Appendix

Address by Hon. Hubert H. Humphrey, of Minnesota, at the Twelfth Annual Design Awards Luncheon

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 11 (legislative day of Monday, April 11), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the RECORD the address which I delivered on the occasion of the Twelfth Annual Design Awards Luncheon, at the Waldorf-Astoria Hotel, New York City, May 4, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Miss Shaver, distinguished guests, we assemble here today to pay tribute to the strength of man. We honor on this occasion a group of men and women who have proved themselves to be the outstanding contributors of the past year to the world of creation and to the world of ideas. The men and women we honor represent all fields of human endeavor. They have in common, however, the honor of being people of ideas and persons of creative thought.

It is said of a mythical Greek hero that by extraordinary physical skill he was able to jump the surface of the earth to the planets, and after accumulating the wisdom of his visit, returned to the earth to be worshipped as a god for his superior knowledge.

Those who have been honored today by receiving the American Design awards have been able, not by virtue of great physical strength, but by virtue of the penetrating mind, to lift themselves from the surface of the earth and explore the mysteries of the universe. We honor them just as our ancients honored their ancestors as the great men of our age.

The thinkers of the world represent the real strength of mankind. The pages of history demonstrate beyond question that it is the idea—the creative idea—that survives through the ages, not the conqueror.

As we pay tribute to the importance of creative design and the concept of the idea in man's development, we can receive renewed assurance that we in this audience are not alone. With us the immortals—the great spiritual leaders of the world. With us sits Buddha (his knees crossed, his feet in sandals, his shoulders covered with a shawl, his body firm but his face beaming) as he says to us:

"A single day amongst the learned is longer than the longest life among the ignorant. The ink of the scholar is more sacred than the blood of the martyr."

We are not alone in this hall, for with us too sits Confucius, his head hairless, his face ascetic, as he says to us:

"Every piece of marble has a statue in it, waiting to be released by a man of sufficient skill to chip away the unnecessary parts. As the sculptor is to the marble, so is education to the soul. It releases it, for only educated men are freemen. You cannot create a statue by smashing the marble with a hammer, and you cannot by force of arms release the spirit or the soul of man."

We are not alone, for with us too sits Mohammed, with black beard and fiery black eyes, who says to us:

"The wise man is instructed by reason; the ordinary man by experience; the stupid man by necessity; the brute by instinct. The essence of knowledge is this: having it, apply it."

We are not alone, for with us sits Christ, who recites the parable of the Good Samaritan in order to express his scorn for those who have minimized the equality of other creeds or races. There is no discrimination among them, because there is no limit to God's bounty. His is the great teaching of love, compassion, humility, and of democratic principles.

We are not alone, for with us sits Moses, his vigorous, athletic body covered with flowing robes. He says to us in the Talmudic manner of question and answer:

"Who is wise? He who learns from everything. Who is strong? He who conquers himself. Who is rich? He who is satisfied with what he has. Who is honorable? He who is honored by his neighbors. What is the great law? That which is hateful to thyself do not do to others. That is the great law. All the rest is its commentary."

We are not alone, for with us sit all these great spiritual leaders—Buddha, Confucius, Mohammed, Christ, Moses. They give us comfort and solace in our conviction that ideas are immortal, that through truth man can be free.

There are two ways of reporting history. The first is in terms of battles won and lost and the fall and rise of governments; the other is in terms of the discoveries of the mind. In every generation the mind of man reaches out to new length and never shrinks back to its former dimensions. Fortunately, though man is mortal, his thoughts and ideas are immortal. Each generation salvages the immortality of the succeeding ones to create a steady progression of civilization.

The creative ideas of man have developed fast in recent years. It was only 300 years ago that man began to seriously question himself about the nature of the physical world in which he lived. The seventeenth century was characterized by the great intellectual revolution, the Age of Science. Men became possessed with the idea that the physical universe was their concern—that they could ask questions about natural phenomena without incurring the wrath of God. They became possessed with the idea that there were physical laws they could fathom. Here indeed was the triumph of Copernicus, Galileo, Newton—men of ideas, men possessed by ideas.

The eighteenth and nineteenth centuries were characterized by new ideas that possessed men—the idea that if there were physical laws of the universe that men could fathom and ask questions about, then why not ask questions about the nature of man-made society.

With this questioning the ideology of democracy came into being.

Until the First World War this ideology was on the offensive. The action against it was rear-guard, defensive, and uncertain. Democracy was the concept of today and tomorrow. Men everywhere heard of it and spoke of it and acted to achieve it.

But in this generation democracy has been challenged by another ideology. In Italy, Germany, and Russia the leaders talked of what they said was a "new order"—something new and streamlined.

But what did we see when we examined this "new order"? We have found it wasn't new at all. It was the old, old doctrine of authoritarianism, pushed with the force of guns and marching feet—yes; nothing more than the ancient curse of "divine right" of the strong to rule the weak.

Democracy met and conquered this old concept years ago in nearly every civilized nation of the world. Today, if we fully understand the power of our idea and its full meaning, we can easily maintain the eminence of the democratic faith that only yesterday spread from mind to mind and heart to heart throughout the world.

When the prophets of the ancient religion of totalitarianism say to us, you need something new, we can answer: It is you who need the new; our ideology is always new—only the truth can make you free.

Of all people who should understand the immortality of the idea and the power of ideology, the American people should be the first. Our idea of democracy was embodied in the Preamble to the Declaration of Independence and in the words of our Constitution. It has as its philosophers Samuel Adams, Thomas Jefferson, James Madison, Tom Paine, Abraham Lincoln, Woodrow Wilson, Franklin Roosevelt. These men all spoke of the same ideology; all were possessed of the same idea. They sought to free men from fear; to free them from poverty; to free them from social and economic injustice, and from insecurity.

Strange as it may seem, America has let loose upon this world the most powerful and

dynamic political and social force in the history of man. It has its roots deep in the spiritual substance of Judeo-Christianity. It receives its political inspiration from the logic of the stoics, the compassion of the martyrs, the faith of the philosophers of natural law. We are of the first to present to the modern world a coherent political faith based upon the dignity of the individual, the equality and fraternity of mankind. We are of the first to pattern a structure of government and a form of society in which the liberties of a people were guaranteed and opportunity was to be assured.

This was an idea—or better to say—an ideology more powerful than the armies of the conquerors. History proves this fact. It was our call to freedom in 1776 and our realization of a government of the people, by the people and for the people that let loose in this world a social and political revolution. This revolution upset the thrones of Europe and convulsed the continent. It put into the hearts and breasts of the colonial people, the underprivileged and the subjected, the consuming desire of individual liberty, a desire which today is manifested by such rebellions as we see in Indo-China, in Indonesia, and in the fact of India's freedom. We never moved a battalion or a regiment on the continent of Europe in the 1800's, yet the idea of the Declaration of Independence produced the doctrine of the "Rights of Man" and broke the back of oppression and the power of kings.

Today, too, the vital force in the world is the search for freedom. We see many manifestations of it: the rise of nationalism of the colonial peoples; the oppressed and the poverty stricken following the leadership of those who use the symbols of freedom, even though their purpose may be otherwise. We find economists and political philosophers talking in terms of abundance within the framework of individual freedom. Men are no longer just content to talk of their security. They want security, and liberty. The humanitarian of this generation is one who understands the interdependence of these two principles—freedom and security.

There are those who today feel we have moved away from this idea, when in fact it is but maturing. It is growing strong in its own sense of competence and rich in its experience. The great political and social experiments taking place in Europe—in the free countries of Europe—are but another expression of this idea of democracy. Our groping and experimentation in the hall of Congress, evolving such programs as the New Freedom and the New Deal are but further expressions of a people with the desire to emancipate themselves from fear, from insecurity, and from oppression.

No better example of our maturing democracy can be found than the evergrowing demand that all people, regardless of race, color, or creed, be guaranteed full and equal civil rights. The morality of our democratic faith compels us to cleanse our body politic of the guilt that arises from our distortion of democratic principles through discrimination and bigotry. The American people are acting to redeem their honor. In city after city—in State after State—human rights are being reaffirmed and protected by law. The democratic spirit of the people now calls upon our National Government to destroy the last vestige of intolerance.

Our maturing democracy calls for the recognition that all must be free from insecurity. All must be privileged to enjoy the opportunity of good health, of productive work, of education, of adequate housing, and of decent living conditions.

This is democracy's answer to the fraud of dictatorship.

To be sure our generation lives in a world, part of which has lost its mind. We have the faith and conviction, however, that the forces of creative thought, of education, and of civilization will, as they have through the ages, survive the obstacles. Future generations will look at the period in which we live as merely one of a moral crisis. It will record, however, that we survived that crisis and moved forward to the greater fulfillment of the idea of freedom. Yes, despite a generation terrified by concentration camps, dictatorship, and world war—in the perspective of time, the achievements of the first half of the twentieth century will outweigh the tragedy and the suffering.

Out of every bitter experience of history, out of every tragedy—man learns in his sorrow. And out of the sacrifice of two world wars we again come back to the immortal idea—of the oneness of man—of his essential unity. It was out of this conviction and out of the recognition of this eternal truth that mortal man, with all of his limitations, his prejudices and inabilities, created the United Nations.

This idea of a world order and the United Nations is not new. It has its own immortality. Mankind from the very beginning has sought a society in which he can live in peace and security, and has groped his way. That society is only obtainable when the principle of government by the consent of the governed, rule by majority, and respect for minority rights is firmly engrained in the social fabric of all nations and all the world.

The United Nations is a summarized expression of the desire of mankind to live in a world of law and order.

History has always demonstrated that this is a long struggle and is not something that can be accomplished immediately. These are long run aims of people of democratic faith for a type of world government based upon law in which individual rights are preserved, and where there is room for a diversity of cultures. This is our objective—a world of free and equal men, who will in their freedom create and secure a just and enduring peace.

The Sovereignty of the People, Then and Now

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, May 11 (legislative day of Monday, April 11), 1949

Mr. KEM. Mr. President, Paul Heyne, a student at St. Paul's College, Concordia, Mo., was recently adjudged the winner of the American Legion's national oratorical contest held in Philadelphia. The prize was a $4,000 college scholarship. I ask unanimous consent to have printed in the Appendix of the RECORD Paul Heyne's thoughtful and timely address.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE SOVEREIGNTY OF THE PEOPLE, THEN AND NOW

Sir Arthur Conan Doyle, one of the greatest of all writers of detective stories, and the creator of Sherlock Holmes, was fond of having his hero comment that "everyone observes but no one notices." The truth of that statement can hardly be denied, especially here in America, where haste is the watchword and where everyone goes through the routine of existence perfunctorily.

Today, with the hurry and scurry of business and pleasure, the American people can find no time to devote to anything not directly connected with their rapid rate of living. But this morning let's call a halt for a few moments to the stir and commotion of life in order that we may do a little serious thinking. Let us this morning journey back in time to the trouble-filled years toward the close of the eighteenth century. Let us listen to the voices of men who lived through the dark and dreary days which accompanied and followed the Revolutionary War, the framers of our Constitution.

Several times each year we probably all glance at or hear the words of the preamble to the Constitution of the United States. But in our usual way, we are inclined to view them as nothing more than perhaps a very compact summary of the aims and purposes of the Constitution. But this morning let us notice that within the lines of the preamble lies a message—a message important to the original colonists, a message of vital importance to the safety and welfare of our Nation today.

The Constitution begins, "We the people * * *, do ordain and establish this Constitution for the United States of America." The authors of the supreme law of the land did not write, "We, the lawful Representatives" nor "We the elected rulers of this land." Instead they chose to begin this immortal document by saying that it was actually the people of the United States who were accepting the Constitution as the guide and overseer of all their actions; that it was the people themselves who were responsible for securing all the rights and privileges granted by the Creator to all men. These three words, "we the people," brought home strikingly to the American public of that day the knowledge that the vigilance and courage of each individual citizen was the deciding factor which would make this unprecedented experiment in democracy a success or a failure.

Now, 160 years later, the Constitution has been firmly ordained and established. And with the passing of the years has come the idea to many an American citizen that he has now been relieved of all duty. Along with the gradual advancement of our Nation to a major position in the world has come the impression to a large majority of the American people that the only requirements of a good citizen are that he listen to the Fourth of July speeches, hang out his flag on national holidays, and stand at attention whenever he hears a rendition of the Star-Spangled Banner.

What a dangerous assumption! What foolhardy complacency! Just as our liberty was bought with a price, the blood, sweat, and tears of countless hundreds, so also must it be preserved with a price.

Today, dark, menacing clouds are rolling ominously above the horizon; once again we hear the far-off muttering of the gathering storm. Can any person read of the war in China, the insurrections in Italy and France, the struggle over Berlin, and deny that a world-wide danger exists? Can any conscientious citizen read of the current un-American activities investigations and still say that we here in the United States are immune to attack? No one but a person afraid or unwilling to face the stark realities of life can deny that the zero hour in our Nation's history is rapidly approaching.

But blissfully asleep to the important role which we must play in the conflict, we go our way, secure in the absolutely false and unfounded belief that democracy is invincible in itself, that as the God-ordained and ideal way of life, it simply cannot fail. History bears out no such assumption. On the contrary, history shows that whenever

any nation assumed such an attitude, it was but a short time before the light of democracy was extinguished in that country; that whenever any people failed to govern themselves vigorously and intelligently, they soon lost the right to govern themselves at all.

My friends, in this respect the United States is no different. Demagogs who go about screaming that the United States can defeat any or all of the countries of the world, that our Nation is so sound internally and its foundation is so deeply rooted in the eternal verities that it simply cannot decay—such men are a poison to our Nation, for they are lulling the people into even deeper slumber, when they should be prodding and stinging them into long over-due action.

Exactly what is there for us to do? Let us examine a few facts well known to anyone who reads the newspapers, and the answer to this question will become obvious. Gen. Dwight D. Eisenhower, in a recent letter to the alumni of Columbia University, stated that there are two ways for a government to become a dictatorship. "One is to slide into it, and the other is to become enslaved by a stronger military power."

Though it may seem trite to say it, yet it is true, and the fact cannot be too strongly impressed upon the minds of the American people that the greatest enemy of democracy today is the deadly plague of communism. Its long, menacing fingers, already clutching at the throat of a large part of the world are today reaching into our country, the last stronghold of free government. Russia, cognizant of the fact that our Nation is most easily attacked from within, is making a concerted effort to undermine our Government and our way of life. With her agents of propaganda painting roseate pictures of life under communism, taking advantage of the fact that so many American people do not realize that under such a system of government, genuine freedom cannot exist, Russia is today undermining the bulwark of our Nation, the people. More and more she is attempting to place representatives of the Kremlin into public office. Only too frequently do we see new indications of disloyalty in our Government, new cases of espionage on the part of persons high up in Washington. When subsequent investigations frequently prove that the guilty officials had been suspected of anti-American activities before their election or appointment, we are forced to ask ourselves the question, "How can these things happen?"

We are forced to answer that they are due to the indifference of the American people. The average man simply is not interested in the affairs of government and politics. The old attitude is constantly arising, "I have no time for such things. That's why we're paying taxes—to get our thinking done for us." But then, in our indifference, too often we do not even choose the men to do our thinking for us. We either do not vote at all, or else we care so little that we don't bother to investigate the men for whom we do cast our ballots.

Have memories of the last global conflict already slipped from our minds? Was the war so long ago that the American people have forgotten the devastating struggle which brought misery to millions, which caused blue stars to appear in the windows of homes all over the Nation, which caused many of these stars later to change to gold? Have the memories of thousands of boys who returned from the war leaving limbs on the soil of some foreign country faded into a dim picture of something that happened once, but can't happen again?

Such indifference and complacency can and will wreak the same havoc in our Nation that they wrought in the republic of Rome 2,000 years ago. My friends, if you doubt the seriousness of such indifference, if you think that such things just don't happen, look at Czechoslovakia. They did not want communism. But by allowing Communists to creep into their government, they themselves set the stage for the gigantic coup d'état which rocked that country in the past year.

Yes, it can happen here. But it must not. We must prevent it. Let us become educated, aroused citizens, well able to govern ourselves vigorously and intelligently. Above all, let us not fall asleep under the false impression that all the responsibility for preserving our Constitution and our way of life lies with the State Department. As is the case in any democracy, it is upon you and upon me that the responsibility lies for keeping our Nation strong. We the people founded and established the Constitution. We the people were the deciding factor which held the Nation together in countless trials since its beginning. And, God willing, we the people, vigilant and courageous, will hold aloft the shining beacon of democracy.

We the people, custodians of the Constitution, stewards of the priceless blessing of liberty, must make the words of Thomas Jefferson ring true when he said, "I believe this is the strongest government on earth, for it is the only nation where every man, at the call of the law, will fly to the standard of the law, and will meet every invasion of public order as his own personal concern."

The world, fellow Americans, looks to us. We must not, we dare not, we shall not fail.

Employer-Employee Relationships

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Wednesday, May 11 (legislative day of Monday, April 11), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the RECORD a summary of remarks by Vincent P. Ahearn at the annual luncheon meeting of the Chamber of Commerce of the United States at Washington, D. C., on May 4, 1949.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

The public policy of the United States with reference to relationships between employers and employees is stated clearly in existing law:

1. Industrial peace and the advancement of the general welfare, health, and safety of the Nation, and of the best interests of employers and employees, can better be secured by the settlement of issues between employers and employees through conference and collective bargaining between employers and the representatives of the employees.

2. The role of the Government in solving unsettled disputes should be primarily that of voluntary conciliation and mediation, all directed toward the achievement of peaceful settlement of such disputes, but settlements which will reflect a due regard for the public interest and the rights of individuals.

3. The right to organize and to be represented through agents of one's own choosing is an important right and it will be protected, but the right not to join an organization is an equally important right, and legislatures, in the words of the Supreme Court, may give the same protection to nonunion workers which has been extended under the due process clause to union members.

4. The right to strike is a privilege which will not be abused and therefore, except under limited circumstances where larger considerations of the public interest are involved, the right to strike will not be impaired.

5. The Government encourages voluntary arbitration of disputes which arise between the parties as to the meaning of the terms of an agreement, and the Federal Mediation and Conciliation Service is directed to make its facilities available in such disputes only as a last resort and in exceptional cases.

6. The Government will be slow to intervene in industrial disputes unless the normal processes of collective bargaining have failed and the public health and safety is threatened. Even then, the absolute right to strike is not destroyed and while the Government may require the parties to maintain the status quo for a relatively short period of time, existing law allows for the possibility that exercise of the right to strike may lead to disaster. The force of public opinion, always the ultimate source of power in a free country, is the basis of our hope and our belief that a crisis of these proportions will not have to be faced.

Nobody has any authority to speak for all the employers of the United States, but I believe that I express the sentiment of most employers when I say that free trade-unions are a necessary part of a free society. Employers accept the national policy of depending upon collective bargaining to settle issues which arise between employers and employees who have exercised their right to join and to be represented by an organization of their own choosing.

Employers realize that this principle is a permanent part of our national policy, and they want to make collective bargaining work. They are interested in the peaceful and honorable settlement of disputes which may arise not only as to the meaning of language in an existing agreement but also as to the terms of a new one.

I have no doubt that the people of the United States are weary of violence on the industrial scene, even though an otherwise desirable objective is offered as justification by those who are responsible for the violence. The public expects employers and employees and trade-unions to conduct their relationships with appropriate regard for the fact that the public interest is superior to every other interest. This is not to say that the right of individuals should be ignored, because experience under preexisting laws led to a statutory declaration that it was a necessary part of sound public policy to be concerned with protection of the freedom of the individual, who in the past has been the victim not only of abuses by trade-unions but also by employers, sometimes acting in concert with trade-unions.

There should be more talk about our responsibility to the society of which we are a part. I believe it to be a legitimate criticism of trade-unions that in recent meetings they paid little attention to the importance of better relations with the public. Apparently nobody reminded these conventions that labor unions, like any other American institution, will be permitted to thrive and develop only as they show a capacity to use wisely the power which the public has given them by law and by custom.

When I say that collective bargaining between free employers and free trade-unions is the foundation upon which public policy is based, I mean collective bargaining in good faith between men of good will, earnestly seeking to reach settlements which will justify the statutory assumption that the public interest and legitimate individual interests will have adequate protection under

the normal procedures of collective bargaining and that the right to stop work will not be abused.

I am sure that employers would oppose any suggestion that the right to strike be abolished. The exercise of this right is part of the price that all of us pay, and gladly so, for a free society. We must hope that men of sober judgment will prevail and that the role of the Government is confined, so far as protection of the public interest is concerned, to mediation and conciliation.

I distrust elaborate proposals for establishment of a powerful governmental right to impose settlements through compulsory arbitration or the seizure of industrial plants and trade unions. I view with concern the proposal that so-called emergency boards shall have the right to make recommendations for settlement of disputes, because this will be the threshold to compulsory arbitration so far as employers are concerned.

I do not share what seems to be a widely held notion that investing the Government with injunction power is an effective means of protecting the public health and safety whenever strikes produce an emergency. There is no evidence that injunctions will provide the lasting solution which a civilized society must have. The problem here involved is one which calls for that kind of emotional maturity which has always characterized the American system when it is called upon to meet a severe test. I should be less than frank if I did not say that I have no magical solution for the problem. But I say this in no sense of apology and, like you, I am continuing to search for a method of government which will fight off threats to public health and safety without destroying the whole fabric of our society. Surely there must be some alternative to lodging great power in the hands of a few men. There is something of significance for us in the words of Francis Bacon: "It is a strange desire, to seek power and to lose liberty."

The normal processes of collective bargaining are weakened and diluted when machinery is established for the disposition of unsettled issues when collective bargaining fails. The National War Labor Board tried to avoid stoppages of work in industries which were necessary to prosecution of the war. There is legitimate criticism of some of the things which the Board did, but the Board fought a losing battle in its effort to persuade some employers and some trade unions to settle their disputes without referring them to the Board with its overcrowded docket. The very existence of the Board at the end of the road, however, encouraged irresponsibility and lack of courage at the bargaining table. I hope that this unhappy state of affairs will not be recreated in a new law designed to meet a peacetime condition.

I have faith in the capacity of Congress to write a law which will protect the legitimate interests of all of the parties to collective bargaining but which at the same time will hold them accountable for abuses of their authority. Congress will not take only a partisan point of view into account. It will act in behalf of all of the people.

Congress has refused to legislate impulsively. It has accepted its constitutional responsibility of writing the laws of the United States. It gives evidence of its intention to preserve the fundamentals of our free society and to do no violence to a system which, however clumsy its procedures may often seem to be, is vastly to be preferred over any other system which man has devised.

I believe that the people of the United States prefer a private competitive-enterprise system. I believe they understand that such a system cannot exist unless it is featured by free employers and free trade-unions. I believe they are willing to continue to depend upon the normal and peaceful processes of collective bargaining, but they dislike violence, whatever the motivation.

Unless employers and employees, represented or unrepresented, show that they are worthy of a free system, the people of this country will turn to compulsory arbitration, because its outward manifestations suggest that it is a sort of civilized way to settle disputes. No greater obligation faces us than that of making our contribution to public understanding of the real significance of compulsory arbitration, because that much power in the hands of government will corrupt and eventually destroy the men who wield it and those against whom it is used.

In searching for the right answer to the problems which lie ahead, we must, above all else, not lose our perspective. We must have patience and we must have tolerance. Our Nation was founded on an instinctive dread of centralized power. We have a tradition of freedom and individual responsibility which is too precious to be lost.

President Truman's Health-Insurance Program

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 11 (legislative day of Monday, April 11), 1949

Mr. PEPPER. Mr. President, one of the most disputed points about President Truman's health-insurance program is the cost. The President gave no estimate, but he contended that it would save more than it would cost.

The best recent study on that subject was issued recently by the Committee for Research in Medical Economics and the Public Affairs Institute. That combined study indicated the gross cost of national health insurance at $5,500,000,000 and the net cost—after deducting present costs—at $1,100,000,000.

This $1,100,000,000, according to the study, would be spent for a 25-percent increase in present medical care. The report makes the point that the cost of the program at first could not be larger than that—without paying the doctors much higher returns than they make now—because there are not enough doctors or hospitals to give any more service than that.

I found the study convincing and powerful proof that some of the estimates recently made by the American Medical Association and our Republican colleagues are nonsense. For the information of my colleagues I ask unanimous consent to include the press summary of this report in the CONGRESSIONAL RECORD.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

A research report sponsored jointly by the Committee on Research in Medical Economics and the Public Affairs Institute, showing that the Nation can well afford the small additional cost of national health insurance, was submitted to Congress today by the Committee for the Nation's Health, which is leading the fight for President Truman's health program. The gross cost of national health insurance was placed at $5,500,000,000, the net cost at $1,100,000,000.

The report, prepared for the Committee on Research in Medical Economics and the Public Affairs Institute was submitted to Chairman ELBERT THOMAS of the Senate Labor Committee and ROBERT CROSSER of the House Interstate and Foreign Commerce Committee, the two committees considering national health insurance legislation. It was drafted by George Soule, well known student, teacher and writer on economic subjects. He analyzed various estimates of the cost of national health insurance and concluded that the most reliable was one made by the Social Security Administration in 1945 which, revised for increased prices since that time, places the cost of a national health insurance program at about $5,500,000,000 a year.

This estimate was based upon the premise that the present corps of doctors would provide about 25 percent more medical care under national health insurance than at present, by using full time the doctors, chiefly the younger ones, whose time is not now fully occupied.

Soule gave no serious study to the recent estimates by the American Medical Association that the plan might cost up to $18,000,000,000 a year. He dismissed such estimates with the brief statement that any such cost would mean an average income for doctors of about $80,000 a year.

"Since the number of doctors cannot be increased on short notice," Soule reported, "the cost of their services during the first year or two after the application of the plan cannot be larger than that estimated by the Social Security Administration unless they are to be paid at higher rates than at present."

"Hospital benefits also are limited," Soule continued, "by the number of hospital beds available in each locality."

Revising the 1945 estimates of the Social Security Administration to 1948 prices, Soule estimated the costs of national health insurance as follows:

	In millions of dollars
Physicians services	2,459
Hospital care	1,804
Dental care	531
Home nursing	86
Laboratory, medicines, appliances	560
Research and education	19
Total	5,459
Per capita	37.39

Explaining that the actual cost of national health insurance would not be this much, but only the difference between this figure and what we are now paying for such medical care, Soule said:

"Just as the automobile buyer turns in his old car in part payment for his new one, the American people would thus exchange medical service now received for a somewhat larger amount of service. The cost of this larger amount is estimated at $5,500,000,000. Since this is approximately 25 percent greater than the cost of similar services now paid for by the insured, the net money cost would be the difference. This would be 20 percent of $5,500,000,000 or $1,100,000,000 for one year. This cost arises, solely on account of the additional services which the insurance might immediately provide, because it would enable people to pay who now cannot afford to do so."

This net cost of $1,100,000,000, Soule added, amounts to less than half of one percent of the $257,800,000,000 a year the American people were spending in late 1948. This is the cost the American people must consider, Soule said, in deciding whether or not they want the benefits of national health insurance.

Soule estimated that in future years the cost of national health insurance might increase by about 35 percent as the number of doctors and hospitals was increased. But by the time this increase in personnel and facilities was accomplished national production would have increased even more, on the basis of past experience and estimates of the President's Economic Council, so that we would be devoting to additional medical care only one-tenth to one-twentieth of our increased production.

"This means," Soule pointed out, "that on the average, the people of the United States can probably have after 5 years (a) as high a standard of living as they now enjoy, plus (b) more adequate medical service, plus (c) a gain of more than 9 percent in other goods and services."

Studying the economic costs of national health insurance, as contrasted with the dollar costs, Soule found:

Health insurance would not take much manpower from any other pursuit at the outset because the additional service would be provided by the same personnel now employed. Therefore, any immediately available extra service would be provided without much extra manpower. It would constitute mainly a gain in the productivity of the working force in medicine.

We could easily afford to divert the number of workers needed to give us adequate medical service later. In times of depression there would be no real cost because the increased medical expenditures would increase employment and production. The number of additional workers in the medical field probably will be "more than counterbalanced by the numbers released from the production, transportation and distribution of material goods."

Health insurance would tend toward stabilizing purchasing power among the mass of the people, and thus would contribute to stabilizing the economy.

Soule pointed out that his analysis took no account of the possibility that national health insurance might reduce the total of disease and disability and thus pay for itself many times over. He said "many millions of dollars are spent every year in paying the costs of disease which might have been prevented or lessened by diagnosis and treatment in early stages" and added that "an enormous number of man-hours of labors are lost to the Nation because of needless disability."

Public Housing

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, May 11 (legislative day of Monday, April 11), 1949

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "Some Public Housing Essential To Take Low-Income Families Out of Slums," by Bleecker Marquette, past president, National Association of Housing Officials, chairman of the joint committee on housing and health, NAHO, and fellow, American Public Health Association. The statement is made in reply to an address by Representative RALPH W. GWINN, of New York.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SOME PUBLIC HOUSING ESSENTIAL TO TAKE LOW-INCOME FAMILIES OUT OF SLUMS

The country has been flooded by a pamphlet titled "Public Housing—Disastrous Here and Abroad," reprint of a speech by RALPH W. GWINN, of New York, in the House of Representatives, June 4, 1948, printed at cost by the United States Government Printing Office and distributed free through the franking privilege.

The quality of Mr. GWINN's thinking of the subject of housing is high lighted in another address he made in the House of Representatives July 26, 1948, on the subject of rent control. This speech he has also had printed at cost by the Federal Government and widely distributed in franked envelopes. In this speech he says:

"The Government has kept the price of shelter low. When an article is cheap people use more of it. Rent control causes the housing shortage. If rents were allowed to rise to their natural level, some people living in apartments would move into a single room, some living in houses would move into apartments, families would double up. In many instances, two families would live in houses where now there is one family. * * * Some people on account of higher rents would leave the city."

In Congressman GWINN's vitrolic attack on public housing there is nothing new. It is the kind of thing representatives of the National Association of Real Estate Boards have been saying for years. Mr. GWINN has been described as "for a long time, their front man in the House." This answer has been prepared because people who do not know the facts may be misled by statements in the speech that are misleading or supported by no evidence. Let us look, then, at some of his pronouncements in the order in which they appear in the pamphlet:

"Housing brings political corruption by the exchange of tenant's votes for low rents." This dire prediction was repeatedly made by certain interests before there was any public housing in our country. We have had public housing now for more than a decade. That would seem to be plenty of time for this evil to develop if it were going to. Where has it developed? The Congressman doesn't say. Certainly it hasn't happened in Cincinnati or in other Ohio cities. If Mr. GWINN is fair he will produce his evidence or withdraw his charge.

His statement that the Taft-Ellender-Wagner bill (now superseded in the U. S. Senate by S. 1070, which under the sponsorship of 11 Republican Senators and 11 Democratic Senators has passed the Senate by a substantial majority; and in the House by H. R. 4009) provided for a Federal Government expenditure of $7,000,000,000 is purposely misleading. The casual reader gets the impression that this is what the public housing proposed in that bill would cost the Federal Government annually for subsidies. Just how GWINN arrives at that total is not clear. He may be including the loan funds all of which will be paid back and will cost the Government nothing. If not, then he is multiplying the annual subsidy by 40 to make the figure appear as large as possible. Building up this figure as Mr. GWINN does is no more fair than it would be to tell a man that when he borrows money to buy a $10,000 house he is really paying $20,000 since over the period of the mortgage the interest paid will equal the principal of the loan. The actual outlay not to be returned to the Federal Government (under S. 1070) is the maximum subsidy of $300,000,000 a year until the projects are amortized. Experience under the United States Housing Act of 1937 shows that the actual subsidy required has been less than the maximum authorized. The total annual cost is a far cry from the fantastic figure of seven billions.

"The Federal Government will also force the local municipalities to exempt the housing projects themselves from all municipal taxation," Mr. GWINN tells us. The statement is misleading. Both the T-E-W bill and its successor, S. 1070, H. R. 4009, state specifically that no community may receive Federal subsidy for local public-housing projects unless the local legislative body (which would usually be the city council) expressly requests the projects. S. 1070 requires exemption from local taxes of housing properties requiring Federal subsidy, but also permits payments in lieu of taxes at 10 percent of shelter rents. Such payments in lieu of taxes in every case exceed the taxes collected on the properties before development for public housing and are greater than the taxes collected from the families living in slums.

GWINN goes on to say that local "taxpayers that get no benefit from the housing" have to provide all the municipal services for the project families and then receive no payment in return. Are we to assume that getting rid of slums, which invariably contribute to high rates of crime and disease, and cost more to service than they pay in taxes is of no benefit to taxpayers? If a decision of the Supreme Court declaring public housing in Ohio to be a private and not a public use has not forced the Federal Government to take title to the local public-housing projects, these projects while they would not be paying full taxes would be paying in lieu thereof a percentage of the rental income. These payments would be aquivalent to the amount previously assessed in taxes against the old properties on slum-cleared sites. Later when public-housing properties are amortized they will be owned locally and will pay full taxes. Local communities would suffer no out-of-pocket loss in revenues and would reap substantial social gains. What the public-housing projects would pay to local communities would be exactly the same as private urban redevelopment housing pays in the cities of New York State. For example, the Metropolitan Life Insurance Co. for 25 years pays on its Stuyvesant Town project, not the full taxes on the new buildings but the taxes assessed against the old slum properties that were cleared away.

Casual workers, the unskilled and the unemployable, the sick and the aged, do not get into public housing. This is untrue of the public-housing projects in Ohio and so far as I know in other public-housing projects. In our community on the average, 10 percent to 15 percent of the tenants are on some form of public assistance or relief, and there is no limitation on the number of families accepted. The average income of families now living in the Cincinnati low-rent developments was approximately $1,250 a year at the time they were admitted. According to GWINN's own statement, a family of four earning more than $1,700 a year cannot qualify for an apartment in Mulford Gardens, a public-housing project in Yonkers, N. Y. It is undoubtedly true, as he says, that Mulford Gardens now has overincome families, as does practically every other housing project in the country. Mr. GWINN knows perfectly well that this comes about because of the acute shortage which makes it unreasonable and inhumane to force these families out peremptorily. Overincome families here and in most places are on notice to move and in Cincinnati approximately 47 percent of the overincome families have moved out.

Mr. GWINN is right that the percentage of truly destitute families in public-housing projects in most cities is not over 15 percent. He no doubt shares the view of those who would admit only the destitute,

make glorified poorhouses out of public-housing projects, and reject honest workers who are otherwise self-supporting but cannot pay for decent housing. He will find no competent sociologist to agree with him.

Mr. GWINN speaks of the "public housers most of whom are on the Government pay roll, or creatures of Government favors themselves." By public housers presumably he means people who believe some public housing to be necessary to accommodate decently families of low income. If he means to include among those on some Government pay roll who support this point of view—the President of the United States, Gov. Thomas E. Dewey, Republican candidate in the 1948 presidential election, an overwhelming majority of the Members of the United States Senate (as shown by the vote on S. 1070), and an overwhelming preponderance of the mayors of our cities, he is correct.

It also happens to be the fact that all major veterans' organizations, the Federal Council of Churches in America, the National Conference of Catholic Charities, the League of Women Voters, the National Congress of Parent-Teachers' Associations, every major labor organization, and some 35 other national civic agencies are supporters of enough public housing to clear people out of slums. Even the New York Real Estate Board has, with reservations, placed itself on record as to the necessity for a limited amount of public housing for low-income families. To say that most of the members of these latter groups are creatures of Government favors is an absurdity.

"At the core of many of these projects are the Socialists and Communists nicely bedded down with low rents." There isn't a scintilla of evidence to prove this statement. Mr. GWINN offers none. If it were true, organizations like the foregoing would scarcely support public housing.

When the Congressman says that the Federal Government has been the culprit that has created the shortage of homes that has accumulated since 1933, he is talking nonsense. Every country in the world is suffering from a shortage of housing. The reason in most cases is simple enough—namely, that during the war, materials and labor were preempted for war purposes and home building practically ceased.

His charge that house building always slows down under Government is not correct. Catherine Bauer, author of Modern Housing, and one of the Nation's leading authorities on housing here and abroad, cites facts that disprove his statement. For a considerable period before the last war all the progressive democratic countries of Europe, Miss Bauer avers, were providing substantial public aid and encouragement for the construction of homes within reach of families of modest means. A substantial percentage of these homes were built and managed by local public or semipublic agencies, some by cooperatives. This did not have a dampening effect on private enterprise in these countries. In the 1930's ordinary private builders in England and the Scandinavian countries built new homes at about double the rate of our American builders, in proportion to the population, although the relative volume of public and semipublic housing was many times as big as ours. All these countries had comprehensive housing programs, more or less of the type envisioned in the various American bills like S. 1070, which have thus far been stopped in the House of Representatives.

As a result of their prewar housing programs, England and the Scandinavian countries had a good supply of homes when the war started in 1940, while we, on the other hand, were already confronting a serious shortage. The wartime destruction of homes in England merely brought that country down to about the same shortage situation which we were in anyway, with a much higher level of wartime building than England's, and without any destruction at all. And the shortage in Sweden and Denmark never has been as severe as it is here.

Congressman GWINN says that Swedish housing is the best in the world. His further statements that this is because it is the freest in the world, and that the famous Swedish housing program involved no government subsidies are completely at variance with the facts. Subsidies to house low-income families with children have been heavy and extensive for many years. And state loans without interest have also been available in recent years. It is true that these aids are extended only in part to local public agencies. But the cooperatives and other building corporations which benefit from them are so heavily controlled as to rents and profits and planning standards that their operations are not greatly different from public housing.

Nor does Mr. GWINN present facts in his assertion that the real English housing boom came in the thirties, after the government had been taken out of the housing picture, and it was entirely the product of private construction and private financing.

From the time the English Government began doing any Government housing before World War I, it has never been taken out of the housing picture, and when Mr. GWINN states to the contrary he is throwing the truth overboard.

It so happens that I personally made a study of housing in England in 1935. The combined program of private and public housing was in high gear at that time with three-fourths of the homes being provided by private enterprise. Had the war not intervened, England would almost certainly have completed the job of total slum elimination within a period of 10 years. It is significant that Mr. GWINN neglects to mention that Government-aided housing in England has had just as strong support from Winston Churchill and the Conservative Party as it has had from the Labor Party.

"A national economy must either be all government or all free," according to Congressman GWINN. The city of Cincinnati owns a railroad. It owns and manages its waterworks. So do most cities. Everywhere the operation of schools is a local government function. Has that made our economy less free? We all agree that private enterprise should perform every function it can, but there are certain things that private enterprise either cannot do or cannot do satisfactorily—housing low-income families decently is one of them. The report of the United States Senate Subcommittee on Housing and Urban Redevelopment (August 1, 1945), headed by Senator ROBERT A. TAFT, substantiates this in these words: "But recognizing all this (that many families in substandard shelter can find suitable housing), the subcommittee is of the opinion that the present housing situation cannot be satisfactorily dealt with except by the gradual elimination of slum housing and the provision of a reasonable percentage of subsidized housing to replace it."

"The whole housing cry is cheap politics and outright demagoguery. It is a scheme of irresponsible politicians," according to GWINN. He includes a lot of people in his name calling. Speaking of demagoguery, the following quotation from the Gwinn speech is in point: "How far are these plans for public housing worked out by Communist government agents here or by their enthusiastic fellow travelers?"

Says Mr. GWINN, "Most of the voters in the areas with public housing would of course naturally vote for the public-housing party." Which, Mr. GWINN, is the public-housing party? Public-housing support is bipartisan on the Federal, the State, and the local level. The members of the City Council of Cincinnati, for example, are unanimously on record for a limited program of public housing, quite regardless of party.

"The T-E-W bill is socialism—American plan." Since the first name on the bill was that of the Honorable ROBERT A. TAFT, United States Senator from the State of Ohio, Mr. GWINN's charge doesn't make sense.

"In the twenties," says the Congressman, "slums well nigh disappeared in one of the greatest building eras in our country," and he mentions New York City specifically. The slums never came anywhere near disappearing in New York City or in any other of America's big cities. Having served as assistant secretary of the New York Tenement House Committee for 3 years (1916–18), and having been in touch with the situation there constantly since that time, I can say with assurance that any objective authority on New York's housing will testify to the falsity of Mr. GWINN'S statement. There were vacancies in New York's slums and in Cincinnati's slums in the thirties, but the slums didn't disappear. They are still very much in the picture and crowded from basement to attic, as never before.

Mr. GWINN picks up the propaganda of the National Association of Real Estate Boards, in citing the so-called Baltimore plan as the answer. According to GWINN, "old houses can easily be reconditioned at lost cost by such an undertaking as the Baltimore plan of improvement." Therefore he argues no public housing is needed. Evidently the honorable Congressman doesn't know that Wilmer H. Schulze, director of the bureau of sanitation, Baltimore Health Department, who directs the so-called Baltimore plan, says categorically that the Baltimore plan is not a substitute for urban redevelopment or public housing but only a means of bringing about better enforcement of housing regulations.

CONCLUSION

As evidenced at the United States Conference of Mayors held in Washington during the week of March 21, 1949, housing is today the No. 1 problem or near the No. 1 problem in practically every American city. It is not going to be solved by measures relied upon in the past. Fifty years of effort have proved that. The existence of slums—in which babies sicken and die two or three times as fast and grown-ups succumb at two or three times the rate from tuberculosis, from pneumonia, and from home accidents, and in which children fall prey to delinquency three times as often as in sections of decent housing—is a paradox in our wealthy democracy. Hitler used movies of our slums to try to discredit America. Russia points to them to our detriment. The rising tide of public opinion demands their destruction. Slums cannot be eliminated unless decent housing is provided for low-income families now trapped in them.

The supply of low-rent homes, bad as it is, is constantly decreasing through demolition. Nothing is being built to take its place. This is a job that unfortunately private enterprise cannot do because private operations must pay a profit and there can be no profit in decent low-rent housing. If there is a workable alternative to public housing, open-minded people, insistent upon the solution of this problem, will gladly consider it but it must be bona fide and not a subterfuge. Until such a workable alternative is presented (and none has yet been offered) the demand for a suitable program of public housing will not down.

No intelligent person claims that the public housing program is perfect. But not only are any real weaknesses it has developed been widely publicized; many that it does not have are heralded from the house tops by self-interested groups and their spokesmen. Honest and factual criticism is healthy and desirable. The program will be the better for it. Specious criticism serves no useful purpose and does no credit to its author.

Public housing is only one small part of the program needed to solve the housing program. It is highlighted out of all proportion because of the ill-tempered and sometimes unscrupulous opposition by powerful lobbyists, stimulated by slum landlords. The goal in housing is an opportunity for every family to live in a house that does not fall below a minimum standard of decency and health. To achieve this goal involves many things. It involves intelligent community planning; realistic and practical zoning; modern building codes that assure good standards of construction but place no unreasonble restriction on the use of new materials or methods of construction; housing regulations well enforced to require the maintenance of decent standards in existing housing; education of the public, of landlords, and of tenants; provision of an adequate supply of housing within the means of the low-income group and of the middle-income group. The latter are not now being provided for adequately by commercial builders. The home building industry has been building little housing for sale at moderate prices and practically nothing at moderate rents. Some data recently secured by the Cincinnati Community Development Co. (a private enterprise corporation planning the construction of moderate rental housing) are in point. The following results of their study of advertisements of accommodations for rent demonstrate the striking disproportion between demand and supply:

Tabulation of housing accommodations in "wanted" and "for rent" ads in Cincinnati Enquirer, Mar. 21 through Apr. 3, 1949

	Percent of total—	
	Wanted	For rent
Below $70	65.86	6.62
$70 to $90	26.51	34.84
Over $90	7.63	58.54

Of the families advertising, 65.86 percent want something to rent for $70 a month or less—but only 6.62 percent of the accommodations advertised for rent are available at those rates. While only 7.63 percent can pay over $90, 58.54 percent of the apartments offered rent for over $90.

The housing of the middle income group is definitely a responsibility of private enterprise, but it is obvious that the need is not now being met and that additional aids will be required to stimulate the building of moderate-priced housing. The facts should make it clear enough that if the home-building industry has to be stimulated to accommodate the middle income group, it is totally unrealistic to expect it to provide decent homes for the unskilled wage earner and the socially disadvantaged.

The slums themselves are the most powerful argument for positive housing action. Screaming "socialism" blows down no slums and builds no houses to replace them.

Awards by Antidefamation League of B'nai B'rith

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Wednesday, May 11 (legislative day of Monday, April 11), 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD citations in connection with several awards for outstanding contributions toward bettering human relations, made by the Antidefamation League of B'nai B'rith to Dr. Gordon W. Lovejoy, of the department of human relations of the University of Miami; the St. Petersburg (Fla.) Times; and George J. Talianoff, of Miami Beach, Fla.

There being no objection, the citations were ordered to be printed in the RECORD, as follows:

TO DR. GORDON W. LOVEJOY, DEPARTMENT OF HUMAN RELATIONS, UNIVERSITY OF MIAMI

In recognition of outstanding contribution to the community and humanity through the advancement of mutual understanding among all people in the tradition of the American heritage.

Presented by Antidefamation League of B'nai B'rith, institute dedicated to the rights of man, Miami Beach, Fla., March 13, 1949.

TO THE ST. PETERSBURG (FLA.) TIMES

In recognition of outstanding contribution to the community and humanity through the advancement of mutual understanding among all people in the tradition of the American heritage.

Presented by Antidefamation League of B'nai B'rith, institute dedicated to the rights of man, Miami Beach, Fla., March 13, 1949.

TO GEORGE J. TALIANOFF

For faithful, meritorious, and devoted service to Jewry, the community, and the people of Florida as director, Florida regional office, Antidefamation League of B'nai B'rith, January 1945–January 1949.

Presented by Antidefamation League of B'nai B'rith, institute dedicated to the rights of man, Miami Beach, Fla., March 13, 1949.

Report of New England Business, 1949

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an address delivered by Mr. Joseph A. Erickson, president, Federal Reserve Bank of Boston, at the New England congressional dinner, Hotel Mayflower, Washington, D. C., May 2, 1949, under the auspices of the New England council.

The address follows:

REPORT ON NEW ENGLAND BUSINESS, 1949

It seems to have become customary at this New England congressional dinner to have a brief report on business developments in New England. Laurence Whittemore, who established this custom in his report last year and the year before, had decidely the better of it. His reports were made when business was still trending upward and our major problem appeared to be keeping an inflationary boom within bounds. It is my task to report at a time of uncertainty about a business readjustment that has been under way for several months.

Well, how are we making out? Part of our economy—the nonmanufacturing part—seems to be doing very well. The manufacturing part has not been doing so well.

We reached our postwar peak in manufacturing in February of 1947 when we had over a million and a half persons employed in our factories. During the last quarter of last year employment in manufacturing dropped nearly 5 percent below the level of the previous year. The drop has continued into the first quarter this year, increasing slightly each month. In March employment in manufacturing was nearly 11 percent below the level a year earlier.

A large part of the decline in manufacturing must be attributed to the serious weakness in the textile industry. This industry accounts for 40 percent of the drop in total manufacturing employment from last year's level. However, we may take some consolation in the possibility that textiles have been going through a readjustment for some time and they may be one of the industries which will pick up sooner than most others.

While manufacturing employment has been sliding off, nonmanufacturing employment has been rising and reached a total of nearly 1,900,000 at the seasonal peak in December of last year. During both the last quarter of 1948 and the first quarter of this year, employment in the nonmanufacturing lines showed gains over the previous year and in fact showed larger percentage gains than were occurring in the Nation. However, the losses in manufacturing have more than offset the gains in nonmanufacturing, leaving us with total employment in the first quarter of this year at a level 4 percent below the level of a year ago.

Unemployment, primarily because of the slack which has developed in manufacturing, has mounted to more than double the number of unemployed at this time last year. The proportion of our potential workers who are unemployed has been running a little higher in New England than it has been nationally.

Apparently New Englanders are not altogether downhearted because they are planning a lot of building for the future. We expect that construction during this year will run as high as last year if not higher.

The business readjustment that we have been having is probably on the whole a healthy one. Costs and prices are being reduced and efficiency increased. There is great underlying strength in the business situation, not the least of which is a strong cash position of both consumers and business. People are inclined to defer their buying of important items when prices are falling. In fact, orders have been reduced so much more than sales that a pick-up is bound to develop. The increase in savings and the decrease in consumer debt in New England during recent months indicates that people have been putting money aside with the expectation that they might buy later when prices were right. There is evidence that business has been doing the same thing. The purchasing power is there if the price is right. Therefore it is up to business to see that the price is right.

It behooves us then to keep cool heads about the business situation. Even if employment continued for the rest of the year at no higher than current levels, New England business generally would have a good year and New England's total personal income would run within 5 to 10 percent of last year's level.

New England's prosperity is dependent first of all upon the prosperity of the Nation, which provides so much of its raw materials and so much of its market. The region's prosperity relative to the national level depends heavily upon how well its management and labor stand up to outside competition. But our relative position also depends upon Federal Government policies to a much greater extent than most of us have realized.

New Englanders have been concerned for a long time about the fact that they pay

more into the Federal Treasury than they receive back in direct payments from the Treasury. We are putting up $2 in taxes for every dollar we get back in direct payments from the Treasury. We have not shouldered this burden without some grumbling, but we have assumed that it was proper for us to carry our share of the load helping out some other sections of the country. We have taken comfort from the possibility of getting back the dollars that we lose through the Treasury by means of our trade with other parts of the country. The Treasury, we thought, might take our taxes and spend them in other areas, whereupon we would sell our goods and services to people there who would have more money to spend by reason of the additional income and the improvement in productivity that it might bring about. It begins to appear that our assumption that we would continue to get the dollars back another way has now proved to be too optimistic. Before the war it was true that we more than regained our net payments to the Federal Treasury through the ordinary processes of trade. During the 8 years prior to 1942, for example, for every dollar of net loss on our transactions with the United States Treasury we had a net gain of $2 on strictly business transactions with other parts of the country and of the world.

In the postwar years, 1946, 1947, and 1948, however, net payments to the Treasury have been at a rate five to six times higher than the rate of the prewar years to which I referred. Instead of $160,000,000 per year, our average annual payment prior to 1942, they have averaged well over $900,000,000 per year in the last three. Although we have substantially increased our net gain from strictly business transactions with the rest of the country, we have not been able to increase it fast enough to compensate for the Treasury's enormously increased drain upon the area. During these last 3 years, for each dollar of net loss to the Treasury we have had a gain of only $1 (not two as in prewar years) on ordinary business transactions with the rest of the world. The conclusion seems inescapable that the continued redistribution of our income through the Treasury to other parts of the country and of the world has weakened our competitive position. Funds so easily siphoned out of New England are spent by the Government in a manner which makes it very difficult for New England to earn them back again. Funds spent on supporting farm prices, for example, go primarily to other regions of the country which sell their products at Government-supported prices to New England. Funds spent upon dams and reclamation projects in the South and West go primarily to pay wages and materials costs of suppliers necessarily closer to the scene of operation than New England. Funds spent for foreign relief and recovery have gone mainly to other regions; New England accounts for 10 percent of the Nation's manufacturing, but an analysis of invoices on ECA shipments through the end of 1948 indicates that New England firms shipped only 1 percent of the manufactured goods under the ECA program. The record so far shows that New England's position was not improved but was worsened by the enormous Federal budgets of the postwar years.

You can appreciate from these few facts that I have given you why our own New England's welfare as well as the Nation's welfare would best be served by reducing Federal Government expenditures. You can appreciate why it seems urgent to many New Englanders that many of the Hoover Commission's recommendations, which might save $3,000,000,000 per year, be speedily adopted.

We must be realistic, however. Federal spending will no doubt remain high for some time. If New England is to maintain or improve its economic position under such conditions, we shall need, more than we have ever needed in the past, either to obtain a larger share of the Federal Government's purchases or a larger share of Federal expenditures on projects in New England. New England appears to have reached the limit of its capacity to contribute to the welfare of other sections of the country through the Federal Treasury.

Our stake in Federal policies is not limited to payments to or receipts from the Treasury. We have a vital interest in Government policies which involve little or no Federal expenditures. An example is freight rates which have choked the business of our New England ports.

A hundred and fifty years ago New Englanders were making their fortunes by carrying on commerce with most of the nations of the world. We are still favored by the geographical position which stimulated ocean-going commerce so long ago. Any farsighted plans for the further economic development of New England should include new opportunities through foreign commerce.

If New England is to realize to the full the advantage from its seaboard, it must develop export cargo to offset its bulky imports like wool, hides, and wood pulp. Boston has for years been denied the advantage of its closeness to Europe and South America by a structure of ocean freight rates which puts it on a par with competing ports. New England ports are discriminated against by the structure of railroad freight rates from the interior which put them at a disadvantage in comparison with competing ports. The Boston Port Authority has carried on a campaign looking toward removing the freight differential of one-half cent per hundred pounds which has held back grain exports coming over the Great Lakes through our ports. The railroads serving New England have published reduced rates wiping out the differential but the railroads serving competing ports have asked the ICC to suspend the new tariff. The ICC has suspended the new tariff for 7 months and will shortly hold hearings upon the subject.

The matter of one-half cent per hundred pounds on grain coming only over the Great Lakes may not appear to be too important an issue, but it is symbolic of New England's opportunity. In this case we are asking for no Government funds, but merely a chance to help ourselves. If New England can win this test case, it may be able to win on more important issues holding back the development of its ports upon later occasions. I trust that the ICC will see wisdom and justice in removing this discrimination against New England's ports. We can no longer afford such discriminations, any more than we can afford to increase our contribution to the Treasury.

Another opportunity for New England's future growth depends upon a raw material found throughout the region. We produce one raw material which, unlike coal or oil or iron, will never be used up—if we treat it right. That material is wood.

Most people do not believe it when we tell them that a greater proportion of the land area in New England is covered with some kind of forest than in any other region of the country. It is a fact, however, that 77 percent of New England's land area is forested. Our forests supply raw material for pulp and paper, lumber, furniture, plywood, and numerous other industries making wood products. Together these industries employ more than 140,000 people and put out a value of product of a billion and a quarter dollars annually.

The growth possibilities of the forests encouraged us to finance a study of the forest resources of New England, what was happening to them, and how we could get more out of them. That study has now been published under the title of "Wooden Dollars." It may seem strange to you for a banker to plug for wooden dollars, but I know of no better way to emphasize that there's money in wood. I want to tell you a little of what we found out—and did not find out—about our forests from this study.

First, we need better information on the forest resources than we have. The wood-using industries need to know how much of what kind of timber we have. The United States Forest Service has for many years been conducting a survey of the forest resources of the Nation. We in New England feel that not enough of this survey work has been done here and we think that we could use very effectively a more accurate inventory of our forests and woodlands. We hope that it will be speeded up as it applies to New England. On the basis of the best estimates available this is about the position of our forests now:

New England's forests are growing more rapidly than they are being depleted by cutting, fire, and insects. Nevertheless, the mature timber is being cut faster than new timber is coming to maturity, so that most of the growth is coming on young timber that has to remain in the woods a good many years before it will be ripe for cutting. Because so much of our timber is in the growing stage, it is important to make the most of that growth.

One of the greatest curses to New England's growing timber is the white pine weevil. Northeastern white pine is by a wide margin our best commercial tree species. The white pine weevil attacks the leader at the top of the tree, and the damage that he does produces crook and forking in the tree which even casual observation demonstrates is all too prevalent in New England white pine. We need more research on how to control the white pine weevil and more work on controlling it if we are going to get a higher value out of our timber. May I say to our Senators and Congressmen that we hope they will keep that in mind when the insect control people come up for more money if more of it is to be spent in New England.

This meeting itself is a token of the next thing I am going to take up with you—the matter of a unified regional program of economic development. New Englanders who have given the matter any thought at all have soon come to the conclusion that they have more in common with people in the other States of New England than they have with non-New Englanders. The forces which tend to unite people in the various States in New England are stronger than the forces which tend to divide them. New Englanders share a sense of regional citizenship.

In view of their common interests it was altogether fitting for New Englanders to set up their own policy, a good-neighbor policy, 23 years ago in the form of the New England Council. That was, I believe, several years before Washington adopted its own national good-neighbor policy. The principles and ideals of New England's own good-neighbor policy have begun to bear some fruit. We have embarked upon joint projects to control forest fires and floods and plans to coordinate other activities.

The New England States are wisely considering a unification and coordination of their development programs. I believe that this is a splendid step in the right direction because we can do a job of industrial development in New England more effectively on a united basis than we can do it piecemeal.

The experience of the State agencies and their more substantial budgets in the aggregate for development work provide compelling reasons for integrating the State and regional programs. Integration of the State and regional programs will be insured if those responsible for the State programs are also responsible for the regional development program. Common sense administration requires that those who guide the regional program be charged also with respon-

sibility for the development program of their own State. It goes without saying that they should invite New England Council's participation in its meetings to insure that public and private efforts are coordinated. We should not follow the bad example set by Washington by piling one layer of Government agency on another. We should and we must take positive action on a regional basis to encourage more growth in the regional economy.

I said more growth intentionally because, despite many impressions to the contrary, New England has enjoyed a very large growth in recent years. Our rate of population growth between 1940 and 1948, 10.2 percent, was greater than that for all but two of the nine census regions—the Pacific and East-North Central States. Nearly 40 percent of New England's gain resulted from in-migration of people from other States. People don't pull up stakes and move without reason. One reason is the family income level in New England, which is well in excess of the national average and of the average of all other regions but two—the Middle Atlantic and East-North Central States. It takes jobs to provide such income. From 1939 through 1948, New England provided three-quarters of a million new jobs, a gain of 29 percent.

When we talk about promoting growth in the New England economy, we are talking about an area of seasoned previous growth. Let's keep New England growing.

The Financial Security of This Country, More Than Ever Before, Rests in the Hands of Those Charged With Disbursing the Funds Appropriated by Congress—We Should Staff All Key Positions With Career Men, Trained in Business Administration

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. BOYKIN. Mr. Speaker, I am sure there are but few, if any, Members of this House who do not know the Honorable John E. (Jack) Peurifoy, Assistant Secretary of State.

They know him best as a business administrator, who, when given free rein by Gen. George C. Marshall, brought order out of chaos in the Department of State. Always affable, ever kindly, helpful, and ingenious, he is above all a good public servant, a great patriot, and a great American.

His understanding is tempered by a rare quality of firmness, equity, and justice coupled with a decent respect for his responsibilities in the expenditure of public funds.

In all the years of his service career in our State Department I have never once heard anybody ever refer to John Peurifoy as a "stuffed shirt" or a member of "the striped-pants set."

I know other such men serving in the executive department of government who have ability equal to his, but certainly, Mr. Speaker, there is no one possessed of greater ability in his field of administration nor any who gives more of his time and of himself to doing a good job than does John Peurifoy.

I have been knowing Jack Peurifoy—good—and for a long, long time.

I have been hearing rumors in the cloakrooms, and, in fact, some of my friends, both Democrats and Republicans, have asked me whether the President, at the request of our great Secretary of Defense, was going to appoint John Peurifoy as Secretary of the Department of the Army.

My answer was that in the interest of unification, of good government, economy, efficiency, and harmony, I certainly wish to see such an appointment made.

Moreover, Mr. Speaker, I know that such action would meet with ringing acclamation from those who sit on both sides of the aisle in the Nation's Congress and on both ends of the Capitol.

That this RECORD may contain a far less personal expression of the abilities of our good friend, John Peurifoy, than my own, I am inserting into the RECORD an editorial published in the Washington Times-Herald only last Saturday.

That editorial comment was as follows:

CAREER APPOINTMENTS?

It is about time more emphasis is placed on rewarding efficiency in Government service instead of selecting top policy officials on the basis of political pay-offs alone, though we neither expect nor hope to see politics entirely out, as after all the party that wins is responsible to the voters for results and naturally ought to have a full say about its top officers on duty.

It seems to us that here is a golden opportunity for President Truman to put some civilian career man in to head up the Army and thus show the policy set up when he made Jesse Donaldson Postmaster General was no mere preelection stunt to get Federal workers' votes.

In this particular case, we hear President Truman is considering Assistant Secretary of State John E. Peurifoy as the new Secretary of the Army. Mr. Peurifoy entered Government service as a clerk in the State Department in 1938. His work in handling personnel and administration matters in that Department has won him rapid promotions. His talents have also been recognized and praised on Capitol Hill and in other agencies of the executive branches of the Government, by Republicans and Democrats alike.

Recently, it was reported that Defense Secretary Johnson is anxious to have Mr. Peurifoy in his department to assist him in working out full unification of the armed forces.

It is a good idea and if carried out will certainly be proof to young people the country over that government as a career is not all political pull and pay-off. And that sort of proof is good politics itself by any test.

Mr. Speaker, I need not remind you of the fact that it seems ages since we knew Jack Peurifoy when he was running an elevator here in the Capitol.

I think it was you, Mr. Speaker, then our Democratic leader—or else your great predecessor Will Bankhead as Speaker of the House—that approved Jack Peurifoy's request to get an elevator on the night shift instead of the day shift—so that he could supplement his education with a course in public administration at American University after work hours.

Upon the completion of that course, he followed it up by taking still another—this time in international relations at George Washington University. And remember, Mr. Speaker, that he did it all on the $90 a month which was at that time the pay of all elevator operators on Capitol Hill.

Well, he never did get his College degree—but there's a lot of us in that class. Neither did Secretary of State Stettinius—our own Jimmie Byrnes—nor did the greatest of all living Americans today, the honored, revered, respected and beloved elder statesman of them all—your good friend and my good friend—the Honorable Cordell Hull.

Like the others, he won his degree of "C. G. E.", Career Government Employee—in the hard school of experience.

John Peurifoy started up the ladder of the State Department as an "economic analyst" at a salary of but $2,000 a year.

Today, at 41 years of age he is the Assistant Secretary of State for Administration and is generally considered to be doing one of the most efficient jobs ever executed in government service—in one of the hottest and most controversial departments of the Federal government.

And you would ask how he does it? Those who know Jack Peurifoy know him as the kind of executive who everybody soon calls "Jack." A direct actionist, he has the ability to get things done.

In his philosopohy first things should and must come first.

Kindly, considerate, possessed of a depth of understanding, he is equally considerate of all from the colored messengers historically employed in the Department of State to the Chairman of the most important Committee of the Congress.

Mr. Speaker, it is highly indicative of his recognized abilities that subsequent to the first conference which General George C. Marshall had with President Truman after his acceptance of his portfolio that Secretary Marshall appointed the 39-year-old Peurifoy as his acting Assistant Secretary.

In that position he was directly charged with the over-all management of the State Department. His job was not to make a foreign policy. It was to provide the machinery with which to effectuate all policies. Under John Peurifoy's supervision was placed all such things of hiring and of firing, the promotion or the demotion of personnel both here and abroad, all telegrams and mail services, all official "house-cleaning" functions, the preparation of the budget for the Department of State, the issuance of passports, visas and security measures, and last, but most important, was the control of all expenditures.

John Peurifoy believes that department regulations should be made to expedite business in an orderly manner and not to retard it. If ever a regulation gets in the way of doing something economically and on time, his suggestion is—let's change this regulation and not—that we can't do this or that because it is against the rules. He considers it his job to see that he gets efficient teamwork and woe to the employee who, feeling too big for the task, goes prima donna and tries to undercut his colleagues.

Although admirably respected by all of his fellow-workers, they know full well

that John Peurifoy will not tolerate any buck-passing.

John Peurifoy's loyalty to President Truman has never wavered at any time in his long service. It was no happenstance that the two men to greet him upon his return to Washington in the seemingly dark days of the campaign were the Secretary of State Dean Acheson and the Assistant Secretary of State Jack Peurifoy.

With the appointment of John Peurifoy as Assistant Secretary something extraordinarily unique happened in the United States Department of State. For many years prior most previous assistants had long engaged in that great State Department pastime of making policy. Here was an Assistant Secretary who simply wanted to do an administrative job, one who wanted nothing whatever to do with the making or formulation of foreign policies.

John Peurifoy knew that his strong point in training was business administration. As a successful official in an executive position he long since put a stop to all policy telegrams and all other foreign policy-making communications from reaching his desk.

By eliminating the time-consuming floods of cables and other communications from overseas, he was enabled to devote his whole energy to the less interesting but the all-important problem of the American taxpayers—the costly, overburdening problems of executive administration.

Mr. Speaker, with his military training at West Point as a background, John Peurifoy would be altogether at home administering the expenditure of the billions of dollars which the Congress has this year appropriated and will be compelled to appropriate in years to come for the United States Department of the Army.

Mr. Speaker, need I recall the splendid words of appreciation spoken about the job that John Peurifoy is doing by the leaders of both parties when the State Department appropriations bill was before this House but a year ago.

Our Republican friends were at that time in the majority. There had been extensive criticism expressed with respect to the conduct of many governmental functions—but with respect to the work that Assistant Secretary Peurifoy was doing in the State Department, let me quote but a few passages from the records of the debate which took place here in the House on March 3 last year.

I do this to exhibit the regard in which Mr. Peurifoy is held by our Republican veteran colleagues who sit on all important Appropriations and Foreign Affairs Committees of this House. Such top flight Republicans as the Honorable KARL STEFAN, of Nebraska; the Honorable FRANCES P. BOLTON, of Ohio; IVOR FENTON, of Pennsylvania; CLIFF CLEVENGER, of Ohio; VAUGHAN GARY, of Virginia; MENDEL RIVERS, of South Carolina, and of others—sitting on this as well as on the other side of the aisle.

The debate which took place was, in part, as follows:

Mrs. BOLTON. Mr. Chairman, will the gentleman yield?

Mr. STEFAN. I am very glad to yield to the gentlewoman for a brief question.

Mrs. BOLTON. The gentleman has spoken of the need of having the administration of these things in one piece. We know that the gentleman has worked with the men at the State Department. Would the gentleman state his opinion of Mr. Peurifoy?

Mr. STEFAN. Does the gentlewoman mean Mr. John Peurifoy?

Mrs. BOLTON. Yes.

Mr. STEFAN. I think he is one of the finest men that I have ever met and one of the ablest men. I have a great admiration and affection for him.

Mrs. BOLTON. Then the gentleman has confidence in what Mr. Peurifoy is doing?

Mr. STEFAN. I have great confidence in him.

Mrs. BOLTON. And the gentleman has perhaps found that it is not always easy for Mr. Peurifoy to accomplish the things that he sets out to accomplish?

Mr. STEFAN. I want to say that he is the finest character that I have ever met and one of the most efficient men. I am very happy to make this statement here in the Halls of Congress.

Mrs. BOLTON. I thank the gentleman. We are most happy to have the gentleman's opinion because we know how you have studied the situation.

Mr. STEFAN. It is always an inspiration to see a man starting to work in the State Department and really doing something that we can really understand. Mr. Peurifoy has been a fine public servant.

Mr. DORN. I just wish to ask the distinguished gentleman if some question was asked about the distinguished gentleman from South Carolina, Mr. Peurifoy, and if the chairman said that he was one of the finest Americans he ever met?

Mr. STEFAN. In answer to the gentleman from South Carolina, the question was asked by the gentlewoman from Ohio [Mrs. BOLTON], and I stated that was my opinion, and I am again very happy to repeat that, in my opinion, he is one of the finest Americans I have ever met.

Mr. DORN. We certainly appreciate that.

Mr. HORAN. Mr. Chairman, will the gentleman yield?

Mr. STEFAN. I yield.

Mr. HORAN. I want to share in the Chairman's appraisal of Jack Peurifoy. We both have a very high regard for him.

Mr. DORN. We appreciate that. We only wish we had more men in the State Department like John Peurifoy from South Carolina.

Mr. STEFAN. So do we. I yield to the gentleman from Virginia [Mr. GARY].

Mr. GARY. Mr. Chairman, I yield 1 minute to the gentleman from South Carolina [Mr. RIVERS].

Mr. RIVERS. Mr. Chairman, I would like to say this about Jack Peurifoy, that he happens to come from my district and that is one of the reasons why he has made such an outstanding Assistant Secretary of State. I have known him and his family for many, many years. I knew his father before him and his entire family. You have so generously stated that if the State Department had more Americans like that there would be much less criticism about those who have walked in and taken over.

Mr. STEFAN. I thank the gentleman very much. We have had very fine cooperation from Mr. Peurifoy.

Mr. RIVERS. I certainly thank the gentleman.

Mr. BOYKIN. Mr. Chairman, will the gentleman yield?

Mr. STEFAN. I yield.

Mr. BOYKIN. We in Alabama appreciate what you have said about Jack Peurifoy. He is really and truly from Alabama. He just happened to go up to South Carolina but we are very, very proud of him. I think he is doing a fine job. Nobody knows it better than you. When I came and asked you about this, it was already in the RECORD. We do appreciate it very much. We in Alabama appreciate all that has been said about John Peurifoy. Now, as Secretary of State, General Marshall has a great deal to say as to who should serve as his Assistant Secretaries. The man in whom he has placed his confidence for the conduct of the security aspects of the Department's operations is Assistant Secretary of State John E. Peurifoy. I happen to know Jack Peurifoy well and have had an opportunity to observe his work for some time. Gentlemen, there is no one in whom I have more confidence than Peurifoy. His family has been in this country for well over a century. He has been raised in the traditions of true Americanism and because of his many years of service in the Department of State, is thoroughly acquainted with the operations of the Department and is fully qualified to assume full responsibility for the Department's security and loyalty programs. His appointment to head up the administration of the Department and the Foreign Service is an ideal one and reflects the well-known ability of General Marshall to select competent and capable people to assist him in carrying out his responsibilities regardless of what they may be.

Mr. STEFAN. Mr. Chairman, I yield such time as he may desire to the gentleman from Pennsylvania [Mr. FENTON].

Mr. FENTON. First of all, Mr. Chairman, I want to add to the testimony given our good friend, the Assistant Secretary of State, John Peurifoy, my sincere blessings. He is a very, very fine and courteous gentleman, and it was indeed a pleasure to work with him; he in the Department of State, and we on this committee. Mr. Chairman, I am not going to take up very much time. It has been a great privilege to serve on this committee for the State, Justice, Commerce, and the Judiciary of the Appropriations Committee.

As the chairman has said in his remarks, there was full cooperation amongst all the members, and the hearings were indeed harmonious.

The details of this bill have been pretty thoroughly covered by our chairman the gentleman from Nebraska [Mr. STEFAN], the gentleman from Washington [Mr. HORAN], the gentleman from New York [Mr. ROONEY], and the gentleman from Virginia [Mr. GARY]. But I do want to say to you that we sat for many hours, days, and weeks listening to the many witnesses for those four Departments in our Government. I want to assure you that our very able chairman the gentleman from Nebraska [Mr. STEFAN] and my colleagues on the committee scrutinized every item in this bill, and the amounts arrived at as shown in the bill are an honest endeavor to do what they thought was right.

(Mr. FENTON asked and was given permission to revise and extend his remarks.)

Mr. STEFAN. Mr. Chairman, I yield 15 minutes to the gentleman from Ohio [Mr. CLEVENGER].

Mr. CLEVENGER. I want to tell you that these members of the committee are wonderful gentlemen, and I can subscribe to the words of praise for our very lovable Under Secretary of State, Mr. Peurifoy.

Mr. Speaker, hear me now—and well—on this.

After the debate had finished the Honorable VAUGHAN GARY, who has long served us on the Appropriations Committee of the House, made this significant statement with respect to the Honorable John Peurifoy, the Assistant Secretary of State:

Mr. GARY. Mr. Chairman, there seems to be one question on which this House is unanimous and that is as to the outstanding abilities, the charm, and personality of Jack Peurifoy. Certainly we minority mem-

bers on this subcommittee will concur in everything that has been said.

It is only in part because of the foregoing that I would urge President Truman to place at the head of the Department of the Army a trained, tried, and trusted, and proven civilian career man such as the Honorable John Peurifoy.

We now have as the Secretary of National Defense Louis Johnson, a man who in the years that have passed has proven himself a hard driving, sure-footed, two-fisted executive who brilliantly served as Assistant Secretary of War and is now Chief of all activities concerned with the Security and Defense of the Nation.

Louis Johnson has already satisfied the President, this Congress, and the Nation that he will unify our armed services and he has already done a magnificent job in the short time he has had this great and grave responsibility.

Heading the Department of our Air Force is that young, energetic, dynamic, and efficient career official, Stuart Symington, who, believing that air power is world-peace power, long stood with his back to the wall, fighting to give America supremacy in the air.

I need not bespeak the love and respect that we in this Congress have for the Honorable Steve Early who, upon request of the President, gave up a career in private industry that paid him many times what will be his salary in Government to join with Louis Johnson in perfecting unification of our armed services.

There is no one thing that President Truman could do that would meet so completely with the approval of this Congress, in particular, and American people in general, than to add to the galaxy of businessmen now heading our National Defense Establishment the name of John Peurifoy.

Mr. Speaker, in conclusion, let me again quote but a brief paragraph from the editorial carried in the Washington Times-Herald:

President Truman is considering Assistant Secretary of State John E. Peurifoy as the new Secretary of the Army. Mr. Peurifoy entered Government service as a clerk in the State Department. His work in handling personnel and administration matters in that Department has won him rapid promotions. His talents have also been recognized and praised on Capitol Hill and in other agencies of the executive branches of the Government by Republicans and Democrats alike.

Tax Freedom

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 11 (legislative day of Monday, April 11), 1949

Mr. PEPPER. Mr. President, by request, I ask unanimous consent to have printed in the RECORD a statement on behalf of the Florida State Retailers Association, on the subject of Tax Freedom.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ORLANDO, FLA.—A new and jubilant national holiday to celebrate tax "freedom" was suggested here today. The date this year would be April 28.

Executive Director Dallas L. Hostetler, of the Florida State Retailers Association, who made the proposal, said that the date of the red letter liberation holiday would vary from year to year, "but without exception Americans would enjoy having it fall as early in the season as possible."

On April 28 for the first time in 1949, the American people can begin working for themselves. All they will have earned from January 1 up to that day will go to Government, in taxes. "This is merely another way of saying that our over-all tax load, Federal, State, and local, has increased to the point where it now takes 32 cents out of every dollar we make," Hostetler pointed out.

"Out of each hour we work, the pay for 19 minutes is taken by Government, in direct and hidden imposts. The situation calls to mind the concession to freedom granted Prussian serfs centuries ago. Their masters allowed them to work for themselves 2 days out of each week."

Quoting from reliable tax information sources, the tax liberation holiday advocate pointed out that there are today, 189 taxes on a suit of clothes, 154 taxes on a bar of soap, 201 taxes on a gallon of gasoline, 205 taxes on a new car, 127 taxes on a roast of beef, 502 taxes on a pair of shoes, and 53 taxes on a loaf of bread. Of the 32 cents of each dollar which go for taxes, 11 cents are out in the open while 21 cents are undercover or hidden taxes. Some 155,000 tax authorities in the United States today are permitted by law to levy more than 500 different kinds of taxes.

Hostetler's State association of Florida merchants is waging a vigorous campaign in behalf of "good government at less cost." "We have the conviction that tax spenders should effect millions of dollars in tax savings through efficiencies and economies in governmental operation before seeking new means of increasing our already over-burdening tax load. When the American people must devote nearly one-third of their working time to supporting their various governments, they are at the saturation point so far as the tax load is concerned," Hostetler concluded.

Explanation of Columbia Valley Administration

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. JACKSON of Washington. Mr. Speaker, before I introduced legislation for a Columbia Valley Administration, there was a great deal of lively discussion about what CVA was going to be. It was said that CVA would be a "superstate," a vehicle for socialism; that CVA would be "authoritarian," and would deprive the individual of certain rights. It was said that CVA would invade the field of private business, and destroy free enterprise. It was said that CVA would mean the end of "home rule"—that the development of the resources of the Northwest would be taken out of the hands of the citizens of the region, to be handled by outsiders. CVA, it was said, would be an invasion of States' rights.

Because my present bill H. R. 4287, had not been introduced, all this had to be mere speculation. Since I placed my bill in the hopper, there has been too little explanation of why CVA is necessary, and what it is supposed to accomplish. The time has come to replace speculation with informed discussion.

The creation of a Columbia Valley Administration has two major purposes: first, to reorganize and consolidate the existing Federal agencies which are planning and carrying out the development of the Northwest's resources. In place of 20 agencies, each making its own plans, there will be but 1. Second, to bring the Government to the region, instead of taking the region's problems to Washington to be decided. These two purposes deserve more careful examination.

First, let us look at the first purpose—consolidation. It cannot be too heavily emphasized that the CVA bill is not designed to create new authority or new bureaucracy. The explicit purpose of the bill is "To reorganize and consolidate certain Federal functions and thereby secure their more effective administration." At present there are nearly 20 Federal agencies carrying on resource activities in the Northwest. Each one makes its own plans. Each one's budget is reviewed by the Bureau of the Budget, and often by the Congress, without reference to the plans and budgets of other agencies. The same thing happens in all our great river basins without coordinated planning. In the Missouri Basin last year, this resulted in the Corps of Army Engineers and the Bureau of Reclamation, who both claim they are authorized to build the Jamestown Dam, both getting $40,000 to do the same preconstruction study for the same dam at the same time. In the Columbia Basin, both of those agencies have gone to the expense of drawing plans for the same dam—Hell's Canyon. The cost to the Government of each set of plans was $250,000. Both the Department of the Interior and the Department of Agriculture carry on forest management on different lands belonging to the public. If the Northwest's great timber resource is to be constantly renewed—which it can be—a single plan for all Federal forests is essential.

The Hoover Commission, which was set up to streamline the organization of the Government, outlines the conflicts and overlaps very closely. The Commission report states:

Division of responsibility means duplication of surveys and investigations. Elaborate basin-wide surveys and plans have been made in several instances by the Corps of Engineers and the Bureau of Reclamation, in addition to the comprehensive basin surveys made by the Federal Power Commission and the watershed surveys of the Department of Agriculture * * *.

Jurisdictional jealousy is inevitable, and costly as well, so long as such organization separation is practiced. Friction therefrom operates as a perpetual drag on efficiency and as a stimulator of group and sectional competition for favor and undue influence. Without more inclusive operating units, plans are made which see only parts of the

whole situation, and wasteful expenditure of funds result, while the total objectives which might have been obtained is only partly realized * * *.

The Commission goes on to say that past attempts to secure coordination through interdepartmental committees have failed "because the dominant members, the Corps and and the Bureau, have been unwilling to permit interagency committees to settle their differences."

To those who cry for "better government, not bigger government," CVA is the answer.

The consolidation of Federal agencies is essential from another common sense point of view. Resource development is not a thing that can properly be broken up into separate pieces, because the pieces naturally belong together. President Truman pointed this out very clearly in his message to Congress on the CVA. It is senseless, he said, to spend millions of dollars to build dams for flood control if there is no over-all plan, at the same time, to control the run-off through forest and range management. It is equally senseless, he went on, to spend millions of dollars to irrigate and reclaim farm land if we are not making the best effort we can to keep the farms from being washed into the rivers.

It took us a long time to realize that a dam is no longer exclusively a flood-control dam, or exclusively an irrigation dam, or one built just to create power. It took us even longer to see how, in most cases, one dam depends on the other; how, for example, water from Hungry Horse will firm up Grand Coulee power in low water periods. It is clear, now, that most dams serve all those purposes, and if they are to do that most effectively, all the dams on a river should be run as a system, not as individual projects. That way, one central manager of the system can take into consideration all the needs of the valley—flood control, irrigation, navigation, power generation.

The resources are one. It is only the Government that attempts to separate them.

How does my CVA bill accomplish this first purpose of consolidation? First, and most important, all of the activities in the Northwest of the Bureau of Reclamation, the Bonneville Power Administration, and the Corps of Army Engineers (except for channel and harbor improvement) will be carried on by CVA. This includes the planning, building, and operating of dams. It includes the transmission and marketing of hydroelectric power from Government-owned dams, now being carried on by the Bonneville Power Administration. This will eliminate the duplication in planning that I mentioned before, which is so costly to the Government. It will assure the dams being run as a system. It will mean the maximum development and generation of the region's hydroelectric power.

Second, the bill directs the CVA to make an over-all plan for the resource development of the region—including forest and range management, development and care of recreation areas, mining research, fish and wildlife conservation—all the activities which are now being planned separately. CVA will submit this over-all plan annually to the President and to the Congress, to guide them in directing the activities of the agencies that carry out the respective functions. For the first time, there will be a single Federal plan for the Northwest's resources. It will be up to the President and the Congress to see that this plan is put into effect.

Let us turn now to the second major purpose of the act—bringing Government to the people. The Tennessee Valley Authority has been described as "bringing a chunk of Washington to the Tennessee Valley." That is what we are trying to do with CVA. As things stand now, the work being done in the Northwest by the Federal Government is done by regional representatives who have to report to Washington. The final decisions are made 3,000 miles away from the region concerned. It is difficult for a citizen of the Northwest to make his voice heard. He either has to travel the 3,000 miles, or he has to write a letter to Washington, perhaps to someone who has not even seen the Northwest.

Those who speculated about what CVA was going to be, maintained that it would mean the end of home rule, an invasion of States' rights. Past experience does not support this kind of speculation. After 10 years of operation, the Tennessee Valley Authority—which lies in the heart of the section of America which is most vigorously for States' rights—brought this statement from the Governor of Alabama:

There is no question of the Federal agency coming in and riding roughshod over State and local agencies.

How has my CVA bill provided for home rule?

First, it requires that the headquarters of CVA will be in the region itself. CVA will be easily available to the people of the Northwest so that, if they want, they can come in and speak their minds instead of having to write their views. Decisions are made in the region. They do not have to be referred to Washington. In short, the citizens of the Northwest will be able to watch CVA, and CVA will be able to watch the region.

Second, it requires two of the three Directors to be residents of the region. Thus, they will know the Northwest and its people.

Third, the bill requires CVA to seek the advice, assistance, and participation of the people of the region and their State and local governments and organizations, public and private, to the fullest practicable extent in planning and carrying out its program. It requires CVA to set up advisory boards. The experience of TVA shows that these boards can be extremely helpful in bringing government closer to people. Any of these boards may include their comments and suggestions in the annual report of the CVA. Thus, the opinions of the people of the Northwest must find their official way to the President and the Congress in Washington, and throughout the Nation.

Fourth, the CVA will be required to respect the water rights and water-rights laws of the several States.

I have received letters which expressed concern over the fact that, through these liberal home-rule provisions, the Congress would be relinquishing its control over CVA. May I emphasize that CVA will, like its counterpart in the Tennessee Valley, continue to get its money through Congress. It will continue to report to the President and the Congress.

There has been concern that CVA would invade the field of private business and destroy free enterprise. The facts and the evidence do not warrant this concern.

The facts are to be found in the bill itself. Nowhere in the bill is there any provision authorizing CVA to carry on activities that would invade the field of private enterprise. Its authority in the field of power generation and transmission will be no greater than that of the Bonneville Power Administration. Rather than competing with business, CVA is authorized to carry out certain functions in cooperation with local organizations—both public and private. It is required to carry out as much of its construction work as possible through contracts with private businesses. It is authorized to carry on research and experiments that will open up new fields for private enterprise.

The evidence is to be found in the past experience of the TVA. In the Tennessee Valley, TVA—which has much more extensive authority than CVA will have—is acclaimed by businessmen throughout the region. Not only has TVA created the economic conditions which have made business expansion possible, it has also acted as a clearing-house for the information needed for business ventures, and has aided business in experiments and demonstrations throughout the valley.

Thus, I believe the facts and the evidence paint CVA not as the competitor, but as the friend of business.

The opponents of CVA have attacked the personnel provisions of the bill as being unfriendly to labor. These provisions are more liberal than those contained in the TVA and Bonneville Power Administration laws, both of which were considered in drafting the CVA bill. Under those two laws, the labor-management relations have been excellent. The Government workers in the Bonneville Power Administration are enthusiastically for CVA.

Under my bill, employees of CVA will have job security and transfer privileges similar to regular civil-service personnel; they will be covered by injured workmen's compensation laws, Federal social security laws and State unemployment compensation laws; they will be able to bargain collectively with CVA. Surely these provisions are not unfriendly to labor.

I have summarized here the major elements of the CVA bill which I have introduced, and explained why the provisions have been included in the bill. But it may still be asked why the Northwest needs the CVA as a whole. Here is why.

The Pacific Northwest is one of the fastest growing regions in the Nation. Since 1940 its population has jumped 37

percent. Agricultural production is up by 25 percent, and income has doubled. But the flow of people has been greater than the capacity of the region to find jobs for them; and the flow has not stopped. Unemployment in the Northwest is twice the Nation-wide average.

At present, the Northwest extracts its resources and exports them in their raw form. Citizens of the Northwest find themselves paying for pots and pans manufactured in the Middle West from aluminum that originally came from the Northwest. There are jobs and income in the industry that the Northwest can and must attract.

Two things can help the Northwest build up its industry. One of them is low-cost power. The great start that has been made, with Bonneville and Grand Coulee Dams, have already shown what power can do for industry. Evidence is also to be found in the growth of industry in the Tennessee Valley, since TVA was started.

The second thing is research and experimentation. The abundant hydroelectric power can readily be applied to chemical and metallurgical processes, for example. The Northwest could become the greatest producer of phosphate fertilizer in the Nation, if techniques for its production are perfected. CVA will be able to undertake and coordinate research in these fields.

The problem of the Northwest is not a lack of resources. The region has the greatest undeveloped power potential in the Nation—yet not enough power to give its industries. It has 40 percent of the Nation's saw timber and 60 percent of our known phosphate reserves.

What is needed is not merely development of these resources, but orderly and balanced development. That is what I propose we are giving the Northwest in a Columbia Valley Administration. To be against CVA is to be against the fullest development of the Northwest.

The Facts About the Wood Bill

EXTENSION OF REMARKS

OF

HON. RICHARD M. NIXON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. NIXON. Mr. Speaker, 1 week ago today the House voted to recommit the Wood bill to the Committee on Education and Labor. Since that action was taken, we have witnessed a deliberate campaign of distortion and misinformation against the provisions of that bill. Apparently because they realize that the Wood bill as amended by the House met a great majority of union labor's objections to the Taft-Hartley Act, administration spokesmen and certain national union leaders have been frantically resorting to the typical name-calling tactics of those who do not have facts to back up their charges. They have said that the Wood bill is worse than Taft-Hartley, or the same as Taft-Hartley. They have attempted to dub it "the Wood slave bill." And they are using the hackneyed device of attempting to divert attention from the merits of the bill's provisions, by the use of baseless innuendoes as to where and by whom the bill was written.

Having failed in their cynical attempts to defeat the prolabor amendments to the bill which were adopted on the floor of the House, they are now trying to keep the truth about those amendments and their effect from rank and file union members and the public.

Under the circumstances, I believe a summary of the major changes in existing law which would have been made by the Wood bill will serve to clear the air and to establish for the record exactly what the issues were when the vote on the bill was taken in the House.

It should be stated at the outset that the Wood bill retained those features of Taft-Hartley which have proved fair and equitable to both unions and management and necessary for the protection of the public. Among the more important provisions retained were the following:

The power of the President to enjoin strikes which threatened the national health and safety.

The ban on jurisdictional strikes, unjustifiable secondary boycotts, and featherbedding.

The non-Communist affidavit requirement.

The prohibition of strikes by Government employees.

The provision that both unions and management shall be responsible for their contracts.

The provision against excessive union initiation fees.

The requirement that unions make financial reports to their members.

The prohibition against mass picketing and violence.

The provision for proper administration of union welfare funds.

The provision for a separate and independent Federal conciliation service.

But in addition to retaining those provisions of the Taft-Hartley Act which had proved themselves in practice, the Wood bill as amended made 19 significant changes in the existing law. Not one of those changes tightened the existing law. Each of the amendments adopted was written into the bill in response to specific opposition by union leaders to certain provisions, supported by facts.

Among the more important changes in the existing law, which were incorporated in the Wood bill, are the following:

First. Union shop election requirement eliminated: The Taft-Hartley Act provided that before a union-shop contract could be negotiated, a majority of the employees in a plant were required to vote in favor of it. During the debate on the Wood bill, the majority leader, Mr. McCORMACK, specifically objected to this provision of the law. The Wood bill eliminated this requirement and had it been enacted into law, unions would have been able to bargain with management for union-shop contracts without first having received the approval of a majority of the employees in the plant.

Second. Union hiring hall recognized: Considerable criticism of the existing law has developed on the ground that the traditional union hiring halls under which employers gave unions the opportunity to fill requirements for new employees could no longer operate. In order to meet this objection, the Wood bill, as perfected by an amendment by the gentleman from Kentucky [Mr. MORTON] specifically provides that it shall not be an unfair labor practice for an employer to submit his requirements for new employees to a union and to give the union a reasonable opportunity to fill those requirements.

Third. Increased authority for unions to discipline their members: Under the existing law, an employer with a union-shop contract could be required to discharge an employee who did not belong to the union only if the union had expelled him because of nonpayment of dues. Union leaders have objected to this provision on the ground that it did not give them sufficient disciplinary authority over their members. The Wood bill, as perfected by the amendment of the gentleman from Connecticut [Mr. LODGE] adds five additional grounds under which a member expelled from the union must also be discharged from his job where a union-shop contract is in effect. These grounds are: (a) Engaging in wildcat strikes; (b) engaging in Communist activities; (c) disclosing confidential information of the union; (d) conviction of a felony; (e) engaging in any activity which subjects the union to civil fines or criminal penalties.

Fourth. Relaxing of secondary boycott ban: The existing law prohibits all secondary boycotts. Union leaders have objected that this provision is too broad in that it illegalizes struck-work clauses in contracts and indirectly requires union members to act as strike breakers. This objection was met in the Wood bill, as perfected by an amendment by the gentleman from Kentucky [Mr. MORTON] through a provision which specifically legalizes struck-work clauses in collective-bargaining contracts and allows employees to refuse to work on orders being performed for the account of an employer whose own employees are engaged in a lawful strike.

Fifth. Anti-Communist affidavit required of employers: Union leaders have objected to the anti-Communist affidavit of the Taft-Hartley Act on the ground that since it applied only to union officers, the implication was that all union officers were potentially disloyal. The Wood bill meets this objection by extending the requirement to representatives of employers as well as representatives of unions.

Sixth. Economic strikers given right to vote in representation elections: One of the major objections which union leaders made to the Taft-Hartley Act is that it denied the right to vote in representation elections to economic strikers. It has been pointed out that this section during a period of depression and unemployment might be used by employers as a strike-breaking device. The employer could theoretically replace the men who were out on strike with new

employees and manipulate an election so that the new employees would vote out the union since the employees on strike would not be entitled to vote under the law. The Wood bill as perfected by an amendment by the gentleman from Michigan [Mr. FORD] meets this objection by providing that economic strikers shall be permitted to vote in representation elections for a period of 6 months after they have been replaced by other employees.

Seventh. Restricts use of injunction in labor disputes: There has been considerable misunderstanding and misrepresentation concerning the possible use of injunctions under the Taft-Hartley Act. That act, as does the Norris-LaGuardia Act, denies the use of injunctions in labor disputes to private employers. Only Government officials are given the power to obtain injunctions and they can do so only in cases involving national emergency strikes, jurisdictional strikes, secondary boycotts, and unfair labor practices. The Taft-Hartley Act does not authorize the use of injunctions against economic strikes unless a national emergency is involved.

Union leaders have particularly objected to the fact that the Taft-Hartley Act made the use of injunctions mandatory against unions in secondary boycott cases and discretionary in all cases against employers. The Wood bill, as perfected by an amendment by the gentleman from Texas [Mr. BENTSEN] meets this objection by making the use of injunctions against both employers and unions discretionary rather than mandatory and by providing that injunctions can be issued only after charges have been investigated and a complaint filed.

Eighth. Free-speech section clarified: The Taft-Hartley Act guaranteed to employers the right of free speech and provided further that no statement by an employer could be introduced as evidence in unfair labor practice cases unless the statement itself was coercive. Union leaders have objected to this provision and have contended that statements by employers should be admitted in evidence where, under all the circumstances, those statements could be found to be coercive. The Wood bill, as perfected by an amendment by the gentleman from Connecticut [Mr. LODGE] meets this objection by providing that statements by employers shall be admissible in evidence before the Board in all cases where such statements would be admissible in evidence in a court of law.

Ninth. Possibility of union liability for unauthorized acts of members removed: Under the Taft-Hartley Act, it has been claimed that a union could theoretically be held liable for the acts of its members even where those actions were completely unauthorized. The Wood bill, as perfected by an amendment by the gentleman from New York [Mr. KEATING] removes this possibility by providing that in no event shall the union be held liable for the actions of its members solely on the basis of union membership alone.

Tenth. State laws legalizing closed shop recognized: The Taft-Hartley Act recognized the validity of State laws banning the closed shop. The Wood bill as perfected by the amendment of the gentleman from Arkansas [Mr. HAYS], recognizes the reverse of this proposition and provides that where a State law specifically legalizes the closed shop, that law shall supersede the Federal law in that State.

Among other amendments to the existing law which the Wood bill contains are the following: The elimination of the requirement that employees vote on management's last offer in national emergency strikes; clarification of the existing law so that reopening provisions in contracts are recognized; allowing unions 120 days to file financial reports; clarification of the section on jurisdictional strikes, so as to expedite settlement of disputes; recognition of the validity of closed-shop contracts which are in effect at the time the law is passed.

Mr. Speaker, an objective study of the foregoing amendments will clearly establish that the Wood bill as amended constituted an honest attempt to meet the legitimate objections which had been made to the Taft-Hartley Act and to write a fair and equitable piece of labor legislation. This analysis also proves that the name-calling attacks which have been made on the Wood bill are completely unwarranted and unjustified.

There is no question but that through adoption of the Wood bill some needed and salutary changes in the existing law would have been made, changes which have been requested by, and would be in the interests of organized labor. A vote against the Wood bill was a vote to delay action on these needed changes. A vote for the Wood bill was a vote to make those changes at the earliest possible moment. Responsibility for the delay in making the changes must be assumed by those administration spokesmen and labor leaders who apparently are more interested in obtaining political advantage than in writing a law which is in the interests of all parties concerned and particularly in the interests of organized labor. The changes which the Wood bill would have made in the existing law are necessary and should be written into law at the earliest possible date. I trust that the administration leaders will expedite the hearings on the preparation of a new labor bill so that these needed changes can be made as quickly as possible. The responsibility for action rests squarely upon them.

Resolution Adopted by Typographical Union, No. 51, Lawrence, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include copy of resolution I received from the Lawrence Typographical Union, No. 51, Lawrence, Mass., commending the President of the United States.

LAWRENCE TYPOGRAPHICAL UNION,
Lawrence, Mass., May 9, 1949.

Hon. THOMAS LANE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN LANE: Following is a copy of a resolution drawn up by our local union at a regular meeting held Saturday, May 7, 1949:

"Whereas in a recent public address Harry S. Truman, President of the United States, pledged himself anew to carry out the legislative program he unequivocally promised labor and the people of the Nation, during the campaign that resulted in his election; and

"Whereas the principal item on the program is the early and complete repeal of the Taft-Hartley slave law and restoration of the Wagner Act, thereby rehabilitating organized labor in the United States and freeing it from rule by intimidation and injunction; and

"Whereas in his address, the President appealed directly for the cooperation and support of the citizens in his effort to 'provide a better life for our people' in opposition to the special interests which 'twist and misrepresent the measures the people voted for': Now, therefore, be it

"*Resolved*, That Lawrence Typographical Union, No. 51, in regular meeting assembled, applauds the President's honest, forthright and realistic appeal; that we offer our fullest support and confidence, and we reinforce this pledge of support to our President in his defiance of privilege on behalf of the people.

Respectfully,

ROBERT L. YOUNG,
Secretary-Treasurer.

American Jewish League Against Communism

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. NIXON. Mr. Speaker, on Monday, May 2, I had the pleasure of addressing the anniversary luncheon of the American Jewish League Against Communism in New York City. This national organization, in its 1 year of existence, has already had great success in emphasizing the opposition of Americans of Jewish faith to communism and in fostering the unity of church and synagogue in the fight against the Stalinist fifth column. It has offices at 220 West Forty-second Street, New York. Eugene Lyons, Alfred Kohlberg, George Sokolsky, Benjamin Gitlow, Isaac Don Levine, Rabbi Benjamin Shultz, Morrie Ryskind, and our colleague from New York, Mr. MULTER, are among the members of this organization who have been leading the fight in the United States against the Communist conspiracy.

At this luncheon, I was tremendously impressed with the address of Brig. Gen.

Julius Klein, past national commander of the Jewish War Veterans, who has rendered outstanding service to his country and his coreligionists, and who is a director of the American Jewish League Against Communism. His talk outlined the development of the idea of freedom of the individual soul, and stressed that Judaism cannot compromise with either communism or fascism.

Under leave to extend my remarks, I am including a copy of his address in the RECORD:

ADDRESS BY GEN. JULIUS KLEIN

There are no Jews who are Communists! A Communist cannot be a Jew. Judaism is the enemy of communism.

We are living witnesses here to the truth that communism is the opposite of freedom, and that Judaism proclaims freedom. In our Jewish Bible, there is a verse which was inscribed on the American Liberty Bell and which may still be viewed in Philadelphia: "Proclaim liberty throughout the land, unto all the inhabitants thereof!" And our great teacher Moses, demanded of Pharaoh, "Let my people go!" He was the first prophet of freedom.

Very recently, we finished celebrating Passover. We Jews ate matzohs, or unleavened bread. You recall when the Jews freed themselves and fled from slavery in ancient Egypt, there wasn't time for their bread cakes to rise. And so we, for 4,000 years, have been eating unleavened bread on Passover, just to remember how they felt—just to get a little of that thrill of freedom, after being a slave. What a wise thing that is! We take freedom for granted. It is given us by the grace of God. Freedom, won with difficulty, is a cherished gift.

Under communism, a man is just a clod and part of a big instrument, the State. He is hardly a human being. Judaism, which is opposed to communism, teaches the importance of the individual soul and individual freedom.

Hitler, only a short while ago, threatened the world with conquest. He would have made all of us slaves—Christians and Jews. But there is another, and greater, menace. I say greater—because too many intelligent people do not recognize it, as they recognized Hitler's menace. You have fascism under a different name. For Hitler—substitute Stalin. For Nazis—substitute Communists. For the German Government—substitute the Russian Government. For anti-Semitism—substitute anti-Christianity and anti-Jewishness.

For international communism, or Stalinism, is just as much a menace to America and to the Jewish people as Hitlerism was. It means slavery. It means the reverse of freedom. Authorities agree that 17,000,000 persons are behind barbed wire in Soviet Russia, working themselves to death under the shadow of bayonets. Many of them are Jews. Their crime was—simply acting like men, speaking their minds, and believing in democracy.

As for the Jews, they are the first to suffer under the Russian economic system. The flood of Jews trying to escape from eastern Europe attests to the confiscation of large and small business, and to the poverty in which these Jews find themselves.

Among the DP's coming to America, are Jews, practically all of whom are vigorously anti-Communist. These are good anti-Communist material for America, because they are fleeing from Communist eastern Europe—from Poland, Hungary, Czechoslovakia, Bulgaria—governments they hate because these regimes are Communists and therefore anti-Jewish and antiliberty. America can be well served by the Jewish DP's today, because these know communism and they are fleeing from it. They despise it.

There can be no compromise with communism for a Jew. His religion and his own personal interest are not consistent with that compromise. A Jew who shows the slightest tolerance of communism is not really a Jew, and is as unfaithful to his tradition as if he tolerated nazism and fascism.

Confirmed anti-Semites believe that all Communists are Jews. But, as we have seen, Jews cannot be Communists.

Still, the lie about Jewish communism should be debunked. It is too widespread and too dangerous. The American Jewish League Against Communism represents the majority opinion of the Jewish people on the subject of communism.

As I look about me on this dais, I see some of the leaders of the vigorous anti-Communist movement of the United States. Alfred Kohlberg, George Sokolsky, Benjamin Gitlow, Isaac Don Levine, Eugene Lyons, as well as all the others, are proud to be both Americans and Jews. The Chicago anti-Semite, Mrs. Elizabeth Dilling, claims that the anti-Communist movement in this country is largely in Jewish hands. We are complimented by her complaint. She thinks it is a plot—we are taking over anticommunism. But if we have succeeded in being so prominent in the anti-Communist movement, we are willing to withstand the attacks of the Mrs. Dillings. At this time we also salute Bernard Baruch; David Dubinsky, great anti-Communist labor leader; Abraham Cahan, editor of the Jewish Daily Forward; and countless others. They are true to their Jewish tradition, because they hate communism.

We are, naturally, all proud of Israel, world's newest state. It is said that Russia supported Israel in the United Nations. But at the height of Russia's so-called support of Israel, zionism was a crime in Russia. It still is a crime. Russia never denied these facts because these days there are too many witnesses, too many Jews who have somehow escaped from their prisons, and who have personal knowledge of Jewish sufferings.

Now Russia is turning against zionism, because it will tolerate no movement except communism, no thoughts except communistic thoughts, no nationalism except Russian nationalism, and no freedom except freedom for communism.

It is significant that a few months ago the Communist Party in Israel suffered an overwhelming defeat. The Israeli people will have none of this enslaving Stalinist doctrine. Israel, being truly Jewish in spirit, will never go Communist.

And if Israel ever does go Communist, it will not be Israel.

Americans of Jewish faith will fight for America when necessary, as they always have.

It seems to me that the chief task of the American Jewish League Against Communism today, and of the corresponding Christian organizations, is to educate our so-called intellectuals, some of whom, terribly confused, are infecting high circles with anti-American propaganda. They represent a tremendous victory for Josef Stalin in these United States.

But, worst of all, they are seeking to corrupt our youth. We must resell America to our youth. We must reveal to them the horrible truth about communism, and the advantages of our way of life—the way of freedom.

I salute this first anniversary of the American Jewish League Against Communism. In the name of Judaism, and true Americanism, and of liberty and peace for all men, I bespeak for our organization early fulfillment of all its ideals.

The President's Message to the National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 11 (legislative day of Monday, April 11), 1949

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the RECORD a message which the President of the United States sent to the National Rivers and Harbors Congress when it was assembled in convention in Washington on March 31, 1949.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
Washington, March 31, 1949.

To the National Rivers and Harbors Congress:

At no time in our history has it ever been more important for the United States to develop and conserve its natural resources. The entire democratic world has rallied to our leadership in its quest for a durable peace in the years which have followed World War II. Despite the fact that we have not sought this position of leadership, we must face this responsibility squarely and carry it through. To achieve the task which history has laid upon our shoulders we must make certain that our own economy is as strong and as healthy as we can make it.

You of the National Rivers and Harbors Congress are engaged in an important phase of the work which must be done to keep our national potential operating at its highest degree of efficiency. For almost half a century your organization has guided the development of our water and land resources, aiding in the vital work of flood prevention, irrigation, reforestation, and the creation of electric power at ever lower costs.

I know that your efforts now and in the years to come will continue to be progressive and effective, and that your true reward for this work will rest in the knowledge that it has aided your Nation.

HARRY S. TRUMAN.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint resolution passed recently by the Legislature of Minnesota:

Joint resolution memorializing the Congress of the United States to admit the Territories of Alaska and Hawaii to statehood

Whereas the Territories of Alaska and Hawaii have applied to be admitted to statehood; and

Whereas these Territories have long been valued possessions of these United States, and the people thereof in times of both peace and war have demonstrated their loyalty,

their spirit of self-sacrifice, their trustworthiness, and their abilities to be good citizens; and

Whereas the Territories of Alaska and Hawaii are important outposts in the preservation of world peace and in the defense of the shores of the continental limits of these United States, and their admittance to statehood will strengthen the position of these territories in the defense of our shores and in the maintenance of world peace; and

Whereas the peoples of these Territories are capable of self-government and are desirous of joining the family of States comprising this American Republic: Now, therefore, be it

Resolved by the Legislature of the State of Minnesota in regular session assembled, That the Congress of the United States is respectfully urged to admit the Territories of Alaska and Hawaii to statehood and that the necessary enabling legislation therefor be enacted during the current session of Congress; be it further

Resolved, That the secretary of state of the State of Minnesota is instructed to transmit copies of this resolution to the President of the United States, the President of the Senate and the Speaker of the House of Representatives of the United States, and to each Member of Congress from the State of Minnesota.

JOHN Q. HARTLE,
Speaker of the House of Representatives.

C. ELMER ANDERSON,
President of the Senate.

Adopted by house of representatives, the 18th day of April 1949.

G. H. LEAHY,
Chief Clerk, House of Representatives.

Adopted by senate, 19th day of April 1949.

H. G. SORREY,
Secretary of the Senate.

Approved April 21, 1949.

LUTHER W. YOUNGDAHL,
Governor of the State of Minnesota.

Filed April 21, 1949.

MIKE HOLM,
Secretary of the State of Minnesota.

Russian Imperialism in China

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Wednesday, May 11 (legislative day of Monday, April 11), 1949

Mr. O'CONOR. Mr. President, the senior Senator from Nevada [Mr. McCARRAN], who has shown great leadership against Russian imperialism in China, has made a most interesting contribution to this timely question in an article appearing in the current issue of National Republic. Because of the scholarly treatment of this issue by the senior Senator from Nevada, and because a reading of the article will prove most beneficial to Members of Congress, I ask unanimous consent that it be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RUSSIAN IMPERIALISM IN CHINA

(By Hon. PATRICK A. MCCARRAN, United States Senator from Nevada)

It is a tragic coincidence that the political renaissance of China began during the great age of imperialism. While the Chinese people were beginning to organize against their Manchu emperors, the nations of Europe and Asia availed themselves of the internal disunity and decay to undertake imperialist adventures which made the rebirth of the nation virtually impossible.

By far the most persistent and successful aggressor has been Russia. Long after the other western powers surrendered their principal gains in China and their multitude of special privileges, the Soviet Union continues to make war upon the Chinese people.

The current Communist drive to subjugate the 460,000,000 Chinese has its roots in three centuries of Russian expansionism, both in Europe and Asia. Late in the fifteenth century the czars launched an eastward movement that extended their holdings to the Pacific by 1636. As the Muscovite approached the Pacific he found the fertile regions of the Amur River a tempting prize. This area was part of the domain of the Manchu rulers who conquered China in 1644. As long as the Chinese Empire remained strong, the czarist adventurers were kept in check. It was not until the period of Manchu disintegration in the nineteenth century that Russia could seize the coveted lands.

As early as 1643, a Cossack exploring expedition wandered down the Amur River, all the way to the Okhotsk Sea. The governor of Yakutsk was convinced by the survey that the entire region could be annexed with a few hundred soldiers. In 1650 an expeditionary force drove out the Solon tribes from the upper section of the Amur and its tributaries, and the fortress of Albazin was built on the north bank during the following year.

A force of 2,000 sent against the Russians was defeated, and the Manchus, still occupied with the consolidation of China, temporarily abandoned further attempts to eradicate what was obviously considered a minor transgression. The invaders then proceeded to secure their hold on the Amur. Another strong fortress was built at the junction of the Nercha and Shilka Rivers (Nerchinsk) and became the seat of the governor in place of Yeniseisk. Russian progress was halted in 1654 when a plundering expedition led by Governor Stepano of Albazin suffered defeat on the Sungari River. A second try 2 years later was also crushed and Stepano lost his life.

The situation remained stabilized for 30 years, during which China and Russia made some attempts at establishing diplomatic and commercial relations. No concrete settlement was reached, partly because the parties did not understand each other, nor were the Manchus yet willing to look upon foreigners as anything but tribute-bearing inferiors.

K'ang Hsi, the learned second Manchu Emperor (1662–1723), turned his attention to the Russian salient established in his lands. During the first year of his reign he sent a scouting party across the Amur to determine the strength of Albazin. The following year warfare developed and a body of Cossack troops was captured. Demands were then made on Albazin to surrender, but these were refused. The Emperor sent an expeditionary force of 10,000 men and 200 guns to take the Russian stronghold. A fleet of 100 war junks with 5,000 men was ordered down the Sungari River.

The Russian garrison of 450 was quickly crushed by a bombardment which killed 100 men. Commander Tolbusin escaped to Nerchinsk with a handful of his garrison. The fortress was completely razed by the Chinese, and Russian prisoners were taken to Peking. They were later given the right to return to Russia but refused to do so, settling instead in a quarter of the Chinese capital allotted to them. They were assimilated by the native population, and some of their descendants can still be identified.

In 1686, 100 Cossacks tried to retake the site of Albazin. Attacked by 8,000 Manchu troops with 400 guns, the Russians were able to hold out for 3 years in entrenchments, although their number was reduced by enemy fire and disease.

K'ang Hsi was greatly concerned over the turbulent relations with Russia. A man of great character and ability, he sought to bring peace and prosperity to all his people. He was more interested in advancing the agriculture of China than in pursuing the useless wars with his northern neighbor. The Emperor set aside his pride and made friendly overtures to bumptious Czar Peter I (the Great). A meeting of emissaries finally took place at Nerchinsk in 1689 and a treaty was concluded through the mediation of 2 Jesuit missionaries.

The Nerchinsk pact required the evacuation of Albazin and fixed the border between China and Russia along the Hsing An Range and the Argun River. It provided, however, for the establishment of commercial relations between the 2 countries.

The principal significance of the treaty is that it was the first agreement with a European power and was the basis of Sino-Russian relations for 170 years, with only slight modifications. It was a forerunner of the extraterritorial agreements signed with western powers in recent times by providing that nationals of one country who committed crimes in the territory of the other would be sent home for punishment. It is not surprising that K'ang Hsi should have agreed to these terms. He was, after all, a foreigner in China himself, and during the early decades of Manchu rule two systems of law were administered in the country; the traditional Chinese law for the natives and Manchu law for the conquerors.

To a large extent Russian violations of Chinese territory had been the work of freebooters, adventurers, and bands of criminals. They were not the official troops of the Czar, although they had his blessing and encouragement, and often the outright help of the Siberian governor. These transgressions continued on a reduced scale, but for more than 150 years there was no serious clash.

Peter looked toward Europe. He and his successors organized Russian diplomacy and military strength for a march westward, with conquest of the Balkans, the Baltic, and the Black Sea area their principal objectives. It was not until these expansionist dreams were blocked by the western powers that the czars concentrated their major efforts in the East.

By that time China was no longer a strong nation. Politically, economically, and militarily, the once mighty empire was on the European level of the fifteenth century. The firm grip of the Manchus had relaxed and rotted away. France and Britain in their global imperialism had already forced their way into China, having humbled the Emperor in military conflict. The so-called opium war with Britain (1840–42) had demonstrated to the world the impotence of China and fired the starting gun for an imperialist race which continues to this day.

The new Russian drive on Chinese territory was initiated under the management of Muraviev, who was made East Siberian governor in 1847. The capable czarist proconsul—who was rewarded for his work by the title "Count of Amur"—opened his campaign by ordering thorough exploration of the Okhotsk coast and the Amur estuary. He fortified his position by building a number of strong points in his domain, among them Nikolaevsk (1850), which was the strongest Russian naval base in the Pacific until the rise of Vladivostok. The governor began the Russian infiltration of Sakhalien Island, then held by the Chinese.

In 1854, Muraviev descended the Amur with 1,000 men to study the military strength of the Manchu garrisons. Convinced of their weakness, he laid plans for extending Russian possessions.

While Muraviev was exploring the Far Eastern field, Nicholas I was being dissuaded from further Balkan adventures by the victorious allied armies of Britain, France, and Sardinia in the disastrous Crimean War of 1853–56. The czar died in 1855, heartbroken at the humiliation of his poorly organized army. His successor was the mystic and ambitious Alexander II.

The Crimean defeat, plus the strong opposition of Britain to Russian expansion in the Middle East, now made China the focal point of czarist foreign policy. After 1856, Russian ships regularly plied the lower Amur; Khabarovsk and Blagoveschensk were founded. The protests of Peking against repeated violations of the treaty of Nerchinsk and its successors were ignored.

The progressive atrophy of Manchu rule was an open invitation to conquest. For several years, the emperor's military forces had been engaged with the nationalist Taiping rebellion. These popular nationalist uprisings lasted for 15 years (1847–62), laid 600 towns in ruins, and cost the lives of hundreds of thousands of Chinese.

At the same time, another conflict broke out with England. Chinese officials boarded a vessel flying the British flag in the Pearl River and carried off members of its crew. After refusal of the Chinese authorities to offer suitable apologies, the English seized the Canton forts and bombarded the city. War was declared in 1857, and Prime Minister Lord Palmerston invited America, Russia, and France to join. The United States and Russia refused, but France became a military ally in the war. After temporary diversion of the British forces by the Indian mutiny, the allied fleet bombarded Canton (December 28) and put a landing party ashore which seized the city.

With the southern metropolis in their hands, the allies again tried to open negotiations with the Chinese Government. In this endeavor they were joined by the American and Russian representatives. The four powers addressed similar notes to Peking. In reply, the foreign envoys were told to deal with lesser officials. This was rejected, and the allied forces moved northward. After additional demands made on the Chinese, a new set of plenipotentiaries was offered. Although they were acceptable to the American and Russian representatives, they did not satisfy the belligerent powers.

While the two neutrals entered into parleys, France and Britain reopened the war. The Taku forts were taken, and the allied forces drove to Tientsin. Here they were met by another set of Chinese envoys, this time clothed with adequate powers.

While China's difficulties with France and Britain were going on, Muraviev was using the situation to force significant territorial concessions in the North. To support their diplomatic pressure, the Russians dispatched a flotilla into the Gulf of Pechihli. A treaty was signed in May 1858 at Aigun by which the territory north of the Amur River—which had been expressly made a part of China by the treaty of Nerchinsk—was surrendered to Russia. The area east of the Ussuri and Amur Rivers was placed under joint administration, although in reality all power was exercised by the Russians. Russia secured the right of free navigation on the Amur, Ussuri, and Sungari.

On June 13, negotiations at Tientsin were also completed and a Russo-Chinese treaty was signed there, followed by pacts with the other three powers involved in the discussions. The four treaties were interlocked by most-favored-nation clauses and provided for the establishment of foreign missions in Peking. toleration of Christianity, payment of an indemnity, and liberalized commercial rights. For the first time, Russia was allowed to use the water route for shipping to China. The treaties were to be ratified within 1 year.

Russian Minister Ignatiev went to Peking and obtained the necessary confirmation without difficulty. The Emperor tried, however, to evade ratification of the pacts with the other three powers. An allied flotilla sent up the Peiho River to bring the Chinese ruler to heel was defeated by the rebuilt Taku forts.

In 1860, a force of 18,000 men landed at Peitang and, after beating the Chinese at Sinho, took the Taku forts from the rear. A truce party was arrested by the Chinese, tortured and imprisoned in Peking, where several members died. Additional engagements were then fought, and by October 13, 1860, Peking was in the hands of the allied soldiers, the first Europeans to seize the ancient capital.

During the allied advance, General Ignatiev played a crafty game of double-edged diplomacy. He offered the Manchu court Russian assistance in the form of guns and supplies. Later he injected himself into the peace talks as mediator, eventually persuading the foreigners to evacuate Peking. At the same time, however, the Russians threatened to send a flotilla into Peitang unless additional concessions were granted in repayment for Ignatiev's help.

Ignatiev's maneuver was one which Russia has employed with great success in her entire history. The Czars as well as the Bolshevik dictators have always posed behind the mask of protector of the weak and downtrodden. It is their hallmark of aggression, their keystone of imperialist strategy. In Europe, St. Petersburg was working desperately to convince the Balkan states under Turkish suzerainty, as well as the skeptical powers lurking around the future empire which the Czars had staked out for themselves, that Russia was the protector of the little nations and the patron of the Christian faith. Soviet propaganda today is an endless repetition of the same theme. Fortunately for Europe, the powers were seldom deceived by these pious utterances and were always quick to unite into a coalition against Balkan adventures, at least until the preliminary diplomatic skirmishes that led to World War I.

As soon as peace was restored in China, Ignatiev came to demand his reward. The treaty which he squeezed from the Emperor at Peking surrendered the jointly administered maritime province east of the Ussuri River to Russia. To assure proper tokens of gratitude from the Manchus, the Russians took the precaution of sending a naval squadron into Hai Shen Wei, 4 months before the treaty was signed in November 1860. This Chinese city was given the prophetic Russian name Vladivostok—Conqueror of the East.

Still the Czars' hunger was not satisfied. For years, their ambition had been to secure an ice-free port. Although Vladivostok was frozen for less time than the other Russian harbors, it was not wholly free of ice all year round. In Europe, the repeated sallies at the Balkan ports had been checked by the powers, so Czarist territorial marauding was directed again at China. Steps were taken to colonize the newly acquired lands and, by the end of the century, one-half million Russians were settled there. The Amur became a highway of communication, ships during the summer, sleds in winter.

In Peking, the Government looked with justifiable concern on the busy activity north of the Amur. To counteract these measures, Chinese colonists were sent into the area south of the river. Port Arthur was built up, arsenals were constructed at Kirin and Mukden, and the Amur garrisons were reinforced.

In 1866, a series of uprisings broke out among the Mohammedans of Sinkiang Province. These disturbances lasted 12 years and eventually spread to the general population, reaching into the heart of the Empire. With monotonous consistency, the Russians availed themselves of the preoccupation of the Manchus and, in 1871, their troops seized Kuldja and occupied the Ili district of Sinkiang. It was solemnly promised that the occupation was a temporary measure and that the territory would be restored whenever the sovereignty of Peking was reestablished and order could be maintained.

After the rebels were put down, an envoy was sent to Russia to remind the Czar of his promise. Negotiations resulted in the Treaty of Livadia (1879) which imposed terms on China showing clearly that Russia had no intentions of moving out of Sinkiang. The rich western area of Ili, including the fertile Tekes River Valley and the city of Yarkand, as well as the strategic passes of the Tienshan Range, were to be ceded to Russia. For return of a small portion of the Kuldja district, China was to pay an occupation indemnity of 5,000,000 rubles. Russia was granted the right to open a trade route from Hankow to Suchow and from there to Kuldja and Siberia, and to establish caravan stations in 36 frontier towns. Concessions were also wrung in Manchuria: Russia received the right to navigate the Sungari River.

The government refused to accept the Livadia settlement and preparations were made for war with Russia. After calmer deliberation, a second envoy was sent to negotiate a new pact. The result was the treaty of St. Petersburg (1881) which provided for the return of additional territory, including the mountain passes. Some of the other objectionable features of the earlier treaty were modified, but the indemnity was raised to 9,000,000.

During the Sinkiang affair, Russian ambition was again frustrated in Europe. Seizing upon the suppression by the Sultan of a minor rebellion in Bulgaria, Alexander II put on his mask of protector of the downtrodden and sent his troops into the Balkans. The armies of the disintegrating Ottoman empire were driven back and the Sultan required to make extensive concessions. The treaty of San Stefano (March 3, 1878) made Russia master of the Balkans and put the Dardanelles within her sphere of influence.

The western powers could not permit such a vast extension of Russian hegemony in eastern Europe. The sweeping gains made at San Stefano crystallized another coalition against Russia, and the czar was forced to renegotiate the pact at a congress of powers in Berlin. The new treaty (July 13, 1878) wiped out virtually everything Alexander had won from the Sultan. His dream of a Balkan empire was blotted out.

The humiliating defeat suffered by the czar on the diplomatic front, plus the inefficiency and corruption in the armed forces which were revealed during the Russo-Turkish war, greatly stimulated the growing dissatisfaction with the autocratic regime. Terrorist activity gripped Russia, and Alexander II himself was killed by a bomb in 1881.

Alexander III devoted his energies to suppressing discontent and to consolidating his empire. He undertook a program of Russification and economic reforms. The foreign adventures under his rule were confined largely to the Near and Middle East.

In 1894, Nicholas II came to the throne. This untalented remnant of the Romanov family was driven by an unbridled ambition which plunged both Europe and Asia into warfare. With the reign of Nicholas there also came a realignment of Far Eastern power politics. A new Asiatic nation rose to challenge the hitherto unchecked invasions of European states: Japan.

Where and When Is America To Start Resisting Communist Expansion in Asia?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Joseph Alsop from the New York Herald Tribune of April 15, 1949:

WHERE IS TAI WAN?

WASHINGTON.—For the vast majority of Americans who have not studied our strategic commitments and necessities, it would be natural to ask, "Where is Tai Wan?" The answer is that Tai Wan is the official name of Formosa, the big, rich, mountainous island off the China coast, that was handed over to the Chinese Government after the Japanese surrender.

These particular items from the geography schoolbooks, are relevant at the moment for a simple but rather disturbing reason. The Chinese Government that now holds Tai Wan is in the last stages of collapsing under the attack of its Communist rival. Yet the American strategists, planners, and policy-makers are unhappily convinced that Tai Wan must remain in friendly hands if our far-spread Pacific position is to be safeguarded.

On-the-spot reports from the Far East will shortly appear in this space. Meanwhile, the best Washington estimate of the Chinese situation is that the Communists will be able to gain control of all metropolitan China within about 18 months. They have three immediate objectives: First, to liquidate Generalissimo Chiang Kai-Shek's remaining armies, which now guard the approaches to Shanghai; second, to occupy the coast ports, and especially Shanghai and Canton; and third, to liquidate the Nationalist armies in northwest China, with headquarters at Sian on the Yellow River.

TO DEAL WITH WAR LORDS

Once these gains have been made, the rest will be easy for them. South China is still war-lord land. The Communist technique will undoubtedly be to make individual deals with the leading provincial magnates like Liu Wenhuei in Szechuan and Lu Han in Yunnan. When these men have formally recognized Communist predominance, they can be pinched off, one by one. The first of the war-lord provinces over which the Communist government will probably seek full authority is the great inland nation within a nation, Szechuan.

Eighteen months is the period given for the entire process, including the elimination of the last war lord. It is ridiculously optimistic to believe the Chinese Communists have not the resources to organize China, as some self-deluding persons, even among American policy makers, used to argue. After all, China has been organized by no less than eight imperial dynastics, since the first true Chinese empire was established by the Emperor Chin Shih Huang Ti. And the dynastic conquerors all possessed poorer resources, in transport, arms, and means of communication than do the Chinese Communists.

This result has, of course, always been contemplated by our China policy, which has consisted in doing nothing effective because no one quite knew what to do. Formosa, or Tai Wan, is the hitch, because the only strategic rationalization of our bankrupt China policy has been that we would guard our Pacific position from the islands.

The fact that this plan is economically, and, therefore, politically foredoomed to failure has been and is being ignored. But no one can ignore the fact that Tai Wan completes the island chain from Japan down through Okinawa. If Tai Wan goes to the Chinese Communists, and the Chinese Communists remain loyal to Moscow (as everyone must be prepared for them to do), our Pacific strategy will be down the drain. For our forward positions will be flanked.

FORMOSA SAFE FOR PRESENT

For the present, Hai Wan is safe. The governor is one of the ablest nationalist generals, Chen Cheng. Defense forces are being trained there by the American-associated Gen. Sun Li-jen, who led part of the army that liberated Burma. A grave problem exists because of the enormous influx of rich, useless refugees from the China coast. But this flood has been dammed and is being turned back by General Chen, in return for American promises of a large part of the ECA appropriation for Tai Wan. The Formosans, who are non-Chinese tribesmen, detest the Chinese occupation, and would actually prefer American rule. But perhaps the ECA money will keep them quiet.

The trouble, in short, is not now, but in the future, when the Chinese Communist Government will be ready to claim this off-shore province. If we recognize them as the legal successors to Chiang Kai-shek, their claim will be excellent, since Chiang's claim to Formosa was approved long ago. A slender legal loophole may exist, since Tai Wan was a former Japanese possession, and there has been no Japanese peace treaty.

Yet, the truth remains. Either we are going to have to behave in a hard, immoral manner, and keep Tai Wan in friendly hands, or we are going to go on prating the same virtuous generalities, see Tai Wan pass to the Communists, and find our Pacific position flanked. This is the sort of truth that is best recognized frankly and early.

In Picturesque West Virginia

EXTENSION OF REMARKS
OF
HON. JOHN KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. KEE. Mr. Speaker, under leave to extend my remarks, I present herewith an article prepared by the West Virginia Industrial and Publicity Commission, giving some details regarding one of the picturesque sections of the State. The facility with which motorists from all parts of the United States may visit these interesting and beautiful spots adds to the pleasure of visitors. The article is as follows:

Bluefield—sprawling at the base of East River Mountain and overflowing along intervening ridges in this city of coal and railroads—is the larger of two incorporated towns of the same name which are separated only by the West Virginia-Virginia boundary line.

The Bluefield twins owe their names to the abundance of bluegrass which grows throughout the area and to the vast fields of chicory which carpet the surrounding hillsides. Chicory is a native wildflower of bluish hue.

King Coal has been reigning in this half-mile-high city since the opening of the first mines of the rich Pocahontas coal field in 1883. Even as the first tons of black mineral were lifted from the earth, Bluefield began to grow. Railroad facilities were rapidly constructed to expedite handling of the State's most abundant and valuable natural resource. Today the glistening steel tracks of two great railway companies, with shops, sidings, and yards in Bluefield, are aimed at the manufacturing centers of the Nation. * * *

As a single index to Bluefield's future business prospects, the Norfolk & Western Railroad has just completed a modern five-story $1,000,000 office building. The same company also plans to spend $13,000,000 solely for the improvement of an important tunnel a few miles west of the city. Another recent addition to Bluefield's skyline is the municipally operated 800-car parking building.

A progressive and hard working chamber of commerce has promoted Bluefield as "Nature's air-conditioned city." Owing to the high altitude, the summer temperature seldom reaches 90 degrees. Occasionally it does, however, and then the chamber of commerce is obliged to serve free lemonade on downtown streets.

A few miles northwest of the city, on U. S. Route 52, stands a towering example of nature's handiwork. Here time and the weather have worked together to produce Pinnacle Rock. A huge mass of eroded stone resembling a giant cockscomb, which is the principal feature of a public recreation area developed and maintained by the State conservation commission.

A climb up a winding pathway of natural stone steps to a flat surface near the top of the formation is not difficult. From there one is afforded a pleasing view of the rolling and, in some directions, mountainous countryside.

A good place to cool off on a hot summer's day is in the Pocahontas exhibition mine, which is located but a few miles from Pinnacle Rock. It can be reached by turning south from U S 52 at the town of Freeman. The concrete road leading to the only show mine in the world is narrow in spots, but the trip is short and well worth while.

It is possible for sightseers to walk or drive their automobiles through the entire length of the mine, for here the famous No. 3 Pocahontas coal seam, is over 11½ feet high. Almost every operation in ordinary coal mining can be viewed by visitors from the upholstered comfort of their cars. Admission is free.

When en route to the mine take a good look at the picturesque little town of Bramwell, in the 1800's the home of billionaire coal operators. It is a veritable picture-book village, with narrow streets flanked by stone fences covered with flowering vines. Here the Bluestone River flows placidly through the heart of what once was the richest town of its size in America, perhaps the world.

Admission of Israel to United Nations

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. HELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Brooklyn Eagle of May 7, 1949:

UN SHOULD END DOUBLE TALK AND ADMIT ISRAEL AS MEMBER

It becomes increasingly difficult to understand why there should be further fuss and delay over admitting Israel to its rightful

place among the United Nations. Nobody free of prejudice doubts the integrity and good intentions of the new little State of Israel. Nor its independence, nor its democratic principles.

Its willingness to cooperate in peace and world progress must be clear to all, as are its ideals as a state and its ambitions, which, as they are realized, will influence for the better all life and modes of life in the Near East. There are a number of nations already accepted into the United Nations, brotherhood of peoples, whose ideals of brotherhood are far, far below those of Israel.

Things are not all settled yet in Israel, say those who still want Israel excluded. The argument takes on the identity of a subterfuge when we consider China and Greece and look back at Poland, whose boundaries were not even set when she was admitted. The years of uncertainty that Israel has experienced were years spent in resisting aggression. They should be evidence of her need for UN membership and UN protection, although she has demonstrated her ability to take care of herself.

One of the least tenable of the arguments now advanced for continuing to mount delay upon delay is the one that cites the questions of Arab refugees and the future of Jerusalem and the holy places. These are questions, it is said, that must be settled between Israel and other states. But other nations involved in their settlement are members of the United Nations. Six of them are Arab states.

What could simple common sense dictate more sensibly than to gather Israel into the fold with the others and then help them all, as brother nations to settle their differences? As it is now, the UN is in the false position of seeming to support its members against the state it excludes.

It is time for an end to the shadow boxing and double talk. Israel's decency, democracy efficiency, and valor have long since been proven. As a member of the United Nations she will add strength and integrity to that world organization of which the greatest strength and integrity are expected. Her exclusion can only be a blot on the United Nations' good name.

Children's Fund

EXTENSION OF REMARKS

OF

HON. HARRY J. DAVENPORT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD a radio speech given by me over Station WLOA, Pittsburgh, Pa., on Sunday, May 1, 1949:

A Congressman's lot is a happy one, on occasion, and this is one of those occasions, for of all things, I'm going to talk about an infant prodigy. There is an affinity, you know, between Congressmen and babies, and I've kissed my share. This baby, though, is a very special youngster and one that belongs to us all—the infant prodigy of the United Nations—the International Children's Emergency Fund.

I said this prodigy belongs to us all, and it does, not only to us but to all the peoples of the world. They have adopted it—made it their own—and they are proud of it as I am proud and happy to report to you today on what is going on in the children's fund.

And I'll talk to you as a Congressman, reporting back to you on how some of your money, collected through taxes, has been spent these last 2 years by the United Nations through its children's fund.

It's no great sum you have spent—about 30 cents apiece so far—but 30 cents from each of you adds up to quite a little sum—about $55,000,000. That's what the United States Government has put into the kitty to date to keep the work of the children's fund going. It matches what other governments give on the basis of $2.50 for every dollar. And, as an American, and as a Congressman, I am proud of the part we have had in this undertaking. We have done no more than we should but we have done that.

Another Representative from Pittsburgh, my colleague on the Foreign Affairs Committee [JAMES FULTON], proposed the bill making this money available to the world's children, and the House of Representatives unanimously supported the proposal. And now, what's been done with our money—and that other governments have put into the till of the International Children's Emergency Fund?

Well, every day nearly 4,500,000 children and mothers—4,500,000, mind you—sit down to a good nourishing meal that the children's fund has helped to provide. It's not much of a meal by our standards—far less than a school lunch—but it's got in it what growing children need, and what many of them would not have if it were not for the children's fund.

They have a little meat, meat out of a can for stew, a little lard on their bread, or some oleo—jam on occasion—and always milk. Milk, that's the big item, as you who have a quart of milk a day for your children do not need to be told. Those children around the children's fund table get not a quart of milk a day, but a cup of milk reconstituted from dried skim milk.

More than 150,000,000 pounds of dried skim milk have been sent so far. That would seem to be about all the dried skim milk in the world—and it is a sizable part of it. And most of it is coming from the farms of the United States—Wisconsin, Minnesota, and California. I like to think of this milk being shipped in such great quantities, for it wasn't so long ago that dried skim milk wasn't thought much of, at least as far as human food was concerned. But here it is now, being gathered up in this country and shipped over the ocean to build bones and put flesh on millions of youngsters.

And how little it costs. The fund has figured out that one of our dollars buys enough dry skim milk to give 10 children a glass of milk a day for a week. Think of it. Was ever a dollar better spent?

Well, besides getting this milk and other protective foods, and, oh, yes, cod-liver oil—gallons of it—to these millions of children, the fund has been helping to outfit them. A dollar of the fund's money—that's your money too, we are talking about—buys enough leather for a pair of shoes, enough wool for a child's coat, and enough cotton to make 15 diapers. And of all the help the fund has given so far it's doubtful if anything was more appreciated than those diapers—they're giving them out 10 to a baby, so they tell me—compliments of the United Nations.

There's something else the fund is doing that is mightily appreciated. It's helping to protect children from TB—vaccinating them against it. Now vaccinating against TB is not done much in this country. We have other ways of getting at the problem, chest X-rays with which to detect the disease, hospitals where those who have it can be brought back to health, to say nothing of the all-important fact that there is less likelihood that our children will get it in the first place, since they are so comparatively well off.

For the most part they have good food—not good housing, but at least fairly adequate housing—and warm clothing and shoes, and those are the best protective measures against tuberculosis.

Well, now, in Europe and many other places—children don't have that protection against TB and it is a leading cause of death among them, to say nothing of what it causes in sickness and misery. There is a way now whereby at least the well can be given some protection against it—there's a vaccine developed—BCG. And the Fund, with the Scandinavian Red Cross and the World Health Organization—is in there vaccinating not thousands but millions of children, in Europe, China, India, and soon it expects to be at work in Mexico and in many other countries.

And how much does that protection cost? Well, one of your dollars pays for testing and vaccinating 8 children against tuberculosis. Think of it—one dollar makes possible protection for 8 children!

I haven't time to go into this BCG story, as it's called, but it's a thriller. Vaccination is really "pyramiding" and who knows before it is over we may have TB pretty well licked around this world, at least as far as the children are concerned. And all because there was a Children's Fund—and a United Nations—here to help get this work going on a world scale.

Do you wonder that people get enthusiastic when they hear about the Children's Fund? Makes us think we're not such a bad lot after all once we get together and start to work.

And through the Children's Fund we are getting together. This work is going on on both sides of that iron curtain there's so much talk about, and what is more, a number of the countries in eastern Europe are now in a position where they, too, are contributors. Poland, for instance, has given $750,000 to the Fund—most of it used for sugar which is helping to put pep and energy into youngsters in Austria and a number of other countries. Little Czechoslovakia has contributed the equivalent of more than $1,000,000—Yugoslavia $175,000. And, they're all counted on to help much more as they can. They know what help for their own children meant in the desperate years after the war and understandably, they want to help in turn.

That's one of the finest things about this whole undertaking—the way people and governments are all chipping in to help. Of course they don't all have money—the "cash money dollars" for the most part are in the United States contribution—but they all have something they can give that is needed. Australia—and incidentally the Australians, through their Government, have given a dollar apiece to the fund—well, Australia has meat, New Zealand has wool, Siam has rice, Yugoslavia has fruit, Canada has milk, fish, meat, lots of things, and likewise the United States. Our money has bought most of the milk, but it's also bought two and one-half million pounds of cotton for diapers and shirts and dresses, and it's bought medicine and medical equipment, and it's paid for a good part of the cost of shipping and administration.

But whatever we spent—and this is the point I want to bring out—it has been matched and more than matched by the government, or some voluntary agency, of the country receiving this help for its children. And it's been done often in the face of great shortages—but it has been done. And that, I think, is the way help should be given, on a self-help basis.

And the Fund's help has been given, too, not only to meet the immediate need, but with the long pull in view. These feeding programs the Fund is helping with now—they're being managed in such a way that the countries themselves—when they have milk enough of their own—can take over. The same with the vaccination, the malaria control, the V. D campaign—and other undertakings in which the Fund has a hand.

And I wish I had time to tell you what the Fund has started in China—a training program that within a very short time will get a vast public health army in the villages and the countrysides. They won't be highly trained technicians—they'll be men and women of ordinary education—but they'll know the simple things about health and sanitation—how to rid a place of flies and mosquitoes; how to vaccinate a child. They'll be able to teach the simple things a mother should know about her baby's health—the kind of work carried on in this country a generation or so ago—and I must say still being carried on even in some parts of our own country today. We, too, have still a long way to go until all have their fair chance at a full and productive life, in health and vigor.

And I'm glad it's an American—an American surgeon, Dr. Lee Eloesser, of California—who's getting this program started. I like to think of Americans out among the people, lending a hand constructively, working at the grass roots. That's the kind of internationalism I like, and when it's done through the United Nations, so much the better. I venture we Americans have got a lot for our money through this single international undertaking—not that that should be the first aim, but it's a satisfaction.

And they tell me that we are getting a lot of good will for ourselves through the help we're giving by way of the children's fund. They tell me—and this maybe I shouldn't say—that the problem is not to see that we get our due share of the credit, for we get that. The problem is to see that we don't get the lion's share, for, after all, this is an international undertaking in which many countries and many people are involved. But the children see "Chicago," "San Francisco," "New York," "U. S. A.," on the milk cans, and naturally they get ideas.

I just happened to see some posters that had come in from Austria made by the children there that are getting the fund's help. You would have laughed, too, at some of them, but have been touched at the same time. One youngster—and a very good artist he was—had drawn a picture of this country—the Statue of Liberty in the foreground, back of it a facade of skyscrapers, and then stretching back and back, Indians, cowboys, covered wagons. One of the other posters, too, had things a little mixed up, but an idea behind it, and this one came from a child in the Soviet zone of Austria. He had the Mississippi flowing from San Francisco straight into New York Harbor, and the Mississippi had a fleet of ships all loaded with children's-fund supplies.

I have digressed a little, but those posters, more than anything I have seen or heard about, gave me an idea of what is being accomplished through the children's fund in building up good, sound international relations. In the beginning we didn't talk about that aspect much—the need was to get food moving and on the table, but in doing that, through the United Nations, something else was gained—something else very important, a new knowledge of how men and women, using the United Nations, can work together for the common good.

That, I believe, was in the mind of Franklin D. Roosevelt when he hit upon the name "United Nations" and when with others he planned what it might some day be. Others have caught that vision, and they have seen it made reality in this children's-fund operation.

The Pope in Rome has earnestly expressed his hope "that the plan of the international children's emergency fund will not only be supported by governments and international organizations, but will also carry an irresistible appeal to the interest and charity of individuals everywhere, whose hearts must be touched by the tragedy which has befallen these, the most innocent victims of the war."

The Congress will be voting for an extension of this work within the next few weeks. I for one believe there can be no better demonstration of the strength of our democracy than this charitable enterprise to feed the world's children.

The Truth and Agnes Smedley

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Plain Talk magazine of April 1949. It makes clear for those who are still uninitiated why Agnes Smedley and Guenter Stein have been such strong advocates of the doctrine that America should not support its ally, China, but let the Chinese Communists take over instead. Miss Smedley has recently been instructing our youth in an exclusive girls' school. Stein had especially great influence because the Christian Science Monitor used him as its correspondent and expert on the Far East. Or perhaps it is more accurate to say that it let him use its columns and good name to the damage of itself, its readers, and our country's interests.

THE TRUTH AND AGNES SMEDLEY

"It has been one of the greatest struggles in my life to learn to tell the truth. To tell something not quite true became almost an instinct."

This startling confession comes from the autobiographical pen of Agnes Smedley whose long career of free-lance service to the international Soviet cause has recently received an unexpected encomium from the United States Army.

Agnes Smedley's reputation for veracity, believe it or not, was upheld publicly and demonstratively by the Secretary of the Army Kenneth C. Royall at the price of besmirching the good name of Maj. Gen. C. A. Willoughby, hero of Corregidor, and Chief of Intelligence at General MacArthur's headquarters in Japan.

In a world of fantastic revelations, perhaps nothing strains one's credulity so much as the exoneration of Agnes Smedley by the Army and the corresponding indictment before the bar of public opinion of a distinguished and loyal officer. His offense: Capping a career of 36 years' service to his country with the preparation, in the line of duty, of a report divulging shocking Soviet espionage activities in the Far East.

First, let us review the facts. The sensational report, released by the Army Department in Washington on February 10, named two journalists, Agnes Smedley and Guenter Stein, as having been involved in the great Soviet spy ring. Substantially the same facts had been disclosed in Plain Talk for May 1948. Guenter Stein, naturalized Briton, reacted dramatically, and significantly. He left New York by air for Europe within 24 hours of the publication of the report.

Agnes Smedley chose to counterattack and to launch a barrage of charges with an air of injury. Challenging General MacArthur to waive his right to immunity, she threatened to sue him. On February 18 the incredible happened: the Army Department publicly declared that the report was a faux pas on its own part. This, of course, was tantamount to a whitewash of Agnes Smedley and to an indirect accusation of irresponsibility on the part of MacArthur.

Two days later General Willoughby openly declared that he, and not MacArthur, had been responsible for the preparation of the report, and that he did not intend to withdraw one iota. Establishing his integrity, he eagerly waived any immunities that might exist and stated that "not only as an intelligence officer, but even more fundamentally as an American citizen" he welcomed a test in court of Agnes Smedley's challenge.

This seemed to join the issue clearly enough. A report containing a number of serious charges had been prepared. A responsible high officer of the United States Army stood by the disclosures, and not only agreed to a court test but leaped at the opportunity to present the documentation in the case. Agnes Smedley had vociferously demanded her day in court, insisting on the right as an American citizen to clear herself. What more could she have asked for than this prompt invitation by General Willoughby to be sued? But, lo and behold, after her loud clamor for justice, Miss Smedley turned a deaf ear to General Willoughby's request to have it out in court.

Miss Smedley's behavior was not quixotic. She understood quite well what she was doing, far better apparently than the Army Department in Washington. First, she was aware of the fact that the Army's unfortunate faux pas press declaration cleared her in the eyes of most Americans regardless of the available evidence. Second, her accuser, who earnestly sought to present his evidence, was in turn accused by the Army he has served so long and faithfully. Third, and most important, she knew that if the case reached court, the evidence would be fully and incontrovertibly sustained. In view of the Army's retraction, it is not surprising that these facts escaped public attention.

The Army's inexplicable treatment of General Willoughby becomes even more baffling when it is brought out that while the report was released, its voluminous documentation was not. How then was the average American expected to be able to examine the evidence from which the report was so painstakingly compiled? Furthermore, the Army's behavior appears even more mystifying when it is realized that the report was publicly issued not on the instigation of the MacArthur command, as Agnes Smedley charged, but by the same authorities in Washington who saw fit to repudiate it 72 hours later.

In fact, the MacArthur command took special precautions against the release of the secret document which had been completed and forwarded to the Pentagon from Tokyo in December 1947, nearly 15 months before its publication by the Secretary of the Army.

There is nothing in Agnes Smedley's career to justify or to explain the Army's strange action. The revealing bit from her autobiography, Daughter of the Earth, published in 1929, which is quoted at the beginning of this article, is a fitting introduction to her life's activities. These have been characterized, since her early twenties, by irresponsibility, simultaneously fanatic and giddy.

The court records show that in 1918 she was arrested and indicted by a Federal grand jury in New York for violation of the War Espionage Act. This first espionage episode in Miss Smedley's varied career occurred while she was attending New York Univer-

sity evening courses after her arrival from the West where she had been divorced following a short-lived marriage. She became involved with a group of Hindu revolutionaries in New York, and was asked to perform certain assignments for them. In time she became, as she later put it, "a kind of communication center" for the Hindu conspirators. "I kept their correspondence, their codes, and foreign addresses," she acknowledged.

When Miss Smedley was charged with a violation of the neutrality law, since her Hindu comrades were found to have been in the pay of the Kaiser's government, she ridiculed the indictment and in an injured way pleaded that all she had done was to help a subjugated people. But long after the case against her had been dropped, she admitted in her book, Battle Hymn of the Republic: "Years later I learned that the Indian exiles in Europe had indeed formed a government-in-exile and taken a loan from the German Government to finance their work."

Agnes Smedley's connection with the great Soviet spy ring in the Far East, headed by the fabulous Russian-born German, Richard Sorge, strangely parallels her first adventure in this dangerous field. By 1929, when in Shanghai she first met the organizer of the Sorge ring, Ozaki Hozumi, Miss Smedley was already in her middle thirties and had had rich experience with professional revolutionaries, including a second marriage to a Hindu who was active in the Comintern.

Whether Agnes Smedley was fully aware of her role in the Far Eastern spy ring or not, the Army report on it covers her case aptly: "The Soviets seem able to use men as agents who either are not party members at all, and yet who are willing to make every sacrifice for the party's cause."

It is also noteworthy that Miss Smedley's relationship to the ring began some 3 years before Hitler's rise to power when the Berlin-Tokyo axis was yet to be conceived. She met Sorge in Shanghai in 1930. Ozaki provided both of them with information about Japanese troop movements and related matters during the following 2 years.

Now consider the testimony of one agent who was asked how he happened to enter Sorge's spy ring. He replied that a member of the United States Communist Party, Kito Ginichi, asked him to meet an American newspaperman named Johnson. Being a bit suspicious, he decided to ask Agnes Smedley about Johnson. She asked him in turn whether he had spoken of this matter to anyone else—her expression was very serious. The answer was "No," at which point she told him that she knew Johnson well, but he was to keep that fact secret. Later she told her questioner that Johnson was a fine man, with an excellent record, and that, in fact, she herself would bring them together. Johnson turned out to be Richard Sorge, the master-spy executed during the war.

For some 30 years Agnes Smedley has been one of the most assiduous propagandists for the Communist cause. Her China's Red Army Marches, also published in Moscow under the title "Red Flood Over China," perhaps epitomizes her voluminous writings on the subject. She has been prominently affiliated with a score of Communist fronts, including several listed as subversive by the Department of Justice.

In the light of all this, is the Willoughby report MacArthur's Fantasy, as Edgar Snow, long-time champion of the Chinese Communists, echoes the Daily Worker line in the "liberal" Nation? The whitewashing of Agnes Smedley must not be permitted to victimize a great and esteemed soldier and to stain the honor of the United States Army.

I. D. L.

New Hampshire Rural Rehabilitation Corp.

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a concurrent resolution adopted by the New Hampshire State Legislature petitioning the Congress of the United States for the passage of an act similar to H. R. 5905, introduced by Representative COOLEY in the second session of the Eightieth Congress.

Concurrent resolution memorializing Congress concerning the New Hampshire Rural Rehabilitation Corp.

Whereas on or about July 12, 1935, the New Hampshire Rural Rehabilitation Corp. entered into an agreement through the Rural Resettlement Corporation with the United States Department of Agriculture whereby all the assets of the said New Hampshire Rural Rehabilitation Corp. were transferred in trust to said United States Department of Agriculture; and

Whereas the sum of approximately $128,701.92 was received by the United States Department of Agriculture under said agreement; and

Whereas said sum remains in the possession of said United States Department of Agriculture; and

Whereas the State of New Hampshire is now particularly anxious to have the trust terminated and the money and property returned to it: Now, therefore, be it

Resolved, by the Senate and House of Representatives in General Court convened, That we do hereby petition the Congress of the United States of America for the passage of an act similar to H. R. 5905, introduced by Representative COOLEY in the second session of the Eightieth Congress of the United States; and be it further

Resolved, That a copy of this resolution be transmitted by the secretary of state to the Senators and Representatives in Congress from the State of New Hampshire and that they, and each of them, be requested to use all honorable means within their power to bring about the enactment of legislation similar to the aforesaid H. R. 5905.

RICHARD F. UPTON,
Speaker of the House of Representatives.

The Reorganization Fraud

EXTENSION OF REMARKS
OF
HON. CECIL F. WHITE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. WHITE of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of May 11, 1949:

THE REORGANIZATION FRAUD

The President has done well to give the Congress a sort of tickler, in his statement urging quick action on Government reorganization. The truth is that all the ponderous labors of the Hoover Commission are perilously likely to produce no more result than the fruitless efforts to reorganize the Government in the Roosevelt years.

Several bills are before Congress, ranging in character from the second defense unification bill to the bills raising the shockingly low salaries of higher officials, and giving the Government decent housekeeping services. The heart of the whole program, however, is the measure granting the President general powers to bring order out of the chaos of the whole executive branch.

And this heart has, so to speak, already had a dagger driven through it in the Senate Committee on Executive Expenditures.

The hand that held the dagger was the hand of Senator JOHN L. MCCLELLAN, of Arkansas, a pleasant-mannered country lawyer who would have felt more at home in the administration of James K. Polk. He gutted the bill by a simple system. He attached an amendment providing that anything the President does to make the executive branch more efficient, may be disapproved by either the Senate or the House within 60 days.

As a practical matter, this provision simply means that the President will be debarred from doing any of the really difficult and important parts of the job. For there is hardly any administrative agency worthy of the name that cannot muster the votes to preserve itself in at least one chamber of Congress. Patronage, plus pork, plus local interest, plus the seniority system in congressional committees, make this certain. In its present form, in short, the general reorganization bill is a fraud.

Considering past history, it is not surprising that the principal agency Senator MCCLELLAN is seeking to protect, at the expense of all hope of effective Government reorganization, should be the Army engineers. Arkansas is one of the States where the engineers wield great political power, owing to the local importance of flood control. As a member of the Hoover Commission, Senator MCCLELLAN joined former Representative Carter Manasco in a hard fight to have the Hoover group recognize the Army engineers' sacrosanct status.

Since Senator MCCLELLAN failed on the Hoover Commission, the engineers have been working overtime to protect themselves in Congress. Their instrument has been their special lobby, the rivers and harbors congress. This group, in which interested contractors, representatives of interested States, and the private power companies join to serve their Army friends, is about as mean, powerful and three-cornered a lobbying organization as exists in Washington. The congress may now be said to have triumphed in Senator MCCLELLAN'S committee.

It must be added that this is by means the first occasion when this theoretically subordinate corps of Army officers has ventured to attack avowed White House policy. The long-famous Pick-Sloan plan for the Missouri Valley bears the name of the present Chief of Army Engineers. It is, essentially, a plan to safeguard the Army engineers' field of operations there by blocking the Missouri Valley Authority. Incidentally, it safeguards the private power interests too.

The proposed Columbia Valley Administration has just received a similar check, by an agreement between the engineers and the also interested Bureau of Reclamation. Both MVA and CVA are projects sponsored by the President. Altogether, it would seem to be time to find out whether the engineers are playing on the President's governmental team.

These facts are relevant because they illustrate the kind of problem that must be solved by effective Government reorganization. The time has passed when we can

afford a Government which is a mere haphazard congeries of agencies speaking for special interests.

To be sure, even the Hoover Commission reports do not provide for complete modernization of our crazy, antiquated governmental structure. No adequate steps have been proposed to provide the Government with competent, fully professional staff. Yet this Government of clerks cannot go on forever. Again, the job of underpinning the Presidency with an adequate secretariat has been left to the Budget Bureau. Pork-hungry Members of Congress, angered by Budget Bureau economies, have just cut the Bureau's appropriations by $300,000. Yet the President himself cannot do his job without a reasonable secretariat.

On the other hand, the proposals of the Hoover Commission represent a strong ray of light on a very dark horizon. They are a test for Congress.

If Congress will not let the President at least begin to put the executive house in order, Congress will have no grounds for denouncing wastefulness or any other executive failing.

Governmental Control of Practice of Medicine

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. DAVIS of Georgia. Mr. Speaker, under leave previously granted, I insert herewith a letter written to me on May 6, 1949, by Rev. T. H. Harrison, together with enclosures:

WASHINGTON, D. C., *May 6, 1949.*

Congressman JAMES C. DAVIS,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: If you will read the attached copyrighted plan of June 5, 1945, to prevent legislative control in the practice of medicine as of July 15, 1943, the same will protect the individuals and the entire medical and dental profession against any type of legislation seeking to control the practice of medicine.

The Lord directed the writers of the Bible to say nothing about legislative in the practice of medicine, neither did the Son of God ever criticize a doctor for his work.

The copyrighted plan for the building of health institutions covers all phases for the building and operation of such institutions, provides for insurance policies that will meet the demands of all classes of people.

I was told by an actuary of one of the leading insurance companies that his firm would like to arrange a series of policies that would meet the needs of all people. He stated that he could arrange a policy that would sell for $50,000 or more to people who have money, which they would like to purchase for cash, as a gift for any institution operating under the copyrighted plan of June 5, 1945. Since such a policy would be nontaxable and the operation of an institution under the copyrighted plan would be free from legislative control, and investments for securities in such institutions would be free from taxation.

Yours sincerely,

Rev. T. H. HARRISON.

[Class AA No. 494851. Copyright Office of the United States of America, the Library of Congress, Washington]

CERTIFICATE OF COPYRIGHT REGISTRATION

This is to certify, in conformity with section 55 of the act to amend and consolidate the acts respecting copyright, approved March 4, 1909, as amended by the act approved March 2, 1913, that two copies of the book named herein have been deposited in this Office under the provisions of the act of 1909, together with the affidavit prescribed in section 16 thereof; and that registration of a claim to copyright for the first term of 28 years for said book has been duly made in the name of Thomas H. Harrison, 313 Sixth Street NW., Atlanta, Ga.

Title: Plan for a Health Institution, by Rev. Thomas H. Harrison, of United States.

Printed or produced by Marguerite Bloxom, Richmond, Va.

Date of publication in the United States, June 5, 1945.

Affidavit received October 11, 1945.

Copies received October 11, 1945.

[SEAL] SAM B. WARNER,
Register of Copyrights.

JUNE 5, 1945.

PLAN FOR A HEALTH INSTITUTION

The following plan, known as the Rev. Thomas H. Harrison plan for health and hospital insurance, proposes the organization of a holding corporation of outstanding citizens in the various walks of life, which board shall have as its function the construction and operation of a complete modern hospital for all types of medical and surgical care, and the employment of a skilled and competent staff to maintain such a standard of service.

Funds for the building and maintenance of the hospitals can be obtained by donations, gifts, endowments, or the sale of stocks and bonds on other contributions for the maintenance and control of the institution. A plan for the sale of a policy guaranteeing to the holder the above services of rates to be determined by the board of control actuarial studies. The policy can be for one, a group, or a family. The longest-life ones in the group or family will be compensated to which the board of directors and the insurance companies by actuarial studies will agree. The policy can be made to cover all expense of transportation in both directions, so that each holder can be given a thorough examination once or more times a year, as agreed upon, in the terms of the policy.

The institution is to be for the care and treatment of anyone who needs such. The proposed location is the State of Florida, or any other place where climatic conditions would be suitable.

A full organization of the staff, management, and other matters essential to its operation will be left in the hands of the board of control.

The selection of members of the board of control will be the prerogative of the contributors.

The board of control can accept gifts or endowments with which to pay the expense for the operation of a research department for medical care of the best that intelligence can produce. All rooms in the hospital will be private and an arrangement for the highest type of religious and musical entertainment. The grounds and buildings will be beautified in keeping with all forms of nature.

The board of control can set aside a certain amount of the net income for charitable work and will invest the net surplus into dividend-paying securities to be used for the increased efficiency of the institution, and will name all organizations and committees with suitable titles to the positions they hold.

Rev. Thomas H. Harrison, author of the hospital plan, 313 Sixth Street NW., Atlanta, Ga.

Written by Marguerite Bloxom, Richmond, Va.

TO PREVENT LEGISLATIVE CONTROL OF THE PRACTICE OF MEDICINE

JULY 15, 1943.

Dr. CHARLES H. BOLTON,
Executive Secretary-Treasurer, Florida Baptist Convention,
Jacksonville, Fla.

DEAR DR. BOLTON: Attached copy of my letter to Senator WALTER F. GEORGE, of July 2, and the Senator's reply of July 3, with a copy of a bill, S. 1161, introduced into the Senate May 24, 1943. The bill has 2,337 articles that take the supervision of a child 9 months before birth and until 30 days after death. The Senator does not approve of this type of legislation.

If this bill is enacted into law, it creates 16 political bureaus to be managed by one person known as the Surgeon General, who will appoint the employees of all bureaus and will supervise the education of all children, and he has authority to disfranchise any child of its studies for medicine, etc., or any hospital or any person who would have anything to do with the care of the sick. The 16 political bureaus will be managed by appointees, and no child can be promoted to any position in life without the approval and recommendation of these political job appointees. This type of legislation takes a God-given privilege from individuals and puts them under the supervision of a political organization for mismanagement and waste.

If S. 1161 is enacted into law, it usurps authority by the Surgeon General to fix the pay of all doctor bills, and hospitals for the services they render, and creates an insurance company owned by the Government to pay a very limited amount, doing away with private industry.

The bill will tax the employer 6 percent and the employee 6 percent, making a total of 12 percent and raising immediately $12,000,000,000; $3,000,000,000 will be given to the Surgeon General to pay for all medical treatment and the salaries of doctors and his millions of political appointees.

The Son of God ordained ministers and gave them the sacred, invaluable right to administer to the needs of the sick, etc., and they have always had the cooperation of the medical profession. If S. 1161 does become a law, it will take from the individual doctor his ambition and initiative to be more efficient in his efforts to relieve human suffering, and it will put him under the supervision of a political bureau, thereby limiting his God-given usefulness. Christ did not direct any political organization, democracy, or monarchy to have anything to do with the care of the sick, but He ordained men to administer to human need and the doctors are a divine necessity, because the health of the individuals produces the wealth of the Nation.

The ministers hold the highest position of any being outside of heaven, and the church membership is the highest type of citizenship of the earth. It is my prayer that God will not permit the work of the church to be destroyed by a political methodized, supervised organization.

Yours sincerely,

Rev. T. H. HARRISON.

ATLANTA, GA.

Mao No Tito; United States Must Act

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. NIXON. Mr. Speaker, in the relief that we are all experiencing over the settlement of the Berlin crisis, it is essential that we not overlook the fact that the Communists are winning a great victory in the Far East, a victory which may in the end far overshadow any of the recent developments in western Europe. Unfortunately, apologists for the Chinese Communists in the United States, both in and out of the State Department, have been taken in by the fallacious theory that Chinese Communists somehow are different from Communists in other countries and will not owe their allegiance to the Russian bloc in the event they come to power in China.

One of the most effective answers to this argument that I have seen appears in the May 7 issue of the New Leader in an article entitled "Mao No Tito; United States Must Act," by the distinguished authority on the world Communist movement, David J. Dallin. The article explodes the myth of the independence of the Chinese Communists effectively and completely. Mr. Dallin's article follows:

MAO NO TITO; UNITED STATES MUST ACT

Supported by a whole set of fellow travelers, the State Department, imagining that a rift between Russian and Chinese communism is imminent, has assumed an attitude of nonresistance toward the current situation in China.

So far there is not the slightest evidence of any Sino-Russian conflict. The victory of Chinese communism, says Pravda, "will tip the scale" in favor of world communism. This phrase, being echoed by the entire world Communist press, is more than a phrase; it is a program.

After their victory the Chinese Communists will undoubtedly establish a centralized army. One of communism's firmest principles is not to disarm in the face of the enemy. The enemy, in this case, being the anti-Communist remnants, which cannot be suppressed; a rehabilitated Japan; and the United States, which—despite the maneuverings of the State Department—will never reconcile itself to the new huge power combination extending from Berlin to Nanking.

Chu-Teh, supreme commander of the Communist armies, studied military science in Germany. A number of his officers have gone through Soviet military academies. The war plants of Czechoslovakia and of eastern Germany will be able to supply the future Chinese Communist Government with more than the sporadic aid America gave to Chiang Kai-shek. Not least, Russia will be free to deliver the latest weapons to the new Chinese regime.

China as an efficient military power—Moscow's primary far eastern objective—will be a novel phenomenon in world affairs. Militarism in China will make inevitable the rearming of Japan and the accelerated arming of India, naturally with American and British support. Who knows whether the cold war in Asia will be shorter than that in Europe?

What we do know, after four fateful years, is that the Yalta decisions were a disastrous blunder for Asia, and that Potsdam has led Europe into an impasse.

Who originally planted the idea that Mao Tse-tung may become a Chinese Tito? Was it, perchance, Moscow itself? Well do we recall how Stalin—during the last war—alluded to his Chinese comrades as despicable agrarian Communists. Simultaneously, however, he negotiated with them, and from behind the scenes issued instructions to them.

Since then, every little fellow-traveler has been displaying "evidence" that Chinese communism is "independent" of Moscow. But the myth of a Chinese Tito serves only to camouflage close collaboration between Chinese and Russian communism.

Owen Lattimore, a pro-Communist writer on Asiatic affairs, has recently published a book entitled "The Situation in Asia." This book is filled with misleading statements and outright distortions. Its main thesis is that we must leave the Chinese Communists alone, in the hope that they will develop an anti-Russian orientation. The same conclusion flows from an article in the Saturday Evening Post by Edgar Snow, Mao Tse-tung's unofficial ambassador in America. The false picture painted by Snow tends to support Moscow's main line: Let the Communists take over.

The fact is that Mao, supreme leader of Chinese communism, was appointed to his post 18 years ago by Stalin. He has maintained it since only by remaining in Stalin's favor. Not once has he criticized Russia's domestic or foreign policies. He has executed Russian purges within his own party, approved Stalin's pact with Hitler, and never questioned Soviet postwar policies in China, however predatory.

Have there been differences of opinion between Chinese and Russian communism? Some. But all have ended in complete victory for Stalin Politburo. It is likely, then, that Mao and Chu Teh will someday turn against Moscow?

If Mao were to proclaim his independence from Moscow, Manchuria would be detached from China instantly. Its main railways are already under Russian control; Russian troops are stationed in two southern Manchurian ports; north Korea is a Soviet satellite. At the first sign of Chinese Titoism, the age-old dream of annexing Manchuria to the Russian Empire would become a temptation hard for Stalin to resist.

If the State Department's bright, young men were to study history more, and the writings of crypto-Communists less, they might learn that exactly 50 years ago a plan was elaborated in St. Petersburg to create a Russian sphere extending not only to Manchuria, but beyond the Chinese Wall as far as Tsientsin and Peiping. The Soviet Government has dug up similar Czarist plans concerning Europe and has been executing them with servile lack of originality. Why not take over the great country on the Yellow Sea and intone the Soviet anthem in Peiping?

Secondly, Mao needs the Kremlin as a diplomatic sponsor. When Henry Wallace returned from China with a pro-Communist report, President Roosevelt subscribed to it out of deference to Russia. Manchuria fell to the Chinese Communists in 1946 as a result of Russian intervention. Today, American passivity in China is due primarily to fear of trouble with the Soviet Union. Hence Chinese communism has been victorious because it is backed to the hilt by Stalin. No one appreciates these simple truths better than the leaders of the Chinese Communists.

After all, no one would deny the possibility of a Communist rebellion in China against the dictates of Moscow. Though unlikely today, it may happen in the future. It is false, however, to build the policy of a great power on nebulous expectation and hypothesis. Moreover, only American activity can accelerate and bring about such a revolutionary change in Chinese Communist tactics.

Contrary to the stories spread by Stalin's and Mao's mouthpieces, in the last few months relation between Russian and Chinese communism have grown closer, and the Soviet press illustrates. The eight "peace conditions" Mao presented to Nanking received very favorable Soviet newspaper comment. The compliment thus paid Mao leaves no doubt that Stalin's approval and advice were given before Mao consented to the peace negotiations. Moreover, the nature of these negotiations—the shrewd delaying tactics as Communist troops approached the Yangtse; and the unexpected presentation of new, totally unacceptable conditions coinciding with the climatic advance of Communist soldiers across the Yangtse—bears the unmistakable imprint of Moscow.

Moscow wants the reorganization of the Chinese Government to be a legal operation, with the Communists appearing as Chiang's successors. The new regime will inherit China's seat in the UN and on the Allied Council in Japan; it will have diplomatic representation in the world's capitals; and it will claim China's gold and other tangible foreign assets.

Three national forces can become the fulcrum for a new international policy in the Far East. Once the United States decides to pursue an active policy, it will have to build on the support of peoples who are interested in resisting Communist expansion.

The outlines of such a policy are clear:

1. South Korea should be united with northern Korea; unification can be achieved, however, only by military means. If Russia and its Manchurian satellite stay aloof, the conflict will be short-lived; if they intervene, it can become prolonged and complicated, but perhaps more significant is its outcome. In either case, south Korea, with 20,000,000 people as against the north's 9,000,000, will be victorious in the end. The impact of this victory, what with the Korean army on the Manchurian frontier, can bring serious changes to China. It would therefore be a mistake of the first magnitude to withdraw United States troops from Korea now, as the State Department intends to do.

2. Around Canton, in southern China, historical grounds exist for a dissident movement. Canton was Sun Yat-sen's chief base of operations against the warlords nearly three decades ago. Canton was the headquarters from which Chiang Kai-shek, in the 1920's, launched his northern expedition to unite the nation. It is still possible that Canton, and perhaps also Kwantung Province, may be salvaged from the Nationalist wreckage and new forces created and trained there.

3. If other efforts fail, there remain Japanese resources and manpower. Faced with a Communist continental coalition from the Aleutians to Shanghai, Japan has no future. It cannot live economically divorced from the continent. It will fall prey to Russian and Chinese forces the moment America withdraws. Japan will then have to fight, unless the outlook in Asia changes before long.

Other political roads can lead to a reasonable balance of power in Asia. Each has its merits and difficulties. But their implications will have to be thoroughly studied before decisions are made. Meanwhile, a revolution in top-level thinking must first take place—a strong will to act in this critical situation must be created.

Compulsory Health Insurance

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a preamble and resolution passed by the Rockingham County Medical Society at its spring meeting, April 27, 1949, in opposition to any form of compulsory health insurance or any system of political medicine designed for national bureaucratic control:

PREAMBLE

We, the members of the Rockingham County Medical Society, specialists and general practitioners, making an honest effort to provide high-quality medical care for as many people as we can, hereby assert that medical care activities such as quarantine, sanitation, food inspection, and industrial hazard regulation may be proper functions of Federal Government. We agree that the construction of health centers and hospitals, and the assistance of institutions for the study and treatment of mental disorders, for the carrying on of medical research, and for the training of medical and allied personnel may require Federal funds. We also recognize that provision for the care of veterans may be a Federal obligation.

We hold these opinions because we feel that such activities of the Federal Government may be for the general good of the people as a whole when administered impersonally.

However, our experience has convinced us that direct medical care which is the sum total of many instances of a private arrangement between the patient and his physician—each instance relating to a health problem of one individual and his family—can never be fully effective unless it arises from a personal and voluntary choice and is continued as a mutual and voluntary cooperation. This mutual and voluntary cooperation must be an implied contract in which the patient controls the payment for the service supplied by the physician, and in which the patient himself provides from his earnings (or his voluntary health insurance) proper remuneration for the actual service rendered and none to any other agency such as a Government bureau. We feel that this is the only way in which the normal free-enterprise incentive can be preserved for the continued attack on the problems of the Nation's health.

We, the members of the Rockingham County Medical Society, therefore, place on record the following resolution:

RESOLUTION

Whereas under a system of free-enterprise, the American medical profession has established the world's highest standard of scientific performance, treatment, and research; and

Whereas payments for the benefits of American medicine are available to the people of this country through budget-basis voluntary health insurance; and

Whereas the experience of all nations where government has assumed control of medical services has shown that there has been a gradual erosion of free enterprise and a progressive deterioration of medical standards and medical care to the detriment of the health of the people: Now, therefore, be it

Resolved, That the Rockingham County (N. H.) Medical Society does hereby go on record against any form of compulsory health insurance or any system of political medicine designed for national bureaucratic control;

That a copy of this preamble and resolution be forwarded to the President of the United States, to each Senator and Representative from the State of New Hampshire, and that said Senators and Representatives be and are hereby respectfully requested to use every effort at their command to prevent the enactment of such legislation.

LOUIS C. THEOBALD, M. D.,
President.
DONALD W. LEONARD, M. D.,
Secretary.

Dated this 27th day of April 1949.

Judge Medina Called to Task for Failure To Stop Continuing Contempt of Court by the 12 Defendants and Their Counsel Now on Trial Before Him

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. CELLER. Mr. Speaker, the trial of the 12 defendants for violation of the Smith-Connally Act has been going on for over 17 weeks before Federal Judge Harold C. Medina in the southern district of New York.

From all indications it may go on for 17 months, not weeks, unless suitable steps are taken to prevent, first, the deliberate delaying and pettifogging tactics of defense counsel; second, the studied and continuous contempt of court shown by some of the defendants and their lawyers; third, the ceaseless altercation between the judge and defense counsel.

The attempt of Judge Medina to prevent defense counsel from turning these supposedly judicial proceedings into farce has miserably failed.

These lawyers and defendants have outrageously taken advantage of the judge's patience and humaneness. There comes a time when patience becomes a fault. That point has long since been reached. The judge gets for his patience more wrangling, and for his humaneness more abuse and insults.

Unless the judge exercises his powers of sanction and stops this mockery of judicial process, he subjects himself to more than mere criticism.

The contempts of court of the defense counsel are legion. Punishment is long since due. The recalcitrant lawyers who are guilty should be placed in the custody of the bailiff and fined until they purge themselves of contumacy. The judge should not await the trial's end for this purpose. If by jailing the offending lawyer a defendant is deprived of his counsel he can procure another. If he refuses to have another and will not take assigned counsel, there is no reversible error for the court to order the trial to proceed. A bit of severity is needed. That would be sufficient deterrent for continuance of the diatribes and the unseemly conduct shown by these lawyers.

Proper conduct on the part of the defense can never prejudice its rights.

Furthermore, I urge that the local bar associations take disciplinary action. The officers of the bar association of other jurisdictions might well hail before them those of counsel who are not subject to the disciplinary action of the local bar.

I am asking Mr. Henry P. Chandler, director of the Administrative Office of the United States Courts, to make a complete report of the matter herein, and shall present it to the House Judiciary Committee.

Communism and Socialism

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. McCULLOCH. Mr. Speaker, I note from a recent Associated Press dispatch that His Holiness Pope Pius XII, on Saturday night, May 7, 1949, in speaking to a delegation of Catholic employers from France, Canada, Belgium, the Netherlands, England, and Italy, in effect, said that there was no irreducible clash of interests between employers and employees.

His Holiness further said, in effect, that socialism cannot be the answer to the world's economic ills.

In another Associated Press dispatch from London it is reported that the House of Commons recently voted to nationalize the British steel industry.

In view of these dispatches I commend to every Member of Congress an editorial which appeared in the Cleveland Plain Dealer on May 8, 1949. Under leave to extend my remarks in the RECORD, I include the editorial:

COMMUNISM AND SOCIALISM

Now that nearly half the world is operating under Communist regimes, and a large part of the remainder is immersed in various stages of socialism, the American people should take a look at the economic and political characteristics of these two ways of life—their similarities and their differences—before they are tricked into discarding capitalism in a search for some illusive will o' the wisp utopia.

The economic aims of communism and socialism are identical, in that both are based on government ownership and operation of the means of production. But whereas the Communists achieve this objective by the appropriation of private property without compensation, the Socialists fix a monetary value for the property they seize and pay the former owners something for their shares.

Under communism, all individuals are required to be wholly subordinated to the state. The government tells them where to live and where to work. It fixes their wages and tells them how much they should produce. It regulates the prices of all the necessities they must buy and most of the luxuries, if any are available. It also determines the kind and amount of goods they can buy.

Socialists contend that individuals should have more economic freedom than is possible under communism. But wherever socialism has been tried, its repeated failures have led

to demands for ever-increasing and more drastic economic controls.

Politically, the differences between communism and socialism are more pronounced. In the Communist state, the individual has no political or civil liberties of any kind. The government exercises control over what he may read or listen to on the radio, as well as the theaters and concerts he may attend and the motion pictures he may see. The Communist Party selects the candidates for public office, no opposition candidacies are permitted and the individual has no choice when it comes to voting.

Under Communist regimes there is no protection for the individual from unlawful search and seizure, arrest without warrant, or punishment and confiscation of property without due process of law. Release on bail and trial by jury are unknown.

Communists frankly admit that their system couldn't operate successfully if individuals were permitted any freedom. They are realistic enough to realize that censorship, terror, and force must be employed to prevent criticism, violation of regulations, and rebellion.

The Socialists contend that civil and political liberties can be preserved under their system. In place of terror and force, they rely on sugar-coated pills of gratuities, subsidies, price controls, rent controls, free medical and dental services, bigger pensions and more unemployment compensation to keep the voters happy and to keep their regimes in power.

But wherever socialism has been tried, it has destroyed the incentives to work and produce. It has become a program of sharing the poverty instead of sharing the wealth. Why should anyone try to improve his condition when (1) the Government will keep him supplied with the necessities of life with no particular effort on his part and (2) the Government would confiscate through taxation any surplus wealth he managed to accumulate?

The false promises of socialism are no longer in the realm of theory. We have examples of how it works in England and other European countries. It is ironic that most of these socialistic economies are being bolstered and supported by the importation of billions of dollars' worth of American goods, produced under the capitalist economy of the United States.

What would happen if American aid were suddenly shut off to Europe? Every supporter of the European recovery program knows the answer. Those socialistic regimes would collapse and become an easy prey to communism, which is more efficient than socialism because of its ruthless disregard of the individual.

And yet there are some people in this country, including labor leaders and Government officials, who abhor communism but who nevertheless, for one reason or another advocate policies which would drag the United States into the morass of socialism and would destroy the economic system which has given the American people the highest standard of living the world has ever known.

European Recovery

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. HAYS of Arkansas. Mr. Speaker, on May 5 it was my pleasure, in company with our colleague the gentleman from Connecticut [Mr. LODGE], to participate in a great meeting in Carnegie Hall, New York, sponsored by Common Cause, Inc.

The meeting was designed to give hope and encouragement to liberty-loving people living behind the iron curtain and to interpret American ideals to them. Under leave to extend my remarks, I include the following excerpts from the address which I delivered on that occasion:

As a Member of the preceding Congress, the Eightieth Congress, I have a special pride in the passage of two bills, that pertaining to European recovery, better known as the Marshall plan, and Public Law 402, the Smith-Mundt Act, authorizing the establishment of an information service to acquaint the world with American hopes and aims and to describe the methods which we propose to use in stabilizing our world and adding to the happiness and welfare of its people.

In extending congressional approval of the Marshall plan, it was our design to extend American aid to the stricken people of the Old World, to those who had suffered such tragic misfortunes in war, and it was a part of that design not to limit this assistance except as the withholding of cooperation by European governments themselves might limit such aid.

Since the extension of material assistance has vast significance that cannot be defined in economic terms the establishment of the Voice of America interpreting American policy to everyone who will hear our message is an exceedingly important program.

I should hope, Mr. Chairman, that some of the things said here tonight will reach an audience in that part of the world which endures a continuing oppression.

There is a longing in the hearts of most people for firm assurances of peace. We speak of it as an ideal and yet there is much truth in the old saying that peace is not an ideal but the state attendant upon the achievement of an ideal. The ideal embraces justice, freedom, and equality, and I propose to speak of these as elements in the common cause. I do not disparage the urge for peace, for it is dear, yet there are dearer things to us. I do not disparage unity, but it, too, is but a byproduct of worthy human exertions. Not even the interest in security can supply the binding and stabilizing forces which distraught people crave.

Again I do not disparage security. Security that provides a buttress against economic reverses determines the daily decisions of millions. But security is not the banner under which we march. It is always a relative; it is never an absolute. The risks of life we assume. Only weak and insensitive people would make security a symbol of progress.

There was a lot of wisdom in what the country preacher said when asked about the atom bomb—if he had explained to his congregation its terror and the destructiveness of this new instrument of death. And, answering that he had not, he said, "I think they understand that we are always here at a very great risk."

So the great values inherent in peace, security, and unity appeal to us but do not fully define the goal which we of this common faith are pursuing.

One of my friends, an officer in World War II, said of some of the French leaders that they had made the mistake, after paying homage to the ancient slogan "liberty, equality, and fraternity," of assuming that liberty and equality can be maintained without fraternity. A sense of human brotherhood will ultimately create world unity but that brotherhood must be an inclusive persistent kind that dares even to rip an iron curtain, not with arms but with ideas and an interest in our fellowman.

Surely it will help to achieve peace if our aims are understood by the oppressed ones. It will be helpful if we can acquaint listeners abroad with the fact that America has no designs except to live in peace with other people and to promote justice and freedom everywhere. We believe in trade and commerce but the kind that is mutually profitable, not exploitative. We seek to prove too that one of the foundation stones in the American creed is belief in the individual as the focus of values. The spiritual content of our governmental system is derived from this emphasis and we will adhere to it in the new relationships that science, with its capacity to annihilate distance, forces upon us.

It is difficult in political councils to speak of spiritual forces but it is very real to Americans and, in part, it is drawn from the fact that our roots are in the Old World. My own people, a rural people, living in cherished remoteness from conflict a thousand miles from the Atlantic, bear the impress of the cultures not only of western Europe but of central and eastern Europe as well, of Bohemia, Slovakia, and Poland. My home is in Pulaski County, Ark.

The people of America who have delighted to provide a refuge for the victims of modern tyranny, will seek every opportunity to convey to those still in subjugation that, while we hold in contempt the system under which they live, there is no prejudice in our hearts against the victims of that system. Perhaps we have spoken too often of eastern Europe's need of a knowledge of America's good purposes and not enough of our desire for knowledge of Europe's problems. We must seek every revealing picture of the plight of those who are still deprived of freedom. An awareness of the sufferings of others has always contributed to unifying forces. Something like this was perhaps in the mind of Emil Brunner when he said "suffering that is of destiny unites but suffering that is unjust divides people." The perpetrators of injustice, those who use their governments to oppress, can no more escape the penalty of this law of life than one could plunge into a fire and not be consumed.

Mr. Lodge and I represent opposing political parties in the House of Representatives. We enterain differences on domestic issues but our commitment to the cause which brings us all together tonight is wholehearted. Our presence is another symbol of bipartisanship in the building of an American policy for good will and yet as I have tried to indicate governments cannot supply the motive for world unity. They can only supply the means by which it is expressed. The motive is a matter of the spirit. It must reside in the hearts of the people. There are great affirmations underlying our free way of life and they must be exalted again with a sense of humility. They have to do with love and kindness, a faith in God's mercy and compassion expressed in human forms and the flowering, according to our political faith, of a world fellowship of freedom.

Election in North Ireland

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by

Anthony Moore, from the magazine America for May 7, 1949:

ELECTION IN NORTH IRELAND

(By Anthony Moore)

America's eyes these days are focused on the Atlantic. Washington feels that an Atlantic Pact is the best insurance against the threat to western European civilization. Never has Atlantic unity and cooperation been so necessary, and for this reason the recent general election in Northern Ireland, together with its background and consequences, is far more important to Americans than is often recognized.

Once again, as in the past, a large majority of Northern Ireland's citizens have reaffirmed their loyalty to Great Britain at the polls. Once again they have repudiated Irish nationality. And there, in the opinion of many, the matter should rest. Democracy has spoken, they claim.

Unfortunately this is a superficial view that does not, despite outward appearances, correspond to realities. True, the election was free of coercion or terrorism on the Communist model. That much is undeniable. However, it takes more than just an election, even if free, to make for real democracy. A fully democratic election (as opposed to an outward show of democracy) calls for certain conditions lacking in Northern Ireland today.

To appreciate the real nature of this election, it is essential that Americans know something of the background history of Northern Ireland, for Americans have a very real stake in the future of this small corner of the world if the Atlantic policy of the United States is to be kept on an even keel.

It has been said that Irish history is something for Englishmen to learn and Irishmen to forget. Be that as it may, Irish history shows that for centuries the historic Province of Ulster was as much part and parcel of Ireland as, say, the "Kingdom of Kerry." The four Provinces of Ulster, Munster, Leinster, and Connaught formed the nation known as Ireland from time immemorial—not Eire, or the Irish Free State, but Ireland. Irish unity is not just a vague tradition. It was a fact and a reality for centuries, in good times as in bad. Even British officialdom has tacitly acknowledged this unity in days gone by, and a survey of recent history shows that the existing partition of Ireland is arbitrary and artificial.

Northern Ireland, as we know it today, does not correspond even to the old Province of Ulster. In our press, Northern Ireland is often called Ulster, but this is actually a distortion. Northern Ireland is not and never can be Ulster, because three of Ulster's counties—Cavan, Donegal, and Monaghan—are not included in Northern Ireland; but form part of the Republic of Ireland.

The Six Counties, as the area is often called, date back to 1920. The section owes its existence to the determination of the militant Conservative Unionists (the pro-British elements) not to practice democracy and share a common life with the rest of Ireland. Britain's political leaders weakly submitted to this pressure, possibly remembering the Ulster Unionists' threats of civil war in 1914, when Great Britain almost gave home rule to Ireland. As a result, six of Ulster's original counties were excluded from the Irish Free State. These six counties were deliberately selected with a view to ensuring a comfortable unionist majority that could be counted upon to oppose Ireland's unity indefinitely.

Cut off from the rest of Ireland and deprived of three of Ulster's original counties, this rump Ulster is merely the offspring of a Machiavellian scheme to thwart Irish democracy and bolster up a local herrenvolk that regards the Irish as hewers of wood and drawers of water.

Wholesale gerrymandering makes the normal working of democracy in northern Ireland of very doubtful value. Electoral boundaries have been carefully drawn to keep the Irish Nationalist minority as ineffective as possible. Statistics published in the New York Times a few years ago show that in County Tyrone 74,000 Nationalist voters returned only 11 members to the Northern Ireland Parliament at Stormont, while only 60,000 Unionists returned 16. In County Fermanagh 33,000 Nationalists returned only 7 representatives, as against 13 elected by 26,000 Unionist voters. The 27,000 Nationalist voters of Derry City were represented by only 8 members at Stormont, while the 18,000 Unionists returned 12 members. Despite a Nationalist majority which, under any fair electoral system, should control Derry's destinies, the city-council representation has in point of fact been gerrymandered in such a way as to ensure a permanent Unionist majority. Such a system obviously bears little relation to democracy as we know it.

Another bitter feature of life in Northern Ireland is the economic and social discrimination against the Nationalist minority. True, the Government claims that such discrimination does not exist. Statistics show, however, that Catholics (who are overwhelmingly Nationalist) do not receive anything like their fair share of public appointments. Cases of applicants having to state their religion occur constantly, and the reason is only too plain.

The Belfast press delights in venomous attacks upon the Catholic Church and Catholic individuals. One paper, for instance, bitterly criticized the American administration for daring to appoint a Catholic in the person of Joseph P. Kennedy as Ambassador to the court of St. James. The late Lord Londonderry, a Protestant, was pilloried for receiving the King of Spain at his County Down residence.

Even physical violence in the district is not unknown. In 1932, Catholics returning from the Dublin Eucharistic Congress were attacked by mobs in Belfast, Portadown, and elsewhere. In 1935, anti-Catholic riots in Belfast culminated in a pogrom that forced over a thousand Catholics to leave their homes because of property damage. Hostile demonstrations against churches and convents, as well as against individual priests and nuns, occur at intervals.

In all fairness, it should be added that the terrorist activities of the IRA have done much to make a bad situation still worse. This tiny band of fanatics has handed the government the excuse needed to take certain high-handed measures at variance with normal civil liberties which have caused considerable concern in England and would be quite unthinkable there. In actual fact, the vast majority of Northern Ireland's Catholics deplore the tactics of the IRA, which have served only to increase the trials of the minority.

Unfortunately it is only too often true that "Catholic" means "Nationalist" and "Protestant" means "Unionist." This is one of the most regrettable phenomena that make life in Northern Ireland so different from life across the channel or across the border, and history alone provides the explanation. There are, however, many exceptions. Just as there is a tiny handful of Catholics who would prefer British citizenship, there are, on the other hand, many northern Protestants who have taken a stand for Irish unity and freedom.

In 1782 the Protestant Volunteers' Convention in Dungannon championed the cause of Catholic Emancipation vigorously, as did a number of Protestant clergymen. Protestants contributed generously toward the erection of Belfast's first Catholic church and seminary. Wolfe Tone's United Irishmen grouped Protestants and Catholics alike. In more recent times so outstanding an Ulster Protestant as that distinguished Presbyterian divine, Rev. Mr. Armour of Ballymoney, openly advocated Irish unity. Today, to their eternal honor, a growing number of Protestant politicians have joined the Catholic minority in opposing Unionist bigotry and discrimination, often paying a heavy price for their courage.

There is no need for the religious issue to cut across the cause of Irish unity. Irish history is eloquent proof of that. Many of Ireland's outstanding leaders were Protestants, often of pure Anglo-Saxon descent. Wolfe Tone, Davis, Lord Edward Fitzgerald, Grattan, Burke and Robert Emmet—all were Protestants. The entire Irish nation is keenly aware of the debt owed to those Protestants who spoke out boldly on behalf of their fellow citizens when the latter could not speak for themselves.

South of the border the religious issue does not exist. Protestants number only 7 percent of the total population, but they occupy positions of importance and public office out of all proportion to their numbers. Protestant clergy and laymen alike have repeatedly paid generous tribute to the tolerance and fair play, not to say the privileged position, enjoyed by the Protestant community in the Irish Republic. The facts speak for themselves. Ireland's first President was a Protestant. The constitution expressly states that state aid to education is not to discriminate between the denominations in control of the various schools. Dublin's two pre-Reformation cathedrals remain in Protestant hands, as in the past. Events have proved that Protestants have no need to fear victimization in Ireland.

Unfortunately the British people, with their traditions of fair play and tolerance, know very little of the facts of life in Northern Ireland, or of the "deal" foisted upon Ireland in their name in 1922. The average Briton dislikes intolerance, and would be shocked were he to know the full facts. In recent years questions about Northern Ireland have been increasingly frequent in the Imperial Parliament at Westminster, and an informed British public opinion can do much to help solve the problem.

Now Ireland's refusal to take part in the Atlantic Pact negotiations while the six counties remain under what is fundamentally an alien rule has once again highlighted the whole issue. It would be a thousand pities if the repercussion were to embitter Anglo-Irish relations, for this in turn could embarrass American foreign policy. It would be the more regrettable at a moment when, by and large, there is more good will towards the British in Ireland than there has been for centuries.

No opportunity should be lost to hammer home the necessity for an amicable solution. Steps should be taken as soon as possible to safeguard the Six Counties' economy and standard of living in a future united Ireland. Much can be accomplished along these lines on either side of the border. Ulster Unionists, could they but realize it, may have a far brighter economic future as Irish citizens working together for the common good than in their present uneasy status.

In the past, ex-Premier De Valera has promised the six counties a wide measure of local autonomy within the framework of a federated republic; Premier Costello is willing to make a similar concession. Whatever guarantees northern Ireland's Protestants may want in order to safeguard their liberties and rights, should be ascertained and given freely, publicly and without delay.

Communism's threat to Western civilization has thrown the entire question of Irish unity into a new perspective. The time has come to let the dead bury their dead once and for all; but this can be accomplished only by respecting the lessons of history and geography. Today Ireland is a nation once again and can freely stretch out the hand of friendship to her old adversary and new-

found friend. Englishmen must see that an Irish Ireland, free and undivided is no menace to Britain's security, but a loyal ally, such as she never could have been in the past.

To achieve this end, tact and diplomacy are needed—and needed at once. America, which owes so great a debt to these two ancient civilizations, can do much to bring them together. Now is the time for American diplomacy to act in its own interest. With the United States as friendly broker, England and Ireland can settle the issue of the six counties and face their common Atlantic future side by side.

Fooling With Franco

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial that appeared in the Christian Science Monitor of May 9, 1949:

FOOLING WITH FRANCO

In at least two respects the current moves to get the Spanish dictatorship into the good graces of the United Nations and the United States are strikingly ill-timed.

Two years ago it could be argued that the UN moral ban on General Franco would rally the Spanish people to him. If such an effect was ever produced, little of it appears today, while there is much evidence that the playmate of Hitler and Mussolini is hanging on to power by his toenails. His financial position is so desperate he has sought a second loan in the United States—this time from the Government-financed Export-Import Bank. Just who is it in Washington that wants the American taxpayer to rescue the Franco regime and finance its continued denial of liberty to the Spanish people?

A year ago it was argued that if Russia tried to overrun Europe, bases behind the Pyrenees would be useful to the United States. But, the Spanish people have had more than enough of war, and Franco would have trouble giving military bases to the United States. He could not go that far even for Hitler. It is very plain also that any value of bases gained in Spain would be far outweighed by the loss of trust and friendship among democratic elements in Europe.

Today the Atlantic Pact gives the United States plenty of other bases in Europe—and with popular support in the countries involved. Fooling with Franco was bad business at any time; today it is so downright foolish that Americans should look behind the advocates of such a course and try to discover what strange influence makes them act that way.

Veterans' Readjustment Allowances

EXTENSION OF REMARKS
OF
HON. WALTER B. HUBER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Vet-Times of May 7, 1949:

LET'S GET THE FACTS

One of the most valuable and economically sound benefits provided for World War II veterans in the GI bill of rights is due to come to an end, for all practical purposes, within the next 3 months. This is the program of readjustment allowances, or to use its common nickname, "52–20" payments.

Some 8,000,000 veterans, or about one-half of all World War II servicemen, have at some time taken advantage of these payments to tide them over while looking for work after their discharge, during work layoffs, or while struggling to get started in their own business.

Just over a million veterans, however, have leaned on this crutch for the full period of their entitlement. Among this group there may have been some abuses of the program, some dependence on the weekly pay check from the Government when employment could have been obtained. Thus developed the derogatory title "52–20 Club."

But the very fact that only about a million vets have used their full entitlements—ranging from 1 week to 1 year, depending on their length of service—shows that on the whole the veterans have used their readjustment privileges with discretion. It shows that when work is available, the vast majority of veterans are willing and anxious to work.

In recent months, the Veterans' Administration has noted a completely changed complexion in the readjustment allowances picture. To a large degree, it is no longer a readjustment program for veterans just out of service, but has instead become an unemployment-insurance program for veterans who are laid off or otherwise find themselves out of work.

Whether this is a correct role for the readjustment-allowance program is debatable. The veterans' organizations, with one exception, feel that it is a perfectly proper role. They feel that the millions of veterans who have never taken advantage of the readjustment, should be covered for an additional time. This, they point out, would provide a cushion for these vets in this present period of industrial unrest.

Apparently a goodly section of Congress is in agreement with this position, and at least four measures have been introduced in the House and Senate to provide for extension of the program for periods of 2 or 3 or 5 years.

Opponents of this extension theory argue that veterans working in industries covered by the unemployment insurance of the social security program, have now built up credits under that program. If unemployed, they would be entitled to the same unemployment insurance as other workers in covered industries. Of course, large numbers of veterans do not work in covered industries, and thus have built up no such credit on which to rely.

The question of extending the 52-20 program beyond its present deadline has never been adequately explored.

It seems only reasonable and logical that Congress should stage a full investigation designed to get all the facts, pro and con, on the issue.

At the present writing, nevertheless, no such action appears to be in the cards—largely because of the opposition of one member of Congress.

Instead it appears as if the program is to be permitted to die by default.

Traditionally, such a determination would be made by the House Committee on Veterans' Affairs, where the GI Bill of Rights was first promulgated. A member of that committee, Representative WALTER B. HUBER, Democrat, of Ohio, has introduced and is hoping to obtain consideration of a bill to provide for an extension of the program.

Representative JOHN RANKIN, Democrat, Mississippi, chairman of the vet committee, has so far refused to announce any hearings on an extension bill, or even to appoint a subcommittee to look into the merits of the case. Representative RANKIN told the Vet-Times this week that he doesn't know "whether we'll be able to get around to it this session."

It most certainly would not require much effort on Mr. RANKIN's part to appoint a subcommittee to gather the facts on the desirability or the nondesirability of extending this program. It most certainly would be unfortunate to have the program die by default, only perhaps to discover later that a serious mistake had been made.

The Welfare State

EXTENSION OF REMARKS
OF
HON. ALBERT M. COLE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1949

Mr. COLE of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of Alf M. Landon at the banquet, State meeting of Junior Chamber of Commerce, Topeka, Kans., Saturday evening, April 30, 1949:

Today most Americans are concerned about the hardening of our relations with Russia and the softening of business relations at home. Both are relevant to my subject tonight, because the true welfare state is essentially based on peace and prosperity.

One year ago the thoughts of war were uppermost in our minds.

Today, shaky and unstable business conditions are even of greater significance to the millions of Americans who are planning either production or the sale of goods and personal services in the way of jobs.

The darkest cloud on the business horizon today is politics. If the Congress, after ratifying the Atlantic Pact and passing the necessary appropriations providing for the administration of our public affairs and national defense, would adjourn, business and jobs would pick up immediately.

If the President continues to press his lavish spending and taxation programs on the Congress and calls a special session in the attempt to force through his Fascist program, business will continue shaky and unemployment will increase until we may have a real tailspin.

We are suffering more today from the national administration's politics than we are from unsound business conditions.

The air is full of warnings of the specter of socialism inherent in President Truman's welfare state.

But Mr. Norman Thomas doubts that they mean that we are drifting in the direction of the labor-socialist Government of England. He sees more of a Fascist trend.

Then, there are those who believe we, by a little snack of socialism, may avoid going the whole way.

The phrase "the welfare state" is one of those slick slogans that has the political advantage of meaning all things to all men.

In all history the basis of every government—tribal, monarchial, despotic— or popular has always ostensibly been the well being of the people.

That's what government is for.

Even the most despotic autocratic tyrant has always loudly proclaimed that this chief concern is the high interest of the state.

He has always said to his people, "Cease murmuring and complaining about my wars and your heavy taxes and the harsh restrictions I put upon you, because they are all for your own good. Papa knows best. You must trust the wisdom of your divinely appointed ruler."

Stalin chose to reject the friendly hand of the world and plunged the Russian people into a pitiful standard of living in order to satisfy his imperialistic aims. Machine guns and concentration camps are the basis of his rule.

And too often, the peoples of the earth—as the Russians today—to their infinite sorrow have "put their trusts in princes" and in methods of government which were wholly untrustworthy. And always under the delusion that that particular tyrant or their new plan would create heaven on earth.

The welfare state as outlined in President Truman's messages to the Congress would be paternalistic in its nature—regimented in character and autocratic in its functions.

I do not believe that the general welfare can by any possibility be promoted and maintained by that sort of government.

The American idea of the welfare state is set forth in the Declaration of Independence.

It defines the purpose and function of government to which we are all supposed to assent.

It says, you will remember, that governments are instituted among men to make secure their natural rights by which they are endowed by their Creator—life, liberty, and the pursuit of happiness.

That doctrine is reaffirmed and emphasized in the preamble of our Federal Constitution. Union, justice, tranquillity, common defense, and the blessings of liberty, might well have been summed up in the one phrase—to promote the general welfare.

That is the American definition of the welfare state—to make secure man's individual rights.

That is the American political doctrine and policy. The United States of America is the most outstanding example of the welfare state that the world has ever seen.

But to say that, does not solve the perplexing problems which confront us nor get us out of the mess we are in. I think I am not assuming too much when I say that every thinking American must realize that the American political system and the American way of life are on trial. No matter how deep our faith in it and how great our devotion to it, there must be, deep down in our hearts, a question if not fear, of its ability to meet and withstand the assault of practically the whole world. The whole world—not Russia alone; Britain has gone socialistic, and I believe to stay largely so for a generation, whatever the result of Britain's next general election, because you cannot unscramble eggs.

We may well question how far we can succeed in buying the allegiance to the democratic idea in the nations of continental Europe and the chaotic peoples of the Orient.

That leaves the responsibility for the preservation of the true democratic way of life, in our hands; and I say to you in all seriousness, that I am more greatly alarmed by the trend of political thought and practices in America than I am by communism or any other alien ism.

The American people will never be deluded by the false theories of stark communism. But many of us are being gradually swung in our thoughts by the sophistries of the administration's political, social, and economic theories which if put in practice—as some of them already are—will ultimately and inevitably destroy the democracy we have known, revered, and enjoyed.

What is our fundamental problem—the problem of the welfare state, which I insist the United States is now and must continue to be?

At the risk of reiterating the wholly obvious I ask you to bear with me while I take a running start at that question. We are agreed, I take it, that every human being born into the world has a basic right to life. Life means development—freedom to develop his own individuality. But by his very nature, man cannot live alone; he cannot exist in a vacuum. Therefore, government is as essential to the human race as are life and liberty.

Man, then, is a dual creature. He is free, but not absolutely free. He is dependent upon society and bound to society, but not absolutely dependent nor absolutely bound. Every individual throughout his life, every nation throughout its life, the civilized world throughout all history, has swayed back and forth between the idea of liberty and order between freedom and control. In one age we overemphasize order, control, regimentation—which inevitably tends to tyranny and by destroying all liberty destroys the very social or political system it was designed to protect.

In another age we overemphasize individualism—laissez faire—which inevitably tends to destroy society and in the end destroys the very individuals who hoped to profit by it.

Either excess is fatal.

It is the hope of democracy, the American idea, to maintain the golden mean between these two extremes—between weak, irresponsible government and the dictatorial regimentation of the we-planned-it-that-way fascistic state.

Now, just as we always have had a welfare state that has given the American people the largest measure of happiness beyond any other peoples in the world—we have had government planning.

The first bill the First Congress passed was a tariff act.

It is true that primarily it was a revenue measure.

Nevertheless, as it developed it became a protective measure for developing American farms and industries.

That is an example of economic planning by government without creating the planned economy of the Fascist state.

The administration's recommendations to the Congress mean a brand-new form of government for the American people. They make the Federal Government the master of the lives of the people. Large groups—such as farmers—will be forced to surrender their liberty and become mere wards of the state.

The basis of that new form of government is attractively described as planned economy—another slick description like the welfare state.

But there is nothing new about that form of government.

History, ancient, modern, and contemporary, is complete with its failures.

Therefore, we should examine the record not as Republicans or Democrats—but as Americans.

For 16 years we have heard paeans of praise for a planned and controlled economy.

For 16 years the planners of a regimented economy have continued their chatter about the advantages of what they call middle-way planning and completely ignored the record.

Let's take a look at that record. First, we must start with the creation of the Federal Reserve bank. Laying aside entirely the technical requirements of the banking system, one of the selling points to the country for the establishment of such a system was to avoid the banking panic that occurred in 1907.

The test of that function of the Federal Reserve bank came in the postwar adjustment policies after World War I.

In the first place, to the bank, through its abrupt change in its discount policy in the late twenties, is attributed a large amount of the blame for the disastrous depression in cattle prices and of other agricultural products which broke and bankrupt many cattlemen and farmers in America.

All through the twenties we had a very destructive farm price plus a hectic and unhealthy boom in stock values and city real estate. Not only did the Federal Reserve bank make no attempt to control this unhealthy and unsound boom, but, every time there was any suggestion of a healthy readjustment, a Republican Secretary of the Treasury jazzed up the market with another statement about sound and healthy conditions of American business and banking.

No attempts were made to put on the brakes and we wound up in a terrible smash and misery and suffering of the thirties.

New legislation was written under the guise of emergency measures to give Government increased powers of a managed economy. You will remember that an agricultural expert was brought in to decide on the monetary policies which were to bring happy days again in America. And we started out on our planned economy by killing little pigs.

In 1936, we had a little shot in the arm by way of $2,000,000,000 soldier bonus. Mr. Roosevelt boasted that business was better, and it was somewhat. There was only one way to go and that was to get better—it could not go any lower. Mr. Roosevelt claimed it was better because, "We planned it that way."

But in 1938, when business did commence to take on some life, immediately the planners got scared of inflation and put into effect some deflationary policies and edicts. Business promptly went into a reverse.

As a result we had as much unemployment in 1939—when war buying started to hit us—as we had in 1933—when the planners started to plan to make America over.

The war interrupted normal business life—as well as the life of many individuals.

But the worst is yet to come. The planners have not even been able to keep the social-security fund solvent. The old-age fund is seven billions short of what it must be to meet the future payments due under the old-age act. That, ladies and gentlemen, is the harsh reality of the superstate so far in America.

With the advent of VJ-day, the planners immediately predicated their policies on a depression. The economic adviser of Mr. Truman predicted, as you will remember, an unemployment of eight or ten million by the fall of 1946 and the national administration started inflationary measures at the very time when inflation not deflation was the inevitable consequence of the situation that we were in.

In his message to the Congress last January, President Truman predicated his recommendations to the Congress on the anticipation of continued inflation. The economic advisers he followed apparently were unaware that deflation had already set in.

Thus, in every instance, the economic planners have been wrong. If they had the complete powers which they asked for—which are those of king's divine right era—they would have made a terrible mess of the productive efforts of the mighty American people.

Two or three economists who are more influenced by their emotions than by their reasoning—given this power—would have dosed the American people with a lot of

quack remedies. But even as it was, we were prodded when we should have been curbed and curbed when we should have been prodded.

Montgomery Ward and Sears-Roebuck pursued entirely different policies following VJ-day. One was conservative of its capital, almost to the point of retrenchment. The other was optimistic and aggressively expansive.

That's America.

This same sort of conflict of opinions goes on in all business all over the country. That is the system which brings stability to our economic life and is the system which the planners would supplant with the edicts and decrees of two or three economic jokers in Washington

It is not a question of Republican or Democratic administration. The issue is simply whether under the sham and pretense of a planned economy that has not worked we want to adopt the principles of the Fascist state which basically does not permit people to think for themselves.

The administration's theory of the welfare state is dictating everybody's welfare by Federal hand-outs. That was the basis that Hitler started out on in Germany when he got the applause of some of the illiterate so-called liberal publications in this country.

It is not a partisan issue, because the record of the Republicans is not any better than the Democrats in planning the economic life of a great nation like America.

And the illustration that I have given is not confined to America alone. For some 14 years, we have heard praise of Sweden as the middle way. Now its economies are facing a crisis. The Swedish planners made the same mistake as the American planners. Following the last war, expecting deflation, they instituted inflationary measures. Thus throwing gasoline—as it were—on the inflationary forces. Now Sweden, the example par excellence for 14 years of state economy planning, is in financial difficulties.

President Truman was right when he said there was a third party in control of the Eighty-first Congress. I would call it the literate liberals who know their history. It is composed of Members of Congress who know that life in an armed fortress—which the present foreign situation is forcing on us—means constant encroachment of the military on all phases of democratic life. When that is coupled with the totalitarian regimented welfare state controlling the planting of every acre of ground and the life of every individual through hand-outs from Washington—a Fascist state becomes inevitable.

The President's message to Congress on the state of the Union is a concrete illustration that a planned economy requires a totalitarian government. When government starts in to plan the economic and individual life of the people, there is no limit. It finds it must have more and more and more control. One control calls for another. I said that as far back as 1936, but now we have the record.

In a world as closely organized as this world, how can you have economic planning on a national basis except by pursuing the same course that Russia has pursued. At the very time the President asked for additional controls over American economic and individual life he asked, also, for additional power in making reciprocal trade agreements.

It seems to me, one is antagonistic to the other. Reciprocal tariff is the way of individual business and the free enterprise system. You scratch my back and I'll scratch yours. That has no place in a planned economy. Therefore, if we are really to make a planned economy work, we must have it on a one-world basis or a one-country basis like Russia.

The warm-hearted, generous souls who are marching under the banner of the welfare state do not see that it is simply the forerunner of the superstate. The superstate does not long stay socialist or communist. It always turns into despotism. Neither labor nor farmers are as free today in England as they are in America or as they were in England before the present labor-socialist government.

There are few left these days that are so benighted that they cling to the delusion that Russia is still following the principles of Marx and Lenin. The liberal-socialist government in England only exists by reason of the dole handed to it by capitalistic America.

It is only a short step from a planned economy to a controlled economy and controlled economy means a Fascist economy.

Already, President Truman has taken that step from a planned economy to a controlled economy when he advocated building Government steel plants; because, Government ownership of industry is the first step in a Fascist economy.

One of the important factors in the cold war that cannot be ignored is the possible effect of competition from foreign state-owned industries on our economic life.

It is well known that Russia has long counted on an economic collapse in our country to make her conquest of America and all of the world easy.

She owns shoe factories in Czechoslovakia and other industrial plants in her satellite countries that can be a powerful, potential weapon in the cold war by disturbing our economic life and flooding us with the products of those plants and selling them without regard to cost of production.

It is childish to blame Russia for the state of the world today when our own policies have repeatedly given her the openings. If you make a bad deal, you are only kidding yourself when you put the blame on the other fellow.

President Truman rightly said a few days ago that the important thing was to know where we are going. That basic issue is not new. Aristotle defined it as the cycle from democracy to autocracy, back to democracy again, and then back to autocracy.

For the immediate present, I think the greatest thing that could happen to business for prosperity in America would be for the Congress to adjourn.

And, second, for both the Congress and our local government to go back to the good old American custom of deciding which must have priority in public appropriation instead of piling each new request on top of the previous ones until we have a perfectly fantastic load of taxation on the American taxpayer.

The cost of Federal and local governments amounts to about 25 percent of our national income.

One of the principal roads to fascism is to destroy the incentive for private production and enterprise. The best way to do that is by a load of taxation that discourages the willing horse.

We are at that point now in our fiscal policies. We are up against an established fact that government all over America must realize and we must deal with it on that basis.

We have gone too far to back out of the Atlantic Pact. That would be suicidal.

The Russians don't fool very easily. They aren't kidded merely by a piece of paper. The Atlantic Pact is more than that, of course; but, without an arms program, it isn't much.

Therefore, we have to provide arms some way—not only for ourselves but our allies.

The question is whether we do it on top of the staggering outlays we are already committed to—and on top of the simply colossal expenditures involved in the administration's cake-eaters welfare state or whether we pare down some of our commitments and pass up the administration hand-out domestic program.

I supported the administration's Turko-Grecian policy—the Marshall plan, and national rearmament; but have repeatedly said it meant a paring down elsewhere on our Government expenses.

It's simply a question that almost every family faces—of what has priority in the family purse.

Americans cannot stand any further tax increases. Our taxes now have reached the load limit.

We are committing a fatal error in not planning for the long-long-drain of the cold war, as we must do. And the threat to our democratic processes comes not only from the military—the economic planners—but from the tax load as well.

There are factors to a strong and sound nation other than a stable economy. The most important of those factors are—a comprehensive education program—decent racial relations—high health standards.

Opposition to the Fascist welfare state of the administration does not mean opposition to welfare legislation. Neither does it mean an administration steeped in a tradition of laissez-faire.

It means—government policies that keep economic opportunities circulating through the entire blood stream of national life.

When nations have limited opportunities to a few chosen groups within a people—those nations have crumbled.

Competition—not a planned economy—production not scarcity—jobs with incentive pay—not government hand-outs—are the life blood of a democracy.

Taft-Hartley Law

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas L. Stokes, from the Buffalo Evening News of May 5, 1949:

THOMAS L. STOKES SAYS "GEORGIAN GAVE FACTS BEHIND SOUTH'S STAND FOR TAFT-HARTLEY ACT"

WASHINGTON, May 5.—During debate in the House on labor legislation a Georgia Congressman told the truth about the Taft-Hartley law and its very slick counterfeit by his fellow Georgian, JOHN S. WOOD, which the House had the good sense to reject.

Representative HENDERSON LOVELACE LANHAM explained that he had voted against the Taft-Hartley bill 2 years ago. It was, he explained, an unpopular thing to do as only 4 of the 14 counties in his district have labor unions, and under the antique unit system in Georgia "labor organizations in these four counties are not able to elect one Representative."

"So," he said, "I voted against the Taft-Hartley Act, not for any political reasons, but because I was convinced that whatever its purpose, its effect would be just what its effect has been, and that it is to hamper and discourage union organization, especially in the South."

In his diagnosis he put his finger on the motives of a number of southerners who

voted previously for the Taft-Hartley Act and voted this week in the coalition with Republicans for the Wood bill, which was to cripple the labor movement in the South. These southerners follow the wishes of the industrial and financial interests, some of them with roots in the East, which are so powerful under the rotten borough system in some parts of the South where so many voters are disfranchised by one means or another, including the millworkers.

Now that the House has sent the Wood bill back to committee, it would seem wise for those who write another bill to consider Mr. LANHAM's penetrating analysis. He is no radical—far from it, as will be seen from some other things that he told the House, but—he has a keen perception of what is back of the fight against a decent and fair labor law that will permit unions to survive.

"There are many factories and mills in my district," he said, "where union organization is not needed; where there is such an enlightened attitude on the part of management and such cordial relations between management and labor that union organization is not necessary."

"Some workers in the South," he said, "do not take to unions."

"But," he added, "there are conditions in the South that only union organization can remedy. I foresaw what has actually happened—that the enactment of the Taft-Hartley Act would discourage union organization in the South.

"When I was at home a young man who worked in a textile mill came to my office. He was not an educated man. He said, 'Mr. LANHAM, I do not know anything about law, but I do know the effect the Taft-Hartley Act had upon conditions in the mill in which I work. We knew it the next morning. There was a different attitude on the part of management.'"

Mr. LANHAM said of the Taft-Hartley law that "there is no question but that in the South it has had the effect of restricting union organization and actually destroying unions that were in existence."

It might be well if some other Members of Congress talked to workers about this union-busting effect of the law.

Union organization means better wages for the worker, and better wages for the workers are essential to keep our economy in balance, particularly in the South, where low standards put a drag on the whole national economy. Mr. LANHAM and a number of other southerners who refused to join the Wood bill parade recognized that.

Israel's First Anniversary

EXTENSION OF REMARKS
OF
HON. ABRAHAM RIBICOFF
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. RIBICOFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement on Israel's first anniversary:

On this historic and festive day of Israel's first anniversary as an independent state, there is much rejoicing in Israel, as well as in the United States. The people of the new Jewish state rejoice because their 2,000-year-old hopes and ideals have at last been realized. They are no longer an aimless people, no longer the unwanted and tragic wanderers over the face of the earth. They now have a home of their own which has been recognized by 50 nations of the world, a home toward which the persecuted and homeless Jews of Europe are returning by the tens of thousands each month.

Here, in the United States, we rejoice for a two-fold reason: First, because this newest addition to the family of nations has been created by the Jewish people in the image and concept of our beloved country as a land of freedom and democracy; second, we rejoice because Israel is gradually emerging as a strong bulwark of democracy in the Middle East and as a force for peace and progress in that backward area of chronic turmoil and human misery.

During its first year of existence as an independent state, Israel has shown itself to be a valuable defender of the enlightened concepts of human liberty, social welfare and a higher standard of living for all peoples of the Middle East. The new Jewish state is determined to proceed along the path of true social justice and economic development to benefit not only its own people, but those of the neighboring countries as well.

It is not difficult to foresee that under such circumstances Israel will, within a reasonable time, become an ideal example of a happy community and an instrument for progress in an area of the world which has for many centuries remained untouched and neglected by the forces of modern civilization, social progress, and economic well-being. This vast backward area now stands on the threshold of great opportunities.

It can be hastened and brought to full realization by the peoples of the Middle East themselves through cooperation, friendship, mutual respect, and constructive efforts. Israel has proved to the world that it has reached political maturity, it is blessed with a sense of good judgment, and it is possessed of an indomitable spirit for the good of all mankind.

In these troubled and uncertain postwar days, the fulfillment of Jewish hopes and prayers of many centuries is truly a modern miracle which stands out in the world as a shining beacon of light and hope. The reestablishment of Israel and its successful existence as an independent state should serve as an encouraging and morale-building factor to all oppressed peoples the world over who, on this day will not fail to take heart and gain a new lease on life from Israel's achievements in the last year.

Just as it made lasting contributions to civilization in ancient days, so Israel may now help guide the way and contribute toward better human understanding, cooperation among the nations of the world, and true peace for mankind everywhere.

Iowa

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. LeCOMPTE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I desire to include the following poem entitled "Iowa," written by Agnes Sloan Stookesberry, of Bloomfield, Iowa:

IOWA

A hundred years and more have gone
Since the caravan of pioneers entered the prairies with a song,
And when they saw the streams and waving grass
They knew they had reached their paradise at last.

With their leader they knelt in prayer
To give thanks to God for his loving care—
That He had guided them safely through
So they could civilize this State for you.

They found the land of "milk and honey"
Here they tilled the soil and made their money,
After all these years and today
We still enjoy the wealth of Ioway.

The wild flowers bloom here in the spring
Here's where robins and bluebirds love to sing,
We have a wealth of corn and oats and hay—
Say! Folks you can't beat Ioway.

We have the valleys and the hills
And rich in all that gives you thrills,
So when you're passing down this way
Be sure that you stop in Ioway.

Here's where the roses bloom in June
And you hear folks say ,"I'll see you soon."
The youngsters are always happy and gay
There's no place quite like Ioway.

Wherever is my home, be it far or near
There's just one spot that I hold dear.
Take me back to it I pray
And let me die in Ioway.

—*Agnes Sloan Stookesberry.*

Labor Bill Compromise

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence:

NOW IS TIME FOR GENUINE SPIRIT OF COMPROMISE FOR FAIR-TO-ALL LABOR BILL

(By David Lawrence)

WASHINGTON.—Whether there will be a new labor-management law enacted at this session depends entirely on how far the labor-union leaders want to go toward meeting the opposition viewpoints that have been expressed by a majority of the members of the Houes of Representatives.

The various votes taken show clearly:

1. The Taft-Hartley Act unamended or unchanged cannot survive as it is written.

2. The old Wagner Act unamended or unchanged cannot be reenacted.

3. Neither side can put into law a pro-management or prounion measure.

This means that the opportunity for a genuine compromise is at hand, provided the representatives of management and labor, respectively, really want to agree.

There is beginning to be a suspicion that both sides would like to maintain the present deadlock. This would be a grave mistake in judgment. The labor-union leaders are figuring that no legislation at this session would enhance their opportunities for a pro-union bill at the January session because the congressional elections would be closer at hand and would influence many who are wavering today.

The management side probably reasons that if no action is taken at this session the Taft-Hartley Act will remain on the books and will be harder to dislodge in January because of the increase in evidence that workers themselves are not as bitterly opposed to certain provisions as some of the labor leaders have described them as being.

But to make labor-management legislation a football in the next political election will

not benefit either the public or the protagonists in the controversy itself. The whole problem is susceptible to compromise.

The task of writing a new labor law that would be fair to both sides cannot, however, be undertaken on the floor of either House of Congress. It must be done in committee after further hearings, or outside of Congress by representative groups from both sides with a will to agree.

Everyone knows now Congress isn't going to allow strikes to be held in industries which can paralyze the Nation's economic system. Everyone knows now there are ways to meet the positions taken by labor and management on vital questions.

Until the House votes were taken there was doubt as to what the prevailing sentiment was. The air has been cleared now.

The President's Health Program

EXTENSION OF REMARKS
OF
HON. JOHN McSWEENEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. McSWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

THE ELIZABETHAN CLUB
OF YALE UNIVERSITY,
New Haven, Conn., April 30, 1949.

The Honorable JOHN MCSWEENEY,
House Office Building,
Washington, D. C.

SIR: I am writing to urge your support for the President's health program. I shall appreciate receiving your position on the matter.

First, I wish to denounce the popular phrase "socialized medicine." That is a term that has probably been insinuated into the press by the public relations men of the AMA. The program proposes to socialize the patient, if anything. The medical profession is most illogical in its opposition to the creation of a guaranteed, solvent, enlarged body of customers, while at the same time it moans that the doctor is the last man to be paid.

Compulsory free public education has been encouraged in this country since at least the promulgation of the ordinance of 1789. If I may make a value judgment, I should readily say that health is of more worth than education. Hitherto, technology has dictated that we could extend only the secondary value of the people. Now it is feasible—on a purely technological basis—to make most of the people fairly healthy most of the time; only poor distribution has blocked the attainment of that goal. The President has offered the chance "to make available enough medical services to go around and to see that everybody has a chance to obtain those services." I believe that we should now give everyone that primary value.

Let me change from idealism to the realism of the dollar. With the increase in medical costs, with the increase in the number of medical services available, and with the increase of the irreducible minimum of them, a growing proportion of the population is unable to obtain what it needs and what is readily available; these people are not paupers. There is the rub. They have access to neither charity nor medicine. They are the great, crushed middle class—the semihealthy basic population. To be more specific: Yale is a school with a graduate body of much greater than average wealth. Yet the average graduate of last June, who must live on his own earnings, cannot afford even an appendectomy—one of the simplest and commonest operations. Mention Yale when applying for charity and get none. Pardon me, but my self-interest is showing—and unashamedly.

More of money. The President estimates that his plan would cost about $7,000,000,000 and that the current costs are about $9,000,000,000. The former would reduce the latter somewhat, but the total would naturally be higher than the present figure. More extensive and more intensive coverage is not going to be cheap. But the dollar dividends—what of the other kinds?—would be enormous in the long run, I think. The percentage of rejections for selective service was staggering; those unhealthy men—and the uncalculated women—are an enormous dollar burden on our economy today. Let us help them and the economy.

I should oppose medical service of the type introduced in Great Britain. But the President proposes complete professional freedom for both patient and doctor. I feel that this is the greatest of the imponderable values in the act.

Let me point out that the AMA—whose authority to speak for all I question—does not oppose public expenditures for subsidies to medical schools, for grants to hospitals, and the like; these, they say, are in the public interest, with the community doing for the individual what the individual cannot do for himself. I claim the same virtues for health insurance.

I shall continue to write you on this and other matters. If possible, I should like to talk to you during the summer recess when you are in Canton or if I am ever in Wooster.

With thanks in advance for your consideration of my opinions, I am,

Yours very truly,

DON ROGERS, Jr.

A Sketch of the Fraternal Order of Eagles' Memorial Foundation, January 1949

EXTENSION OF REMARKS
OF
HON. WILLIAM L. PFEIFFER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. WILLIAM L. PFEIFFER. Mr. Speaker, under permission to extend my remarks, I include the following sketch of the Fraternal Order of Eagles' Memorial Foundation, together with an outline showing the purposes of the memorial foundation:

A SKETCH OF THE FRATERNAL ORDER OF EAGLES' MEMORIAL FOUNDATION, JANUARY 1949

The Fraternal Order of Eagles' Memorial Foundation is a mission of the heart. The foundation is an all-Eagle story, as it shows the great family of Eagledom swinging into action to support one of its greatest humanitarian undertakings.

Conceived by our managing organizer, M. L. Brown, founded and established by the grand aerie, supported and sustained by all of our great Eagle family, it is now operating in all parts of the entire jurisdiction under the capable leadership, guidance and administration of the memorial foundation board of trustees.

Let your mind drift back a few years to those dark and dreaded war days, and recall those scenes when your "finest" departed from your homes and your communities. There were many, many promises made in those days. The Eagles were making promises, and Brother Brown wanted to be sure that the Eagles kept their promise. Thus, as he presented the plan, the board of grand trustees acted immediately by establishing a memorial foundation commission on October 8, 1944, consisting of Brothers J. W. Young, R. W. Hansen, M. L. Brown, John A. Abel, and E. J. Balsiger. This commission was to act until a permanent organization could be established.

Thus, the Fraternal Order of Eagles' Memorial Foundation had been created and the commission began to campaign for funds. Soon, as the good news was broadcast, the pledges of the subordinate units of the Eagles began to arrive. It was soon learned that the foundation, in order to execute its planned program of activities, would need a much greater sum than was first contemplated. The aeries and auxiliaries again responded, and also each member of our Eagle family was afforded an opportunity to support the foundation through individual contributions. There are many thousands of names written on the honor roll of the foundation, which is a record of the charter subscribers to the memorial foundation. The foundation is a perpetual "living memorial" and each and every one of us is afforded an opportunity to participate in our foundation.

The foundation fund is a permanent fund and no part of its corpus can be expended. Only the earned income from this fund, which is very carefully and prudently invested in Government bonds and other high-grade nonspeculative investments, is used to carry out the activities of the foundation. Today that fund has reached the $3,000,000 mark, and as the program unfolds, greater needs are very apparent. It is very vital that this fund be increased so that the Eagles shall never falter nor need to curtail their program of assistance for their large family of more than 1,200 sons and daughters.

All of the administrative expenses of the foundation are borne by the grand aerie. The foundation trustees, who give so freely of their time and effort, receive a salary of $1 per year from the general funds of the grand aerie.

The 1946 grand aerie convention established a permanent body—the memorial foundation board of trustees. The board of trustees was composed of 15 members of the grand aerie. This board was charged with the duty to supervise, administer, and execute the activities of the foundation, as promulgated in the rules and regulations.

Under the inspirational leadership of its chairman, Judge G. A. Farabaugh, the foundation swung into action. Plans were made to search for the memorial foundation's large family of children, the children of those Eagle veterans who had made the supreme sacrifice. The records reveal that there were 3,123 Eagles who had died or lost their lives due to service in World War II.

Soon the foundation had a very large growing family of boys and girls, and today it is an ever-expanding family as the foundation is leaving no stone unturned in its avowed efforts to locate all those children who are eligible. Today your foundation family has 1,248 boys and girls. The largest single family has eight children.

You will find enclosed a copy of the purposes of the foundation. Now we will try to unfold how these purposes are being carried out.

Each child is furnished with an annual medical and dental examination form. The forms are accompanied by instructions that the mother or guardian of the child is to

take the child to the doctor and dentist of their choice. When these completed forms are returned to the foundation's headquarters, they are very carefully scrutinized by a volunteer staff of trained personnel who meet once a week. As each examination form is very meticulously appraised, very careful evaluation is given to the remarks and recommendations made by the local doctors and dentists. Thus, each child is very soon receiving those professional physical, medical, surgical, dental, and optical services in his own community that are so necessary for full growth and development.

Now, as the second annual completed medical and dental examination forms are being compared with the first, the foundation is very happy to report a very favorable degree of improvement in the health status of the foundation children.

The first health assistance afforded was a tonsillectomy for son Raymond, the operation being performed in July, 1947. Since that time there have been authorized 165 tonsillectomies, 7 appendectomies, 3 serious eye operations, a hernia operation, 12 X-rays, 537 dental services, 58 eye examinations, and the purchase of 35 pairs of glasses. These are only a few of the many assistances that are afforded, which have run from serious brain operations, ruptured gangrenous appendicitis, mastoid, deformities of harelip and cleft palate, plastic surgery, rheumatic fever, spastic paralysis, and pneumonia, to skin infections, childhood diseases, colds, and accidents.

An outstanding virtue of the foundation is the method which is employed in being of service. Usually a widow, as she struggles to hold her family together, will first try to provide food, clothing, and shelter for her children. We know that in today's market she has little chance to provide for more or to lay anything aside for emergencies. Not only will there be the need for dental services, immunizations, and other ordinary medical services, but visualize the need when sickness, disease, need for an operation, or an accident visits the household. These are the situations that tear at the heartstrings of a home. Yet, there is your foundation affording assistance so that the mother may call in her family doctor to administer to the needs of her children. Thus, through your foundation's services, you are aiding in preserving that fundamental belief of all Eagledom—"To preserve the integrity of the American home."

The educational activities of the foundation provide each of its children educational opportunities to develop to the capacity of their ability. The opportunities include scholarship aid in the form of outright grants for university, college, business school, vocational school, speech clinic, or other training. The university or college scholarship aid is not an all-out paid-expense account, but the amount of aid granted is commensurate with the cost of attending a State college or university of the State in which the youth resides. Already a daughter of the foundation has graduated from a business college and is gainfully employed. Several others are in college preparing for teaching, engineering, and business careers. In a recent educational-information blank that was sent out to those youths who will soon be graduating from high school, over 80 percent of them expressed a desire to continue their educational preparation. They have selected nursing, ministry, business, teaching, engineering, and printing as future fields of endeavor.

Through the very kind cooperation of many of the aeries and auxiliaries, arrangements have been made so that each foundation child in their community will receive a Christmas and a birthday remembrance. It is only through the untiring efforts and cooperative assistance of the Eagle units in the jurisdiction that your memorial foundation can function thoroughly. There are some children who are not living near an aerie or an auxiliary, and efforts are being made to have these children adopted by the closest aerie and auxiliary. The foundation headquarters sends each child a birthday card.

The real story of your "mission of the heart" is in the many letters of appreciation and thanks that are received.

Today, as the foundation has just completed its first full year of active service, it looks to the future. It can see a large growing family with many needs. The greatest demands upon the foundation, based upon available census, will be in those years of 1959 to 1969. The foundation is vitally concerned because it is very easy to project into those future years and see that the earned income of the present foundation fund will never meet the needs of those years.

The foundation trustees are sure that you feel the same as they do; that the Eagles shall continue to keep their promise that was made to those brothers who cannot answer our roll call. Your foundation can continue to give thorough assistance in keeping with its approved purposes, if each of us loyally supports our Fraternal Order of Eagles' memorial foundation.

"He who builds well in the life of children builds a monument reaching to the sky."

PURPOSES OF MEMORIAL FOUNDATION

A. To provide scholarships to children of members of the Fraternal Order of Eagles who were killed in action while serving in the armed forces of the United States or Canada during World War II.

B. For financial assistance in the educational, physical, medical, surgical, dental, and optical welfare of the minor natural children of those members of the Fraternal Order of Eagles killed in action or dying before January 1, 1950, as a direct result of wounds or illness contracted while serving in the armed forces of the United States or Canada in World War II, provided that such members were members of the order during their service in the armed forces in World War II.

C. For financial assistance in the educational, physical, medical, surgical, dental, and optical welfare of the minor brothers and sisters or step-children, definitely proved as dependent for full support and care upon those members of the order killed in action or dying before January 1, 1950, of wounds or illness contracted while serving in the armed forces of the United States or Canada during World War II, provided that much members were members of the order during their service in the armed forces in World War II.

D. For financial assistance in the procurement of specialized training and scholarships of the worthy sons and daughters, not over 21 years of age, of those individuals who were members of the order during their service in the armed forces of the United States or Canada in World War II, and who, because of military service contracted handicaps or disabilities, are proved to be financially unable to provide merited educational advantages to such natural sons and daughters.

E. For financial assistance to accredited hospitals and associations engaged in health welfare work, baby clinics, and other like undertakings calculated to improve the lot and enhance the physical, mental, and spiritual welfare of underprivileged and physically handicapped children in various communities.

Our Armed Services

EXTENSION OF REMARKS
OF

HON. ABRAHAM RIBICOFF

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. RIBICOFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following excellent article on our armed services by Francis S. Murphy, publisher of the Hartford Times and one of Connecticut's outstanding leaders, which article appeared in the May 6, 1949, issue of the Hartford Times:

ARMED SERVICES FOUND FIT AND READY TO DEFEND NATION AGAINST ANY ATTACK—BACK-OF-SCENES VISIT IMPRESSIVE

(By Francis S. Murphy)

"There will never be another Pearl Harbor." At least that is the determination and the conviction of the officers of the armed services whom I met recently in Washington; Norfolk, Va., Eglin Field, Fla., and at Fort Benning, Ga.

I was fortunate in being included in an invitation from the Secretary of Defense to take part in a joint orientation conference which was to take us back of the scenes and bring us up to date on what is going on in the armed services of our country. I was glad to accept.

In the group were heads of many important manufacturing concerns, many of whom have made a great many articles for the armed services, several heads of universities and other professional men. The group included: William L. Jones, Jr., vice president of Jones & Laughlin Steel Corp.; Malcolm P. Ferguson and Ernest Kanzler of the Bendix Aviation Corp.; Martin W. Clement, president of Pennsylvania Railroad; Senator James M. Mead of New York; Baird H. Markham, director of American Petroleum Institute; Floyd B. Odlum, chairman of the board, Consolidated Vultee Aircraft Corp.; W. C. Rockefeller, assistant to chairman of the board, Consolidated Vultee Aircraft Corp.; R. S. Reynolds, Jr., president, Reynolds Metals Co.; Don G. Mitchell, president, Sylvania Electric Products, Inc.

Dr. Ernest O. Lawrence, director, radiation laboratory, University of California, one of the top men of his line in the country; John Macrae, Jr., chairman of the board, E. P. Dutton & Co.; Allen B. Kline, president, American Farm Bureau Federation; Alexander N. Kemp, director of Standard Oil Corp. of California, former president of American Airlines; Merryle S. Rukeyser, International News commentator; Dr. Deane W. Malott, chancellor, University of Kansas; John Jay Hopkins, president, Electric Boat Co.; Stephen Early, Deputy Secretary of Defense; William T. Faricy, president of Association of American Railroads; Richard J. Gray, president of Building and Construction Trades Department, American Federation of Labor; Carl Huhndorff, director of research, International Association of Machinists; Edward F. McGinnis, former Sergeant at arms, United States Senate; Dr. Charles S. Johnson, president of Fisk University; D. Gordon Hunter, vice president, Phoenix Mutual Life Insurance Co.; Mr. Herbert Eisenhart, president, Bausch & Lomb Optical Co.; H. R. Boyer, director of production, engineering section, General Motors Corp.; Francis S. Baer, senior vice chairman of board of directors, Bank of America, San Francisco; William R. Matthews, publisher,

the Arizona Daily Star, Tucson; John P. Marquand, of Nassau, the Bahamas, noted novelist; Morehead Patterson, chairman of the board, American Machine and Foundary Co.

Raymond P. Alexander, a lawyer from Philadelphia; John F. Budd, publisher of Air Transportation; Dr. Norman Salit, director, Commission for Conservative Judaism; Carroll P. Streeter, managing editor of the Farm Journal; Arthur N. Tode, honorary president, Propeller Club of the United States; Dr. Blake Van Leer, president, Georgia Institute of Technology; W. Walter Williams, president of Continental Insurance and chairman of the board of C. E. D.; W. G. Zaenglein, president of the Monroe Calculating Machine Co.; H. H. Benedict, woolen manufacturer; Lewis Allen Weiss, chairman of the board of Mutual Broadcasting Co., and Kenneth L. Fox, editorial writer of the Kansas City Star.

Our conference started at the Pentagon Building in Washington, D. C., on Monday morning, April 4, and we were addressed by Secretary of Defense Louis Johnson. Later in the schedule of the next two and a half days we heard talks by Charles E. Bohlen, counselor of the Department of State, who is an expert on the Russian situation and who is supposed to speak Russian better than any American in this country. His analysis of the situation was thorough and very illuminating.

Other talks were given by John L. Sullivan, formerly Secretary of the Navy; Admiral Louis E. Denfeld; Gen. Clifton B. Cates, commandant of United States Marine Corps; W. Stuart Symington, Secretary of the Air Force, Gen. Hoyt S. Vandenberg, Chief of Staff, United States Air Force; Kenneth C. Royall, formerly Secretary of the Army; Gen. Omar N. Bradley, Chief of Staff, United States Army.

Dr. Erwin G. Nourse spoke on economic implications of military preparedness; Donald F. Carpenter, Chairman of the Munitions Board, spoke on the industrial support of military operations; Frank Pace, Jr., Director of the Bureau of the Budget, spoke on the national budget; Brig. Gen. C. T. Lanham talked on the subject Better Citizens—Better Soldiers; and Dr. Karl T. Compton, on the subject Scientific Research and National Security. In addition to this, William Webster, Chairman of Military Liaison Committee to the Atomic Energy Commission, and Maj. Gen. Kenneth D. Nichols, Chief of Armed Forces Special Weapons Project, spoke on military aspects of atomic energy.

At the end of each one of these talks the opportunity was provided for questions from the group, and there were plenty of questions passed up to the speakers.

We boarded Air Force planes at Bolling Field, Washington, and were flown to Norfolk, Va., where we were conducted through the great naval base there. We were taken aboard the U. S. S. *Sicily*, which has a mass of equipment designed to detect and destroy submarines. The device, called the Sonobuoy, is tremendously effective in marking the position of a submarine and detecting any movement.

Afterwards we went on board the carrier *Midway*, one of the largest ones, and went out to sea in company with another and smaller carrier in addition to 19 destroyers and a snorkle submarine. We had grandstand places on the carrier on what is known as the "Island" and had the thrill of watching preparations for the take-off of the fighter planes, which are based on the carrier.

Bright colored jerseys and caps are used to designate the different types of responsibilities various men have in the operation. Men in control of the flights have, for instance, yellow jerseys and yellow caps; others have red jerseys and red caps, and blue jerseys and blue caps.

When the planes have all been brought to the flight deck and placed at the stern of the carrier, the motors are started and the Pisacki helicopter takes off from the bow of the ship to eventually take its place a quarter of a mile or so astern of the carrier to be ready for rescue operation in case of a plane or a pilot going into the sea.

It is very much of a thrill to see how quickly the plane takes off from the carrier deck and in such a short space. The take-off is aided by the carrier heading into the wind and proceeding at about 30 miles an hour. When it is time for the planes to return to the deck they land at the stern and if the signal man gives the signal to go ahead, the plane hits the deck and a hook at the end of the plane grabs on to the first cable running across the deck. Should it miss the first, it will get the second or third, or if these are missed, others 6 or 8 feet high have been put quickly in place and very definitely will stop the plane.

When we arrived on board the carrier we saw two twin-motor planes larger than the single-motor fighter planes. They were on the deck below the flight deck. It developed that these planes had flown across the country at a record speed of 3 hours, 45 minutes, and that they were to be catapulted off of the *Midway* where they were to proceed to San Francisco and remain flying for 8 hours more as a demonstration of their range. These planes were jet assisted. While the planes were in the catapult, which arrangement by the way is sunk in the deck, the blast from one of the planes was so severe that it tore off the hood of a jeep standing near the "Island."

Depth charges were dropped from destroyers, practice bombing runs were made at smoke targets and precision was very much in evidence.

Upon returning to the base at Norfolk we were flown to Eglin Field, Fla., the great Air Force proving ground, 450,000 acres in extent. I imagined very few of us knew about this tremendous area which is so valuable in training and proving out various types of planes and equipment. Here we were taken through the new climatic hangar which project cost approximately $10,000,000. This was built here because of the great distance to locations similar to Alaska where intense cold can be found, to see how modern planes stand up under subnormal temperatures.

It was found that there was much time lost in waiting for temperatures suitable for testing, and there was a short duration of these temperatures. There was also need for close contact with designers, manufacturers, and the testing organization, to arrive at the information desired. It was found that when equipment did not prove satisfactory, for instance, in Alaska, the time needed in modifying or changing the design made it necessary to wait until the next season to have the item tested again. So, here in this great hangar we walked through the main section in a temperature of 65 degrees below zero. In preparation for the visit there we had to don heavy parkas with hoods and heavy mittens.

In this hangar was a B–29, one or two jet planes, a section of a Lustron house, and much equipment including electrical material of many kinds so that the engineers could know just what the reaction was in this intense cold. Engines in these planes were started up very frequently and records were kept of instrument readings.

Bomb-release mechanisms are tested in addition to the testing of weapons and everything else possible to see if the plane and its equipment can stand up to the punishment of 65 degrees below zero.

There is a jungle test room where jungle conditions can be simulated. This room is provided with a rain system to provide 12 inches per hour rainfall, and provisions can be made so that material can be infected with mold and fungi. In this room 10,000 pounds of material can be subjected to all conditions that may be found in jungle countries. The room is equipped also with a salt spray.

There is a desert test room to simulate exact desert conditions which might be encountered. There is a strato chamber where pressures can be applied in a very few minutes corresponding to 80,000 feet altitude. It would take days and days to really see everything in this remarkable building.

We were welcomed by the commanding general, William E. Kepner, who commanded the Eighth Fighter Command of the Eighth Air Force in the last war, who has an outstanding record in the Air Force. The air proving ground is needed for developing improved operational techniques and for conducting tests for material under simulated combat conditions, making recommendations relative to the establishing of material characteristics, etc. It is exactly what its name implies—"An organized proving ground to assist in developing the best possible equipment leading to superior air power."

We were taken to one of the large ranges and witnessed a bombing demonstration which made one almost breathless. Promptly at 9 a. m., as announced on the program, a B–36 came over at 8,000 feet to drop several 500-pound bombs and a train of bombs upon a target about 1 mile away from our reviewing stand. Two minutes later came a B–29 to drop four 4,000-pound bombs, to be followed 2 minutes later by another B–29, B–50's, B–17's, B–26's, and later by jets F–80, F–82, F–84, and F–86. Sometimes the bombing was just a minute apart, but everything was exactly on schedule. The display of power and accuracy was breath-taking as was the acrobatic team of four jets from the Fourth Fighter Group, which was something which will long remain in our memories.

We were flown to Fort Benning, Ga., an area of 285,000 acres. I believe it is the largest of its kind in this country. We were shown every step in the training of the parachute trooper up to the first major jump, which is made at 1,300 feet. Fairchild planes carry the parachuters. We witnessed a mass parachute drop of 100 or more men after a preliminary crew had placed a large marker on that section of the field which was the target.

In a building, where were displayed parachutes which are used to drop supplies, a dramatic demonstration was made by a team of six men in assembling from six bundles on the floor a howitzer gun, ready for firing.

The bundles were undone, and the many parts of the gun assembled, and the gun was ready to fire in exactly 1 minute and 4 seconds.

We were taken to a range which one might visualize as a battlefield, probably 2 miles in extent, where targets were set up, quite small in size, which were fired upon by soldiers demonstrating weapons, using tracer bullets, after the officer announcer in charge had explained what we were to see. The soldier's rifle was demonstrated as were the semi-automatic, bazookas, or rockets, machine guns of various calibers, tank weapons, all with tracer ammunition.

The effect at the end of the demonstration, when all weapons were fired across this battlefield, with the tracer bullets firing their way with deadly accuracy, was again something long to be remembered.

One comes away from a demonstration such as we had at Washington, Norfolk, Eglin Field, and Fort Benning with a deep conviction that our armed forces are ready. One couldn't help but get that impression after meeting General LeMay, a tough hombre if there ever was one; a general in his forties who was in charge of the bombing of Japan and who set up the Berlin air lift. Surely it is no secret that he has the group of our largest planes—B–36's—ready and the crews are on the alert all the time to

be ready to get under way at short notice in time of need.

I never got the slightest impression that any officer in the service is spoiling for a fight. They don't want it, but if somebody else starts one these boys will be ready and an enemy will get far more than it expects. It was apparent that a great deal of attention has been given to the threat which might come over Alaska and to our west coast and to possibly the center of the country.

It is hard to imagine that an enemy could get through. Experts seem to have ruled out the East as being in a dangerous area, regardless of the fact that a large number of weapon-production plants are in the East. We didn't think that there was any sign of overconfidence, but we did feel that there was a solid faith that we are ready for any attack which might be made.

That is the message I think the Secretary of Defense wanted us to bring back to those whom we might contact. It would be fine if those likely to authorize an attack could see what we saw. For while we saw only a small part of the military set-up, we felt sure that having seen what we did and listened to the top authorities in the several branches, the defense of our country is in most capable hands and that every precaution that could be taken is being provided.

Basing-Point System in Rigid Steel Conduit—Collusive Origins of System Exposed—Small-Business Enterprise Large Users of Rigid Steel Conduit—Electrical Shops and Contractors Wiring Houses and Buildings Injured by Basing Point—Conduit Used by Small Business Included Phantom Freight

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. PATMAN. Mr. Speaker, I desire to present certain facts from the public record in the Rigid Steel Conduit case dealing with collusive factors in the origin and operation of basing-point system of pricing in the conduit industry.

Rigid steel conduit is metal pipe used to enclose electrical wiring. Its manufacture began in the 1890's. Pioneer producers of conduit generally were converting and selling agents for steel pipe manufacturers from whom they bought unfinished steel tubes which they enameled, galvanized, or otherwise finished to give a smooth inside surface for drawing in wires and an outside surface protected against corrosion. Among such early producers, Safety Armorite Co., predecessor to the present Garland Manufacturing Co., and National Metal Molding Co., predecessor to National Electric Products Corp., were converting and selling agencies for National Tube Co., subsidiary of United States Steel Corp. Thus the conduit industry originated as a quasi-independent branch of the steel industry which originated, devised and established the Pittsburgh-plus system of pricing.

RIGID STEEL CONDUIT MANUFACTURERS FALL IN LINE WITH BASING-POINT SYSTEM

It is not at all surprising, therefore, to find that the first card of the series which subsequently became the method by which conduit sellers announced their base prices, was issued by National Metal Molding Co. and Safety Armorite Co. in 1913 as "Card No. 1." Other conduit manufacturers then in business fell into line and issued similar cards. These cards quoted conduit prices in terms of cents per foot, stated the Pittsburgh basing discounts from such list prices, and made provision for reducing the rate of discount—and thus increasing the destination price—according to the rail freight rate from Pittsburgh to the purchaser's destination. Thus, basing-point pricing system was born in the conduit industry by common consent and concerted action.

BASING-POINT SYSTEM EXAMPLES IN RIGID STEEL CONDUIT

How it worked in producing identical destination prices is best explained by an example. "Card No. 1" of the American Circular Loom Co. of Boston, Mass., listed ½-inch conduit at 8½ cents per foot, and quoted the Pittsburgh base discount as 60 percent. The Pittsburgh base price on this basis would be 3.4 cents per foot. That is 8.5 cents less 60 percent. At any destination other than Pittsburgh, the discount was reduced—thereby increasing the destination price—at the rate of one-tenth of a point for each cent of the freight rate from Pittsburgh to the destination. Thus, at a destination having a freight rate of 34 cents per 100 pounds, the discount would be reduced 3.4 points to 56.6 percent, and the delivered price per foot at that destination would be 0.085 cent less 56.6 percent. With decimals rounded off to the nearest hundredth of a cent, this yields 3.69 cents per lineal foot. This example aptly illustrates how small business in New England paid phantom freight. First, the pipe for making conduit was shipped from Pittsburgh, and, second, the finished product was bought on a Pittsburgh base. Therefore, the purchaser near the conduit plant paid additional freight charges—phantom freight if you please—because it was not the freight from the manufacturer's plant, but freight charges based on a more distant point.

Use by all conduit sellers of similar card-list prices with discounts off based on freight rate from Pittsburgh produced identically the same price at any destination regardless of where the shipment originated or who manufactured the conduit. I wish to point out that, while this system produced identical prices at every destination, it did not produce price differences between Pittsburgh and other points equal to the published freight rates because the charge for freight was arbitrarily determined.

MAINTAINING THE BASING-POINT SYSTEM IN SUBSEQUENT YEARS

Various changes were made in the system and its operation after 1913. Evanston, Ill., was added as a second basing point in 1924 with a base price of $4 a ton higher than Pittsburgh. In 1930, booklets entitled "Freight Adders and Terms" were published which simplified the computation of the arbitrary freight charges used in billing conduit. In 1935, Clayton Mark & Co. was using Chicago, and Youngstown Sheet & Tube Co. was using both Evanston and Chicago as basing points. This matter of two basing points so close together that both took the same freight rates to most points outside the Chicago switching district was considered by Rigid Steel Conduit Association, whose minutes for January 17, 1935, state:

> The board of directors recommends that the Evanston basing point be eliminated, leaving two basing points, Pittsburgh, Pa., and Chicago, Ill.

This was promptly done by the industry by a new price card designated "No. 71," in which the Evanston base was eliminated.

In 1939 the Rigid Steel Conduit Association considered dropping Chicago as a basing point, but no action was taken for the following reasons stated by H. H. Benfield of Fritz-Moon Co. in a confidential memorandum to some of his associates:

> Please note this memorandum and destroy.
>
> There was a meeting of the various manufacturers of conduit in New York on November 16 at which all major manufacturers were represented except Triangle.
>
> * * * * *
>
> The fact that neither Youngstown nor Clayton Marks manufacture conduit in Chicago any more, the dropping of Chicago base was briefly discussed, but it was decided not to do anything about it at the time because of the possibility of investigation.

Also, the Rigid Steel Conduit Association issued a new freight rate pamphlet or bulletin in 1937 which carried the following as a "foreword":

> Method of figuring destination price: The freight rates listed herein are to be used to ascertain delivery charges in figuring f. o. b. destination prices to all points in the United States and their possessions.
>
> When the freight rates shown are from Pittsburgh, Pa., the Pittsburgh basing prices must be used. If the freight rates shown are from Chicago or Evanston, Ill., the Chicago or Evanston basing prices must be used.

BASING-POINT SYSTEM SO PRECISE EVERY MANUFACTURER COULD QUOTE IDENTICAL PRICES TO EVERY DESTINATION

This system enabled every conduit manufacturer to quote identically the same price as every other conduit manufacturer at any given consumer destination. This, however, did not work as well as desired because much conduit is distributed through wholesalers who sometimes failed to maintain the manufacturers' prices. To remedy this, a plan was adopted in 1936 to sell conduit through wholesalers acting as consignment agents for the manufacturers. This plan was adopted with the approval of the National Electrical Contractors Association representing the wholesalers. As late as October 1939, it was stated that wholesalers heartily approved the sales agency plan in connection with the distribution of rigid steel conduit.

This was only one of several collective actions taken with the fundamental purpose of controlling or eliminating trade

conditions and practices which disturbed the perfect operation of basing-point pricing. Among these measures were consignment contracts, protective contracts, the investigation and control of specific building contracts, so-called closed transaction inquiries, elimination of warehouses, uniform trade discounts and classification of purchasers.

RIGID STEEL CONDUIT MANUFACTURERS PRETEND COMPLIANCE WITH ROBINSON-PATMAN ACT

These measures were undertaken purportedly to comply with the Robinson-Patman Act, which apparently was seized upon by these respondents as a grant of authority for collective action to prevent any departure from noncompetitive uniformity in prices, discounts, terms of sale, and merchandising policies. Thus, not even the laws of the United States enacted to preserve competition in the public interest are exempt from gross misinterpretation and misapplication in support of iniquitous concerted practices in support of basing-point price controls.

BASING-POINT OPERATORS PLEAD FOR MORATORIUM

Spokesmen for basing-point pricing are urging the Congress to enact legislation to clarify the law respecting business practices which are harmless, or even competitively beneficial, when done by one, but may become public wrongs when done by many in concert. It is this aspect of basing-point pricing which enables it to masquerade as truly competitive in its carefully staged public appearances, both before legislative bodies and the bar of public opinion. The fact is that no pricing method, system, or practice, whether used individually or by concerted action of a group, is or should be written into law. This fact is well exemplified by the preceding outline of high lights of collective actions taken to implement and effectuate basing-point pricing in the rigid steel conduit industry.

SMALL BUSINESS AND HOME OWNERS PAID HEAVY PRICE

In every city and town in the United States small-business men operate as suppliers of electrical products and as electrical contractors. The electrical-supply businessman and the electrical contractor are, more often than not, one and the same. Long since, architects and builders recognized the value of rigid steel conduit in the building of homes and other structures for protection against the dread cry of "fire." For that protection home owners have paid a heavy price. But, the dealers and contractors were unable to purchase rigid steel conduit and many oher items in a free and open market because the manufacturers forced such dealers and contractors to purchase their products by way of the basing-point system. Undoubtedly, had the rigid steel conduit market been a free one, the use and hence the manufacture, of the product would have expanded beyond all present proportions. Cost in building a home is a major consideration with most folks, and if these costs are controlled artificially, is it any wonder that the housing problem is always with us?

To support a moratorium is to support a possible weapon which will sabotage our antitrust laws. I know full well from the spoken and written words of the basing-point and monopoly boys what it is they want, and hope to get by way of a moratorium. Small business cannot afford to take a chance. The people whom we represent cannot afford to take a chance. The only ones who can afford to take a chance by way of a moratorium are the basing-point and monopoly boys.

Education Is Our Weapon

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from an address delivered recently by President Rufus Harris, of Tulane University, before the Rotary Club in New Orleans, La.:

EDUCATION IS OUR WEAPON—BIG GOVERNMENT, LITTLE MEN

There is a connection between the watchwords of our times and the confusion confronting us. The watchwords are "social security," "freedom from want," "full employment," "social justice," and "planning." The unhappy facts are such that these things cannot be had when they are sought as the conscious objects of government. They are available only as the byproducts of a social system in which the full energies of a people are released.

Large Federal programs employing Federal funds and controls are bringing perilous changes in the structure of our society and in our economic and political outlook. They are undermining our love of independence. Certainly this leviathan state is inconsistent with the traditions and fundamental ideas which have sustained our national life.

What are the fundamental ideas upon which our American society has been built?

First, is the emphasis we have placed upon the limitless development of the individual. Its fundamental assumption regarding government was that there is no sovereignty except the sovereignty of the individual.

The second fundamental idea upon which our society is based is decentralization of authority.

The third fundamental idea is the tradition of the rule of law. Through centuries of judicial development we have established the basic idea that every man must have a hearing. This tradition of every man having his day in court is a further recognition of the value of the individual.

The fourth fundamental idea is the firm tradition of freedom to criticize those in authority. This phenomenon is almost universal in American life—industrial, educational, and of course political. This signifies as nothing else can the place of government as the creature of man.

The fifth fundamental idea is a belief in competitive enterprise. This is a significant economic aspect of political decentralization. We have gone to extensive efforts in antitrust legislation to preserve it. * * *

The last fundamental idea upon which American society is based is tolerance. Its existence in a society of individuals who wish not to lose their status in a super state is obvious.

These principles have been the fundamentals of our national life. There is nothing in them that admits of big government or a leviathan state, with limitless subjugative power over the citizen, which is precisely the menacing tyranny we abhor in Russia or in any controlled state. * * *

Why are we willing now to proceed toward big government? There is nothing new in the idea. It is as old as government itself. The only thing different about it now is that it seems to be desired by a different group. Formerly it was monarchy, oligarchy, or the Divine Right of Kings that forced the individual into subjugation. Now it is claimed as the choice of the reformers.

There must be several explanations:

The first is that we have made the modern mistake of cutting loose from a religious standard of values without substituting an adequate basis of morals. Often sincere men have done this in the belief that scientific principles are adequate bases for social action. Unfortunately scientific principles are not an adequate basis for maintaining the delicate and prized system of responsible individualism which we prize.

A second explanation is that the high quality of American idealism has led many persons to a perfectionist attitude. The tepid enthusiasm of large numbers of people for our American way may have been caused by the fact that they have measured us against moral and humanitarian ideals rather than gainst actual conditions in other parts of the world. * * *

Another explanation is that frequently it has been difficult for public-spirited and unselfish people, who largely make up the great middle class of American society, to escape a dissatisfaction with a system in which they barely exist on low incomes and enjoy relatively low prestige while the social and financial plums often seem to be garnered by people of less attainment and less altruism.

My belief is that the trends toward big government and the controlled state must be effectively resisted if we are to manage to save the basic structure of our freedom, and the cherished way of American life as we have known it for two centuries.

The chief means available for this job, as I see it, perhaps the only weapons in the long run, are the positive forces of education. This requires two conditions. First we must be certain that education remains unshackled. It cannot do anything if it is fettered. It must be kept free from the superstate.

The second condition is that education must be prepared to present an affirmative view of American civilization. The schools, colleges and universities have scarcely taken an affirmative attitude toward the basic American values—responsible freedom, tolerance, government of laws rather than of men, the privacy of the individual, and reward for talent and initiative.

In their anxiety to avoid jingoism and in view of the teachers' dread of propaganda, the schools have tended to become exhibit halls in which the American value system is displayed, but along with all others, as one of a great variety of systems under which men have lived and may live in the future. The march of events has changed the educator's role to that of chief defender of western civilization. He now must become affirmative with our tradition being under attack.

Education cannot succeed in presenting this affirmative view if it has to fight for its own life and self respect on every minor front. It cannot make progress if it must first and constantly overcome the clutches of those who fear that everybody who has a view different than his own is a cheat or a crackpot if not indeed a Communist. It cannot succeed if we employ in America the

totalitarian concept that disagreement is unlawful.

It must be understood that if knowledge is to be advanced someone is apt to venture upon an idea that is different from that previously accepted. This must not be forbidden. We are apt to find someone who insists on trying an old idea over and over again. That must not be decried. There must be tolerated mistakes in judgment. That is not inconsistent with the American tradition, is it, as long as the motive is good and the purpose objective? It is only the stooge and agent who should not be tolerated.

In American life today there is increasing peril confronting the person who affirmatively stands for something. This is unfortunate, for there is need of encouragement for honest and trained people to think hard and straight and to assert their conclusions. The motives of competent and honest people may not be castigated if education is to succeed in this turbulent period. If such protection is not afforded no one may be safe who is loyal to any conviction. In all our history, our good causes have been won by people who firmly were for them, and not by those who were merely against something. Even now we must stand for the basic American ideals, not just against communism, or statism.

Altitude Jet-Fighter Tests by Navy Show B–36 Is Vulnerable

EXTENSION OF REMARKS

OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in the Washington Evening Star, May 10, 1949, by David Lawrence, entitled "Altitude Jet-Fighter Tests by Navy Show B–36 Is Vulnerable":

ALTITUDE JET FIGHTER TESTS BY NAVY SHOW B–36 IS VULNERABLE—ADMIRAL BLANDY ASSERTS FEW IN AIR FORCE KNOW OF CARRIER'S CAPABILITIES

(By David Lawrence)

Sometimes, way down in the press association dispatches, far removed from mention in the headlines, a sensational piece of news is concealed. It isn't intentional, of course, and is due only to the general unfamiliarity of the press with what is or has been secret information of a classified nature on defense plans.

Thus, the fact that the United States Navy has developed a jet fighter plane which can climb to an altitude of 40,000 feet in 7 minutes has been a secret. It has just been made public in a United Press dispatch from the aircraft carrier *Franklin D. Roosevelt* on the authority of Admiral Blandy, commander of the Atlantic Fleet.

What this means is that the B–36's, on which Congress has placed its chief reliance for strategic bombing, are vulnerable and cannot proceed without fighter protection from continent to continent as claimed. Everyone who knows anything about air warfare knows that fighter planes cannot carry enough gasoline to operate from territorial United States and will have to support long-range bombers from overseas bases.

"PIN POINT" BOMBING

Everyone who studied the official reports of the strategic bombing survey made by an independent group of citizens after the last war as to results in both Japan and Europe knows that "pin point" or precision bombing from an altitude of 40,000 feet is out of the question.

The most significant information in the press association dispatch, however, is contained in the following paragraph:

Today very few Air Force officers are familiar with the capabilities of naval aviation, Admiral Blandy asserted. Observers had an implied demonstration of this possibility when Navy jet fighters were catapulted off the 45,000-ton carrier's deck to climb to 40,000 feet in 7 minutes. These planes—McDonnell F2H Banshees—were said to be able to intercept a bomber attack at altitudes up to 8 miles.

"If actual war games were held with the Air Force and the Banshees proved themselves, it would weaken the Air Force's claim that its B–36 superbombers are almost impossible targets for interceptors above 40,000 feet. Air Force statements have been based on tests of the B–36 against Air Force fighters which are said to require 23 minutes to climb to 40,000 feet and then not be able to do tight manuevers."

Here is an excellent example of what patriotic competition between the research and development staffs of the Navy and the Air Force, respectively, has done for America. It is a good example also of what would be lost if one service were given a monopoly over all airplane research.

STIMULUS TO EFFORT

Certainly a monopoly is a much more convenient arrangement for the folks who get the monopoly but, in the business world and in the world of research, it has been found that rivalry of achievement is a stimulus to effort and that a certain amount of competition adds zest to everyday work.

The Navy isn't concerned at all with the vulnerability of the B–36 superbomber but is concerned with the development of the most effective jet fighter possible, because Navy ships must protect themselves against high-level bombing by means of fighter planes flown from carriers.

It can be seen from the above how injurious it might be to the defense planning of America if one armed service were to be prevented from using any particular weapon to perfect its own defense. Theoretically now the head of the Navy and the head of the Army could veto the continued use by the Air Force of the B–36 for which contracts involving hundreds of millions of dollars have just been placed by Secretary Johnson. But this would be as grave a mistake as the veto recently registered by Generals Bradley and Vandenberg against the Navy's simple request to add 100 feet to the size of their existing carriers. To give each armed service the right to improve its fighting technique, provided it stays within its own budget, is a logical and sensible corollary to unification.

How Can the Chinese Puzzle Best Be Solved?

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans Item of May 9, 1949:

HOW CAN THE CHINESE PUZZLE BEST BE SOLVED?

Occupation of Shanghai by Chinese Communist forces is imminent. Its consummation will create an ideological turning point for the western world, not because it is physically more significant than the capture of Hangchow, let us say, but because it symbolizes final collapse of the Nationalists as a governmental entity.

The time is therefore at hand for the West to reorient its political and economic thinking—its policy—with regard to China. The China that was a fumbling and ineffective, albeit courageous, wartime ally of the United Nations has ceased to exist. In its place there stands another China, linked certainly by name and perhaps by fundamental philosophy with a totalitarian Russia. How strong those bonds are still remains to be seen. The fact that both regimes call themselves Communists may be as empty as a bass drum. Let us not forget that the Chiang government, though allied with democracy in the struggle against the Fascist Axis, was as factual a dictatorship as that of the Kremlin.

Obviously, the State Department has written off the new nonexistent Nationalist government. But while we can write off a fallen administration, we can't write off China.

THREE MAJOR ALTERNATIVES

What are the possibilities? They fall into three major classes.

First. Communist Russia and Communist China will form a closely bound international union, over which the Kremlin will exercise dominance as it has over every other local Communist regime except that of Tito.

Second. Communist China will wear the party label, but will be an autonomous state, independent in the sense that it refuses to accept dictation from the Kremlin.

Third. With or without Kremlin domination, the Mao Tse-Tung regime will fail to consolidate its military victory over China into a politically or economically solvent civil administration, in which case the current chaos would continue, as local guerillas seized regional control.

Examining these alternatives from far outside the sphere of immediate action, we think it must be conceded that Soviet administrative capacity is not limitless. To say that Russia can take over China offhand, even with a theoretically friendly administration in power, strains the bounds of belief.

This is not merely a bit of boosterism to the effect that "Russia could not succeed where we have so signally failed." It takes cognizance, for example, of recent developments in Germany, where the blockade of Berlin has boomeranged. The Soviet zone, and the satellite nations behind the iron curtain, could not be furnished by the Russians with the material things they needed, although two-way transport with Russia was as free as the birds. They were not supplied as well or as abundantly as western Berlin was supplied by the air lift.

WHO REALLY WAS AIDED?

If Russia could not provide adequate economic assistance to the iron-curtain zone, is it reasonable to assume that she can supply all China with needed aid when China is more than 10 times as large in area and in population as the east-European theater where the Soviets failed?

Again: The unbroken series of military reverses suffered by the Nationalists in China had its wellspring in the inefficiency and personal corruption of most of its officials, not in the failure to receive foreign aid. State Department files are crowded with factual reports, citing chapter and verse, of cases where enormous stock piles of United States materials were abandoned to advancing Communist armies without any slightest

effort to salvage or even to destroy them. It is no exaggeration to say that the material aid furnished to China by this Government was of greater service to the Communists who captured it, or took it over from deserting war-lord units, than it was to the Nationalist cause.

But with whom will the militarily victorious Communists of China, or the agents of the Politburo in Moscow, deal in administering the sprawling, feudally conditioned, hapless millions of a conquered China? Says the State Department, in effect: "With the same corrupt and inefficient officials with whom the Western World dealt when it was trying to bring order to that unhappy country." China's Communists are agrarians, recruited from the villages of north China. There are among them almost no trained administrators, even at the level of small-town government. Their army is supplied from captured stores as it goes along, just as were the Mexican revolutionists under Madero, Villa, Carranza, and Obregon, beginning with 1910.

That sort of progress can win battles. But it can't administer a country; not even as relatively small and sparsely populated a country as Mexico. That is why, for 10 or 11 years each successful revolutionary administration in Mexico was deposed almost as soon as it had come to power through victory in the field. It required nearly a dozen years for an adequate capacity for self-government to be developed.

General Marshall—a thoughtful, studious statesman, whose great administrative abilities were proved by his service as Chief of Staff and Secretary of State—made every effort to formulate a solution for the problem of China in the military, economic, and political field. He failed.

In neither the Nationalist nor the Communist Parties could he find trustworthy elements of leadership behind which China could rise from the corruption and the sloth of governmental chaos to find new strength in unity. Such a release from almost medieval bondage, he concluded, could come only when a nucleus of young Chinese liberals became strong enough to take the reins. The old regimes—all of them—were barren and sterile.

WEIGHING THE POSSIBILITIES

Under the circumstances, the decision of the State Department to write off China, meaning the China of anarchic helplessness, appears logical. If the Soviets take over, which is by no means a foregone conclusion, they inherit the same difficulties with which the Western World has sought vainly to cope. These obstacles will be magnified by the hostility toward foreign devils which has been bred into Chinese thinking since the dawn of time; a factor with which the Russians have not had to contend in their ideological aggressions against such Slavic nations as the Baltic and Balkan states they have assimilated.

Let us assume, on the other hand, that the militarily victorious Communists do succeed in establishing a reasonably stable government, and make it plain that they will not be subservient to the Cominform successors of the Comintern. If they then look to the Western World for acceptance in the family of nations, the basis on which such an agreement should be struck can be set forth, when the time comes, in the clearest possible terms.

Even the conquered areas of China were a plague to the Japanese who overran them in their first triumphant rush along the Asiatic coprosperity sphere. A glorious China, admitted as one of the big five to the Security Council of the United Nations, has been nothing but an unbroken series of futile harassments to the Allied world. Hence, a China additionally ravaged by bloody civil war is not likely to be any bargain for the Soviets whose weakness has been underscored by recent failures in Italy, France, Yugoslavia, and east Germany.

The United States has nothing to gain by precipitate action at this juncture. Along with the rest of the democratic world, it may have much to gain by awaiting the turn of events to come.

Baltimore City Health Plan

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. BEALL. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the fifth of a series of articles by Agnes E. Meyer entitled "Maryland Solves Health Program." These articles appeared in the Washington Post.

HOSPITALS COOPERATE WITH LOCAL PRACTITIONERS—BALTIMORE CITY HEALTH PLAN

(By Agnes E. Meyer)

(Fifth of a series)

The new Johns Hopkins clinic, like its counterpart under the University of Maryland Hospital, is a lifesaver for mothers who have a variety of medical problems and cannot reach a doctor.

Typical was the situation of a mother with three children who came in while I was present. The mother, it appeared, has diabetes; of the three children, one had a toothache, one was pregnant, and all three were to have physical examinations.

In short order, the mother was assigned to a physician, where she will get free insulin injections; the child with the toothache was referred to a dental clinic; the pregnant daughter to a prenatal clinic of the Department of Health, where reservations will be made at some hospital for her delivery.

All this mother's troubles were lifted from her shoulders as if by magic. The ironical element in the situation was the fact that this family is illegitimate, with one 18-year-old daughter starting off her own illegitimate brood. The more illegitimate children they have, the more aid to dependent children is given these mothers. Now they receive as well, free hospitalization, a personal physician to keep them well and listen to their troubles, free medicines, with special diets and vitamins for the undernourished offspring.

Under such favorable conditions, why should any smart young girl in her senses take the risk of marrying a man who, even with steady employment, can never do more than keep his family just above the relief level? The welfare state, as a husband, is a much better bet for these poor girls now, that it furnishes not only economic and emotional security but complete health protection.

A MORAL IMPERATIVE

Thus, it is not only a matter of justice but a moral imperative that the health services of these new clinics which supply not only first-rate medical care but literally underpin the whole social structure at the lower economic levels, must be extended as soon as possible to the medically indigent, those people who can just manage to keep a roof above their heads and the wolf from the door.

This means that the medical profession must figure out how far down voluntary insurance can reach and give to the group between this level and the relief clients, the same completely free coverage. It remains for statistical medical experts like Dr. Reed to decide where the insurance dollar and the tax dollar should meet. For whether we have voluntary or compulsory health insurance, the health bill for the indigent and the medically indigent will have to be met by the taxpayer.

In analyzing the physical examination reports, the clinic is turning up exact information as to unmet medical needs. A study of 1,500 families revealed that 40 percent of the people over 50 suffer from some chronic disease. As medical care prolongs the age of our population more and more, the lack in Maryland, as elsewhere, of institutions for the chronically ill is a pressing problem of huge proportions.

NEED FOR NURSES

The need for more nursing care in the home is also acute. So far the 6-month-old Baltimore program can meet the problem with the help of the Johns Hopkins teaching program for visiting nurses, the Visiting Nurse Association, and the Public Health Nursing Service for communicable disease. But the need is growing beyond the city's facilities. In the rural counties where the program is 3½ years old, greatly increased staffs of visiting nurses are the prime necessity.

The clinic is also turning up a vast number of people who show medical neglect, in tuberculosis, venereal disease, and children's diseases. The most significant aspect of the clinic's physical examinations is the preventive work especially for children, under the supervision of the local practitioners.

All druggists are cooperating in the program. The total cost of free medicine and medical supplies such as enema bags, bandages, cotton, and other necessities is high, as there is no restriction either on the type of drug or the price and quantity of prescriptions. In January the total bill for the program in the two clinics now operating was $3,000 for 8,200 registered relief clients. This is below the budget of $40,000 for the year. But 40 percent of the 15,000 relief cases assigned to the clinics by the Welfare Department have not yet registered.

SERIOUS HANDICAP

The shortage of Negro doctors in Baltimore, as throughout the State, is a serious handicap. About 20 percent of Baltimore's 1,000,000 citizens are Negroes. Only 90 out of 1,600 doctors in Baltimore are Negroes. The percentage of Negroes among the indigent is 80 percent.

Only a few white physicians in the Johns Hopkins area, where most of the indigents live, will accept Negro patients or go to their homes. As a result, although the existing number of Negro doctors are cooperating wholeheartedly, many of the clinic's Negro clients cannot be assigned to a private practitioner. The clinic itself looks after them.

Dr. Chant thinks the situation presents a great opportunity for any young Negro doctor. He could take over immediately a patient load of 500 to 1,000 people that would guarantee him a living of $3,500 to $7,000 and at the same time he could continue his postgraduate training through the relationship of the health plan to Johns Hopkins Hospital.

The clinic has an advisory committee consisting of two of the local doctors and two members of the staff. It acts as a liaison between the clinic and the neighborhood physicians. The director of the clinic, Dr. Chant, is chairman. This committee irons out unforeseen difficulties, provides a means of discussing various kinds of problems, medical or otherwise, that arise among clients, and serves as a general clearinghouse for complaints and advice. It is a general shock absorber for the plan.

MODEST START

The program began modestly with only two clinics and confined the treatment to indi-

gents, as neither the hospitals nor the city department of health were certain that the experiment would be a success. Judging, however, by the proprietary attitude of the clients, it would be tragic, if not impossible, to do anything but expand the program and admit the medically indigent by a screening process similar to that used in the State program. The State of Maryland and the city of Baltimore have demonstrated that the local community, whether it be a county or a city, working with the State health and welfare authorities, can solve the health problems of the lowest-income groups with efficiency and economy, with free cooperation, and with a minimum of compulsion.

The private resources of every voluntary hospital throughout the country are now swamped by the responsibility to care for patients described by Johns Hopkins as the poor of this city and State of all races who are stricken down by any casualty. It is but reasonable that the State and city governments should take over the full cost of this responsibility.

The State of Maryland and city of Baltimore have set up machinery whereby Federal aid could be given if it proves necessary, without the imposition of Federal control and the consequent danger of political interference with medical problems. That is why their achievements have significance for the country as a whole.

DOCTORS' ATTITUDE

The attitude of the doctors toward the program was summed up for me by Dr. Leo Schlenger, who has been in practice in the neighborhood over 20 years. In addition to his established practice, he takes care of 150 relief clients.

"The per capita payment of $7 is so small that it takes a beginner who needs a start or a humanitarian to come into the program. But many of us have cooperated through fear of getting compulsory health insurance. And why shouldn't we fear it? This program, like everything free, is open to abuse. But we doctors can control this abuse by being frank with the clinic authorities. This control is possible because we are working with and for a hospital and not with and for politicians. If political control came in, this abuse would grow to endless dimensions.

"For example, now if I cannot restrain the use of the program by some patient, I can say so and somebody else takes him.

"Under a Federal political program—and every federally controlled program is political—the patient would run to the ward leader and the ward leader would crack down on me. It wouldn't be the politician's fault as he would lose votes if he did not pay attention to the demands of his constituents. It would be utterly impossible to keep this political pressure out of a compulsory health-insurance program.

"Moreover, if the problem of a public health program is not approached gradually as we are doing it, the quality of medical care would soon be very poor, as every doctor would be overloaded and could not give proper follow-up care.

"For complete care of our Negro population, for example, we need several hundred additional Negro doctors in the city of Baltimore, and I don't know how many more in the State. Moreover, the doctors would have no time for consultation, lectures, clinics, and other educational opportunities, which all the doctors, especially the younger ones, appreciate so much in the Baltimore health plan, that they are willing to make sacrifices to come into the program. As a result of this training, medical care in this whole area is improving and will keep on improving, instead of being impeded by a mass inundation.

"It is far better to preserve and pull up our standards of medical care even if we have to go slow and neglect a few people at first. If we try to take everybody on with inadequate personnel and our present limited facilities, we shall have nothing for anybody. By the gradual methods we are using, we shall learn how to give good medical protection to all the people. In fact, we can already visualize how this could be done, but even the soundest plan cannot outrun the local resources of doctors, nurses, and hospitals."

PROTECTIVE WINGS

What the Baltimore plan does, is to reach out the protective wings of the hospital over the whole indigent population of the city, whether the individual is in immediate need of medical care or not, without disrupting the complex medical structure already achieved or destroying the independence of the local practitioners.

The immense resources of Johns Hopkins Hospital and Maryland University are linked with those of local physicians through the two new medical-care clinics to give to the indigent, and especially to their children, the same chance for health and well-being as is enjoyed by the children of the well-to-do.

As both hospitals are situated in the slums of Baltimore, what the plan in general accomplishes is the social extension of the hospitals' functions into the neediest sections of the city, and the establishment of contacts with the neighboring physicians who heretofore were as isolated from its influence as any doctor practicing in the remotest corner of the State. The new clinic of the medical service department is a liaison and clearing-house between the hospital and the community.

As we examine the organization and results of the Baltimore plan for medical care of the indigent, it becomes evident that this redefinition of the hospital's role in modern society can be readily extended to the medically indigent. Eventually it can make the same preventive and curative program available to the rest of the population by covering the costs now met by the State through voluntary insurance.

"Thus a State or National health program is not a problem in medical economics," says Dr. Reed, "but a problem in organization of services. Once the services and the administrative methods are clarified by a plan such as this, the economic aspects can be figured as definitely as in actuarial life insurance. That is why we cannot answer the problems posed by a national health program quickly but must go at them in an evolutionary manner."

Battle of the Blockade

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Sunday Post, Boston, Mass., Sunday, May 8, 1949:

OUR FIRM POLICY AND FAILURE OF RUSSIAN PLAN ENDED BERLIN BLOCKADE—GENERAL CLAY, RESPONSIBLE FOR AMERICAN SHOW OF STRENGTH, SEES SOLUTION WITHOUT WAR POSSIBLE

(By John Griffin)

The end of the Berlin blockade has many meanings, and one of the most important is the manner in which it has justified the American policy of a strong show of force.

For a long time immediately after the war, there was appeasement of Russia, and the United States took every honorable means to get along with the Soviet. Finally it became obvious that the Russians would be more impressed by American strength than anything else.

There was, of course, opposition in this country on the part of those who feared that an aggressive attitude would result in war. The fact now seems to be clear that the policy has worked and has impressed the Russians in many ways..

THE RUSSIAN PLAN FAILED

The Allied air lift to Berlin has gone on unceasingly for almost a year, at the cost of many millions of dollars and several lives. It broke the blockade of Berlin and, as a matter of fact, resulted in a counterblockade which hurt Russia severely. It is now obvious that the Americans profited and the Russians lost in this battle of blockades.

We were able not only to supply Berlin but also were able to prevent Russia from making adequate use of the resources of eastern Germany. The result of this was a long advance toward unification of western Germany and a crippling of Russian assistance to the satellite nations of the Soviet.

The Marshall plan grew out of the blockade and it has worked. The Russian plan, which called for help to Moscow-dominated countries, has failed, particularly in Poland and Czechoslovakia. Apparently the whole Russian policy in Germany was to induce confusion in the west and to take advantage of industrial power of the east.

Actually, the facts are in reverse, for the west is on the way to unification, and eastern Germany has been stripped by the Russians to no avail.

Thus politically the United States and Britain have won the battle of the blockade, but the victory is due more to economic factors than to outright political conditions. This is, of course, of extreme importance, but anyone who thinks it is the end of trouble in Germany is too optimistic.

SOLUTION WITHOUT WAR

The Russians will still strive to find means to prevent complete unification of western Germany, although nobody can figure out in advance the methods they will use to achieve this end. So it may be said that the present situation is a temporary truce which could be broken sometime in the future. Nevertheless, European reaction is such that there is great hope that a solution to Germany will be reached without war.

There are still many people in high positions who feel that war is inevitable, but Gen. Lucius D. Clay, who probably knows more about the situation than anyone else, expressed the belief the other day, upon his retirement as American Military Governor, that war is not inevitable; and despatches from Russia and other areas in Europe indicate that the people have been given a great lift of hope by the latest developments.

It was the first good news that the Russian people have received in many months, and Associated Press despatches from Moscow reported a rising of hope among the Russian people. There was also a great enthusiasm in Berlin, where the people have been living from hand to mouth; for the end of the blockade means a chance for employment for many Germans and an improvement in their living conditions.

CLAY'S WISDOM JUSTIFIED

In the countries not directly affected, there has been a similar feeling of optimism, and although the ending of the blockade was not due to any spirit of generosity on the part of the Russians, but largely to the cold economic conditions, that fact in itself offers more justification for hope than an intangible atmosphere does.

General Clay has been the personification of the strong American policy, which is now paying dividends. He has done a magnificent job under the most difficult conditions that could be imagined, not the least of which was the fact that he was forced by the inaction of our own Government to go along pretty much on his own, and the firm policy which has won the present victory is due more to him than to Washington.

Long ago he realized that the only way to deal with the Russians is to be strong and ready, and the wisdom of his thinking has now been justified.

One aspect of the situation which has not been widely understood by critics is that the Army never wanted to rule the American sector of Germany. The Army expected that it would be through with the job when the fighting ended, except for a necessary work of policing. The State Department was expected to take over the civil administration.

COMMAND CHANGED

But the job was given to the Army, with Gen. Joseph McNarney in charge, and General Clay as his deputy. General Clay was governor of Berlin while General McNarney had over-all charge for a while. General Clay was finally placed in full command.

As it turned out, administration by the Army was a necessity and an advantage to the United States, for it was only through the firmness of General Clay, backed by the threat of the military, that prevented the Russians from taking over Germany completely.

It is easy to imagine that things would have been entirely different if the State Department, with its traditional reliance on form, had been running the show. The strong hand would have been absent and the Russians would have seen only weakness on our part, and undoubtedly would have taken full advantage of their position.

Firmness has paid off in Germany and also in Austria, where Gen. Mark Clark insisted on full American rights at all times, and General Keyes has followed that policy. Somehow or other, it gained the respect of the Russians and served to maintain our position.

THE BEST CHANCE

Perhaps the Russians will now develop another way of harassing the other occupying powers, but so long as the firm policy is continued, the chances of getting along without war are good.

The policy has some danger in it, of course, for an incident could quickly result in an armed clash. But that is a chance that has to be taken, and there appears to be no other way.

Arab Refugees a United Nations Problem

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, the present tragic situation of Arab refugees flows from the partition decree of the United Nations on November 29, 1947. All reports coming out of the state of Israeli indicate that that state will not permit a return of the Arabs to their homes in Palestine. The United States has a responsibility, Mr. Speaker, for it was the aggressive weight of our Government behind partition that has lead to the present situation. Under leave to extend my remarks I am including an editorial which appeared in the Christian Century of May 11:

WHERE CAN THE ARABS GO?

Israel has made it official. It has told the UN conciliation commission for Palestine that the Arabs who formerly lived in Palestine will be recompensed for their land, but they may not return. So where can they go? It is reported that there are now 900,000 Arabs requiring assistance. The fund contributed by 20 nations for United Nations relief for Palestine refugees cannot last more than a few months longer. In southern Palestine the 50 volunteers working under the American Friends Service Committee are distributing food, clothing, tents, and blankets, are running clinics and trying to hold epidemics in check, and without either books or buildings are even conducting schools in three towns. Around Gaza there are about 250,000 of these refugees on the Egyptian side of the border. They are living in idleness, having no source of employment and no place to go to get work. They are united in one thing: bitterness against America and Americans. They hold us ultimately responsible for their plight, and have plastered "Down With Truman" posters everywhere. We need not argue the merits of this charge, but we may not ignore the vast human problem involved in the destiny of these people, of whom a considerable number are Christians. Their fate is a challenge to the conscience of the world, to the great nations which permitted the Palestine question to be settled by war, and particularly to the nation from which much of the resources for fighting that war came. No plan that has yet been brought forward for resettling these people promises to take more than a small fraction of them, and all the plans added together would accommodate fewer than half of their large and growing number. It seems that here is a situation which offers a compelling reason for bringing the President's famous and still misty "point four" program for developing underdeveloped areas down out of the blue and putting it to work without delay.

Letter to the New York Post

EXTENSION OF REMARKS
OF
HON. VITO MARCANTONIO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks I include herein copy of a letter which I directed to the New York Post and which the New York Post has refused to print:

COPY OF LETTER FROM CONGRESSMAN VITO MARCANTONIO TO THE NEW YORK POST

MAY 2, 1949.

EDITOR, NEW YORK POST,
New York, N. Y.

DEAR SIR: This is the second letter I have written in answer to the distorted reporting of my activities in Congress contained in your Washington Memo column. You have not printed the first with respect to veterans' pensions. I trust there is enough decent journalism in you to print this one.

Under May 2 date line, your Washington Memo column insidiously tries to give the impression that there has been cooperation between me and the Republicans with respect to Taft-Hartley. However, the article itself unintentionally gives the truth away. It states, "Restoration of the Labor Management Relations Act of 1935 (the Wagner Act) without amendment is not the real issue before the House." Why not? This certainly has been and still is and will be the issue before the Nation.

I submit the following facts which are incontrovertible:

1. Working people were led to believe that in voting for the Democrats, they were voting for the outright repeal of Taft-Hartley. This means the restoration of the Wagner Act. Anything else is betrayal. Note the five amendments now being supported by the House Democratic leadership. This I charged would happen and this has happened. Are not these five amendments a betrayal of the Democratic campaign promises?

2. The CONGRESSIONAL RECORD reveals:

A. My substitute calling for outright repeal and restoration of the Wagner Act was offered as a substitute to the Wood bill.

B. The vote on my substitute therefore was a vote of choice between the Wagner Act and the Wood bill.

C. The parliamentary situation was clear, as stated by me and by the presiding officer, that if my substitute were voted down and the Wood bill was voted up, there would be no other chance to vote on any proposal to repeal Taft-Hartley and restore the Wagner Act.

3. In the light of this situation, with the exception of 35 Democrats and 1 Republican, the Democrats, including the Truman Democrats, joined JOE MARTIN, HALLECK, and all the other Republicans in voting against my amendment.

Who is playing ball with the Republicans against labor?

It's high time that your readers were told the truth despite the distortions, omissions, and lies contained in your Washington Memo column.

Sincerely yours,

VITO MARCANTONIO.

Repeal the Excise Taxes

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. DAVIS of Wisconsin, Mr. Speaker, in view of the widespread interest now in repealing the excise taxes, I wish to include in the CONGRESSIONAL RECORD the following editorial from the Wisconsin State Journal of Madison, Wis.:

THE HABIT OF SPENDING

The manner in which the social planners and the big Government boys hate to give up Federal tax revenue, once they have latched onto it, is amply illustrated in the Eighty-first "Fair Deal" Congress.

When the United States began mobilizing for war, Congress naturally passed every tax imaginable in order to finance the huge American military program. Despite that fiscal program, we found ourselves, at the end of World War II, about $250,000,000,000 in debt.

Part of that wartime tax program included a 20-percent tax on cosmetics, luggage, amusement admissions, club dues, and electric light bulbs. The tax program included a 15-percent tax on train tickets and local telephone bills. It included a 25-percent tax on telegrams and long-distance telephone bills.

Part of the purpose of these taxes during the war, of course, was to discourage citizens

from tying up the telephone circuits, to prevent them from spending money for nonessentials, and to prevent unnecessary travel on overworked railways.

The war is over. But the social planners and the big Government boys won't admit it. They want Washington to retain its wartime emergency powers. They want the wartime tax revenue to continue to roll into Washington.

If the Democratic administration came out flatly and said that Americans should tighten up their belts a bit, and economize personally and governmentally in order to pay off a sizable portion of the national debt, most of us would agree heartily.

But instead, President Truman has asked for another $4,000,000,000 in added taxes. And he has dreamed up a half-dozen ways to spend the additional revenue as well as the emergency wartime income. Some of his welfare schemes have merit, but their desirability is questionable at a time when the national debt is staggering and the tax load already lies heavy on the shoulders of most Americans.

Some of the excise taxes were passed as luxury taxes.

The day is past when cosmetics were a luxury. If you have to take a trip, luggage is a necessity. (The ruling that ladies' handbags and men's billfolds are luggage and therefore subject to the tax is rather amusing. The way Federal taxes are, most men and women don't have enough stuff to put in their billfolds or handbags to constitute them as luggage.)

The administration that is toying with the idea of socializing the telephone business because it is a public necessity is the same administration that persists in taxing telephone calls as a luxury.

And why should the excise tax be continued on electric light bulbs?

The continued tax on railroad tickets is a downright insult. Two years ago Congress removed the tax on travel to certain foreign countries. But Congress has yet to recognize the fact that most Americans have money enough only for domestic vacations. And why should citizens who are forced to travel because of sudden illness, accident, or death in the family pay a luxury tax on such a trip? This excise levy on travel, incidentally, is one of great interest to Wisconsin citizens, many of whom rely on the vacation-tourist industry for their livelihood.

The State Journal is quite aware that high Federal income is necessary during the next 4 years.

But we would be better satisfied if the misnamed Fair Dealers would concentrate on retiring the national debt, and cleaning up governmental machinery so that present income is spent wisely, rather than figuring out new ways to extend their social controls over the taxpayers who are footing the bill.

United Jewish Appeal

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following letter from Mr. Seldon M. Kruger, of Newark, N. J. As chairman of the special events committee for the junior division of the United Jewish Appeal for Essex County, N. J., Mr. Kruger is thoroughly familiar with this program:

NEWARK, N. J., *May 4, 1949.*

Hon. HUGH J. ADDONIZIO,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE: On April 29, 1949, Congressman LAWRENCE SMITH, of Wisconsin, inserted in the Appendix of the CONGRESSIONAL RECORD on page A2551 a letter written by Mr. Faiz El-Khouri, criticizing the United Jewish Appeal. In this letter Mr. El-Khouri attempts to prove that the funds raised by the UJA were used "to fight and kill the Arabs." If the Minister of Syria were to take a little time to investigate he would find his information to be totally incorrect. I am sure that if he would know of the work which was done by the constituent agencies of the United Jewish Appeal he would not have made such distorted statements.

Last year the United Jewish Appeal brought 130,000 displaced persons, including 10,000 orphans from the graveyard of Europe to the State of Israel. Once these people were in Israel food and clothing was provided for them until they could become self-sufficient. In addition, 40,000 units of housing was constructed to meet the needs of these immigrants. The United Jewish Appeal helped provide for rehabilitation, vocational guidance and retraining, care of the aged and invalid, the Youth Aliyah program and the promotion of trade and industry to speed the integration of the newcomers into the economy of Israel. This does not seem to me to be the acts of a nation which is aggressive.

Mr. El-Khouri seems to conveniently forget that it was the Arab nations which attacked the State of Israel and not Israel who attacked them. The attack by the Arab states was a violation of the decision of the United Nations of November 29, 1947.

The United Jewish Appeal also helps meet the needs of the agencies and institutions of the American Jewish community.

I hope that Mr. El-Khouri's unjustified attack will be answered shortly.

With my kindest personal regards, I am,
Always sincerely yours,
SELDON M. KRUGER.

The Sweatshop Defined

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. MULTER. Mr. Speaker, the following article entitled "The Sweatshop Defined," by Pat Holt, which appeared in the New Republic of May 9, 1949, contains much valuable information which this House should have before it when considering the new minimum-wage legislation which will be presented to the House shortly:

THE SWEATSHOP DEFINED—TESTIMONY IN CONGRESS SHOWS CONDITIONS IN A VARIETY OF INDUSTRIES WHICH DEMAND NEW ACTION IN MINIMUM-WAGE LEGISLATION

(By Pat Holt)

"Well," said Senator TAFT, "what are sweatshop gooda?" The Secretary of Labor, Maurice J. Tobin, had complained to the Senate Labor Committee that the Taft-Hartley Act banned "union members from refusing to work on sweatshop goods." TAFT objected. "As a matter of fact," he said, "are there any sweatshops in the United States, with the minimum wage 40 cents, and going up to 75 cents, I hope?"

Well, what are sweatshop goods? Do they include goods made illegally by child labor? In that case there are plenty of sweatshops in America today. The 1948 report of the Wage-Hour Administrator says:

"It was found that three children under 12 years of age had worked in a starch factory from 6 p. m. to 6 a. m.; 27 children, all under 16, had worked in a cement plant from 10½ to 13 hours daily and up to 70 hours a week; a 15-year-old boy worked from 6 p. m. to 5 a. m. cleaning knives in a plant, where he slept from 5 a. m. to 7 a. m., then went to school; two 14-year-old boys worked in binderies and looseleaf concerns, one up to 60 hours a week, the other up to 64; two 12-year-olds and five 13-year-olds handpainted plaster novelties; children as young as 9 headed shrimp, picked cotton, made crates for eggs, and made rugs at home; 11- and 12-year-old children worked in vegetable canneries and fresh fruit and vegetable packing sheds."

But sweatshops in America are more than a matter of child labor. Testimony before the House Labor Committee brought out these wage standards in the country:

Rural telephone-switchboard operators make from 40 to 75 cents an hour, and the United States Independent Telephone Association objects to coverage because these wage scales are comparable to others in the community.

A representative of the Arkansas Wholesale Grocers' Association said the average wage paid by members of his organization was 56 cents an hour for a 52.5-hour week. The Georgia Wholesale Grocers' Association man said his people were paying around 60 cents.

A witness from the Texas Citrus and Vegetable Growers' and Shippers' Association said wages paid by members of his group varied between 40 and 65 cents an hour, but pointed out that the workers were allowed to take fruits and vegetables home with them to supplement their pay.

In Washington, D. C., hotel workers are getting 65 cents an hour for a 48-hour week.

Laundry flatwork finishers throughout the country average from 37 to 91 cents an hour, depending on the city in which they are employed.

Suppose, as Senator TAFT does, that a wage of 40 cents, or even 75 cents, an hour keeps a place from being a sweatshop. (The lowest of the minimum budgets analyzed by the Labor Department requires a wage of about 85 cents an hour to support a single person without dependents.) How far are we protected from sweatshops today?

Our protection is the Fair Labor Standards Act of 1938. It sets a minimum wage of 40 cents an hour; it provides time-and-a-half overtime payments for more than 40 hours' work a week; it regulates the use of child labor. It covers considerably less than half of all our working population; it doesn't provide effective protection for the workers it does cover, and the workers who need its protection most are among those who aren't covered at all.

The law gives the protection of a 40-cent-an-hour minimum wage to 23,000,000 people out of a civilian labor force of about 60,000,000. The thirty-odd million workers who are omitted include these categories:

Eleven million proprietors, self-employed persons, domestic servants, and farm-family workers.

Ten to eleven million persons engaged in essentially local activities.

Six million Federal, State, and local Government employees.

Four-million-odd executives, administrative, professional, and retail employees, and outside salesmen. (Under the current regu-

lations you may be an executive if, among other things, you make $30 a week.)

Three million agricultural workers.

Eight hundred thousand miscellaneous groups, including seamen; air-lines employees; fishing and fish-processing workers; learners and apprentices; messengers; physically handicapped persons; employees of most weekly and semiweekly newspapers; local railway and bus-line workers; food-processing workers; and switchboard operators employed in public telephone exchanges with fewer than 500 stations.

If coverage is inadequate, so is enforcement. With the limited appropriations provided by the Eightieth Congress, the Wage-Hour Division was able to inspect only 29,000 of the 638,000 establishments covered by the law in 1948. More than half of those inspected were found to be violating one or more of the Fair Labor Standards Act's provisions.

Enforcement hasn't been helped by the Portal-to-Portal Pay Act of 1947. In 1945, out of 22,000 cases involving monetary violations, the employer agreed, or was ordered, to make full or partial restitution in 19,000—or 86 percent. In 1948, this percentage dropped to 63—or to 9,600 cases out of 15,000. And workers got only 40 percent of the back wages owned them—$4,000,000 out of a total amount of $10,000,000.

The Portal-to-Portal Pay Act, says Wage-Hour Administrator W. R. McComb in his annual report for 1948, "had an adverse effect on voluntary agreements to pay such back wages, as well as on the amounts voluntarily paid. The Portal-to-Portal Act provided employers with defenses excusing the nonpayment of until then unlawfully withheld wages to employees. In addition, it limited the period of recovery to no more than 2 years. In consequence, many employers found in violation of the act since then have preferred to rely and take their chances on such defenses, rather than voluntarily pay back wages determined due after inspection."

Violations of the child-labor provisions of the act are almost as widespread as violations of overtime-pay requirements. The Labor Department found 1 of every 20 employers inspected in 1948 violating the child-labor sections; violations ranged from practically zero in mining to 16 percent in the canning and preserving industries.

Even with proper enforcement the control of child labor is inadequate. The law's provisions are not effective for children employed in establishments that don't produce goods for commerce. This exempts children working for interstate trucking concerns as loaders and helpers, those working for railroads and on boats, and those working for communications companies as telegraph messengers. The provisions do not directly prohibit child labor. They merely prohibit the shipment, or delivery for shipment, of goods removed from the producing establishment within 30 days after oppressive child labor has been employed. It's perfectly simple for some employers to hold goods for 30 days and then ship them. In certain industries, it's even more convenient to hold the goods. Frequently, in the logging industry, for example, logs are held until the spring freshets provide easy transportation.

The law further exempts any child employed in agriculture during the periods he is required to attend school. In some States, employment in agriculture is a legal excuse for not attending school, and thus the Federal law is completely nullified. In other States, school-attendance laws apply only to children whose parents are legal residents of the State; so migrants, who need the protection most, are not covered by the Federal law. And since the law applies only when the child is supposed to be in school, it is ineffective during the summer vacation, which coincides with the peak farm periods when the greatest exploitation of child labor occurs.

At least 250,000 boys and girls under 16 were paid workers on farms in July 1948, thousands of them on commercialized farms engaged in large-scale production. Administrator McComb reports:

"Inspections and studies conducted on commercialized farms have revealed the employment of very young children, some as young as 5, 6, or 7 years of age, working at hand operations in the harvesting and cultivating of crops in various regions of the country. Their work is made up of repetitive tasks, often arduous, often in a stooped or otherwise strained position, for hours at a time. They must lift and carry heavy hampers of fruits or vegetables, or drag heavy bags of cotton. They are exposed to excessive heat in the summer and cold, rain, mud, and frost in the spring and fall. Indeed, probably the greatest exploitation of child labor in this country is in commercial-type agriculture."

One of the reasons these children work in agriculture is that the wages of their fathers and mothers are so low that the family income has to be supplemented. For this reason extension of the minimum-wage provisions of the law to adult commercial farm workers needs to go hand in hand with the extension of the child-labor provisions to farm children.

The administration is pressing a bill in Congress to remedy some, though not all, of the defects in the present law. It is in danger of being cut to pieces by a log-rolling coalition of Republicans and southern Democrats. The Republicans never thought much of the law in the first place; the southern Democrats are afraid it may disrupt conditions in some southern industries. The coalition works on the good old back-scratching principle of "You vote to exempt my industry and I'll vote to exempt yours." And in their search for votes, the log-rollers don't confine themselves to the wage-hour bill but use any other administration measure that will serve their purpose.

This method of carrying on our Government was baldly illustrated in an exchange between Representative FRANK W. BOYKIN, Democrat, Alabama, appearing in support of the southern lumber industry to protest a 75-cent minimum wage, and Representative CLEVELAND M. BAILEY, Democrat, West Virginia, a committee member and a supporter of the 75-cent minimum:

"Mr. BAILEY. In a matter of 2 or 3 weeks, when the Reciprocal Trade Act comes up on the floor, I am going to have to wage a fight to protect the glass industry. Are you going to vote for me?

"Mr. BOYKIN. Are you for it or against it? We usually vote together, do we not?

"Mr. BAILEY. You did not vote with me before on the reciprocal-trade issue.

"Mr. BOYKIN. I might this time. I will make a trade with you."

The trade didn't come off. BOYKIN voted for reciprocal trade, BAILEY against it; and BAILEY is still supporting a 75-cent minimum wage. But the principle is well-established. And the conservative legislators are acting for the most powerful of the lobbies, trying to exempt the few additional industries singled out for coverage under the new bill. For example, the retailers' lobbies are fighting furiously the enactment of minimum standards for retail employees. The business is local, they say. A Federal statute ought not to concern itself with such trivia as local wages and hours; it was perfectly all right, they added, for a Federal statute such as the Taft-Hartley Act to concern itself with local labor relations.

This was too much even for TAFT. "I think we ought to do the same with both," he said to a National Retail Dry Goods Association spokesman. "Whichever way it is decided, we ought to be consistent."

Another NRDGA spokesman blandly argued before the House committee that his industry ought to be exempt because its standards were lower than the minimum proposed and raising them would be a hardship on business. He didn't say anything about the hardship for employees of not raising them.

A witness from the American Retail Federation pointed out that 70 percent of retail employees are either women or minors, and then argued: "Wage rates are meaningless in retail employment since they do not reflect widespread practices, such as paid vacations, bonuses of various kinds, and commissions on sales."

Already the terms of the administration bill have been drastically reduced in the House Labor Committee. The bill proposed originally to expand coverage by five or six million workers. By the time the House Labor Committee got through with it, only 2,000,000 workers had been added. Perhaps half of these are now making less than 75 cents an hour. The administration bill set the objective of a $1-an-hour minimum and authorized the Secretary of Labor to order a $1-an-hour wage in certain industries upon the recommendation of industry committees representing labor, management, and the public. These provisions also went out the window.

The bill which passed the committee by a vote of 13 to 12, proposes to raise the minimum wage from 40 to 75 cents an hour. It extends the coverage by about 2,000,000 workers. It tightens the enforcement powers somewhat and it slightly extends the child-labor provisions. It still leaves more than 30,000,000 workers uncovered and among these are those who need the protection most.

Raising the minimum wage to 75 cents without changing present coverage would boost the wages of about 1,500,000 workers by an average of between 8 and 9 cents an hour. It would affect principally the southern lumber industry, trade and communications, and the tobacco, leather, clothing, furniture, and food-products industries. Raising the minimum to 60 or even 65 cents without changing coverage, as advocated by some of the southerners and their Republican colleagues, would affect practically nobody.

The new coverage provisions which the House committee retained include seamen, fish and other food processors, air lines workers, local transit employees, and employees of retail stores with an annual volume of $500,000 or more.

The House committee also deleted a provision from the administration bill which would have given minimum-wage coverage to workers on farms employing as many as four regular hired hands. It would have applied to about 1,000,000 workers on some 100,000-odd farms. This is about half of all hired farm workers, but it is less than 2 percent of all farms. The deleted provisions would have been most effective on the west coast, where it would have covered about 10 percent of the orchards and truck farms and about two-thirds of the farm workers. Farm wages there are now estimated to average 60 cents an hour.

The House committee bill authorizes the Secretary of Labor to sue employers on behalf of workers for back pay, and it also increased the Portal-to-Portal Pay Act's 2-year limitation on recovery to 4 years.

The new bill's coverage of child labor in agriculture continues to be limited to school hours, but at least it eliminates the present loophole—coverage that applies only when the child is legally required to be in school.

While it tightens the child-labor provisions in some respects, the new bill loosens them in others. It adds exemptions for children

employed as newspaper carriers and by small retailers.

Although the House committee's bill still leaves out more people than it covers, it extends coverage at a higher wage level to important segments of the population who badly need protection. And, if we manage to keep employment at reasonably high levels, it may have equally important fringe effects on those who are not covered directly by its provisions.

A minimum wage spreads upward and outward. The upward spread, or bump effect, is felt by workers a step or two removed from the bottom. If a worker making 65 cents an hour is raised to 75 cents, another worker in the same plant who is already making 75 cents has a good case for a raise to 85, the one making 85 has a good case for a raise to 95, and so on.

More significant is the outward spread, and this accounts for a good deal of the opposition to a higher minimum wage from businesses which would not be covered directly. To the extent this outward spread occurs, it reduces the necessity for 100-percent coverage by the law itself. To some degree, especially in periods of high employment, the minimum set by law tends to become the prevailing minimum in a given locality. If a New Orleans fisherman making 60 cents an hour can get a job on a Mississippi barge line at 75 cents, then, barring an excess-labor supply, the fish industry is likely to find itself forced to pay 75 cents, even though it is not covered by the law.

The farther the minimum-wage coverage extends into retailing and similar basically local enterprises, the more likely it is to help farm labor and other exempt local workers.

Industrial wage levels have a marked effect on farm wages. In the farm areas around New York and Chicago, for example, wages average 84 cents an hour. But in the South and Southwest farm labor is getting only 53 cents an hour.

As inflation recedes and employment rises, a higher, more realistic, effective minimum becomes more important than ever. It could act as a strong brake on a recession by putting a floor under purchasing power. It would also protect the businessman who tries to maintain wage levels against his competitor who thinks that any drop in profits is a signal for wage cutting. That threat is great, as every fair businessman knows.

A Sound Approach to Labor-Management Legislation

EXTENSION OF REMARKS

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. THOMPSON. Mr. Speaker, for a long time I have believed that there was only one position from which I could render a service to our troubled public in the solution of labor-management differences. There are various terms for it—"neutral" or "conservative," maybe. Personally, I think "middle-of-the-road" fits better than any. Whatever you call it, I want to be trusted by and representative of the thoughtful leadership of both sides.

I look back on many years in my home town—years spotted here and there with contacts with labor disputes. Sometimes I have acted as mediator, officially or informally. More often I have merely sat and listened to an outpouring of differences of opinion, and once in a while have been fortunate enough to toss in a helpful suggestion.

Entering public service for the second time just after the enactment of the Taft-Hartley law, I was naturally asked by both labor and management what my position on that law would be. My reply was always to the same effect, namely, that I was willing to support any changes which would make it more workable. That was the only campaign pledge I have ever given on the subject.

Much later came the shouting about "repeal" of the Taft-Hartley law. This, I always insisted to my labor people, meant absolutely nothing—that the important question was, what kind of a law is to take its place? I have never agreed to support the old Wagner Act as was, nor do I recall being asked to.

My very temperate approach to the over-all problem was generally acceptable to labor. The only abuse I got was from the management side. I hasten to add, however, that most of the real employers of labor did not criticize me. They were inclined to be a little jittery over the idea of any change in the Taft-Hartley, fearing it might lead back to the old Wagner Act, the law that permitted abuses which led an angry public to demand the Taft-Hartley law.

That gives a very brief look at my background up to the beginning of the Eighty-first Congress.

During the days when the new law was being considered in committee, I listened with the greatest regret to reports of violent disagreements, and, even more, of the completely unyielding attitude of both sides. It seemed to me that a wonderful opportunity was being overlooked by somebody. One calm leader could have laid out a course palatable to all, and if both sides had been wise enough to yield here and there, a law could have been passed which would have provided a satisfactory vehicle for the labor-management-relations of the next 25 years.

When it became apparent that we would have to act on the straight, unadulterated Lesinski bill, I had numerous talks, and exchanges of letters with union members. I told them all that I would support only legislation which provided certain public safeguards. The law I described was pretty close to what we now know as the Sims substitute. We had no falling out over my position. After all, it was no different from what it had always been.

In the meantime I was being bombarded with all sorts of propaganda from sincere but generally uninformed people urging me to fight any changes in the Taft-Hartley law. I doubt if one in a hundred knew even vaguely what was in the law. Somebody told them to write their Congressman, or fill out a questionnaire, or something. Much as I appreciated their sincerity and desire to help I could not place too high a value on their contribution to the solution of the very complex problem of labor-management relations.

Through all of the turmoil during House action on labor legislation I held to the same position. The Taft-Hartley Act, as such, had to go. A more agreeable basis for bringing labor and management together was essential. TAFT himself suggested 28 changes in his own law.

I had intense pressure on me to support the Wood amendment. This was a straight Republican bill. It was admittedly written by Republicans and cleverly maneuvered by their leadership. They saw the fine political possibilities in the Dixiecrats and they exploited every angle of coalition with this group.

With such a background, no matter how we might have amended it later, the Wood bill could never have been acceptable to labor. It would hardly have been better than the present law, and would have left us with the same distrust on the part of labor as they felt, rightly or wrongly, for the Taft-Hartley law.

We are dealing with the minds of men. We have little hope of successful negotiations unless the minds can meet without having to overcome distrust for each other.

That let the Wood bill out so far as I was concerned. No labor bill written by the Republican leadership will be trusted for a long time to come.

In view of my feelings on the two pieces of legislation, the Wood and the Lesinski bills, there was only one possible solution. It occurred to many of us, and from the very beginning we worked quietly and consistently toward its accomplishment. There was never a greater need, nor a greater opportunity, for compromise.

Just why it didn't succeed is hard to tell. The Republicans, hungry for political victory over the majority party, were solidly against it. Left-wing Democrats were also opposed, or at least very reluctant. Anyhow, the move failed.

Faced with an incredible legislative mess, which the Wood bill was by that time, it seems to me very advisable to send it back to the committee for study. I voted for recommittal accordingly. Had recommittal failed, I had intended to vote for the Wood bill on final passage.

I am glad the bill is back in the committee. Obviously, further hearings are necessary. Perhaps with extensive testimony and calm discussion will come a solution that will do the country one of the greatest services of our generation.

There are two very bright spots in my recollections of those trying legislative days. The first concerns a visit by two CIO officials, one from the State office in Austin and the other from national headquarters in Washington. I had met the former and he had known of me and my work for many years. I was not able to go along with the bill which they wanted to pass. I told them exactly how I felt, fully and frankly, and when we parted, the Washington man said to the Texan, "Well, you certainly told me right about the Congressman." Turning to me, he went on, "Joe told me that you might not agree with us, but that you would tell us just exactly how you stood and what you would do. He said that you would be absolutely sincere and that whatever you told us you would stick by."

The second pleasant memory came after the action on the labor legislation was completed. The United States Chamber of Commerce had been in session all through the week. An old friend of mine who had once come to Galveston to put on a financial campaign for our chamber was here in Washington at the convention. Toward the end of the week he phoned me that he was coming up to see me.

As he left his meeting he mentioned to one of the legislative experts of the chamber that he was coming to see me. This man said, "Say, you better talk to that THOMPSON guy. He did not vote with us on labor legislation." My friend said, "Well, I do not know how he voted. I haven't talked with him, but you can figure on one thing for sure: However he voted, he thought he was voting right, and for the best interests of all concerned and he did not come to his conclusion until he had made very careful study of the whole thing."

Just after I was elected to the Eightieth Congress I went to call on Gen. Ike Eisenhower, a very warm friend of many years. We talked at considerable length of the complex and difficult affairs which Congress would have to settle in the immediate future.

The general said, "In these trying times I am going to say one prayer for you. I am going to pray God will give you the strength to stay in the middle of the road. It will take far more courage to maintain that position than to yield to the pressure from either extreme." I have thought of the general's prayer many times in these past few weeks. Evidently it was answered. I am still in the middle of the road.

Federal Aid to Schools

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a statement by Mrs. Harris A. Reynolds, 95 Pinehurst Road, Belmont 78, Mass., on Federal aid to schools:

"While we are in little danger of overestimating the value of common schools, yet we shall err egregiously if we regard them as ends and not as means." (Horace Mann.)

All modern dictators have utilized public education as the medium through which to attain their ends.

The infiltration of subversive activities into the public-school systems of the United States is no longer a matter of conjecture.

This fact injects a menacing element into the question of Federal aid to schools which once more confronts the American people.

That a problem exists all intelligent persons must fully recognize; yet, in the face of a world totalitarian trend, the crux of the situation is no longer the fact that yearly a million or more children in our country get no schooling but the question as to what kind of education the oncoming generation has received and is receiving. The reasons for rejections in the selective service should suffice to stimulate such inquiry, for the deficiencies were by no means confined to those communities where adequate funds for public education were lacking.

It should be remembered that schooling is not necessarily education and that literacy cannot be held to be an index of progress. Note Germany.

They call it Federal aid. Why equivocate? The powers who hold the purse strings inevitably manipulate the controls, the proponents of the Federal Aid to Schools Acts notwithstanding.

The provisions purporting to leave the States and the local communities unfettered in the management and control of their public-school systems, are but more sleeping potions administered to an unsuspecting public.

There is still open a less apparent but more insidious source of control to those seeking to mold the plastic clay of youth to the pattern of their own ideologies, even though the nominal control in the administration of public education remains in status quo.

The teacher has always been and is still conceded to be the most important factor in any education set-up. From time immemorial youth has been held to be in possession of the key to the future of any nation.

In recent years under the influence of a new line of thought propagated in our theoretical schools of education, the criterion of teacher qualifications has gradually undergone a change. Degrees and more degrees and professional advancement have become the yardstick of teacher efficiency. Teacher certification had its roots in this conception. At present, in some places, teachers are receiving a "super" increase in salary as a reward for attending courses in schools of education.

One hundred million dollars for an equalization fund and $200,000,000 as subsidies for teachers' salaries. By imposing a pattern for teacher selection from above, high sounding and well received by virtue of the profession of the advocates of the policy, what a hey-day of success these radical educators would experience in staffing our public schools with a personnel well prepared for the indoctrination of the future citizens of America with totalitarian philosophies. And all this through the generosity of the Federal Government with the taxpayers' money.

The acuteness of the teacher shortage dilemma loomed upon the horizon long before Pearl Harbor. Standardization and regimentation in teacher preparation has been a far greater factor in creating the condition than either low salaries or the war, for the method used in the training of teachers has failed to attract those who still believe that education is primarily designed to serve the interests of the school children and not to further a "pattern of conspiracy" of those who would undermine the greatest bulwark of defense in the democratic process.

Surveys like the Strayer Report of the City of Boston, Mass., present flagrant examples of propaganda as a bid for Federal aid to schools.

It is interesting to note that the Strayer recommendations parallel exactly the provisions in the Federal legislation. One is forcibly reminded of Beveridge's "From the cradle to the grave."

The purpose of these investigators seems to be to discredit the existing regime and then to propose a plan of reform which has all the earmarks of bureaucratic control.

There is a form of exploitation of youth for which there is no punishment by law but than which there is none worse; namely, to use the cause of youth to further political ends. It is a traffic in the souls of our children.

The danger lurking within the provisions of the Federal Aid to Schools Acts is far too real to be ignored and the risk far too great to be assumed.

Eternal vigilance is the price of liberty.

The Cornerstone of This Republic Was Laid Upon the Fundamental Principles of Equality of Opportunity, Personal Initiative, and Personal Responsibility—Equally Essential to the Maintenance of Freedom Under Law, Today They Constitute as Never Before the Very Bedrock of Our American Way of Life

EXTENSION OF REMARKS

OF

HON. R. WALTER RIEHLMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. RIEHLMAN. Mr. Speaker, the annual luncheon of the Republican women of my district took place last Saturday in the grand ballroom of the Hotel Syracuse in Syracuse, N. Y.

Attended by more than 1,200 of the most representative women in up-State New York, it was a gala affair.

Appropriately, it was called the silver-lining luncheon. There were special decorations, and especially designed lighting effects were employed to emphasize the theme of the occasion.

The principal speaker was my good friend and the good friend of every Member of this House, the Honorable FRANCES P. BOLTON, of the Twenty-second District of Ohio.

Mr. Speaker, I need not remind you that every Member of this body has personal knowledge of the oratorical powers of FRANCES BOLTON when she enters into debate on the floor of this House.

I have listened with deep interest to the Congresswoman from Ohio on many occasions as she addressed herself to some specific question under discussion.

I wish that all could have been in Syracuse with me and listened to her last week end as she addressed herself to the problems which today confront our country.

We who know her recognize the endless labor, infinite patience, and tireless devotion which she gives to every problem that comes before this body.

We know her as one who, having achieved the maturity of judgment and wisdom, brings these great forces to bear upon every question upon which she must make decision.

I was particularly thrilled, Mr. Speaker, when I read a telegram from the beloved and respected leader of the Republican delegation to this Congress.

In order to make it possible for all of my colleagues on this, as well as on the other side of the aisle, to read that telegram and the excellent address of our colleague, FRANCES BOLTON, I am asking

the unanimous consent of the Members of the House to extend my remarks in the RECORD of these proceedings and include both the telegram from the Honorable JOSEPH W. MARTIN, JR., of Massachusetts, as well as the speech of the Honorable FRANCES P. BOLTON.

The telegram and address are as follows:

MAY 7, 1949.

Mrs. JOHN W. BROOKS,
Vice Chairman, Republican Committee of Onondaga,
Syracuse, N. Y.:

In spirit I am with you—the members of the Silver Lining Luncheon Group—and my fellow Republicans of up-State New York attending the great Republican luncheon being held in Syracuse today.

I am particularly happy that the Honorable FRANCES P. BOLTON is with you, for in her personality you will not alone find the great humanitarian, but a great legislator, patriot, statesman, and American.

First, as Republican leader and then as Speaker of the House, I could always count on the splendid counsel and support of FRANCES BOLTON.

Distinguished by the service she has long rendered on the Foreign Affairs Committee of the House, she is equally distinguished by virtue of her depth of understanding and intimate grasp of the most intricate of all legislative problems.

Loved and respected by her every colleague, regardless of the side of the aisle on which he sits, I know that she is going to give a great American message to her audience today.

With best wishes from myself and every member of the Republican delegation to Congress, I am most sincerely,

JOSEPH W. MARTIN, JR.

ADDRESS OF THE HONORABLE FRANCES P. BOLTON, MEMBER OF CONGRESS, BEFORE THE ONONDAGA REPUBLICAN WOMEN, HOTEL SYRACUSE, SYRACUSE, N. Y., SATURDAY, MAY 7, 1949

Madam Chairman, I have come to Syracuse with a very real sense of the privilege it is to meet with such an outstanding group of Republican women at a time more momentous than man has so far experienced. All the world hangs upon what America does. All the world, whether consciously or unconsciously, prays that America may be given the wisdom, the judgment, and the courage to accept her destiny. If she is to do this, American women must shake off their lethargy and assume their particular share of responsibility.

I was a woman and a citizen of this great Nation long before I was a conscious Republican. Being a woman I am particularly eager to see women in the vanguard of all constructive action.

From what I know of the Republican women of this area I can say sincerely that you have courage, judgment, and no little imagination thrown in. Certainly you and your menfolk have sent fine men to represent you in the Congress. Your present Representative, R. WALTER RIEHLMAN, is giving an excellent account of himself on the Hill. It is no easy thing to follow a man like Clarence Hancock, but Congressman RIEHLMAN has assumed the responsibilities and the implications with a quiet dignity that has won him many friends. He is a hard worker and has had the wisdom to speak seldom. You will find he, in his turn, is writing a fine record for this great district.

I could not come to Syracuse and to this wonderful meeting of the Onondaga Republican Women without thanking your committee and its able and charming chairman, Mrs. Brooks, for this opportunity to express a little of the gratitude that is mine to the man who was your Representative for so long, whom I loved, and whose wife is one of those rare spirits whose very presence brings joy. Clarence Hancock was a quiet, strong, consecrated man whose life was given to service, whose every act spelled justice, whose thought was always for his country, his people, and his family. His absence is felt every day there on Capitol Hill, whether in the Committee on the Judiciary or on the House floor. He did not speak often to the Congress, but when he did his colleagues hurried out of the cloakrooms to listen.

No one has missed him more than I. Our friendship began in 1928 when my husband first went to the Congress. After his death and my own election, Clarence Hancock was one of the few men with whom I felt free to discuss the many complex and confusing problems with which we are constantly confronted. He had the rare ability of obliterating his personal point of view, so giving a clear, objective picture of the problem—which was of inestimable value. In many of the present difficult situations with which we are confronted there on the Hill I try to use the same objective method I had begun to learn of him. When I feel I have been a little successful I find myself saying, "Thanks, Clarence," with a certainty that he has heard and that I could see his gentle smile of approbation if I but turned my head quickly enough.

And Emily. No need to speak to you women who know her far better than I, of all the ways in which she has endeared herself to everyone. I often wonder if she knows even a little what her warm friendship means to me.

I am here also, thanks to the magnetic charm of your chairman, Mrs. Brooks, that reached out across the miles and caught me up and drew me here. How fortunate you are to have such force all wrapped up in so lovely a package.

As background for what I really want to say today may I take you for a moment across the Atlantic and back to the war days of 1944, the immediate aftermath of war in 1945, and then a glimpse of fall of 1947:

England in the summer and fall of 1944: On all the roads, in the fields, on the hillsides, the last of the military equipment that had literally covered every usable bit of terrain and the marks of what had been assembled there. Why the sheer weight of it didn't make the tight little island topple over gave evidence of the quality of the rock upon which it stands. Evidence there was on every side, also, of the restraint and the rocklike quality of those amazing Britishers. For so very long, millions of strangers filled their streets, kept them from sitting in their cinemas, even lived in their homes. An army of occupation, even a friendly one, is not easy to tolerate when weeks grow into months and months into years.

But our lads made themselves beloved too, in spite of the pressures.

Let me tell you about an experience I had when I went with Lady Reading (head of the Women's Voluntary Services) to inspect a bombed London area the morning after 62 buzz-bombs had fallen—and believe me, that in itself is not something one readily forgets.

We went first to the WVS emergency center in a newly bombed area. Plaster everywhere, in a nearby house a table hastily cleared and on it sheets of torn brown paper on which were listed the names of all the known occupants of the two bombed apartment houses just across the street. These were carefully checked whenever definite word was brought in. We heard the gentleness in the voice as the woman in charge said to a frantic man back from night work: "They're all right Jack—shocked a little but all right—get on with you to the hospital and see for yourself."

Then we went outside. What a scene. As background, like a stage set, four stories of homes laid open for all to see with hideous piles of rubble on the ground, a choking cloud of plaster dust which rose and fell as the searchers worked. The warden, easily recognizable by his hat and white straps, seemed to be everywhere. The silent watchers, strained and anguished. I noticed especially two sad-eyed women in well-worn dresses. Suddenly I heard one of them say, "If only we could get some of the American lads—they dig so fast and so carefully."

Rather wonderful I thought—"they dig so fast and so carefully." Both are so important—thirty people under that rubble and every moment precious. Even as we watched they were carrying away the dead.

And our girls? We here at home have no conception of what the landing on these Normandy beaches meant. How could we? But I saw the hideous spikes set in the water to upturn our landing craft, the rolls of barbed wire on top of the low stone walls back of which were the little hedgerows filled with machine guns, the fields sown with platter mines. How could men ever have had the courage—how could human flesh take it—how succeed?

In the second wave went the nurses. One little nurse all weighted down with her duffle and her heavy field clothes clambered over the side—to disappear completely under the water. She wasn't 5 feet high, and the tall soldier who reached down and pulled her out laughed as he said, "Sister, we'll have to have some new regulations. No tiny tots. No midgets."

Now go with me for a moment just a short way from the beaches over which our forces went and our salamanders landed and crawled inland in spite of the entrenched enemy. Walk with me between the white crosses that row on row, mark the resting places of the bodies of generals and privates that have sanctified to us forever the soil of Normandy. There under the stars and stripes—emblem of our Republic, symbol of freedom—only a few weeks after D-day, anguished French women of the nearby villages had already begun their exquisite ministry of flowers. Now, everywhere in the world where an American is buried, there is the symbol of our sacrifice to freedom.

I was in Paris two days after the liberation—the first civilian woman—in nurse's uniform. In the big hospital on the hill left in unspeakable condition by the Germans, our medical people were doing the impossible. On several of the upper floors there were many German wounded. There I made my first contact with gangrene, and I hope my last. It is one of the indescribable horrors of war as is jungle rot, and all the stench of disease and death.

With the German wounded were several German surgeons, a Red Cross aide who was also a newspaper reporter, and an older professional nurse. As I have always spoken German I was able to talk with her. I asked her if by chance she had had training at the Rudolph Hess school. For a moment her eyes blazed, then she said, "No, madame. I trained many years ago." The Rudolf Hess school turned out women versed in Hitler gestapo methods. They were put in as superintendents, chief nurses, etc., and used as informers, etc. Her eyes had blazed such resentment that I could not but rejoice, feeling that her nursing was still a sacred thing to her.

In the now satellite countries I talked with many women in 1945. One of them said to me: "Tell me, Madame, do the women of America know what we have suffered—what it is to women to have an army sweep across their country—and what two armies mean, with the second so much worse than the first? Do American women care? Do they know that the only hope we have—all of us of the

war-torn countries—that our only hope is America?"

Do we? Have we learned that though we bestow all our goods to feed the poor and have not love, it profiteth us nothing?

In the countries of the Near East and in Egypt, where war in all its fury had not then been, the same idea met me on every side both in 1945 and in 1947. America the hope of the world.

Yes, everywhere across the world people who want freedom look to us, not just for war potentials, indeed, perhaps least of all for these. They want our know-how, our techniques, our mechanics, our engineering, our ways of teaching, of farming, of transportation, of communications. Yes, they want all these, but more than all else they want to be certain that this freedom about which so much is said and written is an increasing reality—right here in the United States.

How did we get it? Is it still ours? Is it worth while? That is what they want to know.

I have sat here as you have, deeply moved by the remarks of your able chairman and by the three words projected above us: "Dedication—Power—Freedom." Certainly these words give dramatic meaning to this gathering. The rededication of ourselves—united for action—that constructive power may be generated and freedom made secure.

It is of this that I have come to speak to you, not in gentle terms but in blunt words suited to the grim moment in which we find ourselves. In our hands is the future of the world. What we do now decides the fate of centuries.

We can no longer play with life. We Americans must take full responsibility for our actions. We must be practical, down to earth, intelligent and aware, knowing that there is nothing we cannot accomplish if we set out in all faith and honesty to serve God's purposes here in our own land and out across the world. We have said, "In God we trust." Very well, let us prove it and be worthy of Him.

It would appear that darkness overtakes us—that a great cloud rolls between us and the light, paralyzing the very centers of our being. Still are there glimpses of silver, tips of the blackness touched by an unseen sun, reminding us of the fundamental wisdom of our early beginnings as a nation, of the need to maintain our strength upon these proven truths.

Like many of you I have lived long and have experienced many changes. I have been privileged to travel more than most and to study both at home and abroad. I have had opportunity to learn much about the broad social consciousness as well as about the political consciousness of the people in the New World as well as in the Old. My years of service on the Committee on Foreign Affairs of the House of Representatives could not fail to give me knowledge of the differing points of view here and abroad with respect to both our economic and political problems.

Life has taught me many things, but nothing more certainly than an abiding faith in Almighty God and in my country—in our ability here in America to survive within the democratic principles under which this Republic operates if we are faithful to them.

Note well that I say the democratic principles under which this Republic operates. We must never forget that these United States operate under a republican form of government, not under a democratic form of government. We are a Republic, not a democracy.

When Julia Ward Howe wrote her all-inspiring American hymn she did not call it the Battle Hymn of the Democracy, she called it the Battle Hymn of the Republic.

The Pledge of Allegiance as it is taught to our youth and used in our meetings is not a pledge to democracy or to a political party. It is a pledge to the flag and to the Republic for which it stands. Clear your minds once and for all on this point, and use the words accurately. It is this far-reaching, careless use of a word which was introduced into our language in the 1920's, and brought to fruit by the New Deal, that has been a source of confusion in our thinking when we consider the very fundamentals of our form of government, our way of life.

Let me recall to you Thomas Jefferson—revered by every thoughtful and patriotic American. It was he who founded the Democratic Party, first known as the Republican-Democratic Party. But never once in his first inaugural address in which he made several direct references to the Republican form of government under which this Nation operated, never once did he use the word "democracy" or any derivative thereof.

It is interesting that here in your great State of New York, Governor Lehman, in his first inaugural address, delivered in 1933, never once used the word "democracy"; in 1935 he used it twice; in his inaugural message of 1939 he used the word "democracy" or a derivative thereof 25 times; and in his annual message of January 1940 he used it 33 times.

Ever since the advent of the New Deal this misuse of the word "democracy" has been deliberate—an effort to confuse the electorate into believing that the Democratic Party and democratic principles of government are one and the same. Nothing could be less true.

In early colonial days, before the Constitution was brought into being, our forebears held their own local town meetings. There the citizens themselves, in assembly, made all the laws for their immediate community. There was no delegation of power. The democratic form of government was in action, and that is the way a democracy functions. Communities were small. The scope of life and the services rendered by government were restricted to the accessible areas. As civilization developed, however, and life grew more complex, government extended itself across the vast expanses of the continent. The simple form of town-hall meetings no longer met the growing needs, so there was evolved a method of delegating power to elected officials.

It was with amazing wisdom that our forefathers conceived the idea of a representative form of government, based upon the pure principles of Jeffersonian democracy functioning within a republic. That is what we are. That is what we must continue to be.

No government the world has seen has given more opportunity, more joy, more ease to more people. It is worth every effort, every sacrifice to retain, for it has within it the ingredients from which world freedom and world peace can be built.

We have been a nation that worked hard and played hard. Our fathers plowed their own fields and raised their houses by common effort. They built their churches and established their schools, and they continued their interest in what was taught in both.

Somewhere along the line we forgot that eternal vigilance is indeed the price of freedom. Because of our forgetfulness there has been an infiltration of a completely irreligious ideology not only into our schools and colleges but into every area of our living.

Subtly and with consummate skill and fiendish ingenuity there has been created a situation in which we find certain citizens of this great free Republic actually apologizing for the very freedoms that have been built here, for the formula that has given more comfort, more security, more opportunity to more people than the world has ever before seen. We find here all too little enthusiastic understanding of what we have and are. Yet, all over the world, America is the symbol of freedom—mystic, wonderful.

Our fathers were brave, fearless, and hard-working. They had a dream, and each of them appears to have had the ambition to spread the dream out by individual effort. We have not lost this dream, this eagerness to see freedom and opportunity possible to all men, or we would not have sent our armies out twice to protect freedom in other lands. We did not know, perhaps, how vitally this would change us. We did not realize at the time that the going made us part and parcel of the world. Now we know that we cannot withdraw, much as we may long so to do. The desire to strengthen freedom wherever there is need is still the mainspring of our being, regardless of misstatements being blasted across Europe and whispered here.

When we found we had taken on a larger order than we knew we recoiled a little, but we have not retreated—and we must not, for ours is a position of world leadership, of world power. We may not have done too well at some points, but we are beginning to find our balance, we are beginning to recognize our responsibilities, and square our shoulders to take the load.

If we are to assume a real leadership, then we women must play our destined part beside our men. What is leadership? "Courage," said John Buchan (Lord Tweedsmuir), "courage and wisdom and a carelessness of self." This means less talking, more doing, and the putting aside of selfish interests.

Men and women together, we must look at life again, seeking its deepest meanings. Together we must reevaluate America—what she was, what she is, and what she must become if she is to meet her destiny.

To our forefathers was given a new land of great natural resources, a land into which others had dipped mercenary fingers, taken what they desired, and left. In their arrogance they failed.

What of us? Have not we, with a similar arrogance, taken the native wealth in unbridled impatience and scattered it in careless fashion until we find ourselves in this year of grace 1949 with our forests going, our rivers unmanageable, our deserts on the increase, and our people afraid of the future, afraid of themselves and their own frailties, rather than certain of their strength.

We have taken, taken, taken. We have given little back. We have forgotten that we, too, are subject to the implacable laws of nature, which insist upon balance, which demand that whatever is taken out must be replaced if life is to continue to flourish in beauty and in peace.

If America is to be the light of the world as decreed by destiny, we must insure her fundamental strength. We must keep her true to the principles of the Republic. We must renew the earth we have depleted, replenish forests and game, and make provident use of the resources of climate, soils, and streams. We must above all, insure that our children are born with healthy bodies and clear minds, and imbue them with a high sense of the value of justice and of truth. We must inculcate in them tolerance, understanding and a passionate eagerness to serve this dream of freedom under law, established by our founding fathers. Let these simple truths take deep root in the mind and in the hearts of our youth, and they will know with a certainty even greater than our own that "the earth is (indeed) the Lord's, and the fullness thereof."

Friends, the moment is upon us when we must return to basic truth, that future generations may be born to be good and to do good.

I sincerely believe we can do this.

I sincerely believe that the moment of destiny is upon us both as women and as Americans.

America has grown great in importance overnight, before her period of preparation

had more than begun. Therefore, the strain upon her responsible people, yes, upon every man, woman and child, is difficult to realize and to maintain.

What does greatness demand of a nation?

First of all: Humility—a recognition and a demonstration of our fundamental belief that the earth is not ours, but God's—that man, as part and parcel of His very essence, is restrained by eternal law and so must restrain himself.

Greatness demands strength, not the blare of trumpets or the beating of drums, not shouting from the house tops nor prating in the market place, but an inner power for action based upon the certainty that it is God who moves and we who are His tools, His instruments.

Such strength sweeps away fear, leaving in its place a patience and a quiet force that stems from unity, from the deep knowledge of the importance of the individual and his primal responsibility for his own acts and his need to give back, in his turn, the riches of opportunity granted him here in this great land.

Such strength is based upon the faith with which our forebears endowed America.

But we must be up and doing. We must remember with every breath we draw that we were given a representative republic to strengthen, to cherish, to protect, a form of government which contains assurance of freedom from the oppressor, from false rulers, even from our own weaknesses, which gives us opportunity to be ourselves.

Last fall the people of the world watched to see all the electorate of the greatest of nations assume its full responsibility only to witness the tragic failure of many to use their right of franchise.

They saw a President elected by a minority of the votes cast, while millions never went to the polls—the first minority President since 1916.

This must never happen again. Such apathy sounds the death knell of freedom.

To us who are Republicans the challenge is very real. To play the vital part we must play—if the people are to see the dangers and do battle against them—there are certain things we need.

1. There must be a meeting of all minds, based upon the fundamental principle that personal initiative, individual opportunity, and individual responsibility are the three essentials to the reestablishment and maintenance of freedom under law. That principle constitutes the very bedrock of the American way of life.

2. We need to reacquaint ourselves with the Constitution that divided the very powers of power so that the individual be protected from injustice, whether at the hands of other individuals, or groups, or at the hands of government itself. This is the warp and woof of that Constitution and of the Bill of Rights.

3. We need to recognize and accept the cold fact that there can be no turning back—that the only way is on.

4. We Republicans as a whole need to realize what we as women have long known, that the walls of the American home encompass the world—that our business as a nation is the world's business, that unless the world is fortified for peace there can be no joy anywhere—no hope.

Get out your new maps. Get out your globes. Remember, as you examine them, that 36 hours sees you in Cairo—even with stops on the way; that but a few hours take you to the Caribbean and on to the Latin-American countries. Look to the north, there at the Bering Sea where there are hardly 100 miles between an Alaska that not long ago belonged to Russia, and the Soviet Union. Remember that Mexico sits on our southern borders getting a part of the capital she needs from her new Soviet friends.

No, don't tell me the world is not our business; for it is.

We who are women, especially those of us who are Republicans, must no longer be content to wear the quiet robes of yesterday. We must put on the flaming garments of reality.

A torch is there—what are we going to do with it?

As Americans, as Republicans, as women, our concern must be for the new life with which the whole Nation must be infused. As Republican women we have both the opportunity and the responsibility to recharge our great party. We must fortify our Republican Party. We must strengthen her and prepare her for the work that is to be done, if our institutions of Government are to survive.

We know a party is strong only as those who belong to it are strong; it is alive only when its members are alive.

As women and as mothers we know that no mother sits by her sick child without the passionate determination that he must and will live. She does not fight death with fear—she fights with the flame of a consuming demand upon the forces of life, with the expectant prayer of unshakable faith.

It is this spirit which we Republican women can reconsecrate to the service of America.

We can insist that all men and women of sanity stop talking of shadows.

We can insist also that what has been done is over and that a new world labors to be born.

Women, more readily than men, can be progressive, for are we not God's own afterthought? His own progressive formula for change and for progress?

Are we not fashioned out of His loneliness when man showed himself arrogantly sure that he knew better than his Maker? Are we not the result of His need to create a humbler being who could conceive Him as He is?

Are we not the matrix of His life, mother of knowledge, pregnant with deep feeling, reaching out always toward bettering the state of the world?

But things can be better in a new fashion only if we get together, setting aside selfish ends, deciding to unite to make the party through which we work a wholesome, honest, and courageous instrument.

We know that this is a moment of travail and labor out of which new life must and will come. We know a new spirit of service is being born.

Difficult? But, of course, for it will mean work and work and then more work—work for that which we believe—for that which is our faith. Most difficult of all because the love of work has gone from so many of our people under a regime that has taught a doctrine from which personal responsibility has been almost entirely eliminated. But that is no more than a dark cloud that has temporarily obscured the sun of a strong people's sanity and judgment. It looms large, perhaps, but if we start a quiet little breeze that comes from the deep conviction of our woman's belief in the power of freedom under law it will soon become a strong wind, which will blow the darkness off the earth.

After all, it isn't what we may do, friends; it is what we must do.

There is still time, though we have lost tragically by our apathy, our laziness, our readiness to accept a defeatism that has spread over us like a miasma.

Always woman has been the deciding factor. She can be again. But she must concern herself less with superficial things and more with the world's need of her service, her judgment, her capacity for selflessness, her understanding of the giving rather than the taking of life, her capacity for complete devotion to the immediate as well as to the long future.

Where are we going? Let me tell you in the poetic words of Frank Townsend:

"Where do you think we are all going?
I will tell you:
Towards happiness that is beyond dreams;
Towards truth that surpasses thought;
Towards realization of something that is both within and beyond you;
Towards freedom, peace and love."

Our National Security Demands Secrecy of Atomic Energy

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. McDONOUGH. Mr. Speaker, while we take every measure to provide an adequate Army, Navy, and Air Force for the protection of our Nation, and to procure vital strategic materials for use in case of emergency, we are failing to provide an adequate measure of protection for what is perhaps our most important resource, the knowledge of atomic energy and the atomic bomb.

Almost daily extensive information about atomic developments is passed along publicly through Government reports and private publications and is available through these channels to any foreign agencies which might be interested.

Virgil Pinkley, editor and publisher of the Los Angeles Mirror, recently issued a series of editorials revealing the extent to which atomic information is being released to the public, which indicates the need for adequate safeguards to protect this information for the security of our Nation.

The editorials follow:

[From the Los Angeles Mirror of May 3, 1949]

OUR HOPE FOR PEACE IS ATOMIC SECURITY

I

As long as the United States produces more atomic energy, and especially more atom bombs, than Russia, there is a chance for world peace.

There is world agreement, outside Russia, on this point.

Many military experts on this side of the iron curtain are alarmed about the extensive atomic information we are passing along publicly to Russia, all for free.

What assets do we possess that tend to preserve the world's present armed peace?

1. Production of the atom bomb in larger quantities than any other nation.

2. Our strategic Air Force bombers can deliver the bomb in greater numbers over longer distances than any other nation.

3. In industrial production, the major factor in a long war, the United States, Britain, and western Europe outmatch the world.

4. Western research and production distribution know-how is tops.

5. Steel and petroleum are the basis of modern war. The United States produces four times as much steel as Russia and the other iron-curtain countries combined, six

times as much petroleum. Our total production outmatches Russia 5 to 1.

6. We have more trained manpower.

7. Our raw-material supplies are largely adequate.

8. Our merchant marine and Navy strength is far superior.

9. The Marshall plan is succeeding.

10. The Atlantic alliance is a deterrent to war.

11. The Anglo-American airlift technique is unmatched anywhere.

We propose to deal chiefly with atomic energy, our tremendous trump ace in the postwar deck.

In these articles we will show the looseness in our handling of highly technical information dealing with the atomic bomb and our unwise disclosures of the extent and location of the plant facilities producing atomic energy.

We might be justified in passing on exact details of our atomic production if there was a genuine desire for peace by all nations and especially their leaders. If a free exchange of ideas existed, to which Russia made a full contribution, there might be a sound basis for making public so much top-level scientific information.

Conquest through world revolution is the basic, avowed principle of communism. In the face of that fact, it is hard to justify revealing our hand.

For the moment, and possibly for several years, atomic energy is our greatest means of preserving peace. Many are rightly alarmed when they daily read and hear officially released atomic bomb secrets.

In this troubled world in which we live today, certain scientific and military knowledge is vital to our existence, ideals, and way of life.

We dare not forget that in the minds of Communists there are only two kinds of people, themselves and the other kind—ourselves. Communists are sworn to the theory that all peoples other than their own must be made to comply or be liquidated.

Therefore, much information on atomic energy should now be handled just as a military top secret in wartime. Today we have a so-called peace, at best an armed truce, which has been properly described as the cold war. The national safety demands extremes of security in any war, hot or cold.

VIRGIL PINKLEY.

[From the Los Angeles Mirror of May 4, 1949]

UNITED STATES TOO GENEROUS WITH ATOMIC FACTS

II

Any newspaperman in normal times would properly defend freedom of press and speech against all censorship. But, we do not live in normal times when normal rules apply.

The press and radio have definite responsibilities now, particularly when dealing with atomic energy, which can mean life or death for the world.

At this point in world affairs, any irresponsible handling of scientific and military information can be dangerous. A certain amount of self-censorship is needed, in addition to any truly essential security censorship.

Great Britain has an Official Secrets Act which prohibits dissemination of information which might endanger the security of the nation. This law has remained in effect through Conservative, Liberal, and Labor-Socialist administrations. The same laws exist in Sweden, Switzerland, Belgium, and Holland—all of them democratic countries.

The United States needs similar laws now.

Writers and radio commentators here are retailing information every day of great interest to the Russians. The Soviets could not get this information in any other way without great effort, danger, and expense.

Russia, however, maintains the world's strictest censorship of scientific and military matters. Moscow advocates the free exchange of ideas between leading scientists, but makes no contribution. The Russians forbid reciprocity in science, military research, and experimentation. They do not disclose plant facilities, factory locations, or research centers.

We do. It could be a fatal mistake.

Why should we pass on all the information given out about atomic energy?

The recent report of the United States Atomic Energy Commission on atomic power development, and the Fortune magazine article on the atom and the businessmen are examples of dangerous information freely distributed.

These published documents give Russia more information about our production and war potential than we were able to get about Germany or Japan after 3 years of war. Make no mistake, the Russian general staff is busy evaluating this intelligence right now.

Top-ranking American military officers are shocked by our careless broadcasting of what every foreign spy should know about United States defenses.

Photographs, charts, and diagrams pinpoint important atomic energy operations. We have, in effect, drawn up a flight path to our most bomb-vulnerable installations for any potential enemy. For instance:

"The center for the development of atomic weapons is the Commission's Los Alamos laboratory, operated under a contract with the University of California," the Atomic Energy Commission report trustingly prattles. "Los Alamos is about 35 miles from Santa Fe, N. Mex. It is in rugged country on an isolated mesa, about 7,500 feet above sea level."

This is typical. Outside of furnishing daily weather reports, and having USO girls on hand to welcome any enemy bomb crews forced down, what more could we do to make it easier to Pearl Harbor the nerve center of our atomic-energy program?

VIRGIL PINKLEY.

[From the Los Angeles Mirror of May 5, 1949]

PUBLICATIONS GIVE OUR ATOMIC SECRETS

III

Too many of our atomic secrets are being published and broadcast.

We continue to republish much material to which some of those charged with the security of this country have made violent objections.

All of this material has unquestionably reached the Russian Army intelligence. It is on public sale by Government agencies, or in popular magazines.

Here is a sample, from the United States Atomic Energy Commission report for 1947–48:

"By spring 1948, the building of these new major facilities had become the greatest single construction program in American peacetime history. Work which would eventually cost $700,000,000 was under way. It centered at the Hanford, Wash., plutonium works.

"Today fissionable materials production extends into at least 15 States. It is carried on in 30 separate plants at 25 locations." (Try to imagine Russia giving out such information officially.)

Just to make it easier, page 17 of the report shows pictures of the K–25 gaseous diffusion plant at Oak Ridge, Tenn. The K–27 auxiliary process plant is shown, too.

"The K–25 plant, built during the war to extract fissionable U–235 from normal uranium, is the largest continuous process plant in the world under one roof—a 60-acre roof. Each side of the giant U-shaped layout is ½ mile long."

There's a target-for-tonight for enemy strategic bombers, on a platter.

Fortune magazine, on page 53 of the January number, brackets in some more key targets. It tells of the nuclear energy aircraft propulsion projects at Oak Ridge, the plutonium plants at Hanford, Los Alamos, the Argonne National Laboratory, the Brookhaven National Laboratory, the gigantic Knolls Atomic Power Laboratory at Schenectady, N. Y., and projects in Iowa, Ohio, and the University of California.

Remember, the destruction of any one of these projects would be a disaster from the standpoint of national security. If Russia hasn't got long-range bombers, what's to prevent on-the-ground sabotage by Russian agents and home-grown traitors? We know they exist. They brag that their first loyalty is to Russia in case of war.

Fortune publishes a large photograph, containing many details of military importance, of the Oak Ridge plant. Rivers, lakes, woods, ridges, smokestacks, water towers, and many other terrain features show up like road signs.

They would all make excellent "fixes" for a bomb run. Crews briefed with photos like that couldn't miss dropping bombs "right down your throat," leading airmen say.

Remember during the war how our military pleaded with the public to go through their tourist albums for any hazy snapshots of invasion coasts and enemy industrial areas? They were vital to air operations.

We're going to make sure any potential enemy isn't inconvenienced like that. Any nation with $1 cash or less can get its whole air war against us mapped out, by us, at any newsstand or the Government Printing Office.

VIRGIL PINKLEY.

[From the Los Angeles Mirror of May 6, 1949]

NOW IS THE TIME TO END SECURITY ABUSES

IV

Latest Washington reports indicate that officials handling atomic energy information are becoming more security-minded.

It's about time. It's essential. It's common sense.

Today we reproduce more excerpts from already-published information. It shows our past laxity in maintaining security guards on our atomic energy production.

The United States Atomic Energy Commission's last report carries a surprising map and diagram on page 23.

It shows the 620 square miles used by the Hanford, Wash., plutonium plant. The plant location is shown with reference to the junction of the Yakima, Snake, and Columbia Rivers. Enemy bombers couldn't ask a better "fix."

On page 25, the reactor area at Hanford is shown in great detail. Installations shown include a smokestack close to a ball-shaped tank, a row of cylinders mounted on piles on one bank of the river, and other key structures.

These are invaluable identifying check points for potential bombers or saboteurs. So detailed are the maps and photos in the AEC report and Fortune magazine that exact distances can easily be figured from river bends, islands, and landmarks. The Russians know mathematics, too.

The Fortune article even helps evaluate the relative importance of the various United States atomic projects by breaking down the costs of operation:

"Monsanto Chemical will get $7,000,000 for basic research in Mound Laboratory in Ohio. In 1949 the University of Chicago will get $35,000,000 for running the Argonne National

Laboratory as a business; the University of California will get $37,000,000 for running the Los Alamos Scientific Laboratory and its own radiation laboratory as a business; and Associated Universities, Inc. (a coalition for atomic purposes of Columbia, Cornell, Harvard, Johns Hopkins, MIT, Princeton, Pennsylvania, Rochester, and Yale) will get $27,000,000 for running the Brookhaven National Laboratory at Patchogue, Long Island, N. Y."

Fortune continues: "At Oak Ridge the heart of K–25 is a gigantic U-shaped building. * * * Inside, hexafluoride, a gas, is pumped a distance of some 11 miles through thousands of porous barriers, each perforated by billions of holes smaller than two-millionths of an inch. Gas molecules containing U–235 move slightly faster than U–238 * * * "General Electric's big job is to operate the first nuclear chemical factory in the world * * * in what is now known as Knolls Laboratories, in Schenectady.

"Knolls was once a big 360-acre private estate 5 miles northeast of Schenectady * * * this new laboratory, known as K–1, is now half finished and partly occupied."

Real security censorship on atomic energy secrets would hurt no one. These same secrets known to a potential enemy might cost thousands on thousands of United States lives.

There should be a closed season on publishing maps, charts, and photos giving specific geographic details and listing the physical properties of atomic-energy plants and all affiliated operations.

Too much information has been tossed out carelessly already.

The time to halt such unnecessary and dangerous knowledge is now.

VIRGIL PINKLEY.

Merry-Go-Round Is Now Slowing Down

EXTENSION OF REMARKS

OF

HON. ROBERT E. JONES, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. JONES of Alabama. Mr. Speaker, under leave to have printed in the Appendix certain editorials, I include an editorial which appeared in the Progressive Age of April 14, 1949, entitled "Merry-Go-Round Is Now Slowing Down," and written by the editor, Mr. P. W. Campbell, who is one of my good friends and one of the outstanding weekly newspaper editors in the country. Mr. Campbell has presented in this editorial a most interesting and timely discussion of a profound problem:

MERRY-GO-ROUND IS NOW SLOWING DOWN

This editor, not claiming to be an expert on the future, or even the past, believes we are not going to have a depression. That is, the kind we have known in the past where pinto beans were king of diet and second-hand clothes looked like Easter.

I think we are catching up on production and slowing down on easy money making and when those two ingredients get together the big parade always slows. But it was a humdinger of a parade, where a dollar got down in respect to the former status of two bits and folks who had hardly ever felt the kindly caress of much folding money were suddenly finding themselves toting $20 bills around in several pockets.

We are rapidly leaving the realm where the seller was king and the buyer the peasant and entering a new and former status where the buyer is king and the seller bows and says "Mister" soft and sweet. Pretty soon you'll begin to see some of us boys who have recently strutted into the banks with our hats on our heads, turning up in front, and shelling out big money and demanding change quick, now begin to quietly slip into these places of glorious aid in time of stress and meekly wait their turn at the borrower's table. Oh, no we did not lose our hats because you do not see them on our heads—we'll have them in our hands.

We have, most all of us, the last several years been singing a wild, rollicking song titled "Gimme This, and Gimme That, An' Git Outer My Way When I Say Scat." But lately another song is beginning to be heard. It goes "Sweet Money, My Dearest, I'm Holding You Tight Until I'm Persuaded Your Suitor Is Right."

We can't have a general depression with the gigantic government "buy and give away" program, and the many other Government support and aid systems we did not have last "rabbit hog" era some of us older and middle aged well recall. Too many people need too many things.

But Old Man Big Profit is beginning to show signs of reaching old age and may have to retire from the usually active life he has been leading these last few years.

At the same time the old gentleman known as Mr. Good Job, who had been neglected in attention while Mr. Profit and Madame Prosperity were putting on the exciting show, is now getting more attention and a few bouquets of appreciation. It is my guess that pretty soon Mr. Good Job will be hugged half to death by admiring suitors. He will become a little more independent himself as the weeks roll by and keep us on the "hot seat" by looking around to see if he can find a better love to fill his heart.

The percent of wise people in prosperity is perhaps higher than you would think, and a lot of easy money has been salted away while the salting was good. Of course, most of the folks got their folding money snatched loose before they could get used to the "feel," that is what inflation does to the multitudes. But we will always have these multitudes and they are the backbone of the country. They can take it on the chin, and have done it in the past. The multitudes like nice things and good living just like the upper ten and while able they attend the big show, but when the show is over they soon realize it and quickly settle down to normalcy. The loudest squawkers are usually those who make big money, far more than the average, and begin to get whacked down when the multitude decides the show just ain't worth the big price charged.

Yes, folks, I believe we are not going to bust, or starve or become a nudist nation. We've all got good enough sense to look the future squarely in the face and dismiss the abnormal years we have just seen while at the same time gradually adjust ourselves to a little slower and more energy requiring era that appears just ahead of us.

Favorable Report on Public Library Service Demonstration Bill Made by Federal Security Agency

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. PATMAN. Mr. Speaker, on January 13, 1949, I introduced H. R. 1411, a bill to provide for the demonstration of public library service in areas without such service or with inadequate library facilities.

On February 15, 1949, pages A796–A797, I inserted in the RECORD a statement containing an analysis of the bill, also questions and answers concerning it. On February 25, 1948, pages A1150–A1151, I extended my remarks in the RECORD, giving my views on this bill. I am calling attention to these extensions of remarks for the convenience of the Members, who would like to have a full explanation of the bill before them when reading the report, which will follow.

The Committee on Education and Labor of the House, to which H. R. 1411 was referred for consideration, through its chairman, the Honorable JOHN LESINSKI, requested a report on the bill, also on H. R. 874, an identical bill, introduced by Congressman RAY J. MADDEN, of Indiana, from the Federal Security Agency. The report furnished by the FSA favors the enactment of such legislation, and I am inserting in the RECORD at this time a copy. It is as follows:

FEDERAL SECURITY AGENCY,
Washington, May 3, 1949.

Hon. JOHN LESINSKI,
Chairman, Committee on Education and Labor, House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: This letter is in response to your requests of February 16, 1949, for a report on H. R. 874 and H. R. 1411, identical bills "To provide for the demonstration of public library service in areas without such service or with inadequate library facilities."

The bills would provide for Federal grants to be made to States which submit to the Commissioner of Education and have approved by him plans to demonstrate the value of public library service under the stipulations set forth in section 5 (a)–(c). The sum of $40,000 would be made available to the qualifying States for each year of the demonstrations, not to exceed 5 years. In addition, sums ranging from $40,000 to $100,000 would be made available, each year for 5 years, on a 50-50 matching basis to those States which submit to and have approved by the Commissioner an expanded plan within 4 years from the effective date of the act. There is also authorized, during the first year of operation, the sum of $150,000 to enable the Commissioner to assist the States in training workers for these library demonstrations by means of institutes and short courses.

The objective of these bills is to aid in remedying a serious deficiency in our educational facilities. Adequate public library service is highly essential in a democracy. It furnishes adults with a means of continuing their self-education, or improving their vocational competence, and of obtaining a sound understanding of social, economic, and cultural problems. The public library also renders invaluable service to children and young people. It is a necessary auxiliary to the educational programs of our schools and colleges. Yet despite noteworthy efforts by State and local communities, one-third of the total population in the United States is still without public library service, and another third has service of an inadequate nature.

The provisions of the bills should stimulate the States to study their library situations and to take constructive steps toward establishing adequate public-library service. The reports required to be submitted to the Commissioner should yield information of practical value to local appropriating bodies and citizens in determining what sorts of

library programs are needed and what they cost. The further requirement that the values and methods of public-library service be studied by the Commissioner and the resulting conclusions reported to the Congress and the Nation should furnish essential basic information for administrators of library programs.

The bills provide for workable State and Federal relationships. In section 2 (b) and section 5 (b), the control and operation of the proposed library service, the appointment of personnel on a merit basis, and the selection of books are reserved explicitly to the States and their local subdivisions. The participation of the Commissioner of Education is clearly defined. In addition to certain routine administrative duties, that participation consists of: determining whether the plans submitted meet the specifications set forth in section 5 (a); cooperating with the States in training workers for the demonstrations; studying the results of the demonstrations and making reports to the Congress and to the Nation; and taking appropriate steps to protect the interests of the Federal Government if a State fails to fulfill its obligations under the State plan (sec. 8 (b)).

The bills have other features worth noting. They emphasize the service aspects of public libraries and expressly forbid (sec. 7 (c)) the use of any of the Federal funds for a library-building program. They allow (sec. 5 (c)) variations in plans among the several States, so that the service may be adapted to local needs. Further, the bills authorize some brief preliminary training of the demonstration workers, a provision which should assure more effective use of funds granted. They provide the financial assistance of the Federal Government to the States only for a limited number of years.

The purposes as outlined in the bills are practical and attainable. The few isolated library demonstrations previously conducted by States indicate that such a method of stimulating and aiding library development is sound. There exists already in the Office of Education a section which within the limitations of a restricted budget, is furthering library development by assisting State library agencies through consultative and other services.

There are, however, certain provisions of the bills which need clarification. For example, under section 5 (a), paragraph 1 (p. 3, lines 8–12), a State plan must contain a certification that the State plan "has made no reduction in the appropriation for * * * the fiscal year in which the apportionment is to be made." We assume that the purpose of this provision is to prevent Federal aid for States which devote to library purposes, in the fiscal year in which the apportionment is made, less than in some base period, e. g., the fiscal year before enactment. The quoted provision, however, contains no such standard of comparison. Again, it might be made clear, as we take it to have been intended, that State and local aid now granted for library purposes will be counted as part of the State and local matching funds ($40,000–$100,000) referred to in section 7 (b) as a condition of additional Federal assistance. (The following typographical errors should be corrected: In H. R. 874, on p. 5, line 18, insert "Agency" after "Federal Security." In H. R. 1411, on p. 6, line 8, "supplied" should read "supplied.")

We would therefore recommend that the bills modified as suggested above, be enacted by the Congress.

The Bureau of the Budget advises that the broad objectives of this proposal are meritorious and that there is no objection to the presentation of this report to your committee.

Sincerely yours,

J. DONALD KINGSLEY,
Acting Administrator.

Shall We Abandon Our Freedom?

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1949

Mr. McDONOUGH. Mr. Speaker, the basic freedoms which have been the foundation of our Nation since the ratification of our Constitution and the adoption of the Bill of Rights, and which have made the United States the stronghold of individual liberty and a beacon for all oppressed peoples everywhere, are now being threatened by an insidious attack that is advancing and gaining momentum, unnoticed by most Americans, with alarming speed.

This movement is designed to repeal our Declaration of Independence and to nullify our Constitution through the establishment of a limited world government with the United States enrolled as a member with the loss of a large part of our national sovereignty.

The supporters of the world government are working to obtain the support of a sufficient number of State legislatures to call a constitutional convention to amend our Constitution to permit the United States to become a part of the world federation. Most Americans do not know about this movement nor are they aware of the extent to which it has already succeeded in accomplishing its objective.

Only 36 State legislatures are needed to approve of this plan and compel the Congress to call a constitutional convention. Already 17 State legislatures have adopted formal resolutions favoring "limited world government."

It is time the American people realize how far this move toward world federation has progressed in the United States. A recent editorial by Mr. E. F. Tompkins appeared in the Los Angeles Examiner and sounded the alarm. It deserves our serious attention:

SHOULD WE ABANDON OUR FREEDOM?

(By E. F. Tompkins)

Hardly observed by the vast silent majority of the American people, a spreading and seductive movement is progressing across the country to repeal the Declaration of Independence and to nullify the Constitution of the United States.

The undeclared objective is to be accomplished by establishing a form of world government based upon the existing organization of the United Nations.

At the very least, if the enterprise succeeds, this country would be required to abrogate a large part of its national sovereignty.

Eventually, we would probably be compelled to merge our citizenship with alien and distant races, who do not share our language, our customs, our principles of law, our traditions of individual liberty, or our ancestral experience in the arts and qualifications of democracy.

Obscure in its origin, the movement was initiated some years ago by Mr. Robert Lee Humber, a lawyer of Greenville, N. C., who formulated a proposal, for submission to State legislatures, to declare that all the people of the earth should now be united in a world federation.

Since the formation of the United Nations, the movement has been carried further by new organizations, supported by notable names.

One of the most active groups is the United World Federalists, Inc., headed by Mr. Cord Meyer, Jr., which has a global prospectus and which claims the backing of Gov. Chester Bowles, New Deal Democrat, of Connecticut; Gov. Alfred E. Driscoll, Republican, of New Jersey; United States Senator Robert R. Hendrickson, of New Jersey; Gov. Luther Youngdahl, of Minnesota, and Associate Justice William O. Douglas, of the United States Supreme Court.

Another group is Federal Union, Inc., represented by Mr. Clarence Streit, a former Rhodes scholar, which as a beginning would recombine the United States into the obsolete British Empire.

Still another group, led by former Supreme Court Justice Owen J. Roberts, would start with an Atlantic union and progressively include all of Europe, the Americas, Asia, Africa, and Australasia.

Former Secretary of War Robert P. Patterson and former Under Secretary of State Will L. Clayton like the Roberts approach.

Then there is the American Association of the United Nations, of which former Under Secretary of State Sumner Welles is an honorary president.

Since the movement was instituted by Mr. Humber—way back yonder and way down in Dixie—the legislatures of 17 States have been deluded into adopting formal resolutions favoring limited world government—which is the basic idea.

Efforts are now being made to join Alabama, California, and Maine to the list.

Developing this aspect further, the United World Federalists, Inc., has devised a new model resolution for the legislatures directly seeking a change in our Federal Constitution and calling upon Congress to summon a national constitutional convention for the purpose.

Furthermore, the United World Federalists has established local propaganda chapters in 600 communities and colleges; has won the support of the pretentious American Academy of Political and Social Science; and has under way a $500,000 expansion campaign to transform the United Nations into a limited world government.

The danger that this backward step in freedom and civilization may be brought about by well-meaning faddists is growing imminent.

The legislatures of 36 States can compel Congress to call a constitutional convention for a specified purpose; and nearly half of the requisite number of States have already sanctioned, in effect, this procedure which would ultimately result in their own political extinction.

The old and defunct League of Nations was an attempt at limited world government which started in the travails of one global war and expired in the bloodshed and anarchy of another.

The existing United Nations, with its 200 or more commissions and councils, is developing into a scheme of world socialism, sustained chiefly by American taxpayers and providing notably a sheltered haven for foreign espionage and intrigue in this country.

Experience thus proves that a limited system of world government must either dissolve itself in disappointing futility or else become unlimited government over all the diverse peoples of the earth.

Under such a system—

The American people would no longer be permitted to write their own tariffs or immigration laws, or to regulate their own banking and currency practices, for the free movement of goods and persons across national boundaries is an essential idea of world

government; international monetary controls have already been set up in the United Nations; and Congress has already scuttled our protective-tariff system and repealed the statutes prohibiting Asiatic immigration.

Under such a system—

Our natural resources and the fruits of our productive free enterprise could be exhaustively looted for the benefit of covetously less able and less industrious populations elsewhere.

Under such a system—

American labor would have to compete at home and abroad with alien pauper labor, and the American standard of living would vanish.

Under such a system—

We would have to share our privileges of citizenship with the aborigines of Africa and the hordes of the Orient, and in the end be overwhelmed by their migrations.

Under such a system—

We could maintain no national defense without the express assent of foreign powers.

Under such a system—

Our flag would cease to command respect, our institutions would become degraded, and an American would never again inherit the pride of our ancestors in being an American.

The United Nations and Spain

EXTENSION OF REMARKS

OF

HON. RALPH E. FLANDERS

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, May 12 (legislative day of Monday, April 11), 1949

Mr. FLANDERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The UN and Spain" from the New York Times of May 12, 1949, which deals with the subject of the recognition of Spain by the United Nations and by the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE UN AND SPAIN

Late in 1946 the General Assembly of the United Nations adopted a resolution denouncing the Franco regime in Spain and calling upon all member states to withdraw the chiefs of their diplomatic missions from Madrid. Some member states promptly did so. Others have not done so, to this day. Now the Political Committee of the General Assembly has adopted a new resolution amending the 1946 declaration to the extent of leaving member states full freedom of action as regards their diplomatic relations with Spain. The vote on this resolution was 25 to 16. Most of the Latin-American nations supported it. The United States, Britain, France, and five other nations which are signatories to the new North Atlantic Pact abstained.

Our own Government's abstention on this vote presumably reflects a judgment that no great issue is involved in the question of restoring full diplomatic relations. To a large degree this is true. American opinion disapproves strongly of the totalitarian Franco regime. But American opinion also disapproves strongly of the totalitarian Stalin regime in Russia and of the totalitarian puppet regimes in all the satellite states. Yet we continue to maintain diplomatic relations with all these totalitarian governments and have, in fact, just appointed a new Ambassador to Moscow. If to Moscow, it may be asked, why not to Madrid? Certainly Franco isn't half as thorough or as efficient as Stalin in his destruction of the basic values of democracy, and, at the head of a weak and exhausted nation behind the Pyrenees, he is incomparably less of a menace to world peace than Stalin, with his mighty armies and demonstrated policy of territorial expansion and political penetration.

Whether we are represented in Madrid by an Ambassador or by some State Department official of lesser rank is not a question of great moment. We are confident, however, that our Government knows where to draw the line, and that it is no more prepared to strengthen a totalitarian of right than it is to strengthen the more numerous totalitarians of the left. Specifically, in the case of Spain, this means no American loans to Franco and no attempt to bring Spain within the democratic framework of the North Atlantic Pact.

Address by Hon. Olin D. Johnston, of South Carolina, Before Association of Retired Civil Employees

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, May 12 (legislative day of Monday, April 11), 1949

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the RECORD an address which I delivered before the Association of Retired Civil Employees at Washington, D. C., on May 7, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

President Johnson, ladies and gentlemen, it is an honor to be asked to address an association composed of people for whom I have such a deep and profound interest. I have always worked hard for beneficial legislation for our retired people. It is because of my deep interest in this matter that I assigned myself to serve as chairman of the Subcommittee on Retirement in addition to my duties as chairman of the full Committee on Post Office and Civil Service. Under my guidance this subcommittee to date has been the busiest of all. We have reported to the Senate six very important retirement bills and in addition to this, have held hearings on two others.

Approximately 32 bills have been referred to this retirement subcommittee and of this total, I, myself, am the author of nine.

Of primary importance to this group is Senate bill 878, which I introduced on February 10, 1949, and was instrumental in guiding it through the full Senate committee to a favorable report on April 28, this year. This bill corrects a great injustice of Public Law 426, in that last year those people on the retired rolls prior to April 1, 1948, had to make an election in a very short period of time either choosing an increase in annuity, or a survivorship annuity for his or her spouse. This bill authorizes both the increase and the survivorship annuity, and I might add here in connection with Senate bill 1440, which is also a part of Senate bill 1189, that we are morally bound and in all probability will report favorably to the Senate on S. 1189.

I know that most of you will be interested in some comment on S. 1189. My subcommittee held hearings on this bill on Monday, May 2, and I might say at this point that your general counsel, Mr. Lewis H. Fisher, presented quite an attractive argument in its behalf, and as a result of his and other very important testimony, I believe that I will be able to get favorable action from my committee on this bill.

Ladies and gentlemen, I would like to say that I think this is a great stride in the right direction because frankly when I introduced this bill I believed that we might have some trouble in getting its approval. As you all know, the bill to which I refer would provide for retirement on full annuity at age 55 after 30 years' service, and would, in addition to that, wipe out the present 10-percent reduction in a retired person's annuity which is to provide for a survivorship benefit for his or her spouse.

Other bills already favorably reported by my committee and now on the Senate Calendar for consideration are: S. 988, which would extend retirement benefits to employees who were involuntarily separated during the period from July 1, 1945, to July 1, 1947, after having rendered 25 years of service, but prior to attainment of age 55.

Senate bill 1023, to amend section 9 of the Civil Service Retirement Act so as to grant credit for service for which, through inadvertence, no deductions from salary were made.

Senate bill 1229, to enable certain employees of the Government separated from the service subsequent to January 23, 1942, to elect to forfeit their rights to civil-service retirement annuities and to obtain in lieu thereof returns of their contributions with interest.

Senate bill 1359, to repeal the provisions in the Alaska Railroad Retirement Act and certain sections of the Canal Zone Code and to extend the benefits of the Civil Service Retirement Act to employees to whom such provisions are applicable.

And Senate bill 1459, which would authorize the Civil Service Commission to waive the 6-month limitation prescribed by section 6 for filing claims in the case of an employee whose disabling condition is of such nature that it reasonably could be assumed to have existed at the date of separation, the time for filing of such cases being extended to 1 year. It further provides as to persons heretofore separated from the service that application may be filed within 6 months after the effective date of this bill.

Ladies and gentlemen, as I stated previously, I have always worked hard for more liberal retirement legislation, and I will continue to do so wherever possible. In this connection, there are two things which have given me very much concern. The first point is, the low average annuity of people on our retired rolls at the present time. I realize that it is very hard to exist on such a low income, and I and my committee are at the present time exploring every possibility for increasing this average.

Secondly, the exemption from income tax on all retirement pay up to $1,440 a year. I am hopeful that our inquiries and study will bring forth some beneficial legislation on these two points during the Eighty-first Congress.

I want you to know that I will continue to exert every effort to obtain favorable consideration on retirement bills now on my calendar, but only on those bills which I consider fair and just and meritorious.

We cannot afford to endanger the financial structure of our retirement system by

catering to the wishes of every Tom, Dick, and Harry.

I appreciate very much the honor you have bestowed on me in asking me to come before you and deliver this address and I want you to feel free to call on me at any time when you think I might be of help in strengthening our civil-service retirement system.

Hon. Harry Flood Byrd, of Virginia

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 12 (legislative day of Monday, April 11), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have inserted in the RECORD an article which appeared in the Washington Daily News on Tuesday, May 10, 1949, entitled "More Byrds Needed."

I also ask unanimous consent to have inserted in the RECORD an article which appeared in the Wilmington Journal-Every Evening on May 8, 1949, in which they, too, complimented Senator BYRD on his outstanding speech of last Friday on the fiscal affairs of our Government.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News]

MORE BYRDS NEEDED

Officers of the American Veterans' Committee, who called on President Truman yesterday, said he told them there were too many men in Congress like Senator HARRY F. BYRD, of Virginia.

Mr. Truman, according to the AVC officers, admonished them to go back home and see to the election of Members of Congress who think in terms of national rather than local interests, of large plans instead of small plans.

Senator BYRD, in a speech the other day, said that the national interest urgently required a large plan for Government economy.

He predicted that, in the present fiscal year, ending next June 30, the Government would spend $800,000,000 more than it takes in.

He estimated that present Government activities, plus new activities proposed by Mr. Truman, would increase Government spending from $40,300,000,000 this fiscal year to $44,300,000,000 next fiscal year and $47,400,000,000 in the fiscal year after that.

He said that boosting Government revenue enough to cover such spending would require a large tax increase—but that a large tax increase, imposed at a time when business is already receding, might turn a minor decline into a major depression.

He asserted that the higher individual and corporate income taxes for which Mr. Truman has asked, plus Federal excise taxes, plus higher pay-roll taxes for expanded and new social-security programs advocated by Mr. Truman, would mean a take for the Government of $49,300,000,000 next fiscal year.

It would mean, he argued, the Federal, State, and local governments taking nearly 30 percent of the total national income—even if the national income stays as high as it is—and imposing a heavier burden than the economic machine can carry safely.

Deficit spending, Senator BYRD said, would be even more surely ruinous. For, he said, if the Federal budget cannot be balanced in this period of prosperity and peace, there is grave doubt that it ever can be balanced again and that the Government's credit and our system of government can be saved from destruction.

The only safe way to balance the budget, he contended, is to retrench—to eliminate or postpone all new activities not absolutely essential, to reduce the Federal pay roll, to trim appropriations, to cut $4,000,000,000 from proposed spending for next fiscal year.

Mr. Truman, it seems, did not admire Senator BYRD's speech. He probably was more favorably impressed by the remarks of Senator J. C. O'MAHONEY, of Wyoming, who has just warned of dire peril if the Government starts trimming its spending too deeply or firing too many employees.

So it's likely that a chorus soon will be shouting that O'MAHONEY, the liberal and progressive, is the true prophet, and that nobody should listen to BYRD, the conservative and reactionary.

But what Congress really needs just now is more men like BYRD, of Virginia—more men who react against danger of national insolvency and dare to advocate conserving the Government's credit.

[From the Wilmington (Del.) Journal-Every Evening of May 9, 1949]

SENATOR BYRD PEERS AHEAD

The Presidential budget message that goes to Congress each January attempts to forecast the future. For example, the last one dealt with the Government's prospective income and outgo for the 1950 fiscal year, which does not begin until July 1 and will not end until June 30, 1950.

This is not said in criticism. Nor is it a criticism of the system that the Presidential estimates often prove to be bad guesses. The experts can do no more than their best and they cannot predict what Congress will do or prophesy the course of the economic cycle. Even if they miss the mark by a wide margin, they do provide Congress with a rough guide for action in taxing and spending. And it helps.

Actually, it could be charged against the system that it does not require the experts to look even further into the future. They might be guilty of even greater errors if they did but they would at least give Congress a picture it does not have now. Such a picture, however inaccurate, might serve as a warning.

All this is preliminary to the observation that Senator BYRD, in the comprehensive address on the Government's fiscal outlook he delivered last week, made a very pertinent point. He noted that if the administration's spending plans are approved the Federal debt will be higher by around $11,000,000,000 on June 30, 1951, unless taxes are increased. On that ground he declared that the Nation now faces a fiscal crisis.

That is, he looked ahead 1 year further and discovered an alarming prospect. It is alarming because such an increase in the debt, already standing at $250,000,000,000, would be likely to destroy confidence in the Government's financial soundness and bring disastrous economic consequences. To avoid it, however, higher taxes must be voted—or spending must be cut.

New taxes now might turn the deflation into a depression. Congress sees that. But it must also recognize the danger implicit in deficit financing. It should look beyond 1950 and act accordingly.

Secretary Brannan's Farm Plan

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, May 12 (legislative day of Monday, April 11), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials from the Nebraska Farmer for May 7, the first entitled "Bugs in Brannan's Farm Plan" and the second an editorial regarding the plan signed by the editor, Sam R. McKelvie.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

BUGS IN BRANNAN'S FARM PLAN

Secretary of Agriculture Brannan has given Congress the outline of a new plan to stabilize agricultural income. From the general description of its provisions and lacking the details essential to its practical application, the plan appears to combine the present price-support mechanism for basic nonperishables, such as wheat, corn, cotton, and tobacco, with production payments when needed for perishables such as livestock, dairy products, and eggs, prices for which would seek their own level. Marketing quotas, acreage allotments, and compliance with soil-conservation programs would be permissible or mandatory to head off excessive surpluses.

At first the Secretary proposed a restriction on quantity of a product eligible to price supports or production payments to 1,800 units, of around $25,000 value, as a special favor to family-size farms. Later he withdrew this provision where the producers had complied with all the regulations imposed.

Where price supports are employed, an attempt would be made presumably to hold prices near the price-support level. For perishables, the market would be allowed to seek its normal level with payments equal to the difference between the average normal level and the predetermined price or income standard announced for the commodity.

The price supports or income standards contemplated by the Secretary are somewhat higher than those set up under the Aiken law to become effective in 1950, and somewhat below the 90 percent of parity supports now in effect for certain crops and products of 1949 production. For livestock, dairy, and poultry products, income standards would be above present parity. In terms of desirable income standards the Secretary uses a figure of $26,234,000,000 as the minimum gross cash income desirable for 1950.

The plan is obviously designed to win support from both farmers and consumers. It is, therefore, an astute political instrument.

Farmers would become wards of the Government, submitting to all-out direction and dictation in running their individual farms and depending on a political Congress to appropriate the money for part of their pay. Consumers are promised, but may not get, cheaper food at a time when their income is just as adequate to pay for food that is no higher respectively than other commodities.

The plan would involve a great increase in Government records, red tape, regulations, Washington dictation, and a bigger and costlier political administrative bureaucracy. While Brannan denies that any more governmental power is contained in his proposal than in the Aiken law, which does not become operative until 1950, it is quite clear,

in this writer's opinion, that the record keeping and supervision for production payments, acreage allotments, and marketing quotas, would be much greater.

No specific estimate is made of the cost of the Brannan proposal, but the Secretary believes that it would be no more costly than the Aiken law. He attempts to justify the cost, whatever it may be, by comparing it to tariff benefits, postal subsidies, land grants to railroads, minimum wage standards, and collective bargaining rights for organized labor. If production payments are needed for the many perishable products involved, comprising about three-fourths of our total food production, the cost could easily total several billions of dollars.

With supports or guaranteed income standards higher than those contemplated in the Aiken law, and in the case of livestock and dairy products even higher than the present parity levels, the incentive to produce would lead eventually to overproduction and then the pernicious production controls that are permissive in the plan.

BY THE WAY—A WORD WITH THE PUBLISHER

A new farm program has been presented to the agricultural committees of Congress by Secretary of Agriculture Brannan. It is rather more complex than anything heretofore proposed. The more essential and salient features of it will be outlined in these columns from time to time, and our readers will be kept well and fully informed.

I agree with its purpose and several of its provisions, but I do not concur in the approach to solving the problem of parity income for agriculture, or the controls for enforcing it. The primary design is to give the consumer a "real break" on food prices. In order to do that the laws of supply and demand are to operate untrammeled (ostensibly), and the producer would be reimbursed on the basis of a "fair, stable income."

The well established and generally accepted thesis of parity prices for agricultural commodities would be tossed out of the window, and replaced with a scheme of subsidies based upon average national agricultural income over a 10-year period, for instance 1939–48. Just how that would be done among 6,000,000 farmers is something else again.

To me it seems the approach is in reverse—hind end to. The consumer comes first. That's a honey politically, for there are several times as many of him as there are producers; but it takes no account of consumer ability to buy, which at present is the highest in history for organized labor and most other classes except "white collar" folks. Presumably as food costs go down wages and other costs would follow, but who is naive enough to believe that will happen. It has not happened with organized groups in the last 25 years, and it will not happen now. True, a good many may be unemployed, but when that occurs the Government will be called upon to take care of them just as has been the case since the early thirties.

Controlled production for agriculture never has been popular with farmers, and never will be. They have accepted it at times, and will again if it seems the more logical course; but it is bound to be partial as among the widely varying localities and products due to weather and other factors beyond human control. Moreover, the farmer is not going to submit meekly to controlled production when everybody elese is free to do as he chooses whether school keeps or not.

As for the costs of carrying out such a scheme, Secretary Brannan refuses to venture a guess. Even that does not worry me too much, except that it leaves the gate wide open for multiplied Government employees, and Government will determine what constitutes fair income for the farmer. For instance, to take the average national farm income over the last 10 years would not be at all fair unless costs of production come down proportionately; and that does not seem probable. History records that in periods of depression or price declines agriculture has suffered first and most seriously. That was because farmers were not as well organized as other groups, and it is more so now than ever before.

As formerly stated in this column, I believe that the only sound approach to this problem is to place agriculture first, for the very simple reason that it is the most basic of all industries in the national economy. To place the consumer first by insuring him the benefits of cheaper food, not only is unsound but smells to high heaven of politics.

SAM R. MCKELVIE.

Veterans' Care

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 12 (legislative day of Monday, April 11), 1949

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Veterans' Care," published in a recent issue of the Charleston, (W. Va.) Gazette.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VETERANS' CARE

The question of veterans' hospitalization has been thoroughly aired and with each airing grows more obscure. To the best of our belief, there will have to be some sort of congressional or Executive intervention to get it straightened out.

Administrator Carl R. Gray, Jr., and Dr. Paul Budd Magnuson, medical director, are unable to agree on what should be done for the veterans. Mr. Truman, according to Administrator Gray, recommended a reduction of 16,000 beds in the hospital building program. Dr. Magnuson appearing before the House Appropriations Committee, recommended closing of 21 existing hospitals. In the meantime, the record shows that there are 96 veterans awaiting hospitalization at the Baker Veterans Administration Center at Martinsburg, W. Va., where they hospitalize general surgical, medical, tubercular, and psychiatric patients for West Virginia. There are 64 on the waiting list at Roanoke, Va., where they hospitalize psychiatric patients from West Virginia; there are 404 on the waiting list at Huntington, W. Va., where they hospitalize general surgical, medical, tubercular and temporary psychiatric patients; there are 34 West Virginians on the waiting list at Chillicothe, Ohio, where they hospitalize psychiatric patients from West Virginia. There are a number of other hospitals that occasionally take West Virginia patients but these are the major points of hospitalization for veterans from this State. This gives a total of 598 known to be awaiting admission to the hospitals.

These are West Virginia boys, who in time of emergency, were asked to risk their lives for our Nation. That was at the time of an emergency. Today the emergency is passed and they can wait while public officials, members of the Administration, and Members of Congress, quarrel over what to do about the hospital program. Couldn't some arrangement be made to take care of the sick and wounded veterans, either through assignment of beds from other Government owned hospitals or through emergency hospitalization in privately owned hospitals, so these men won't have to wait and suffer while the question of how they should be taken care of is thrashed out at top Government level? Isn't it time for action on this subject and not so much discussion?

Hans Freistadt and the Atomic Energy Commission

EXTENSION OF REMARKS

OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. COLE of New York. Mr. Speaker, I want to inform the Members of the House of what I believe is a very strange and incredible occurrence. It is the award of a postgraduate scholarship by the Atomic Energy Commission to a student identified as a professed Communist and a distributor of Communist propaganda.

This student is named Hans Freistadt, a native of Austria, a graduate of the University of Chicago and now studying advanced physics at the University of North Carolina.

This student has been identified as an organizer of the Marxist study group at North Carolina. He is said to be the means of distributing Communist propaganda at the university and was a recent host to one of the Communist leaders now on trial in New York City.

Now this student applied to the Atomic Energy Commission for a scholarship to aid him in studying subjects which would make him an atomic energy expert. The Commission says that a fellowship of $1,600 has been granted to this subversive student. The Commission may grant 600 of these scholarships.

A startling disclosure is that the Commission says it does not go into the loyalty background of any individual applying for these scholarships until the time comes when such an individual may arrive at a position where he will have access to confidential and secret information vital to national security.

This, in the face of the fact that the Atomic Energy Commission has an FBI report on this Freistadt.

I believe that the Members of Congress are entitled to know that Government funds are being used to further the education of an atomic student who is a professed Communist and as a party member is pledged to do all he possibly can to destroy our Government.

Mr. Speaker, these facts were first brought to public light by Fulton Lewis, Jr., the radio commentator and under leave to extend my remarks I include his broadcast in the RECORD.

Now, quite by coincidence, ladies and gentlemen, I have here tonight some further information on what I reported to you last night about the Atomic Energy Committee of Congress facing some fireworks, in regard to the program of student scholar-

ships, which Mr. David Lilienthal's Atomic Energy Commission is doling out, under the theory that there are not enough scientists available, in this dawning era of the atomic bomb and atomic energy, and, therefore, the Government must begin training a larger crop of young scientists to supply its own manpower needs in the atomic-development years ahead.

I believe I explained to you that the Commission is permitted to grant scholarships of $1,500 and $1,600 a year and up to students who already have graduated from college, so they will be able to take postgraduate work and become familiar with the atomic-energy problem and be prepared to man the Government's whole program, and I also told you that some members of that congressional committee are suspicious that some of those appointees are not all that they might be—in fact, that some of them have very suspicious leanings toward Russia and communism.

That seems like a rather wild idea, doesn't it?—the thought that in the Atomic Energy Commission, in which are our most important and vital secrets for our future protection, there could be even the slightest possibility that Government assistance would be given to the training and education of young scientists, to be drawn upon in the future to run that atomic-energy program, without taking every possible precaution to guarantee that the students we help are loyal Americans, faithful to the United States of America, and are absolutely beyond the slightest suspicion.

It is grotesque enough—the thought that any Government agency would run the slightest risk of sponsoring any individual who even entertains the thought of overthrowing by force and violence the very Government from which he is receiving assistance. But in the Atomic Energy Commission, as vital as that picture is, it is almost incredible.

But other incredible things have happened under Mr. David E. Lilienthal, and so when, quite by coincidence, I received a tip this morning to look into a certain specific individual at the University of North Carolina, who is reported to have been granted a scholarship of $1,600 a year, instead of tossing it aside as being flimsy rumor, I undertook to begin tracing it down. Listen carefully to the facts as they developed and then see what you think.

The individual in question is named Hans Freistadt, who graduated from the University of Chicago last year, and who now is a graduate student in the University of North Caroline School of Physics, working toward a doctor of philosophy in physics. My reports stated that Freistadt is a professed Communist, born in Stubbering, Austria; is a frequent source of Communist propaganda on the campus of the University of North Carolina; is an organizer of the local Marxist study group there, and was host to John Gates, one of the 12 Communist leaders now on trial in Federal court and editor of the official Communist publication the Daily Worker, when Gates attempted to speak on the university campus several months ago. (Remember, this is the university where Dr. Frank P. Graham, he of so many Communist-front affiliations, was president, and in which position Mr. David Lilienthal arranged to have him given complete atomic-energy information clearance, over the heads of all security review sources in the Commission.)

A check with the Atomic Energy Commission revealed that Hans Freistadt, formerly of the University of Chicago, now of the University of North Carolina, did apply recently for a fellowship from the Atomic Energy Commission (the Commission is entitled to grant up to 600 of these fellowships each year) but the Commission reported that it did not know whether the application had been granted or not, and if granted, whether Freistadt had accepted it or not. Through other means of checking I found that while this student was at the University of Chicago he was president of the Communist club there—his name was carried as president of the Communist club in a news report in the triweekly campus newspaper, the Maroon, in an article which told of a rally by the Communist club, in protest against a proposed legislative investigation of un-American activities in the university. An issue of the same publication dated February 20 carried a letter to the editor, signed by Hans Freistadt, as president of the Communist club of the University of Chicago, and another letter, bearing the same signature, appeared in the issue of February 27.

Also a magazine of avowed pro-Communist, pro-Marxist policies, called the New Foundations, in its issues prior to last fall, carried the name Hans Freistadt as associate editor at the University of Chicago, and since that time has listed him as collegiate editor at Chapel Hill. Professors at the University of North Carolina told me today that they have no proof that he carries a Communist Party card, but that he is outspoken in his advocacy of communism, and is the leader of Communist activities on the campus.

Later this afternoon the Atomic Energy Commission informed me that further checks of their records show that his application for a fellowship has been approved, to the extent of $1,600, and that he has formally accepted the fellowship. When asked whether they are aware of his record, they said that they did not go into the loyalty background of any individual until the time comes for the individual to be placed in a position in which he will have access to confidential and sacret information.

The fact is, and they did not deny this, they have had the FBI report on Hans Freistadt in their hands for some time, plus additional information such as I have given you here. And yet the fellowship was approved.

Is it a fair question to ask whether that is just a matter of stupidity, or whether this passes stupidity and looks like part of a plan? What do you think?

Reform of Private-Bill Procedure

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. CELLER. Mr. Speaker, I present a most revealing statement on private bills. The reform suggested by Mr. George B. Galloway, a distinguished member of the Legislative Reference Service of the Library of Congress, is long overdue.

REFORM OF PRIVATE BILL PROCEDURE

This memorandum measures the burden imposed upon Congress by various types of private bills, describes the legislative machinery and procedure now used for handling private legislation, summarizes the criticisms that have been made of present private bill procedure, and outlines the reforms that have been proposed for dealing with private matters.

THE PRIVATE BILL WORK LOAD

Much of the legislation considered by Congress is private or local in character. Private bills are those which relate to particular persons. Local bills are those which relate to particular places, such as the District of Columbia. In the calendars of Congress local bills are classified as public bills, in contrast to the practice in the British Parliament where private bills deal with the powers and problems of local government. (Compare O. C. Williams, the Historical Development of Private Bill Procedure and Standing Orders in the House of Commons, vol. 1 (1948).)

The principal categories of private legislation introduced in Congress today are threefold:

1. Private claims bills granting relief for property damage or personal injury.

2. Private immigration and naturalization bills relating to the residence, citizenship, and deportation of aliens.

3. Private land bills providing for the issuance of patents in fee, etc.

Prior to the Eightieth Congress considerable numbers of private bills for individual pensions, for building bridges over navigable streams, and for the correction of military or naval records were also introduced and considered in Congress. But their introduction is now banned by the Legislative Reorganization Act of 1946.

For many years the volume of private business in Congress has accounted for from one-third to one-half its total business. The high-water mark was reached in the Fifty-ninth Congress (1905–07) which enacted 6,248 private laws, or 90 percent of the total legislative output of that Congress. From the Seventy-sixth to the Seventy-ninth Congress the proportion of private to total laws enacted rose from 39 percent to 55 percent. But this proportion dropped to 34 percent during the Eightieth Congress as a result of the partial ban upon the introduction of private bills which became effective in 1947. Table I shows the comparative volume of public and private laws passed by Congress since 1936.

TABLE 1.—*Comparative volume of public and private laws 75th to 80th Congs., inclusive*

	75th Cong.	76th Cong.	77th Cong.	78th Cong.	79th Cong.	80th Cong.
Public laws	919	1,005	850	568	733	906
Private laws	840	657	635	589	892	457
Total laws	1,759	1,662	1,485	1,157	1,625	1,363
Percent private	48	39	43	51	55	34

The ban upon the introduction of four categories of private bills, which Congress imposed by section 131 of the Legislative Reorganization Act of 1946, effected some reduction in the private-bill work load. The number of private bills introduced in both Houses dropped from 3,772 in the Seventy-ninth Congress to 2,532 in the Eightieth Congress. In proportion to all bills introduced in those Congresses, the percentage of private bills introduced fell from 32 percent in 1945–46 to 21 percent in 1947–48. Yet one-fifth of all the bills introduced in the Eightieth Congress were still of the private type. These relationships are reflected in tables 2 and 3.

TABLE 2.—*Public and private bills introduced in the 79th Cong.*

	House	Senate	Total
Public bills	5,712	2,172	7,884
Private bills	2,849	923	3,772
Total bills	8,561	3,095	11,656
Percent private	33	30	32

TABLE 3.—*Public and private bills introduced in the 80th Cong.*

	House	Senate	Total
Public bills	6,420	3,151	9,571
Private bills	2,152	380	2,532
Total bills	8,561	3,531	12,092
Percent private	25	11	21

The reduction in the number of private bills introduced in recent years has naturally been accompanied by a decline in the number of such bills approved. The volume of private legislation in the Senate that survived all legislative hurdles and received the President's signature dropped from 199 bills in the Seventy-ninth Congress to 146 in the Eightieth. Private bills in the House that finally won approval registered an even greater decline, from 693 in the Seventy-ninth Congress to 311 in the Eightieth. These changes are shown in table 4.

TABLE 4.—*Private legislation in the 79th and 80th Congs.*

	Introduced		Approved	
	79th	80th	79th	80th
Senate	923	380	199	146
House	2,849	2,152	693	311
Total	3,772	2,532	892	457

Analysis of private legislation introduced in the Eightieth Congress by type of bill shows that private claims bills accounted for approximately one-half of the total; that private immigration measures amounted to about one-third of the total number; and that private land bills were a little less than 10 percent of the total. Table 5 shows the break-down by type of bill of private legislation introduced and approved during the Eightieth Congress.

TABLE 5.—*Private legislation in the 80th Cong.*

	Introduced			Approved		
	House	Senate	Total	House	Senate	Total
Private claims	1,269	77	1,346	164	108	272
Immigration	754	79	833	116	4	120
Land bills	65	174	239	17	21	38
Military and naval	41	29	70	0	4	4
Private pensions	11	5	16	0	0	0
All others	12	16	28	14	9	23
Total	2,152	380	2,532	311	146	457

The preponderant burden of this private legislation is borne in both Houses by the Judiciary Committees which have jurisdiction over measures relating to claims against the United States and over immigration and naturalization matters. Of the 2,946 bills referred to the House Committee on the Judiciary during the Eightieth Congress, 2,179 or 74 percent of the total were private bills relating to claims or to immigration and naturalization. A total of 1,346 private claims bills were referred to the committee. Of these 272 (20 percent) became private laws, 6 became public laws, 450 were reported to the House, 130 died in the Senate, 20 were vetoed, 13 were pocket vetoed, and 9 were recommitted. As to private immigration bills, 833 were referred to the committee. Of these, 121 (15 percent) became private laws, 3 were vetoed, and 1 was pocket vetoed. In accomplishing its task, the full committee held 71 executive meetings, and the subcommittees held innumerable executive sessions and conducted 342 hearings; 265 reports were received from the executive departments and considered.

During the first 3 months of the Eighty-first Congress (up to March 10), 1,329 bills and resolutions were referred to the House Judiciary Committee. Of this number, 856 (64 percent) were private bills, 555 were claims bills, 292 were immigration and naturalization bills, and 9 were patent bills.

As of March 15, 1949, 624 bills and resolutions had been referred to the Senate Committee on the Judiciary. Of these, 232 were private claims bills, 204 were private immigration measures, and 5 were private patents. In other words, private bills constituted 71 percent of the work load of the committee in terms of the number of bills referred to it.

In addition to handling these private bills, the Judiciary Committees also have the task of screening thousands of cases in which the Attorney General has recommended suspending the deportation of aliens. Senator MCCARRAN, chairman of Judiciary, told the Senate on April 11, 1949, that this task is "one of the trying problems which was assigned to the Committee on the Judiciary by the Reorganization Act." He estimated that the committee would be compelled to deal with 15,000 such deportation cases during 1949, and he expressed "grave concern" at the burden of this work. (CONGRESSIONAL RECORD, April 11, 1949, page 4255.)

MACHINERY FOR HANDLING PRIVATE BILLS

In the House of Representatives the private bill work load is largely handled by two standing subcommittees of the Committee on the Judiciary and by two standing subcommittees of the Committee on Public Lands.

Subcommittee No. 1 of the Judiciary Committee has special jurisdiction over immigration and naturalization bills. In the Eighty-first Congress this subcommittee has seven members, under the chairmanship of Mr. FRANCIS E. WALTER. Much of the burden of the subcommittee's work is carried by its able and experienced clerk, Mr. Walter M. Besterman, with the aid of an assistant clerk (authorized April 14, 1949), and a secretary. The subcommittee holds weekly meetings on Mondays, at which from 7 to 10 of these immigration and deportation cases are considered and acted upon.

Subcommittee No. 3 of the Judiciary Committee has special jurisdiction over claims bills. In the Eighty-first Congress this subcommittee has six members, under the chairmanship of Mr. WILLIAM T. BYRNE. All the staff work of the subcommittee is handled by its veteran clerk, Mr. Walter R. Lee, and one assistant. The subcommittee holds weekly meetings on Wednesdays at which it customarily considers 10 or 12 of these private claims bills and recommends action thereon. The recommendations of both subcommittees are considered and usually approved by the full Committee on the Judiciary at its weekly meeting on Thursdays.

The Subcommittees on Indian Affairs and on Public Lands of the House Committee on Public Lands handle its private bill work load with the interim aid of the six clerks of the full committee. Eighty or ninety percent of the land patent bills are handled by the Indian Affairs Subcommittee, which has 11 members under the chairmanship of Mr. WESLEY A. D'EWART. The Public Lands Subcommittee has 25 members chaired by Mr. WILLIAM A. BARRETT.

Part of the work load of screening private bills in the House is borne by six Members known as objectors, of whom three are appointed by the Speaker to represent the majority party and three of whom are appointed to represent the minority. After private bills have been reported from committee and are on the Private Calendar of the House, they are divided up among the six objectors and reviewed by them, together with the accompanying reports. The objectors never meet as a group, nor do they have any staff assistance.

In the House of Representatives, the first and third Tuesdays of each month are reserved for the call of bills on the Private Calendar. Individual bills are considered on the first Tuesday, and omnibus bills on the third Tuesday. Although the second Private Calendar Tuesday is frequently dispensed with, much of the time of the House and of the committees concerned is consumed in the course of a session in the consideration of bills of a private character. On the average it takes about 45 minutes to call the bills on the Private Calendar on each day they are in order. There is no such calendar in the Senate.

In the Senate the private-bill work load is largely borne by the full Committees on the Judiciary and on Interior and Insular Affairs, with the aid of their staffs. Private claims bill are handled by the full Judiciary Committee which, in the Eighty-first Congress, has no standing subcommittee on claims. The entire professional staff (six) of the committee works from time to time on these private claims bills, while two of the six specialize in this work. The standing Subcommittee on Immigration and Naturalization has two members and a staff of two persons. Under Senate Resolution 40, Eighty-first Congress, first session, the Judiciary Committee has recruited a special staff of 25 persons who are engaged in making an intensive field study of the administration of the immigration laws. Many of the members of this staff are currently engaged in screening the thousands of suspended-deportation cases referred to the committee by the Attorney General. Without this special staff the Judiciary Committee of the Senate would be unable to assume and carry the tremendous burden of reviewing all these deportation referrals. This particular burden is now being entirely borne by the Senate committee, since the House subcommittee with only two clerks is clearly not equipped to share in this task.

Review of suspended deportation cases by the Judiciary Committees results from a 1948 amendment of the Immigration Act of 1917. This amendment (Public Law 863, 80th Cong., 2d sess.) authorizes the Attorney General to suspend the deportation of aliens under certain circumstances. If the deportation of any alien is suspended under the provisions of this amendment for more than 6 months, the Attorney General is required to submit a complete and detailed statement of the facts in the case, with the reasons for such supension, to the Congress. These reports shall be submitted on the 1st and 15th day of each calendar month in which Congress is in session. The new law further provides that "if during the session of the Congress at which a case is reported, or prior to the close of the session of the Congress next following the session at which a case is reported, the Congress passes a concurrent resolution stating in substance that it favors the suspension of such deportation, the Attorney General shall cancel deportation proceedings. If prior to the close of the session of the Congress next following the session at which a case is reported, the Congress does not pass such a concurrent resolution. The Attorney General shall thereupon deport such alien in the manner provided by law."

The private land bills in the Senate are handled at the committee stage by the full Committee on Interior and Insular Affairs which has no standing subcommittees. One member of its staff, Mr. Grorud, assists the committee in this work.

Judging by the figures for the Eightieth Congress, it appears that the burden of private business is heavier upon the House of Representatives than it is upon the Senate. In that Congress, 85 percent of the private bills were introduced in the lower House and 15 percent in the Senate, while two-thirds of the private legislation approved were House bills and one-third were Senate measures.

PRESENT PRIVATE BILL PROCEDURE

The procedure for handling private claims and immigration bills in the House of Representatives may be briefly described.

A citizen having a claim against the Government asks his Congressman to introduce a bill for his relief. If the Congressman thinks the claim a reasonable one, he either

draws a bill himself or has it drawn by legislative council or by Mr. Walter Lee, legislative assistant to the Subcommittee on Claims. The bill is then introduced in the House and referred to the Judiciary Committee. No consideration is given to any claims bill by the subcommittee until the author or sponsor requests it and files proper evidence in its support, nor until the report of the Government department or office involved has been secured. Perhaps three-quarters of all private claims bills in the House are so referred for departmental reports which are customarily rendered within 60 to 90 days after request. Upon completion of the file on a case, it is referred to one of the six members of the Claims Subcommittee who reviews the case and recommends appropriate action. No bill is considered by the full subcommittee until it has been referred to and reported, either favorably, adversely, or without recommendation, by a special subcommittee. The full subcommittee holds weekly meetings on Wednesdays at each of which it customarily considers 10 or 12 of these private claims bills and recommends action thereon. Its recommendations are then submitted to the full Judiciary Committee at its weekly meeting on Thursday. The chairman of the subcommittee presents a brief synopsis of each case to the full committee which usually approves the recommendations of the subcommittee. Claims bills approved by the full committee are then referred to the private calendar of the House and screened by the official objectors. On private calendar Tuesday these bills are called up and if there is objection to any one of them, it is recommitted or passed over. Objections are sometimes resolved on the floor or in the cloakrooms in conversations between the sponsors and the objectors. The action of the House is generally, although not always, accepted by the Senate. Few private claims bills go to conference. In each session of Congress over 2,000 such bills are referred to the House Judiciary Committee. And in each session a great many are summarily rejected for want of jurisdiction.

The procedure in connection with private immigration bills in the House of Representatives is as follows: An alien seeking admission into the United States or to avoid deportation from the country, through relatives or friends in some congressional district, asks a Member of Congress to introduce a bill for his relief. If the Congressman considers the case a meritorious one, he introduces a bill to authorize the admission of, or for the relief of the alien. The bill is referred to the Judiciary Committee and by it to its subcommittee No. 1. The case is then referred to the Justice and State Departments for a report. Their reports are usually received by the committee within 3 weeks after referral. Meanwhile, the committee receives communications in support of the bill from its sponsor and from the client and his attorney. The subcommittee holds weekly meetings on Mondays at each of which from seven to ten of these immigration and deportation cases are considered. Present at the meeting, besides the subcommittee members, are representatives of the Justice and State Departments who appear in the role of prosecutors, and the client's Congressman and attorney who appear in his behalf. At these meetings the subcommittee sits as a jury and hears the arguments pro and con. Following the hearing the subcommittee goes into executive session and reaches a decision upon the pending cases. These decisions are then reported to the full Judiciary Committee at its next meeting and are usually approved by it. Upon approval by the full committee, the private immigration bills are then reported to the House and referred to the Private Calendar. The same official objectors who scrutinize the private claims bills also screen the private immigration bills. Most of these bills originate in the lower House. About 80 percent of them relate to deportation cases; the remainder to immigration and naturalization. None of these bills ever go to conference.

CRITICISMS OF PRESENT PROCEDURE

Through the years members and committees of Congress have criticized its "petty business." In its final report the Joint Committee on the Organization of Congress stated (S. Rept. No. 1011, 79th Cong., 2d sess., pp. 24–25):

"A high percentage of congressional time is devoted to matters of purely local or petty importance. * * * Private claims bills and inconsequential legislation dealing with local affairs and matters only slightly related to national policy take an excessive amount of congressional time from consideration of national affairs.

"Your committee believes that Congress should jealously guard its time for ample debate and consideration of matters of national and international importance. It seems hardly consistent to hear the excuse that congressional calendars are too crowded to take up and discuss issues of great national interest when so much time is devoted to these minor matters. Congress still tenaciously clings to many insignificant details which could be far better handled by the executive departments and the courts.

"Congress is poorly equipped to serve as a judicial tribunal for the settlement of private claims against the Government of the United States. This method of handling individual claims does not work well either for the Government or for the individual claimant, while the cost of legislating the settlement in many cases far exceeds the total amounts involved.

"Long delays in consideration of claims against the Government, time consumed by the Claims Committees of the House and Senate, and crowded private calendars combine to make this an inefficient method of procedure."

A lamentable amount of committee time and effort devoted to private legislation goes for naught, it is argued, because a large percentage of private bills reported are not acted upon in the House or Senate or fail to become law. In the Eightieth Congress the House acted upon all but one of the private bills reported, but almost one-third of them failed to become law. In recent years more than 2,500 private bills have been introduced in each Congress, of which less than 20 percent became law. Of all the presidential vetoes during the Seventy-fifth to Seventy-seventh Congresses, fully one-third were of bills granting relief for property damage or personal injury resulting from vehicle collisions.

Furthermore, the present practice (insofar as private claims bills are still handled in Congress under the Federal Tort Claims Act of 1946) causes disappointment to many citizens and aliens whose petitions are denied or not disposed of. Several hundred persons every session are denied the justice, equity, mercy, or generosity that committees hold to be deserved. Much private legislation that is justifiable and desirable is indefinitely and harmfully delayed by the pressure of more urgent legislation.

The present procedure is also a very costly one. It is estimated that the cost to the executive and legislative branches involved in considering the claims bills of each Congress, not including congressional salaries, amounts to $125,000; that the printing costs alone of the claims bills which fail of passage are almost $19,000 per Congress; and that it costs almost $200 to pass a single bill, more in some cases than the amount of relief granted. In short, the procedure for relief of tort claims by special act of Congress is slow, expensive, and unfair both to the Congress and to the claimant. The costs of handling the private immigration bills are presumably of equal magnitude.

It has long been the practice for the private-bill committees to refer such bills to the departments or bureaus concerned for advice upon their merits. Then, when the bill comes up on the floor of the House on Private Calendar Tuesday, objection is voiced to its passage if the committee report accompanying the bill shows that the department has advised against it. This means that in actual effect the judgment of the department or bureau largely prevails. Therefore, it is argued, why not let it be final, at least in petty matters?

Seventeen years ago Representative Robert Luce of Massachusetts, who served in the House for 20 years, deplored the "petty business of Congress." (Petty Business in Congress, American Political Science Review, October 1932.) "With the rising burden of its private work," he wrote, "Congress is becoming less and less able to cope with it. It is hard to see," he said, "how any reasonable man with any sense of proportion can find ground for insisting that Congress continue to burden itself with the little bills. To do so is penny-wise and pound-foolish. * * * If it be purely a question of justice, nothing can be worse than to leave it to a legislative body, particularly a large body like the House of Representatives. Parliamentary history abounds in instances of the miscarriage of justice at the hands of legislators. * * * To give to as few as three objectors what is in practical effect the power to kill the minor bills seems to many of us unfair and unnecessary." Luce concluded that private bills "do not seem to be matters that should invade the time of so large and costly a body as Congress." The rising burden of congressional business in the intervening years since 1932, and the increasingly vital importance of major legislation, appears to reinforce the validity of his conclusions.

In testifying before the Senate Expenditures Committee in February 1948, on the operation of the Legislative Reorganization Act, former Senator La Follette recommended that further steps should be taken toward the elimination of private bills relating to claims and immigration. "Various private bills still allowed," he said "are relatively unimportant individually, but in their large numbers can and do put an onerous burden on the present Judiciary Committees in both Houses. Unquestionably, further steps should be taken to relieve the Judiciary Committees of this burden." (Hearings before the Committee on Expenditures in the Executive Departments on evaluation of Legislative Reorganization Act, U. S. Senate, 80th Cong., 2d sess., p. 63.)

PROPOSED REFORMS

Members and students of Congress have proposed several solutions of the private-bill problem.

1. One suggestion is to create a joint-select committee to inquire into the whole subject of private-bill legislation; to consider the best means of relieving Congress from the duties now discharged by private bill committees; and to report how far, and in what manner, without prejudice to public interests, the present system may be modified with a view to the interests of claimants and clients and the economy of the time of Congress. Whether or not such an inquiry would yield any fresh information on the subject not already known is doubtful.

2. Another proposal is to establish exclusive private-bill committees in each House with jurisdiction over all such legislation. The effect of this proposal would simply shift the private-bill burden from the Judiciary Committee to a new committee without diminishing the work load. It would be a step backward toward the situation which existed before the passage of the Legislative Reorganization Act of 1946 when there were separate claims committees in both Chambers.

3. A third suggestion is to create a new joint standing committee on private legislation, with jurisdiction over private bills of every type, and with a joint staff to aid it. While this change would not reduce the private work load on Congress, it would make for simplicity, rapidity, and economy in its disposition by avoiding such duplication as now exists in the consideration of small bills by both Houses. There are now 28 stages in the enactment of a law. Joint action would eliminate a dozen of these expensive and time-consuming steps.

4. Perhaps the most promising proposal, if relief from work of this sort is the objective, is to continue the evolution begun in 1946 when Congress imposed a partial ban upon the introduction of four types of private bills (sec. 131, Public Law 601, 79th Cong., 2d sess.). This would involve (a) repealing section 421 of the Federal Tort Claims Act which excepts twelve classes of claims from its provisions; (b) delegating the adjustment of immigration and deportation cases to the Imigration and Naturalization Service; and (c) delegating the issuance of land patents to the Bureau of Land management or to the Bureau of Indian Affairs in the Department of the Interior. Senator WILEY, who was chairman of Judiciary in the Eightieth Congress, has suggested that the introduction of private bills could be banned in both Houses merely by amending their standing rules. (Ibid., p. 254.)

Extension of the current evolution to old claims and to immigration cases was recommended by Congressman MONRONEY in his testimony before the Senate Expenditures Committee last year. "Further elimination of private legislation could be effected," he said, "by a resolution setting up an appeals board within the Justice Department to hear and finally determine immigration cases. (Ibid., p. 83.) A Board of Immigration Appeals was established in the Office of the Attorney General on August 30, 1940. The Board has jurisdiction to review on appeal the orders entered by, or under the general direction of, the Commissioner of Immigration and Naturalization in cases of, or relating to, applications for admission, in deportation cases, and in cases of fines and penalties imposed on steamship companies or other carriers for violation of the immigration laws. It also has jurisdiction to consider and determine such cases which are not appealed but which the Commissioner certifies to it for final decision. Just as final judgments in the district courts on tort claim suits against the United States are subject to appeal, under the Federal Tort Claims Act, to the circuit courts of appeals or to the Court of Claims, so could the decisions of the Immigration and Naturalization Service, in the types of cases now referred to the congressional judiciary committees, be made subject to the Board of Immigration Appeals if such matters were delegated to the Service.

According to the Office of Legislative Counsel, there would be no constitutional objection to a ban upon the introduction of all private claims and immigration bills, nor to delegating the adjudication of such cases to external tribunals, provided Congress gives them a clear standard to go by. Congress could, if it desired, condition such delegation by subjecting administrative decisions in certain cases to legislative review and confirmation or annulment by simple or concurrent resolution, within a specified time.

The arguments against further delegation of the private business of Congress to administrative tribunals are: That, because of being too strongly impregnated with the general public-interest viewpoint, they may lose sight of individual rights; that the administrative authority may be at one and the same time a fact-finding, a prosecuting, and an adjudicating authority, and a party in the case; and that the combination of two or three functions of government in the same authority prevents adequate control over any function.

The argument for delegating the remaining private-bill work load to external tribunals or administrative agencies runs as follows: It would complete the current evolution begun by the Legislative Reorganization Act of 1946. It would insure uniformity of treatment in private matters and save congressional time and money. It would avoid the uncertainty and loss of time attending private legislation. It would relieve Members of much arduous and uncongenial work on the private-bill committees. It would reduce the costs and charges upon claimants and clients through the provision for local hearings in such cases. Congress is now unable to handle this private business efficiently because of the congestion of its calendars. The public business of Congress has become so great that there is grave danger of a legislative break-down unless Congress delegates its functions in respect of private legislation. The duty of Congress is to legislate, not to discharge judicial functions as well. Questions of general policy or expediency are not involved in private-bill legislation. Members are elected to Congress to attend to great questions concerning the Nation and the world, to supervise the administration, and to take part in making public laws, but not to spend their time on petty business.

GEORGE B. GALLOWAY.

MAY 2, 1949.

No Reason To Continue Boycotting Spain

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1949

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial which appeared in the Cleveland Press on May 9, 1949:

NO REASON TO CONTINUE BOYCOTTING SPAIN

The political committee of the United Nations General Assembly has voted 25 to 16 in favor of lifting the 1946 ban on the appointment of ambassadors and ministers to the Franco government in Spain. The question now goes to the General Assembly for final action, and the issue there is in doubt.

Representatives on the committee of the United States and 15 other nations did not vote either way. However, if we duck the issue again in the General Assembly, our refusal to vote will be counted against the proposal, which requires a two-thirds majority for approval.

Our Government initiated the original boycott resolution against Spain. That mistake should be acknowledged by joining in the movement for its repeal.

Franco's government isn't our kind of government, but that is not the test.

If we exchange diplomats only with those nations of which we approved in every particular, we would be doing business in a very restricted world.

Spain is under a dictatorship, yes. The Soviet Union, Poland, Yugoslavia, Bulgaria and Czechoslovakia—with all of which we have full diplomatic relations—also are under dictatorship.

Franco attained power by revolution—by force and violence. So did the other dictatorships. So have several Latin-American governments to which we have extended full recognition.

Franco's particular crime is that he gained control of Spain with the assistance of Hitler and Mussolini. But that was a case of dog eat dog. Stalin's international brigades were fighting on the other side. If they had won, we probably would have a Communist Spain today. Would that be good?

We voted to boycott Spain in 1946 largely as a sop to the Soviet Union. In doing so, we ignored the fact that Spain had not been guilty of attacks on any other nation, which was more than could be said of Russia. After Hitler and Mussolini helped Franco, he did nothing to help them. But who is there today to find fault with him for that? Hitler and Mussolini aren't around any more.

Our Government has had friendly relations with Spain since the War of 1898.

Franco has shown every evidence that he desires to live at peace with the rest of the world.

His country is one of the bastions against communism and occupies a strategic area vital to us and the other members of the North Atlantic group.

Our Government should vote to lift this foolish boycott.

Civil Rights Program

REMARKS

OF

HON. ANTHONY CAVALCANTE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. CAVALCANTE. Mr. Speaker, in view of all the commotion now going on with respect to the so-called civil rights program of both major political parties in this country, I believe it is apropos to place in the RECORD of this House a short report of our friend Drew Pearson on this subject, as the result of his observations in the State of Alabama while lately sojourning in that State. Here is what Mr. Pearson says:

MONTGOMERY, ALA.—A few years ago, if anyone predicted that white and Negro teachers would soon be paid the same salaries in the schools of Alabama, he would have been scoffed at.

A few years ago also, no one would have believed the prediction that Negro schools would become as up-to-date and modern as white schools. And if anyone had predicted that a Negro would sit among 12 good men and true on a jury which decided the fate of a white man where the death sentence was involved, he would have been considered revolutionary.

However, all of these things have happened—in Alabama.

Furthermore, there seems to be a healthy desire in this State, which has one of the heaviest Negro populations of the South, to work quietly and steadily toward improvement of race relations.

Two new Negro high schools have just been finished in Montgomery, and this writer, who recently visited them, can testify to the fact that they appear more up to date than the older schools for white children. Alabamans admit that the Negro schools were long overdue, and that it has only been recently that Negro education has begun to catch up. However, the important thing is that it has improved.

Montgomery also boasts a State Teachers College for Negroes which has a large number of modern, new, well-equipped build-

ings, plus an athletic field which some Alabamans ruefully claim is better than theirs. Montgomery's most beautiful monument to Negro education, however, is St. Jude's School, built by the nickels and pennies scraped together by a Catholic priest, Father Purcell. It probably surpasses anything built by the State.

NORTH-SOUTH COOPERATION

Another monument to North-South cooperation is being urged by the Blue and Gray Association which has built part of a football stadium for athletic contests between the North and the South, and is now trying to raise sufficient funds to complete the project.

Eventually a monument to the two great generals of the Civil War—Lee and Grant—will stand outside this shrine to North-South friendship, where already an annual football game is played between two all-star teams from the North and the South in Montgomery, the cradle of the Confederacy.

Taking a cue from the Blue and Gray Association, many southern high schools invited northern school elevens to the South last winter, and the idea is spreading.

"You can't legislate or force good-will and brotherly love," says Champ Pickens, chief operator of the Blue and Gray Memorial. "You have to encourage it."

The Blue and Gray has done a lot of encouraging and will do more down here in the heart of the deep South—if given a little help from those in the North who sometimes criticize without taking the trouble to find out how much progress the South is making on its own.

On Franco and Defeatism

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mrs. DOUGLAS. Mr. Speaker, during the last few days there has been much talk but little understanding about the United States resuming full relations with Spain.

Three years ago the United Nations passed a resolution calling for the withdrawal of ambassadors from Spain by the United Nations members, as an expression of disapproval of the oppressive Franco government.

Although no change has occurred bettering the Franco government, a concentrated drive is now on to send an American ambassador to Spain.

What would this mean?

An American ambassador cannot be sent back now without flouting the United Nations and without it being taken in Spain—and throughout the world—as a gesture of approval of the Franco government.

Franco's anticommunism is asserted by those who champion Spain in this issue, and it is indeed comforting that they can seize upon one virtue in his defense—even though it is a merely negative virtue.

We shall never defeat communism here or in Europe if we rely on the happy delusion that mere anticommunism will be enough. We must not undertake to forgive and forget every default of obligation merely on the excuse that the defaulter is sound on the anti-Moscow line.

If violation of free speech, of free press, of free religion, of free assembly are qualifications for fellowship with us—then let us hasten to send our Ambassador back to Spain.

If oppression of labor and hostility to every liberal idea give title to our friendship, let us hang out the welcome sign to Franco.

I do not believe this is the way to promote democracy in Europe.

And nothing is more false than the idea that we must insure a frontier of defense on the Pyrenees. If the Atlantic Pact means anything, it means that we have aready chosen a frontier far to the north of them. Could anything be more harmful to mutual defense of western Europe than a display of anxiety now over a frontier that might be useful to us only when western Europe is gone?

There is one thing we can do about Spain. It is the best thing: Leave relations as they are. We have an Embassy in Madrid; Spain has an Embassy in Washington. The machinery is quite adequate for the business which has to be transacted.

To fall victim to Franco propaganda now would mean our fight against communism in the 16 western European nations would suffer a severe set-back.

Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include the following article by Walter Lippmann which appeared in the Washington Post of May 12, 1949:

ON FRANCO AND DEFEATISM

(By Walter Lippmann)

The trouble with sending an Ambassador to General Franco now is that the action will be misunderstood. The Ambassador was withdrawn as a gesture of disapproval and an ambassador cannot be sent back now without its being taken in Spain and throughout the world as a gesture of approval.

The gesture of withdrawal was, as Senator CONNALLY says quite rightly, a mistake. It is a mistake we have often made. It is the mistake of treating diplomatic recognition as a testimonial to be accorded governments that we like and denied to governments that we do not like. But in fact we do not maintain embassies abroad or receive them here to express our feelings and opinions about foreign governments, but in order to transact our business with them. The question, therefore, ought never to be whether they are good governments or bad governments but simply and solely whether they are governments with which we are not at war.

The withdrawal of an Ambassador is a meaningless gesture unless it is intended as a warning that even severer measures will follow unless the issue is settled. If the severer measures—the rupture of diplomatic relations, embargo and blockade, and in the last resort war—are not contemplated, then the gesture is a mere pin prick, indeed a bluff which will quickly be called. There is no graceful or satisfactory way of acting when a bluff has been called. And that—as respects the Ambassadors—is our predicament with Franco. In order to correct the original mistake, which did not impress him or hurt him, we would not have to make the still bigger mistake of appearing to have made up our minds to help him.

The best thing to do under the circumstances is to do nothing at all. We have an Embassy in Madrid and Spain has an Embassy in Washington, and whether the head of the Embassy has the rank of Ambassador or is only a chargé d'affaires is not a question of any real importance. The machinery is quite adequate to the business which has to be transacted, and relations are sufficiently correct, and quite cordial enough. If we still had Ambassadors in the two capitals, little would be different than it is except the seating arrangements at dinner parties.

The real argument, of course, is not about Ambassadors but about whether Franco Spain should be treated as an ally, made eligible for Marshall aid, given military equipment, and brought into the military system of the Atlantic Pact.

The ardent advocates of sending an Ambassador at once are ardent because they think of Franco Spain as a base. They see that it is protected by the Pyrenees Mountains. They think it is manned by a large fighting army. They know it is governed by a general who is firmly anti-Communist and puts up with no nonsense from Communists, Socialists, labor unions, liberals and all the others who have to be considered in governing countries like France, Italy, Belgium, and the like.

But this picture of Franco Spain as a strong, indispensable, dependable ally, worth cultivating no matter what our other allies think, is a product of wishful thinking and of blatant propaganda. Franco Spain is not strong but so weak, so poor, and so primitive that to make it the kind of base we hear about would take years and a program of capital investment on a grand scale.

As for Franco being a dependable ally, his regime rests upon the sullen submission of the disarmed masses of the people to a dreary and bigoted military dictatorship. There is no reason to think that the regime would stand up under the strain of war, or that the Spanish people would continue to submit if arms were put in their hands. The order and stability which so impress the casual visitor are a thin crust and under it there is a smoldering discontent. This discontent is not confined to the Communists of whom there are not many more, and to the anarchists of whom there are many more, but exists—waiting for the opportunity to express itself—among businessmen, monarchists, among the clergy, in the army.

This is no time to embrace Franco and lose forever the confidence and good will of all the Spaniards in all walks of life who will eventually remove him. Nor is this the time to entangle ourselves in the internal affairs of Spain as we have become entangled in the internal affairs of China and of Greece.

And as for the strategic importance of Spain, the whole conception is the worst kind of defeatism. The only way to make it certain that no one in Europe would fight if the Russians started to march is to notify the Europeans that the United States expects to retreat rapidly from the Elbe to the Rhine, from the Rhine to the Seine and the Loire, and from there to the Pyrenees. It would be like preparing to defend the United States against a Japanese invasion by fortifying Long Island.

Our true object is to prevent war by making the risks prohibitive and successful aggression impossible, and then by negotiation and compromise with the Soviet Union to end the military partition of Europe. Our concern is not with a part of Europe but with the whole of Europe, with the defense of Europe as a whole, not with Europe at the Pyrenees, not with Europe at the Rhine, not with Europe at the Elbe, not with Europe at the Vistula but with Europe as a continent and a civilization, destined to be independent, united, and free.

That may take a long time to achieve. It may not take so long a time as many fear. But we cannot, we should not, settle for less.

The costs will be no heavier, the risks will be no greater, if we stand forth clearly as the partisans of what all Europeans yearn for, of what in the end can alone give hope and faith, the will to endure and to persevere, until a true peace has been made.

Labor Dictation to Congress Is Our Most Absurd Myth

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas L. Stokes from the Buffalo Evening News of May 9, 1949:

THOMAS L. STOKES SAYS "LABOR DICTATION TO CONGRESS IS OUR MOST ABSURD MYTH"

WASHINGTON, May 9.—In connection with labor legislation in Congress there's lots of loose talk about labor bosses who are caricatured as ogres or evil spirits who somehow or other are trying to dictate to Congress and Government.

Long years of covering Government and politics and civic affairs gives the newspaper reporter a good insight into both labor leaders and business and financial leaders. In such experience one learns that the labor boss stacks up over-all very well alongside those in business and finance who sit at the top of our corporate economy and across the table in bargaining. Often the edge is distinctly in favor of the labor leader when it comes to sincerity of purpose for the general public welfare.

But, as for dictation of Congress by labor, that is the most absurd myth of our times to anyone who lives here daily with Congress and has seen the impregnable barricade raised here in the last 10 years against measures for the interest of millions of people, including labor.

Now that there seems finally a chance to pentrate that barricade, only if a little bit here and there, to get through a few much-needed bills—housing, education, health, increased minimum wage, modification of the harsh Taft-Hartley law—those who are working earnestly at this, as they have been for years, suddenly become evil labor bosses. It's very queer tactics.

To get at the real problem involved, it is necessary to go back of the labor bosses to the millions of individuals who work daily in the greatest industrial machine the world ever has seen. They may be set apart as some sinister element called labor, but they are just people, good Americans, who live in your neighborhood, work hard to make ends meet and put their children through school and pay their doctor bills.

Twenty years ago our system broke down temporarily because we failed to recognize that basic fact in our still new industrial economy.

It is a humanitarian thing to provide for our people. But that doesn't have to be considered at all. It is a hard-boiled necessity of economics, just plain good business. Big bosses on the industrial management side should be thankful that labor organization has come along, as a great many of them are. It has done much for them, as for all of us. They are doing nicely. We owe them much, too, for their skill and know-how. But they didn't do it all themselves and they can't keep it going themselves. Some of them seem to think so.

That appears to be the attitude, too, of some in the Republican Party, judging from what goes on in Congress. If that attitude persists, if the objective in labor legislation continues to be to punish something called labor and some legendary Frankenstein labor bosses, it can be forecast that the Republican Party never will win another election and will pass away.

That would be the tragedy of our times. For we need two healthy political parties to check on one another. That was the way our great political democracy has been built up, and that is the only way it can survive.

Mrs. Harriette Harper Honored by Medical Society of the State of Pennsylvania

REMARKS
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1949

Mr. FENTON. Mr. Speaker, it is with a sense of pride that I join with my home-town neighbors and fellow citizens of Mahanoy City, Pa., in congratulating a fine American mother on attaining her ninety-ninth birthday on May 10.

Mr. Harriette Harper is the oldest resident of my community and for years I had the honor and privilege of being her personal physician.

In addition to having reached the remarkable age of 99 years, Mrs. Harper has attracted the attention of the medical profession for the wonderful recovery she made 3 years ago when she fractured her thigh. On her birthday Mrs. Harper was presented by the Medical Society of the State of Pennsylvania with a plaque, "in recognition of one whose life span exemplifies healthful living." I was to have the honor of presenting the plaque but was unable to be present because of our legislative program.

I know, Mr. Speaker, that you and the Congress join with me in paying tribute to this grand lady and wishing her continued good health and happiness.

An article appearing in the Mahanoy City Record-American, in reporting the epochal occasion, reads as follows:

THE STATE MEDICAL SOCIETY PRESENTS MRS. HARPER WITH PLAQUE AS A SPECIAL HONOR

Mrs. Harriette Harper, 99, of 612 East Centre Street, Mahanoy City's oldest resident, who made medical history when she completely recovered from a broken hip which she suffered in a fall down steps at her home when she was 96 years old, was honored by the Medical Society of the State of Pennsylvania today—her ninety-ninth birthday—by the presentation of a handsome plaque.

The plaque, which stated, "The Medical Society of Pennsylvania extends greetings and felicitations to Mrs. Harriette Harper, born May 10, 1850, in recognition of one whose life span exemplifies healthful living—1949," is signed by Gilson Colly Engel, M. D., president of the State society; Walter Donaldson, M. D., secretary-treasurer, and Hugh M. Miller, M. D., trustee and counselor. The formal presentation was made by Dr. William Leach, surgeon in chief of the Locust Mountain State Hospital, who graciously expressed the pride the physicians of the State feel in Mrs. Harper's remarkable recovery.

Also present for the presentation and extending brief congratulatory remarks were Dr. Charles Hogan, Pottsville, trustee of the State Medical Society, and the official representative of that body; Dr. Kenneth Donnelly, president of the Mahanoy City Medical Society; Dr. John Burke, Shenandoah; Dr. C. S. Burke, Dr. George Ricchiuti, and Dr. William A. Van Saun, of the local medical society.

Mrs. Harper replied to the presentation speech alertly and wittily, summing up the reason for her longevity in a sentence that may well be regarded as her philosophy of life (and a worthy one for all to follow): "I am satisfied with what I have and ain't worried about what I haven't got."

Witnessing the ceremony were Mrs. Harper's daughter, Mrs. Hattie Stride, who resides with her mother; her son and daughter-in-law, Mr. and Mrs. Stephen Harper, and Mr. and Mrs. John L. Goepfert, neighbors and close friends of the Harper family. Photos of the presentation were taken by Maurice Pedriani.

Deluged with cards and other greetings today, Mrs. Harper also received a telegram from Congressman IVOR D. FENTON expressing warm personal greetings and stating that the record of her remarkable recovery is to be inserted into the CONGRESSIONAL RECORD.

STORY BEHIND PRESENTATION

Mrs. Harper's daughter, Mrs. Hattie Stride, of the East Centre Street address, received notification last December from Leo E. Brown, Harrisburg, executive assistant of the society, that the plaque presentation would be made on the former's ninety-ninth birthday.

The society last year, which was its centennial, after requesting the names of centenarians residing in the State, inaugurated a custom of recognizing persons reaching their one-hundredth birthday. Mrs. Stride saw a request of the society published in the Record-American and communicated with its officers informing them of the remarkable recovery of her mother from her injuries at her advanced age. The fact that the bone had knit and she is able to be about again led the society to make special recognition of the fact on her ninety-ninth birthday.

In the letter informing Mrs. Stride of the honor to be paid Mrs. Harper, Dr. Brown stated: "I am convinced that your mother certainly must be a perfect example of healthful living to have been able to reach the age of 98 and under the circumstances, she is an excellent example of the progress which has been made in medical science due to her complete recovery from a broken hip."

After stating that it would be impossible for the society to present Mrs. Harper with a plaque in time for last Christmas, he wrote: "We are notifying the Schuylkill County Medical Society and will request that they make this presentation on your mother's ninety-ninth birthday. She will be the first individual under 100 years to have received this plaque. However, in view of her remarkable health and recovery, we feel she is justly qualified."

The presentation of the plaque culminated Mrs. Harper's ninety-ninth birthday celebration which commenced Sunday, Mother's Day, with a family dinner.

That the aged lady may continue to know health and happiness for a long time to come is the sincere wish of her legion of friends among whom the Record-American is happy to be numbered.

Amphibious Operations Represent True Unification of Our Military Services

REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. VAN ZANDT. Mr. Speaker, on Monday of this week many Members of the House were privileged to observe Marine Corps exercises at the Marine base in Quantico, Va. It was a thrilling and interesting demonstration of the skill of the Marines in carrying out the very difficult and dangerous ship-to-shore landing operation.

But, Mr. Speaker, of far greater significance was the demonstration of one phase of an amphibious operation wherein the various branches of our armed forces are coordinated and unified into one entity, packing the maximum striking power at any given point.

An amphibious operation represents real unification, the only kind that counts in terms of security to our Nation. Unification bills passed by Congress and big stick and head cracking in our National Military Establishments may be spectacular, but they will not win wars. War was won in 1945—and will be won in the future—by the type of unification achieved in the amphibious operations.

Mr. Speaker, I know something about amphibious operations. I participated in 21 of them in the southwest Pacific. I was a naval officer, but these 21 operations were commanded by an Army officer, Gen. Douglas MacArthur. We had unification out there in the Pacific. Those of my colleagues who served in the European and Mediterranean theaters will undoubtedly agree that in the amphibious operations at Normandy, Salerno, North Africa, Sicily, and southern France, we also had unification. The field commanders—the men who were charged with winning the war—achieved a real unification—and did it without any head cracking in Washington.

On Monday, at Quantico, we observed just one phase of an amphibious operation, that phase performed by the actual combat troops. In this particular case it was the marines who made the demonstration. But a successful amphibious operation is not just United States Marines, it is not just the United States Army, it is not just the United States Navy, and it is not just the United States Air Force. It is the combination and coordination of each branch of the service, with each branch bringing to the operation the particular skill for which it has trained and in which it is most proficient. It is the assembly of a large group of specialists, each of whom performs his own particular specialty for the benefit of the whole operation.

I shall speak of the Pacific war, Mr. Speaker, because I was closer to it than to the European war. It was an amphibious war, much more so than the European war, but only because the Pacific is a larger ocean than the Atlantic and thus more landings had to be made. Both were, essentially, amphibious wars. In both cases we had to transport men and equipment over large bodies of water and put them ashore in the face of enemy opposition.

Mr. Speaker, in the Pacific we achieved a degree of coordination almost beyond imagination. Why, for one operation—the invasion of Okinawa—we had every branch of our own armed forces, plus a task force of the British Fleet. Various elements of this force staged thousands and thousands of miles apart. Air units were based as far apart as the Philippines, the Marianas, and China. The whole was coordinated, and when the actual attack got underway, all of these elements moved into place and performed its job as if the whole force had rehearsed together many, many times. Yet, the Army troops were staged at Leyte and the marines were staged at Saipan. They went ashore side by side. They met for the first time as they stormed the beaches.

The United States plan for the capture of Okinawa gave each service the opportunity to fully demonstrate its effectiveness in modern war. To the B–29's, carrier aircraft, and the submarines were given the task of strategically separating Okinawa from the main islands of Japan. For the B–29's this meant, largely, the continuation of their strategic bombing campaign against military and industrial targets on Honshu. They flew one mission against Kyushu, bombing Kamikaze air installations. For the United States submarines it meant continued patrol of the sea lanes between Okinawa and the home islands. For the carrier-based planes it meant alert patrols on the lookout for enemy aircraft and for enemy ships getting through the blockade, plus a number of raids against the Kamikaze bases.

The guns of the fleet were given the job of destroying shore defenses and providing cover for the minesweepers and underwater demolition teams. The fleet had to protect against enemy air attack and directly support the troops on the beachhead until the campaign was concluded.

The amphibious force had the mission of destroying local opposition and to make it possible to land the Tenth Army, which was composed of Marine and Army divisions.

As I have stated, Mr. Speaker, all the elements making up this great striking force came from points scattered throughout the far Pacific and Asia. Reconnaissance planes under General Wedemeyer in China had to be coordinated with General MacArthur's search planes in the Philippines. Forces were mounted in the Marianas, Leyte, Guadalcanal, Ulithi, and Espiritu Santo. The northern attack force sortied from Guadalcanal on March 8 and the southern attack force left Leyte on March 21. Both were ready on Love Day, April 1. One task force assembled at Guadalcanal, another at Espiritu Santo. Combat ships generally were all prepared and replenished at Ulithi. The British Fleet assembled at Ulithi.

This operation drew from the Central Pacific Force under command of Admiral Chester W. Nimitz and the Southwest Pacific Force under command of Gen. Douglas MacArthur. It was a real unification, but no more of a unification and coordination of effort than had been achieved many times before.

Let me discuss, briefly, one other amphibious operation—the invasion and capture of Iwo Jima. From standpoint of services participating, this is not such a good example of coordination as Okinawa, but the principle was the same and it represents still another phase of coordinated effort.

Iwo Jima was not originally scheduled for attack and capture. The decision to take it was reached by the Joint Chiefs of Staff in order to facilitate the strategic bombing effort of the Twentieth Air Force—the B–29's operating from the Marianas. It should be pointed out here, also, that the various operations in the Pacific were decided upon by the Joint Chiefs of Staff here in Washington. They then sent Admiral Nimitz or General MacArthur orders to take this or that spot. The planning and everything else in connection with the operation was handled by the area command.

But let us get back to Iwo Jima.

The B–29's were based on the Marianas. This was done because the long haul from bases in India—from whence they made their first attacks—was too great to reach the Japanese home islands. They were under the direct operational command of the Joint Chiefs of Staff which sometimes made unified area command difficult, but not too difficult, for the Twentieth Air Force was never asked to fly in tactical support of any other group. In the Okinawa operation, as already mentioned, they were diverted briefly from their basic pattern of strategic bombing of cities on the main island of Honshu to take a crack at the Kamikaze bases on Kyushu, but this was essentially a strategic mission.

The B–29's came to the Marianas in October 1944, and, after a month of practice runs against Iwo Jima, 111 Superforts hit an aircraft engine plant on Honshu. Thereafter they made from five to six attacks against the Japanese home islands a month.

The Japanese did not take these raids lying down. Flak was extremely heavy, and kept the B–29's at an inaccurate 30,000 feet altitude. Fighter opposition was fierce. The Twentieth were sorely in need of fighter protection, which could not be given from the Marianas.

Iwo Jima was the key to the problem. From this island enemy interceptors flew. Moreover its radar station gave Honshu ample warning every time the big bombers were headed toward Japan. The Japanese were using the island to stage counter air attacks against the B–29 bases in the Marianas. Iwo had to be taken, and the Joint Chiefs so ordered. It had to be taken quickly, for Okinawa was being planned.

In this operation coordinated effort was again observed. Task Force 58 and the

B–29's hit selected targets on Honshu just before D-day at Iwo. The B–29's continued coordinated raids on the home island of Japan, as Task Force 58 withdrew to directly support the Iwo operation.

Consider, Mr. Speaker, the size of the naval force involved in the Iwo Jima operation. In addition to Task Force 58, commanded by the late, great Vice Adm. Marc A. Mitscher, Admiral Raymond A. Spruance's Fifth Fleet included the following elements: transport and landing ships, with the protecting screen of destroyers; antisubmarine warfare forces of escort carriers and destroyer escorts; the logistic support group, composed of fleet oilers, ammunition ships, replacement transport CVE's, escort CVE's, general store ships, aviation supply ships, towing and salvage ships and its own screen of destroyers and destroyer escorts; search and reconnaissance groups of seaplanes and long-range shore-based aircraft; a service force at Ulithi, which could service the fleet just the same as a State-side navy yard, and finally the amphibious force, which included the landing force of marines.

Nine hundred ships and thousands and thousands of men were diverted in an operation designed solely to facilitate the Twentieth Air Force in its strategic campaign against Tokyo and the Japanese home islands. That, Mr. Speaker, was real coordination and unification.

Now, Mr. Speaker, how important was the Iwo Jima operation? The answer is found in the following quotation taken from the final issue of Impact, an official publication devoted to the part played by the Air Force in the war against Japan:

> To every B–29 crew who flew to Japan after March 1945, the fact that Iwo Jima had become a United States base was a cause for thanksgiving. Iwo is less than 5 miles long, a very little island. But never did so little mean so much to so many. Located about midway between Guam and Japan, Iwo broke the long stretch, both going and coming. If you had engine trouble, you held out for Iwo. If you were shot up over Japan and had wounded aboard, you held out for Iwo. If the weather was too rough, you held out for Iwo. Formations assembled over Iwo, and gassed up at Iwo for extra long missions. If you needed fighter escort, it usually came from Iwo. If you had to ditch or bail out you knew that air-sea rescue units were sent from Iwo. Even if you never used Iwo as an emergency base, it was a psychological benefit. It was there to fall back on.

That, Mr. Speaker, is a real result of the kind of unification and coordination we had in the Pacific, spoken eloquently by those who benefited directly therefrom.

Permit me to emphasize the lesson of this brief discussion of amphibious operations. Never throughout the campaign was one service, or one specialist, called upon to perform other than his basic mission. Navy and marine carrier-based air provided tactical support to the amphibious landings. Shore-based air took over the tactical support as rapidly as facilities were made available. At Okinawa it required 6 weeks to do this job, for the first shore-based tactical air arrived on May 12. Long-ranged, shore-based aircraft flew either reconnaissance missions or continued to fly strategic bombing missions, but were never called upon for tactical support. Army and Marine troops fought ashore. Surface craft performed their screening and bombardment missions. Submarines performed their missions of reconnaissance and patrol of shipping lanes.

Each service brought to the operation its own particular specialty. Each was called upon to provide its specialty to the whole operation. Each was expected to utilize the weapons which would enable it to perform its specialty in the best possible manner.

That is what I mean, Mr. Speaker, when I say that the art of amphibious operations, whether in the Atlantic or the Pacific, represents true unification of our military services.

Unemployment Statistics

REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1949

Mr. SADLAK. Mr. Speaker, it has not necessarily been a pleasant duty to me to make interim reports to the House about the growing unemployment in my district, the State of Connecticut, and the consequent claims for unemployment benefits. It is, however, most pleasant for me to report this morning to the House that I have just received a release from the State Labor Department of Connecticut indicating that jobless claims have declined by 1,500.

The number of jobless claims declined to 74,450 during the week of May 2 to 7 from 75,973 for the previous week. I hope this downward trend in the numbers of those filing unemployment benefit claims and the entire number of all unemployed in Connecticut, New England, and the Nation will continue.

Mr. Speaker, may I mention further that in spite of the fact there are now only 74,450 people seeking unemployment benefits in Connecticut, this does not necessarily mean there are only that many unemployed. The Governor, on Tuesday, announced there are some 95,000 unemployed in Connecticut.

Mr. Speaker, I include as a part of my remarks an editorial from the Hartford Courant, the oldest newspaper of continuous publication in America, as follows:

UNEMPLOYMENT STATISTICS

In retrospect what former President Hoover needed most was a good set of statisticians. That deficiency has now been supplied. As a result we are told by the Department of Commerce in their latest report on the labor force that there are 3,167,000 persons unemployed. These figures are corroborated in the latest statement of Robert C. Goodwin, director of employment security. But when you start to break down the statistics you run into some weird and wonderful governmental jabberwocky.

For example, there seems to be a difference between being unemployed and not working. Although there are 3,167,000 frankly unemployed the Department of Commerce blithely explains that there is an additional 1,816,000 with a job but not at work. Presumably these also are people who are laid off but, like Micawber, hope something will turn up in the near future. Added to the unemployed and those who are not working is another group of 2,301,000 who are working from 1 to 14 hours a week. How many of this group are working 1 hour and how many 14 is not explained. There is still another group of 7,787,000 who are working from 15 to 34 hours a week.

While the administration gives out the information that there are some 3,000,000 unemployed, it is a fact that there are actually more than 14,000,000 now working less than a standard workweek. More than 7,000,000 of this group are either totally unemployed, not working, or working less than 14 hours a week.

To put it another way, of the total civilian labor force of more than 60,000,000 only a little more than 45,000,000 are working a standard workweek of 35 hours or more. Understandably the administration is anxious not to create a psychology of fear by stressing unemployment figures. Here in Connecticut it is no secret that Labor Commissioner John J. Egan created mild consternation in local democratic circles by predicting widespread unemployment a few months back. Since then Mr. Egan has for some reason or other refrained from making further forecasts.

But none of these factors is sufficient to justify the statistical casuistry that foists on the American people the idea that there are only 3,000,000 now unemployed. Let's face up to the fact that unemployment has been a democratic albatross and that only a war and a feverish postwar economy unloosed it from democratic necks. It will not be wished away by coining euphemisms nor concocting phony statistics.

Tyrant State or Welfare State: It's the Same End

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial comment by E. T. Leech, from the Pittsburgh Press of May 8, 1949:

TYRANT STATE OR WELFARE STATE: IT'S THE SAME END

(By E. T. Leech)

The old idea in America was that the people run and support the government. Now it is in conflict with a new and world-wide idea that government runs and supports the people.

That's what all the shooting is about. There is a basic clash of ideas raging both in this country and abroad.

If you say you favor the old American idea, you risk being branded as old-fashioned and reactionary. And probably you will be called hard-hearted.

Actually, you won't be old-fashioned—for the simple reason that the American idea really isn't old. Compared to the other

theory, it is quite new. However, the mere matter of age is of little real importance save as it reveals future prospects by past experience.

As for the matter of being hard-hearted, it is, of course, difficult to oppose things which promise well. It is a tempting idea to think that the state can make everybody comfortable and secure, well-educated and healthy, and safe against old age, unemployment, or emergency. Why would anybody oppose such a system?

IS IT POSSIBLE?

The answer, of course, is that nobody would—if it actually could exist. The only question involves whether or not it is possible.

Every government claims, and always has claimed, that it is the best possible government for its people. There have been thousands of governments over the long course of history—and they all made that claim. At least 99 percent of those governments don't exist today, or else they have been so modified as to be completely changed.

Had those governments been as good for their people as they claimed to be, more of them would have survived. That seems to be a reasonable assumption.

Another thing to remember is that at least 99 percent of those governments were supreme over their people. That is, the state controlled the people—instead of the people controlling the state. That has been the customary and general condition since man emerged from barbarism.

If it had been a good system, why would mankind have suffered so much under it? Why would such governments constantly fail and disappear?

RESULT OF FAILURES

The American system grew out of those failures. It was founded for the express purpose of getting away from state control. For the first time, the principle that the individuals are supreme over the state not only was proclaimed but was put into practice.

Now this idea—less than two centuries old—is again in conflict with the other idea, which is at least 10,000 years old. Yet, for some queer reason, the ancient system is being hailed as something new.

The only real change is that it has been dressed out in high-sounding and appealing trappings. It is to be a welfare state, seeking only security, abundance, health, schooling, and contentment for its people. The people are to subordinate themselves to it, not as a master, but as a benefactor. It is a new application of the old end-justifies-the-means idea.

There is one supreme obstacle: The state never creates anything. It doesn't earn a dollar. It can give only what it takes from others—either from its own people, or other people, or from both. And before giving anything back it must deduct the cost of government—a deduction which grows in proportion to the services which the state attempts.

America doesn't intend to loot any other people. Instead of taking from them, it is giving them billions. Therefore, all that Washington can give away must be taken from our own people here at home.

SOME GET MORE

Many will get more than they give—at least for a while. That's the chief bait. But those who do most of the producing and create most of the wealth will get less than they give—far less in many cases.

The big question is how much the state can take from this producing group before it dries them up. How much can they be forced to give before they switch sides—that is, start giving less than they receive? If enough of them are dried up and switch sides, then government collapses.

But before any government collapses it always tries to save itself by forcing the people to follow its plans. It tries to make them produce under government orders.

And it makes no difference whether the government started out to be a welfare state or a tyrant state—a benefactor or a master. Liberty goes down the same old drain into which it has flowed time and time before.

Cost of Congressional Record

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1949

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Licking Weekly, Newark, Ohio, of May 8, 1949:

ODDITIES—UNUSUAL ITEMS FROM THE CONGRESSIONAL RECORD, THE WORLD'S MOST COSTLY PUBLICATION

(By A. Wade Wells)

Total cost of the CONGRESSIONAL RECORD, 1947–48 (the last complete year):

There seems to be no record of this information having been compiled as herein set forth. This data was obtained for this columnist through the courtesy of Hon. J. HARRY MCGREGOR, Member of Congress, through the Legislative Reference Service of the Library of Congress, who contacted:

Government Printing Office.

Public Law 641, Eightieth Congress.

Official Register of the United States, 1948.

Report of the Postmaster General, 1947, page 4.

Amount paid to the Government Printing Office (for printing and binding of CONGRESSIONAL RECORD, 1947–48), $1,338,323.30.

Salaries of Senators, 1948–49 ($12,500 per annum each), $1,200,000.

Salaries of Congressmen, 1948–49 ($12,500 per annum each), $5,482,500.

Salaries of Chaplains, Senate, $2,520; House of Representatives, $3,750.

Salaries of Cabinet members at $15,000 each, $135,000.

Salaries of Supreme Court Justices (the Chief Justice, $25,500; each of the eight Associate Justices, $25,000), $225,500.

Franked mail, 1946–47 (latest available) $921,277.

Total, $9,308,870.30.

The following information is provided on mailing costs of the CONGRESSIONAL RECORD. The statistics cover the second session of the Eightieth Congress for the period from January to December 1948 and including the Appendix printed January 10, 1949:

Mailing machine (equipment and personnel), $21,482.23.

Hand mailing, $15,831.20.

Residence delivery by truck (513 copies daily), $5,660.08.

Total, $42,973.51.

The entire cost of 1,700 sales copies is paid for by the subscriber, but Post Office charges for this class of mail are at the rate of 2 cents per copy. In addition to the costs tabulated above, it costs 10.36 cents to cut and file each stencil for the 32,000 copies which are mailed, 53 cents per thousand for addressing wrappers, an indeterminate amount for maintaining changes at the 10.36 cent rate, and an approximate 50 cents per thousand for wrappers. The 2-cents-a-copy Post Office rate applies to mail of this class.

The daily press run of the RECORD is 42,500 copies and the quantities not represented in the above figures are bulk deliveries to the Capitol.

The Salesman and the Politician

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, May 12 (legislative day of Monday, April 11), 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able address delivered by Mr. William Benton, publisher of the Encyclopedia Britannica and chairman of the Muzak Corp., before the Sales Executives Club of New York, April 19, 1949.

The subject of Mr. Benton's address is The Salesman and the Politician. As a former Assistant Secretary of State, in charge of the United Nations Educational, Scientific, and Cultural Organization, Mr. Benton won many friends in the Congress for his valuable service to the country in connection with UNESCO.

His address will be particularly interesting to the Members of Congress, for whom he expressed keen sympathy, understanding, and appreciation. In the course of his remarks, he said:

I would trust our United States destiny overwhelmingly to the Members of Congress. Judged by intelligence, integrity, competence, and hard work, far ahead of trusting our country's future to top business leadership.

He added:

That is as great a tribute as I know how to pay to a group of men who are so frequently kicked around, abused, misunderstood, and unappreciated.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE SALESMAN AND THE POLITICIAN

Fellow salesmen, I'm going to talk briefly today about two of the most important—underrated and unappreciated—figures of our time, the salesmen and the politician. Mr. Larsen generously spoke of me in both roles, and I confess gladly to the fact that I have been both. My first 15 years after graduation from college I spent as a salesman, first with the National Cash Register Co., starting when John H. Patterson was still president of the company; and later in the advertising business, writing advertisements and using the techniques of advertising for salesmanship.

In 1936, as Mr. Larson told you, I left advertising to take up the perils of education and to associate with a great university. I then unexpectedly discovered that I had gone into politics. Those of you who know much about university administration I'm sure will not correct me on my assertion that during my years at the University of Chicago, as well as during those with the State Department, I have been a politician.

I attest to those of you who may doubt it—that salesmen and politicians have much in common.

But they do have some big differences. Take for example the advice of my favorite

politician, Mrs. Clare Luce, with whom Mr. Larson is perhaps acquainted, to my favorite partner, Mr. Chester Bowles when Mr. Bowles was planning to run for governor in Connecticut I asked Mrs. Luce whether she wouldn't, through me, relay some helpful advice, knowing that she had some experience, at least in Fairfield County. Mrs. Luce gave me five precepts on how to be elected, which I forthwith relayed to Mr. Bowles. Fortunately I kept a copy of my letter, which I was able to dig out yesterday and thus refresh myself on her five rules for the candidate:

1. Explain nothing.
2. Deny everything.
3. Demand the proof.
4. Don't listen to it.
5. And attack the opposition.

Now, if you think these are slightly cynical rules, maybe that's because you're not trying to be elected to anything. And of course Mrs. Luce isn't trying to be elected to anything either.

As a contrast to these rules for a politician, I shall try to give you my ideas on the qualifications for a specialty salesman. Perhaps these will only show you how great the differences are between what we want in the politicians we elect and in the salesmen we hire.

Here are four suggested criteria, drawn from my own experience, for the ideal specialty salesman—the great specialty salesman—the man we want to hire:

First, he must be homeless and childless,

Second, he must be neurotic,

Third, he must have a wife who demands more and more money, and

Fourth, he must have the glands of an elephant. Now of course one reason that such men are very rare is that if they have the glands of an elephant, they are not likely to be homeless and childless.

Vincent Riggio last week told you about his first day as a salesman. A friend of mine who was here told me that Mr. Riggio explained how on his first day he wasn't able to sell anything, but that he went home his first night and sat up till 3 o'clock in the morning, and practiced in front of a mirror, and mastered his product, and the next day went out and made 26 sales. And Mr. Riggio's moral was, "Know your product."

The Encyclopedia Britannica, which is my favorite reading matter, as of course, I need not assure you—in fact, I like to browse through these 24 volumes while relaxing to the soft strains of Muzak—the encyclopedia says much the same thing as did Mr. Riggio. In its article on salesmanship, it uses somewhat longer words than Mr. Riggio's. Here they are: "No amount of verbal plausibility or dialectic brilliance," says the Britannica, "can compensate for lack of precise and complete knowledge of whatever one is selling." This is one of the ABC's as set forth in the Britannica and I can only conclude that Mr. Riggio must have been reading his Britannica before he came up to talk to you last week.

Mr. Riggio's story made me think you might be interested in my own first day as a salesman. Perhaps because it differs so much from Mr. Riggio's experience. Yes, and it even differs from anything I find in the Encyclopedia Britannica.

I spent my first day as a salesman learning how to keep my boss out of jail.

My first day out at work after I graduated from college, a week or two after, was devoted to reading a little book, which was compulsory reading for every salesman then hired by the NCR. I sat in the Utica office, responsible for Herkimer and Oneida Counties in New York, and studied this booklet on what not to do as a salesman.

The specialty sales managers here today will concur with me that John H. Patterson is the great legendary figure of specialty selling. And I suppose no man in American business ever more earned the phrase pinned on him by his contemporaries than John H. Patterson earned that phrase, "the father of scientific salesmanship." Most of his successors forget, however, that in 1911 he was tried and convicted under the Sherman Act and sentenced to 3 years in jail.

This booklet that I read my first day—this recited much of the testimony and the verdict.

What not to do was the most important idea in the world of NCR—to Mr. Patterson's salesmen. If the salesman did the forbidden things, the boss would go to jail. His sentence to jail, for 3 years, had been suspended or held up, due to his humanitarian work in the Dayton flood of 1913. If he went back to his old ways, or his salesmen did in their enthusiasm for the old times—into jail Mr. Patterson would go, without further ado.

This booklet recited the testimony which documented those standard techniques for putting your competitor out of business—the opening of stores next to the rival company's stores; the cutting of prices to such a low level that the competitor couldn't compete; the hiring of his good salesmen whenever the competitor happened to get any, at fancy inducements; and other techniques well known, at least to our predecessors.

But this booklet went further and told of an even higher level of techniques for getting rid of your competition, and there were such further features as these—the bribing of expressmen not to ship competitors' machines, if by chance the competitor happened to sell any machines; or the most skillful way to drop sand into a machine that the competitor might have delivered to a retailer, in order quickly to put the machine out of business.

Finally, there were two features that were uniquely and distinctly John H. Patterson's and which were a further evidence of his genius. The first was his famous knock-out squad. The knock-out squad, headquartered in Dayton, consisted of skilled and select men who were shot out to any area where competition showed likelihood of development. And the squad was aptly named because the back alleys and the blackjacks were not unknown to these knock-out men.

And second was the morgue. In Dayton, in an impressive room, was kept a model of each cash register that had even been offered in competition with the NCR. And the knock-out men invited any competitor, when he opened up in the cash register business—so the legend went—to come to Dayton with all expenses paid to visit the morgue. There he was shown the dead and gone models of all his predecessors. And when I went to work for Mr. Patterson, his techniques had proved so successful that he enjoyed a world monopoly.

Thus, I was to sell cash registers—but no blackjacks, no sand, no bribery, no trick shots around the corner, no real opportunity for an old-fashioned man in this twentieth century. It was a tough outlook.

I spent the next 8 months learning the product as an office man, a floor demonstrator, and of course I still remember my first month in the field, driving a truck and lugging those big 75 and 100 pound cash registers in and out of the butcher shops and bootleggers' establishments and barber shops.

But in the month of March in 1922, my first in the field, I had the lowest quota a salesman for NCR could be given (70 points of $25 a point). And when I just barely squeezed through with that quota my first month out—it was the first month of Frederick Patterson's presidency of the company and, of course, a president's prize was offered to all salesmen who made their quotas—I won a beautiful pair of cuff buttons, from Tiffany's I think, and with my name on them, too, which further dedicated me to salesmanship.

The reason I finally left the cash register company was that they wouldn't send me to Dayton to their special training school because they said I was too young and they wouldn't take a man under 25 years old. That's how I happened to come to New York and beat the pavement of Madison Avenue, until I got a job in the advertising-agency business.

This experience I had in cold canvassing and specialty selling gave me an enormous advantage over many of my competitors in the advertising business of 1922. Too few of them had had this specialty selling and too many of them spent too much time at the typewriters and not enough time in the butcher shops. And later when Chet Bowles and I started our firm—I think Jay Gould and Bayard Colgate, two of our old clients who are sitting here at the head table, will agree here—one of the great assets we had as young men in the advertising business was our willingness to get out into the field, ride Mr. Gould's Best Foods trucks, and travel out in the field with Mr. Colgate's salesmen.

I'm sure a lot of you read the recent article in Time magazine about Paul Hoffman, who is today helping to raise salesmanship to the level of statesmanship. He is the man of whom we can all be most proud today. This Time article said that for many years the salesman, rather than the banker, the engineer, or the industrialist, has been the typical figure of American free enterprise. Time says the Socialist planner in Europe is only an inferior substitute for the American salesman. However that may be, there can be no doubt that the American salesman has been the prime mover in the United States in raising the American standard of living. Our salesmen are today our economy's catalysts. They are as much pioneers as the scientists and the inventors. Studies show that there is an average time lag of 30 years between any major discovery or invention and its use on a mass scale, and only the salesman can cut down that lag.

The salesman, of course, has two jobs (apart from keeping his boss out of jail). First, he must make the prospect want the product. And secondly, he must persuade him to take action.

Our sales work on Britannica is largely an example of this second function—to get people to act on their obvious needs. Almost everybody would like to own a set of the Britannica. And almost everybody doesn't want to do anything about it, and doesn't want to buy it.

In Muzak, on the contrary, we have to stress both functions. First, we've got to convince factory managers of something that is novel to most of them—that the right kind of music will improve employee relations and increase output without added strain. After doing that job we then have the second job of persuading them to act.

I think Muzak can be said to be a business that has been created wholly by salesmanship. There wasn't any market for Muzak—no latent desire for Muzak in manufacturing plants—until we came along and presented our evidence and presented our story.

And similarly the third of the companies of which I am chairman of the board, Encyclopedia Britannica Films, is almost wholly the result of the salesmen's efforts. Schools I think change more slowly than any other human institution, and they never would buy motion pictures or projectors without the constant and reiterated pressure of the salesman.

Unhappily, this word "salesman" is often used to connote a fast-talking, smooth, slick individual who is able to extract from a reluctant buyer too much money for an inferior product. I'd like to hope that an organization of the kind assembled here today, of top sales executives, can learn to devote itself, in part, to making clear to the American people that our salesmen are a

great creative force in American production and distribution, and that the great salesman is the one who not only knows his product but who knows that he can only prosper as his product serves the needs of his customers at a reasonable cost.

Men such as my friends, Paul Hoffman and Roy Larsen, whom you heard today; Jay Gould, sitting next to Mr. Larsen; Harry Houghton, who was introduced to you; Sidney Weinberg, up here (who I hope won't mind being called a salesman; I'll have to go into that perhaps a little bit with him later)—these are men who illustrate the high creative standards of modern American salesmanship and the urge it provides in driving the economy forward.

Now, to get back to Hoffman and the politician. If you read the story in Life magazine, you saw Paul Hoffman quoted as defining salesmanship to some of his European associates as follows: "Selling," said Mr. Hoffman, "is the process of transferring a conviction from the mind of the seller into the mind of the buyer." The Europeans thought this sounded more like a definition of diplomacy or of statesmanship. Because surely that is the great problem of diplomacy and the great problem of statesmanship, and this is because Paul Hoffman puts the emphasis where it belongs, which is on the word "conviction," and this word, of course, leads immediately right into politics.

We are accustomed to thinking of commercial salesmanship as selling goods or services. The politician—at his best—is a salesman of ideas and of convictions. BOB TAFT is a salesman of ideas—even if you don't like them, as I don't some of them—and so is SCOTT LUCAS a salesman of ideas, and so are others who succeed in the environment of politics, and particularly in Congress.

When I left Washington, I was asked by one of our big magazines to do an article on what I thought of Congress. I said, "I don't think you'd want me to do the article because the title to my article would be 'Why I Like Congress.'"

The truth is that the Members of Congress—the five hundred-odd Members of Congress—are the finest group of men that I have ever met anywhere; and on integrity, intelligence, hard work, they rank above any group of men with whom I've ever worked and, believe me, I know the business community pretty well. I know the Board of Trustees of the Committee for Economic Development, and I am not without friends in the Chamber of Commerce and the National Association of Manufacturers. I would trust our United States destiny overwhelmingly to the Members of Congress, judged by intelligence, integrity, competence, and hard work, far ahead of trusting our country's future to the top business leadership as represented in these business associations. That is as great a tribute as I know how to pay to a group of men who are so frequently kicked around, and abused, misunderstood, and unappreciated.

(I'm more delighted at that applause, I think, than any applause I've ever listened to.)

Now suddenly we of the United States find ourselves up to the ears in world politics and these 500 men who are supposed to know everything about the farm problem and the labor problem are now supposed to master and learn everything about world politics. And the problems of our United States international relations are suddenly more important than all these domestic problems in which most of us have spent our lives, including the Members of Congress.

Our commercial salesmen, directed by you men, are superb as merchandisers of goods and services. Our politicians are not bad at all as salesmen of ideas and principles on the domestic scene. In fact, they've got to be consistently very good to stay in office. But all of us are woefully inexperienced and unorganized when it comes to projecting ideas and principles internationally. And that is precisely the crux of today's cold war.

Last week the Herald Tribune quoted a speech by Arnold Toynbee, the world's most eminent living historian, who has charted the rise and fall of 21 civilizations. Toynbee predicts that the cold war will not develop into a shooting war. He says, "I don't believe the Russians will attack the western world in that way because I don't think they're so foolish * * *" Toynbee continues, "We have another kind of war which they are waging, which I won't say they invented. Perhaps advertisers," says Toynbee, "people who invented advertising, invented this kind of war. The Russians have the propaganda kind of war which they are waging, and I think they will go right on waging that war. * * *"

I think this is a very illuminating comment, coming from such an authority, on the situation in which we find ourselves today. He doesn't mention the atomic bomb or the armed forces. He centers his interest on the war of propaganda. And I agree with Professor Toynbee's implication that the skill and energy of the Russians as salesmen, as propagandists—as salesmen of ideas—can be a far greater threat than the Red army.

Now let us get it very clear that the Russians have been succeeding in this propaganda war. They have exploited ideas, while we on our part, thus far, have largely neglected ideas, internationally.

Congress is preparing to vote between 20 and 25 billions for various forms of military and economic national defense this year. At the same time it is preparing to vote one-fifth of 1 percent of that amount for information work on the part of the United States abroad—the salesmanship of ideas and of convictions. If this is an ideological war, what would you, as sales executives, thing of a ratio like that. Would you not think it worth while, for example, to spend $100,000,000 to build a world-wide radio network that could lay a signal into every radio receiver in the world? Yet such an idea, as obvious as it is, today has no advocates and receives no leadership.

It isn't hard, oddly enough—of course, it's easy to understand why this is true against our background—to get support for the building of a giant aircraft carrier that costs far more than $100,000,000, or even to arouse Congress to an extra half billion for more airplanes and for the Air Force. But where are the voices demanding that we provide ourselves adequate facilities and budgets in this war of ideas? I welcome Senator FLANDERS' speech of last Wednesday when he called for a political and propaganda offensive by the United States that would be imaginative but not unfriendly to the Russian people. It is my conviction, as it is Senator FLANDERS', that the problem we face as a country, and which is faced by our political leaders, is not so different from the problem faced by most of you sales executives here today. If you do not win and hold your customers, you go bankrupt. If we as a country do not persuade the peoples of the world to peaceful policies and to the fact that our aim is a peaceful aim, we shall face the cataclysm of war. We must persuade, in my opinion, or we shall perish.

Thus what we require, far more than we require bombs and planes and battleships, is a high level of political salesmanship, the salesmanship of ideas projected at the international level. To get this, even to approach it, we must first show our people and our Congress why we need it. Then we must get them to act—to provide the budget and the facilities.

Perhaps you saw yesterday in the papers that we are preparing to relinquish our radio station in Berlin for lack of funds. Yet at the same time a keel is being laid for an airplane carrier to cost $189,000,000.

I'll conclude by saying that there are more sales skills in this room today than in any room in the world at this moment. I would like to hope that this group, men such as you, will begin to apply these skills and your thoughts to these new problems around which our future will revolve and will apply these skills not only to raising the standard of living, but to raising a nobler standard; a standard which is the finest product of the ages; a standard of personal freedom, civil freedom, and political freedom.

Dedication to Economy Called Sole Alternative to Debt Rise

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, May 12 (legislative day of Monday, April 11), 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "Dedication to Economy Called Sole Alternative to Debt Rise," written by Mark Sullivan, published in the New York Herald Tribune of May 11, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEDICATION TO ECONOMY CALLED SOLE ALTERNATIVE TO DEBT RISE—MARK SULLIVAN SAYS USE OF TRILLIONS INSTEAD OF BILLIONS MAY SPOTLIGHT UNITED STATES SPENDING

(By Mark Sullivan)

I do not know if it is the first, though I think it may be, and if so it is an interesting landmark. I refer to use of the word "trillion" in a statement about the Federal Government's fiscal operations. The statement was by Senator HARRY F. BYRD, of Virginia. He said the national debt is now "a quarter of a trillion dollars." That way of putting it is new and arresting. The customary way is to say $250,000,000,000, or exact figures close to that.

Perhaps Senator BYRD meant to be arresting. He may have wished to make the country trillion conscious. The purpose of waking us to a danger would be furthered if the press and radio would adopt Senator BYRD's new word. We might become alarmed about a trillion-dollar debt before the actuality of it is upon us, and in time to avert it.

There was much to do when the word "billion" first came into the Government's fiscal operations (about a phase different from the national debt). That was in 1910, when for the first time the yearly appropriations of a Congress exceeded a billion dollars. The phrase "billion-dollar Congress," leaping conspicuously into headlines, became current and important in public discussion for a considerable time.

TRILLION AS A WORD

Trillion, if it should come, will be an awkwardness to the press. As spelled, it is only one letter longer than the familiar billion. But in figures it contains three more zeros, difficult to crowd into headlines. And it is seriously doubtful if the eye of a reader can take in at a glance the difference between the 9 zeros in a billion and the 12 in a trillion. That may be symbolic. What the eye does not take in, the mind does not grasp. Sheer inability of the mind to comprehend may be a reason why billions could pass into trillions without much public

awareness of the consequences, or the resistance the public would surely make if it understood fully.

To treat the emergence of trillion merely as an interesting development would be to miss the solemnity of Senator BYRD's warning. His analysis of the Government's fiscal operations has a thoroughness and convincing precision which make it an important document of our time. A few of the points he makes, or which may be deduced from his analysis, can be stated briefly:

Unless we stop the trend, the expenditures of the Federal Government next year will be larger than this year, and larger still the following year, and yet larger in ensuing years. This is made certain by the fact that many of the spending proposals in the President's legislative program, now or about to be under consideration, are long-term programs, providing for continuing and expanding expenditures next year and in ensuing years.

For meeting increased expenditures by the Government next year and the following year, there are theoretically two possible courses. One is increase of taxation, the largest part of which is from incomes. But incomes are now declining. Hardly any practicable rate of taxation on incomes as they now stand could be enough to meet the increased expenditures next year and the year following, unless the expansion of these expenditures is arrested.

DEBT MAY GO UP

The more likely alternative is to pay the increased expenditures by borrowing, which would increase the national debt. Increase of the national debt, following 17 years of almost continuous increases, and coming at what ought to be a period of peacetime prosperity, would undermine faith that the upward trend is likely to be stopped ever.

The present volume and pace of Government expenditures is such that it can hardly be checked except by intense dedication to economy, to preventing increase in the national debt. Such dedication is not likely to come from the administration. As Senator BYRD says in his analysis, "The President's budget submitted in January contains some 40 spending proposals * * * which require new legislation by Congress." This was exclusive of major military and foreign commitments. Many of the President's proposals open up completely new fields of spending.

Dedication to economy can come only from Congress, and only if dedication by Congress has the support of dedication by the people. The test of any proposal for new spending is not absolute; it is not whether the purpose of the new spending is desirable. The test is comparative, whether the new spending is more desirable than arrests of increase in the national debt, and whether the new spending can wait until increase in the national debt is checked surely. Beneath all lies need of public understanding of the social misery and economic destruction that would come in the final stage of a prolonged increase in the national debt.

Economy and the Public Debt

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1949

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include therein an excerpt from a recent article which appeared in the celebrated Clinton (Mass.) Courant.

This statement by the immortal Jefferson and Mr. Babson is timely, cogent, and particularly applicable to conditions in the Congress and the Nation today. We can all with great benefit be guided by the wisdom and sound judgment of one of our greatest American patriots and leaders. I am thankful to the gracious lady from Bolton, Mrs. Sprague, for sending me this article. It follows:

The following was written by Thomas Jefferson, the founder of the Democratic Party, about 150 years ago. Read it carefully, then cut out and send it to your Congressman. It should be printed on the flyleaf of every school book.

"I place economy among the first and most important virtues and public debt as the greatest of dangers. To preserve our independence, we must not let our rulers load us with perpetual debt. We must make our choice between economy and liberty, or profusion and servitude. If we can prevent the Government from wasting the labors of the people under the pretense of caring for them, they will be happy. The same prudence which in private life would forbid our paying our money for unexplained projects, forbids it in the disposition of public money."

The above statement by Jefferson is just as true today as when he made it.

ROGER W. BABSON.

Counting Our Blessings

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of May 6, 1949:

COUNTING OUR BLESSINGS

In any discussion of the state of employment in Wyoming Valley we cannot overlook the unemployed and the problem they present. At the same time for the community's welfare we must keep in mind that the employed far outnumber the unemployed.

In Wyoming Valley and the rest of Luzerne County except the White Haven-Nescopeck-Hazelton area we now have 119,000 employed workers. Of that number 82,900 are male and 36,200 are female. Their earnings constitute a mighty force in maintaining spending power and good business conditions in the community.

Also it is not to be overlooked that many of the unemployed receive subsistence payments and have a measure of spending power.

Our mine pay roll alone runs about $110,000,000 a year, and under all these circumstances it is not astonishing that many merchants are reporting that business is on a high level with the results last month comparing favorably with those of the corresponding month last year. Fluctuation of unemployment in the community has not tended to produce a sudden impact. The range of fluctuation has been about 5,000 since the end of the war. Thus, unemployment has become a chronic problem and not one confronting the community overnight. It is a problem demanding solution, but in the meantime it is well to remember that the community has not gone to the bow-wows economically.

On the national basis Dr. Edwin G. Nourse only yesterday told businessmen not to start digging for storm cellars, that the Nation's economic foundations are strong enough to prevent a collapse. He was predicting a future easing of living costs this year. Their gradual decline has made for an orderly retreat from the peaks.

Softening for War Criminals

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1949

Mr. WEICHEL. Mr. Speaker, strong protest has been raised throughout the country against the impending release from imprisonment of Ilse Koch of Buchenwald, and against the action of Gen. Lucius D. Clay in commuting her life sentence to a 4-year term of imprisonment, and I am including a resolution of protest adopted by the Ohio Senate:

Senate Resolution 48

Resolution protesting commuting the sentence of Ilse Koch, and requesting the proper authorities in Washington to have the matter reviewed in order that the ends of justice may be served

Whereas voices of protest in strong indignation are being heard throughout the United States and Ohio against the impending release from imprisonment of Ilse Koch of Buchenwald, and against the action of Gen. Lucius D. Clay in commuting her life sentence to a 4-year term of imprisonment; and

Whereas Ilse Koch was the wife of the commandant of the Buchenwald concentration camp, and, as such, her trial disclosed that she was responsible for extreme cruelty being inflicted upon prisoners, some of which resulted in their death; and

Whereas Ilse Koch was an active participant in the design of the Buchenwald concentration camp and that is the charge under which she was tried; and

Whereas the revolting atrocities of which Ilse Koch is accused have shocked the civilized world; and

Whereas it is alleged that Ilse Koch took a fancy to tatooed skin and had lamp shades and other articles in her home made of skin taken from prisoners; and

Whereas an investigating committee composed of seven members of the United States Senate has concluded that Ilse Koch should receive no mercy; that she has forfeited her right to associate with society and should spend the remainder of her life in prison: Now, therefore, be it

Resolved by the Ohio Senate, That we protest the action of Gen. Lucius D. Clay in commuting the life sentence of Ilse Koch to a 4-year term of imprisonment, and request the proper authorities in Washington to have the matter reviewed in order that the ends of justice may be well served; and be it further

Resolved, That copies of this resolution be transmitted to President Harry S. Truman, to the Chief of Staff of the United States, Army, to Gen. Omar Bradley, and the President of the Senate and Speaker of the House of Representatives of Congress, and to the Ohio Members in the Senate and House of Representatives of Congress, with the urgent

request that action be taken in memory of those World War II citizens of the United States who made the supreme sacrifice on the battlefields and in prison camps in defense of their country.

I, Dwight L. Matchette, hereby certify that the above is a true and correct copy of Senate Resolution No. 48, adopted by the Ohio Senate on May 5, 1949.

DWIGHT L. MATCHETTE,
Clerk of the Senate.

Social Security as Based on Taxes

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of May 8, 1949:

SOCIAL SECURITY AS BASED ON TAXES—BUILDING OF RESERVES TO PAY BENEFITS IN THE FUTURE IS VIEWED AS FUTILE—PROBLEM ONE OF SUPPORT—PROGRESS OF PAY-ROLL LEVIES INTO THE TREASURY AND ITS TRUST FUND TRACED

(By Godfrey N. Nelson)

Whenever proposals are made for the expansion of Federal social-security benefits on the so-called trust-fund basis of financing such plans, proponents take exception to plain talk on the fiscal methods employed in their administration.

The favorite method of approach is to charge those who persist in plain talk with directly or indirectly opposing social security as an institution. This is wholly unjustified. The welfare of our people is a generally recognized social need. It is on the extent to which welfare projects can be supported that there are serious differences of opinion and it is the fiscal method employed which is objectionable; bookkeeping reserves will not save future generations from again being taxed to liquidate bonds in the fund.

In 1939 the original Federal old-age-benefits law created "an account in the Treasury" to be known as the Old-Age Reserve Account. This was superseded by the Old-Age and Survivors' Insurance Trust Fund on the books of the Treasury. The trust fund succeeded to the securities and balances held by the Secretary of the Treasury for the old-age reserve account on January 1, 1940.

COURSE OF PAY-ROLL TAXES

Receipts from social security pay-roll taxes are loaned to the Treasury, for which the fund receives interest-bearing United States obligations. To the extent of such loans the fund has disposed of its cash; instead of cash it holds United States obligations. The moneys so loaned are used by the Treasury for the payment of current Government expenses.

As and when the trust fund should need money for the payment of social-security benefits, the certificates of the United States obligations will be surrendered by the fund for payment and the proceeds used to pay beneficiaries.

Since the Government has only one main source of revenue—taxes—the fund's bonds presented for payment must necessarily be paid out of current tax receipts. If the Treasury should be without a surplus—operating at a deficit—and tax-money is not available out of which to redeem bonds belonging to the fund, the bonds would have to be sold and redeemed at some future time when tax-money is available.

ACTIVITIES OF THE TREASURY

Although in principle the moneys turned over to the fund are funded, in that bonds are issued and delivered to the fund, the Treasury is the only real party to the transaction; it assesses and collects the tax, and issues its obligation therefor. When it needs the money represented by bonds it must either meet such demand out of current funds—tax receipts—or raise the money again by the sale of bonds. Conceivably, if the fund has $50,000,000,000 of bonds (which is anticipated), the Treasury could be seriously embarrassed by large demands upon it. Thus the Treasury's ability to pay social security benefits must again depend upon its ability to raise revenues. The greater the fund, the greater the potential burden.

A different viewpoint can be placed upon these transactions by considering each branch of the Treasury as a separate entity, but basically the facts are not altered. The bonds were not out of the possession of the Treasury; they were not paid for or held by the public; they were only evidence of an indebtedness by and to the Government itself. When the law was amended to change the name of the Reserve Account to Trust Fund, the intrinsic character of the account was not changed.

Even in England, a comparison made some time ago of the Beveridge plan with our own system showed that the British social security system does not involve a huge growing reserve. The British system was practically on a current cash basis. The British policy is quite the opposite to that of our social planners. A study of one of the Beveridge reports rejects the idea that government should create a fund or reserve against liabilities maturing in the future by pointing out that its power of compulsion can bring each successive generation of citizens into the plan and exact from them through taxation enough to cover the benefit disbursements.

To pile up a reserve for future social security benefit payments would result in excess taxation now and would not spare future taxpayers from having to pay the full cost of such benefits.

Being an American

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to call attention to the proclamation of the President designating May 15 as "I am an American Day" and I wish to submit a copy of an excerpt from a radio address delivered by William Randolph Hearst, on September 28, 1932, and reprinted in the Hearst newspapers, as follows:

BEING AN AMERICAN

(From a radio address delivered by William Randolph Hearst, on September 28, 1932, and reprinted in the Hearst newspapers)

I know of no finer title, and I want no higher position, than to be a citizen of the United States of America.

In the ancient days to be a Roman citizen meant to be the equal of princes and kings.

Today the most envied honor in the world is to be an American citizen.

And this is so, not merely because America is the greatest nation in the world, but because it is the freest nation in the world, and the happiest nation on account of its freedom.

We cannot understand how much freedom means in this country until we come back from countries where freedom means nothing.

Here we have freedom of thought, freedom of the press, freedom of speech.

Here we can think and say and do what we please as long as we do not interfere with the rights and liberties of our fellow citizens.

But the great honor and advantage of being an American citizen carries with it an obligation just as great, and that obligation is to preserve inviolate the rights and liberties and privileges which our forefathers won for us in blood and toil and travail, that we may hand this precious heritage of freedom and independence, of liberty and dignity, down to our children and our children's children, undiminished and unimpaired.

Mr. Speaker, it is my opinion that this expression is most appropriate at this time, and is a message well worth reprinting as we celebrate "I am an American Day."

Iraq Urged as Refuge for Arab Refugees

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES
Thursday, May 12 (legislative day of Monday, April 11), 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article from the Christian Science Monitor of Tuesday, April 12, 1949, entitled "Iraq Urged as Refuge for Arab Refugees," written by Eliahu Ben-Horin, who lived for many years in Palestine and was head of the Padestine News Service. I may say it is a subject with which I am thoroughly familiar and with which I am in entire sympathy, the solution, I believe, not only of the problem of Israel but of the problem of the Middle East, which can be financed easily by a small portion of the very generous oil royalties which American and British firms are now paying in the Middle East.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IRAQ URGED AS REFUGE FOR ARAB REFUGEES

(By Eliahu Ben-Horin)

What has the future in store for the Arab refugees from Israel? Can Israel reabsorb them? Or can they be permanently resettled in a new land?

Perhaps 600,000 Arabs have fled from Palestine to non-Israeli territory. They are not wanted in the lands to which they have fled. Nor are they able to find a place in the economy of their present home.

Whether the Arabs fled from fear of Jewish fighters or whether they were badly advised by Arab leaders who wished to clear the field, the fact remains that they have gone.

Except for the 100,000 who stayed behind, the Arabs are no longer in Israel. By the time peace is fully restored, they will have been gone at least a year.

HOMES TAKEN OVER

During my recent trip through Israel, I was interested particularly in seeing what had happened to prewar Arab homes and positions. Thus examined, the practical prospects for a mass Arab return emerge as poor.

Let us start with the question of Arab homes, whether in the mixed and strictly Arab cities or in the Arab villages. In Jerusalem, Jaffa, Haifa, Safed, Tiberias, Acre, Ramleh, Arabs owned many modern houses. As a result of the great onrush of Jewish immigrants during the past 9 months, all the houses fit for habitation have been taken over.

Today Katamon, the Arab quarter of new Jerusalem; Ein Karem, a township outside of Jerusalem; the new city of Acre; the modern sections of Jaffa and Haifa are inhabited by Jews to full capacity.

The slum sections in most of these cities either have been destroyed by warfare or dynamited in order to clear the way for city planning. About 30 blocks of houses in Jaffa, adjoining Tel Aviv, now present a mass of ruins and masonry, while a similar picture is to be seen in the Arab parts of Haifa. In other words, if the Arab refugees should return to Israel, not one could reoccupy his former home. The same is largely true of the bigger and more prosperous Arab villages.

Not only Arab homes but also Arab economic positions either have become nonexistent or nonavailable to the Arabs. Arabs used to form the majority in the lower officialdom of the Palestine Government. Thousands of them were in the employ of the railways, the police, or the road repair service. Without suggesting in the least that the Israeli Government will be "Arabless"—in fact, there are already some Arabs in its employ—one must conclude that only a limited number of Arabs can look forward to government posts.

The large decrease in the size of the Arab rural community must cause a decrease in the Arab urban population. The Arab intelligentsia is bound to find a much narrower scope of activity. Arab lawyers, doctors, architects, teachers, or musicians never had a Jewish clientele, though Jewish professional men had many Arab clients. As things now have developed, the prospects of Arab professional workers have shrunk by 90 percent. The same applies to the Arab cafe and restaurant, cinema, newspaper, grocery store, and the entire spectrum of city life.

The Arabs of Palestine are entitled, of course, to financial compensation for property they have left behind them. This means that Arab refugees from Palestine will have money coming to them from Israel. Whether it will be much or little, it will not be homes, jobs, and farms.

It appears from the foregoing that it would be better for them, for the Jews, and for Middle East tranquillity if they used these sums elsewhere.

REFUGEE PLAN CHARTED

And such a possibility exists. A plan has been devised for a constructive solution of the Arab refugee problem. I mean the Hoover plan, set forth by Herbert Hoover long before the Palestine war, and before the Arabs of Palestine became refugees. The fact that the remedy Mr. Hoover prescribed predated the problem in no way detracts from the practicability and urgency of his plan. As Mr. Hoover explained in 1945:

"In ancient times the irrigation of the Tigris and Euphrates Valleys supported probably 10,000,000 people in the kingdoms of Babylon and Nineveh. The deterioration and destruction of their irrigation works by the Mongol invasion centuries ago, and their neglect for ages, are responsible for the shrinkage of the population to about 3,500,000 people in modern Iraq. * * *

"My own suggestion is that Iraq might be financed to complete this great land development on the consideration that it be made the scene of resettlement of the Arabs from Palestine * * *."

MUTUAL BENEFIT

"There is room for many more Arabs in such a development in Iraq than the total of Arabs in Palestine. The soil is more fertile. They would be among their own race, which is Arab-speaking and Mohammedan. The Arab population of Palestine would be the gainer from better lands in exchange for their present holdings. Iraq would be the gainer, for it badly needs agricultural population. * * * It would be a solution by engineering instead of by conflict."

Many millions of dollars have been spent and many more will be spent for the upkeep of the Palestine refugees. The United States has granted $16,000,000 as its share of the $29,000,000 allocated by the United Nations. All these millions will not solve the problem of the Arab refugees or produce any permanent adjustment. To avoid misunderstanding, let it be stated that I heartily endorse the most generous relief for Arab refugees, but I see no reason to ignore the fact that charity unaccompanied by constructive planning is no remedy for a social ill.

President Truman has proposed large-scale aid to undeveloped and underprivileged areas of the world. One hears of plans for a $1,000,000,000 appropriation for the Middle East alone. The permanent resettlement of 500,000 men, women, and children, who lost their homes, fields, and shops, should be an integral part of these plans.

What Mr. Hoover visualized as a one-sided transfer can be developed into a plan for an exchange of populations. About 250,000 Jews live in Iraq, Syria, Lebanon, Egypt, and Yemen. An exchange of population is indicated, and it is seen as a benefit for all concerned.

The formula of Mr. Hoover seeks a solution by engineering instead of by conflict. Unless it is accepted a bad socio-political irritant is preserved, which would prove to be a serious obstacle on the road to peace and stability in the Middle East.

The Case for National Health Insurance

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Thursday, May 12 (legislative day of Monday, April 11), 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Case for National Health Insurance," written by the distinguished Senator from Minnesota [Mr. HUMPHREY] and published in the New York Times magazine of May 8, 1949. This article supports the President's national health program.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CASE FOR NATIONAL HEALTH INSURANCE

(By Hon. HUBERT H. HUMPHREY, of Minnesota)

As a member of the new Senate Subcommittee on Health, I have just finished my homework—boning up on 10 volumes of testimony gathered by two earlier subcommittees on this question: How can we best bring adequate medical care within the reach of all our people?

To date, 5,890 pages of answers have been accumulated. For Congress, the very soul of caution, has been gingerly weighing the merits of voluntary versus compulsory health insurance ever since 1939.

Admittedly, the task before Congress is difficult. Good health cannot be legislated into existence. Nor can any simple prescription, hastily conceived or carelessly compounded, improve the Nation's health. But after more than a decade of examination and debate, and in the light of experience with voluntary prepaid programs, I believe we can at least agree on a frank diagnosis of what is hurting us.

The cause of our malady is essentially economic. We suffer from the high cost of medical care. American medicine, undoubtedly the world's finest, is priced beyond general purchasing ability. This act was brought out in 1939 by the American Medical Association's own bureau of economics. Its study disclosed that families with incomes below $3,000 could not meet serious illness costs without outside aid.

Bring those figures up to date by compensating for a 10-year spiral in living costs and the $3,000 mark soars to $5,000. Today, four out of five families fall below this standard of medical self-sufficiency. Consequently, the threat of doctor and hospital bills hangs over 80 percent of our people. For most of us serious illness means all to frequently wiped-out savings, unpaid bills, and mortgaged futures.

Medical care is not only expensive; it is poorly distributed as well. Doctors, hospitals, nurses, dentists, and other professionals are often in scarcest supply where the need is greatest. Gleaming doctors' plates crowd each other for space on city apartment houses. (Cities average 1 doctor per 500 people.) But weathered wooden shingles are fast disappearing along with their practitioners from our countryside. Some rural States now average only 1 doctor per 1,700 people.

Where hard cash is short and medical attention scant, high-sickness rates prevail. A few heart-breaking statistics drive home the thesis that low income equals poor health. Only 1 out of 2 southern mothers can afford or receive needed childbirth care. Result: 9 out of 10 States with the highest maternal death rate in 1946 were Southern States. In the low-income States of Alabama, Georgia, Mississippi, and South Carolina, the death rate among women in childbirth, for example, is three times as high as in Connecticut, Minnesota, or Rhode Island.

Infant death rates repeat the same tragedy. In 4 low-income States, 50 to 100 babies died in their first year, compared with 28 to 30 babies per 1,000 live births in 4 high-income States.

Shocking figures? Yes, and all the more so because they stem from the dismal economic cause we have thus far failed to remedy: The price of medicine in the market place is too high.

Let us keep this broad picture of our health needs in mind as we examine the two principal solutions that have been proposed: voluntary versus national health insurance.

The achievements of voluntary plans in most areas of American life are impressive. In fact, I should state that a Nation-wide system of voluntary organizations for medical care with adequate coverage is more consistent with my personal and political philosophy than a Government-established program. I would, indeed, warmly welcome a national network of such voluntary cooperative health plans as the Group Health Mutual in my own State of Minnesota and the Group Health Association in Washington, D. C.

These truly voluntary plans are not, however, what is intended by those who would oppose a national health insurance program on the ground that voluntary plans can fill the need. Rather, many of those, led by the lobbyists of organized medical societies which now champion their own brand of voluntarism, are the very ones who have persistently impeded the growth of cooperative medicine—the very essence of voluntarism. The law reports and legislative hearings provide ample evidence of that. For example, the group health cooperative in Minnesota, because of the opposition of certain spokesmen of the organized medicine societies, has been unable to obtain enabling legislation despite the support of the Governor. Similar opposition is being met by cooperatives in Wisconsin.

In reality therefore the voluntary plans being championed by opponents of the national health insurance program are outlined, prepared, and directed by the doctors and hospital personnel and not by the public, which is most directly affected by the lack of adequate health facilities. Curiously enough the representatives of the medical societies now urging their form of voluntarism are the same ones who not so long ago opposed the plans they now endorse.

Where and how do these voluntary plans fall short? Let us judge them by four important criteria, which should be applied to any program purporting to improve our Nation's health:

1. Coverage: Is it Nation-wide in scope so that all our people are covered?

2. Comprehensiveness: Does it pay for almost all medical services of an average family?

3. Sound administration: Is the plan administered in the public interest?

4. High-quality care: Does it firmly guarantee professional freedom so essential to doctors, nurses, and hospitals? Does it promote better standards of medical care?

Two factual surveys of voluntary health-insurance plans were released recently by the Committee on Research in Medical Economics, a nonprofit group which has pioneered in this complex subject. The first report analyzed the relative scope of voluntary plans, the protection offered, the number and geographical distribution of people served.

The findings may be summarized as follows:

COVERAGE

The general shortcomings in this field may be glimpsed in a few statistics on how many people have what kind of protection.

Hospitalization insurance only: 27,000,000 people.

Hospitalization insurance plus physician's services in hospital: 27,000,000 people.

Comprehensive plans, including preventive care: only 3,500,000 people. In other words, about 1 out of every 40 persons enjoys reasonably complete protection through voluntary programs.

In rural areas, less than 3 percent of the population presently subscribe to the Blue Cross hospital plan.

Eighty-five million Americans have no protection against crippling sickness costs. The reason? Voluntary plans are priced beyond the reach of that great middle-income group which needs such protection most. Since these plans have no sliding scale of payments to match income, their rates are too steep for many pocketbooks. The same conclusion is reached by the Journal of the American Public Health Association:

"Both logic and experience indicate that such a program does not—and cannot—reach the large middle group of the population.

"Nor can the issue be solved by asking families to join in support of voluntary insurance and pay out money which they do not possess."

COMPREHENSIVENESS

Voluntary health insurance, although an excellent aid, does not cover even the major part of the subscriber's annual sickness bills. Hospitalization insurance, such as Blue Cross, covers only 21 percent of an average family's annual medical bill. Add physician's services in a hospital—Blue Shield—and it still remains relatively low—only 35 percent.

These combined plans, the largest in existence, do not meet such important day-to-day medical costs as protection against common illness, periodic check-up, immunization or inoculations, or prenatal and postnatal care. The services of a family doctor or a specialist in his office or at the patient's home are not provided. Preventive medicine is not possible.

SOUND ADMINISTRATION

Sound administration requires a division of responsibility between the professionals who provide the health services and the consumers who pay for them. Certainly all medical matters should be left strictly in the hands of doctors. But by the same token those who foot the bills should have more control over such lay matters as administrative details, scope of benefits, eligibility of membership, subscribers' fees, etc.

To deny the public its proper voice in the administration of voluntary programs is to invest medical societies with all the powers of a monopoly and none of the checks against the abuse of that power. Unfortunately, there is abundant evidence showing how organized medicine is presently exploiting its quasi-monopoly position.

A study by the committee on research in medical economics, recently completed, reports that State and local medical societies use restrictive State legislation, boycotts and other professional pressures to block the growth of health insurance plans providing comprehensive services. These plans, competing with the Blue Cross and Blue Shield, are sponsored by industries, unions, cooperatives, farmers, and other consumer groups. Special laws passed with the approval, if not at the request, of medical societies have been enacted in 22 States. These laws prevent the establishment of voluntary health insurance plans unless they are controlled by organized medicine.

The report of the committee on research further declares:

"The medical societies not only refuse to sponsor the type of health-insurance plan which professional opinion has recommended as able to offer the most adequate medical service at reasonable cost, but also have endeavored to prevent their individual physician members from participating in such plans.

"They have choked the development of * * * comprehensive health services in favor of plans offering only very limited services.

"They have restrained doctors from free experimentation in improved forms of medical service and have prevented the people from experimenting with improved methods of payment for service."

HIGH-QUALITY CARE

The study further declares that the AMA defends its opposition to consumer medical plans on the ground that it is guarding the standards and quality of medical service. But, states the report, the medical societies cannot claim that the health-insurance plans which they control guarantee the quality of professional care. On the other hand, the study points out, many of the consumer-operated plans do provide high-quality medical care through group practice and preventive medicine which have been repeatedly recommended by professional authorities.

The distinguished chairman of the committee on research in medical economics, Dr. Michael M. Davis, once summed up the case against voluntary health insurance in these words: "Voluntary plans do not offer broad enough coverage at low enough rates to a large enough portion of our people to justify serious consideration as a national solution to our national problem."

All of this evidence compels recognition that the four basic criteria of coverage, comprehensiveness, sound administration, and high-quality medical care are not met by voluntary plans. They are at best stop-gap defenses in the battle against medical cost.

But some people ask: "Why not overcome the cost factor by subsidies to voluntary plans for those people unable to meet premiums?"

The proposal is attractive on the surface but further reflection uncovers its many defects. First, it would inevitably require a means test to decide who can or cannot afford the premium. We would thus be turning the clock back to the odious charity principle of the nineteenth century. Second, to protect tax funds from misuse, it would require an army of bureaucrats constantly prying into each family's income and job status to check on eligibility. Third, it would involve Federal subsidies to private plans which are essentially run by organized medicine, not by the public.

Now we come to the heart of the controversy—the national health program the President has requested. Following his special message on April 22, an improved comprehensive health bill was submitted by eight Senators and two Congressmen.

The bill specifically guarantees that payments for benefits shall be in proportion to incomes, and persons "shall, therefore, obtain services as a right and not as a charity; that they shall be insured the free choice of their doctors; that physicians and other professions furnishing services to them shall be assured freedom in the practice of their profession and assistance in maintaining high standards, and that the administration of this act shall be based upon the American principle of decentralization."

Administrative responsibility is accordingly placed "in the hands of local bodies representing both those who pay for and those who render services, and operating within the framework of plans made by the several States." This provision, incidentally, though recognizing the role of volunteer plans and providing for their operation, does not give adequate protection to all volunteer nonprofit plans, such as cooperatives, whose operation may be opposed by State medical societies. I am, therefore, introducing an amendment to correct this weakness.

The bill bans "discriminations because of race, color, or creed," and would allot substantial funds annually for scholarships, grants to professional schools of research, and concrete aid to underdoctored areas, such as ambulance services and subsidies to young doctors.

As drawn, the bill would cover approximately 85 percent of the population. It includes employees, self-employed persons, and their dependents.

As a former practicing druggist of many years' experience and an admirer of the tremendous achievements of the American medical profession, I was particularly critical in examining guaranties of professional freedom. A careful scrutiny of the bill and of the testimony presented on previous measures before subcommittees assures me that there is no danger to the professional freedom so essential to doctors, nurses, and hospitals. None of these is placed under Government control and the patient has the unqualified right to go to the doctor of his choosing or to change doctors. Furthermore, millions of persons who today do not have free choice of physician because of economic

barriers will have that privilege for the first time. The bill also scrupulously protects the private relationship that should exist between a doctor and his patient.

Thus, the national health insurance bill measures up to the four standards by which we have judged voluntary health insurance:

It would cover almost all our people.

They would receive virtually complete protection against all medical hospital bills.

Local control and the principle of decentralization are stressed repeatedly.

High-quality medical care would be stimulated.

What then of the serious objection raised in some quarters that the national health insurance plan is primarily a blueprint, not a working plan?

Some physicians reject the AMA's tactics and recognize that the present fee-for-service system is unsuited to our needs and that voluntary insurance has incurable deficiencies. But, at the same time, they argue: "National health insurance promises more than can be delivered. It would impose crippling demands on our present overtaxed facilities. * * * We need time, more time, to prepare."

These critics have been calling for time for the last 10 years. Yet the desired expansion has not come. Nor can it come so long as medical care is circumvented by restricted purchasing power. We may build more hospitals, train more doctors, and discover new cures. But they must be supplemented by pooled purchasing power to pay for hospital care in each community to be effective.

To wait for promised expansion before we seek to provide pay for health care is to blind ourselves to the hard facts of medical economics. A sound plan strives to create a financial base first and accepts the necessity of a brief "tooling-up period" to train personnel and build facilities.

Foreign experience serves as no necessary criterion, but for those who like to look before they leap, Great Britain's progress under its new National Health Service Act is enlightening. While differing from our proposed program in some respects, the British plan spreads and spaces the costs of medical care. Both work on the tested insurance principle of pooling resources to face a common risk. In the 10 months since the British act went into effect (July 5) professional medical opinion (once opposed), the Conservative Party and the British people have provided evidence of the act's tremendous acceptance.

Said the Lancet, long established independent British medical publication:

"Both doctor and patient are pleased with their new and easier relationship. * * * Patients are also grateful to observe that the new service is truly comprehensive. * * * Complaints are few."

The Conservative Party virtually lost the important by-election at Hammersmith before they could reverse their policy and endorse the British Health Service Act. Official Conservative Party policy is now to promise the act's retention and to point to the important role played by Winston Churchill in sponsoring the program in 1944.

The last and most compelling endorsement of the act comes from the people themselves. The British Institute of Public Opinion reported that British voters named it the Attlee government's best act: "It far outranked any other measure in popularity."

For 10 years we have been diagnosing our problem, studying the operation of voluntary programs here and national programs abroad. Now the urgency of the situation compels us to act.

Civil Air Patrol Doing Fine Job Under Able Leadership of Its Commander, Maj. Gen. Lucas V. Beau

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. JOHNSON. Mr. Speaker, it was my extreme pleasure to attend the annual banquet of the Civil Air Patrol last evening. It happens that I was the author of Public Law 557, which gave the Civil Air Patrol a legal status in our armed services. My efforts in this regard gave me great personal pleasure. The commander of the Patrol is Maj. Gen. Lucas "Vic" Beau. He presented a report which I am including in my remarks. The work of this group—comprising over 100,000—is inspiring. These people are performing their tasks without any compensation. All they want is to be given a chance to do something for their country. They have adopted aviation activities as their vehicle to express their desire to serve America.

I commend a reading of the national commander's report to Congress to my colleagues in Congress. The commander has a wonderful record as an aviator and Air Force officer. He was one of the pioneers in building air power in America and I am sure you will be thrilled by his message which follows:

NATIONAL COMMANDER'S REPORT TO CONGRESS

There are many tried and true friends with whom I have often discussed aviation and the part being played in its growth by the Civil Air Patrol, so to them, my report will be especially interesting, for without their faith and encouragement CAP would not be as advanced as it is today.

I might say that a year ago Civil Air Patrol was like a ship on the Sargasso Sea. It had its framework but the hull was becalmed for lack of impetus and guidance.

There were then 49 wings—49 individual wings trying to do a job without having a definite, clear-cut outline of the work to be done or how to do it.

The Honorable LEROY JOHNSON, of California, started the ball rolling in the right direction by introducing Public Law 557, which was passed by the Eightieth Congress to become the cornerstone on which today rests the Civil Air Patrol as a volunteer legal auxiliary of the United States Air Force.

With passage of that law we have the Air Force as a guiding light—our big brother to help us and lead us, and the tempo of organizing and correlating the Civil Air Patrol has stepped up.

A previous public law, No. 476, enacted by the Seventy-ninth Congress in 1947, had granted a Federal charter for incorporation as a nonprofit corporate body, and thereby establishing the need of a formal constitution and bylaws. The constitution and bylaws were promulgated and approved at last year's national conference. During this past year the members of the national executive board and the wing commanders have tackled the job of building and organizing anew with the utmost initiative, imagination, and spirit. The effort has been surprisingly consistent and on the whole the Civil Air Patrol wings throughout the country are now knit into an organization of which we are, we feel, justly proud.

In this, my annual report to Congress on the progress and record of Civil Air Patrol, I am not going into too many statistics and dry facts. They are available and have been presented to you in other forms, but I do want you to realize that the progress has been gratifying and that the future looks "clear and unlimited."

As General Vandenberg has told you, the Air Force is prepared to give CAP all the help possible within the limits of the law, and this assistance already has contributed greatly to the securing of additional members and the building of a thriving and healthy cadet program that I hope to see the peer of any in the world.

The wisdom of Congress in making the Civil Air Patrol a legal auxiliary of the Air Force has been amply demonstrated this past year in the increased efficiency and wider appeal of the CAP to the air-minded civilian groups in the Nation. Many wish to keep alive their technical air proficiency in small aircraft. Others strive to promote better citizenship through organization of the youth of the Nation by assisting in giving the teen-age groups a healthy and interesting outlet for inquisitive minds, in a period when juvenile delinquency is on the increase.

A high point in the program is the cadet exchange which General Spaatz and I recently arranged on a quick trip to England, France, and Switzerland. As you know, our cadet exchange program with Canada was put into effect last year and its success prompted us to enlarge our Canadian-American program to include the three European nations.

It is easy enough for me to envisage in the not too distant future a youth organization linking together the airmen of the world in a fraternity that might go further than any of us now see toward establishing a firm basis for mutual understanding and lasting peace.

Air cadets from the three European nations and Canada will be "exchanged" with Civil Air Patrol cadets this summer: living in each other's communities, sharing the exchange cadet's friendships, knowledge and experiences, studying his problems; to be sure, even dreaming some of his dreams.

It seems to me that we could not find a finer means of drawing our world closer, of enlarging the horizons and outlook of the youth of this great Nation of ours than the knitting of the minds and ideals of our boys and girls to those of air-minded youth groups in other nations.

The validity of this thinking was pointedly demonstrated to us when the group of "Marshall plan" high-school-age youngsters were brought to this country early this year. These 34 young people, a boy and a girl from each of the 17 Marshall-plan countries were given a "Cook's Tour" of the United States under the sponsorship of CAP, with transportation arranged from the United States Air Force.

At most of their many stops, these youngsters were house guests of CAP cadet families. Those of you here who had any part in the arrangements along the trip can vouch for the splendid good will that was created. Col. Nancy Tier, our wing commander in Connecticut, accompanied these young folks on their trip, and I think a paragraph from a letter she received from one of them explains the project in better words than I command. I quote: "It does not make any sense for me to try to deliver another one of my unbearable gratitude speeches here, because what I feel towards all you Civil Air Patrol people cannot be expressed in words. Since I came here I have been relating my exciting experiences in the United States of America over and over, and I never got tired

of repeating the details of our CAP trip for dozens of times. True enough, all those details, the planes and their pilots, the picturesque landscapes we flew over and the beautiful clouds we flew under have left a very clear path in my memory, and I wonder if we all will be able to forget them, someday. We will never forget our exciting departure at Mitchel Field; nor our Texas storm, or the Albuquerque paints—but I am confusing things. Maybe I will write a book some day, and I will tell the world how a group of boys and girls, while singing the 'Should Auld Acquaintance Be Forgot' and being 11,000 feet over the ground, discovered the greatest truth of all ages, that people from all over the world are simple, plain people, that can get along together very well." Signed "Very sincerely yours, Anthony Demetriades," from Athens, Greece. * * * Need I say more?

Getting on, in addition to the exchange of cadets, we also are sponsoring between Canada and the United States a marching drill competition which last year stirred the air-minded youths of both nations to new heights of anticipation. The various wings and units of CAP and the Air Cadet League of Canada are striving for the privilege of representing their country in the final drills.

This year, the final drill team from the United States will meet the team from Canada at Toronto and we hope to wrest the marching title from our good cousins for at least 1 year.

A new training manual is being prepared in our organization and will be ready for distribution late this summer. The manual will cover the entire field of aeronautics and is designed to teach fully and clearly these fundamentals to the 100,000 students I hope to see enrolled in CAP by the end of this year.

This manual, by the way, is something new in the field of aviation. This is the first time that this admittedly technical field has been organized and prepared for presentation to teen-age groups. Our training staff has spent countless hours in the preparation and, I am happy to say, we have had invaluable aid and guidance from some of the top educational people in the country.

I would like at this time to offer the heartfelt thanks of Civil Air Patrol to those selfless teachers and educators who have offered suggestions and guidance and then helped to edit and re-do the material for this manual.

During the past year our Civil Air Patrol aeronautics courses were adopted by many secondary schools throughout the country. All arrangements are being made by CAP units in the communities and the benefits of our works are free to any who wish to partake. CAP membership by students and faculty is desirable, but, and I emphasize, CAP membership is not a requirement for use of CAP material in the school systems. We are becoming and we desire all our affiliates to be leaders, not taskmasters.

This is the air age and the science of flying certainly must be considered one of the most important to include in the science courses of our schools.

We have completed plans making the CAP courses available to all the secondary schools in the United States and we expect to urge as many schools as possible to include the course next fall.

This program is predicated on new regulations for organization, administration, and training of the cadets.

Book 1 of the manual will give the cadet a thorough grounding in the history and purpose of CAP and familiarize him or her with such subjects as air marking, search and rescue, communications, photography, and emergency services.

Book 2 goes right into the heart of aeronautics, dealing directly with the theory of flight, meterology, and navigation, and is designed as a 1-year course when taught daily.

However, the senior program is not being neglected completely either, although this year we do seem to be robbing Peter to pay Paul in order to launch our full-scale cadet program.

The purpose of this entire civil air patrol educational program is to teach the theories of flying so that the Nation's youth will be aware of this most modern of sciences and to give them an opportunity to take part in the air development of America by adopting aviation as a civilian career.

I am sure you will all agree with me that this emphasis should properly be placed on our cadet program, for certainly the future of the world lies to a large extent in the hands of its air-minded youths. And we here in the United States owe a duty to the future to provide the training and knowledge of flight to the youth of today.

Not many of us realize the obligation we, the first generation of airmen, owe to the heritage of the air which starts with some of us who are still flying today after pioneering almost as far back as the turn of this century.

Well, to get to another side of the CAP picture, I want to recall to you the terrible blizzards that swept the West this past winter, taking its toll of CAP pilots' lives and destroying equipment and reserves that we could ill afford to expend so quickly. However, we had to be prodigal when the lives and welfare of many isolated families were at stake.

Everyone has heard of the great feats performed by the Air Force and the Corps of Engineers in fighting the blizzard conditions. CAP was caught behind the door and little credit, except among their own neighbors, went to the intrepid small plane pilot cruising for CAP in the worst possible weather conditions.

These CAP pilots flew hundreds of missions week in and week out during January and February, dumping food, medicine, messages, spotting isolated and desperate families and livestock. They acquitted themselves most courageously.

I personally want to thank every man and woman, boy and girl, in CAP who contributed to the magnificent record of the organization.

Incidentally, the CAP growth by leaps and bounds in 1948 also can be attributed to some extent to this excellent record.

After the storms cleared many of these neighbors, who had been voluntarily helped at a critical time, decided that in the next emergency they would be ready, too, and so the requests for new CAP units have come in steadily.

These small-plane CAP pilots flew more than 1,400 official hours in more than 134 aircraft in the seven most severely stricken Western States during the spectacular rescue work in January and February.

In nearly 1,000 sorties CAP flying crews master-mapped and observed thousands of miles of storm-swept country.

More than 23 tons of various relief drops were made by CAP personnel—and that's a lot of weight for small aircraft to distribute.

I am glad to report to you that the efficiency of a national radio network which has really been put into operation by the Civil Air Patrol during the past year was amply demonstrated during last winter's emergency blizzard conditions. The CAP network in many cases was the only link some isolated settlements retained with the outside world for weeks at a time.

This network, a mere outline on paper for the most part at this time last year, has been completed, and now reports are received and correlated at national headquarters every Tuesday and Thursday nights from every part of the Nation and Hawaii and Alaska.

Hundreds of radio units throughout the country tackled the problem of setting up the network using surplus military radio equipment, in most cases, with an enthusiasm that soon started cadet classes humming with potential ham operators.

In fact, my report to Congress will be picked up by the national radio net of CAP and relayed to every point in the Nation. It's a wonderful sense of achievement to realize how far this project has advanced since last I reported to you.

I am aware that we still have many problems to be met in the Civil Air Patrol and its administration, and I am sure that with patience and the guidance of the Air Force we shall meet the needs that emergencies will force us to face in 1949.

In summation, I believe we can safely assume that a year of accomplishment has been completed since we were all together at this time last year, and I am proud to report to you that in 1949, to this date, the total number of new applications processed by national headquarters is close to 6,000, an increase of about 3,500 over the same period last year, and exceeds by several thousands the entire enrollment of new applicants in 1947.

That, I believe, represents the kind of progress we want in Civil Air Patrol and with your assistance and the mutual understanding and exchange of information and ideas possible at such gatherings as this, I hope we will go forward steadily to take our rightful place as the more or less graying, but still vigorous, tutor and guide for the airman of tomorrow.

FBI and the Communists

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1949

Mr. VELDE. Mr. Speaker, under permission to revise and extend my remarks, I include in the Appendix of the RECORD two excerpts from the editorial column of the Peoria Journal and Transcript of May 6, 1949, entitled "Starting Over" and "Who's a Communist?":

STARTING OVER

Defeated in their effort to ram through Congress a one-sided labor-relations bill, the Truman administration now must start all over again if it hopes to obtain repeal of the Taft-Hartley Act in this session of Congress.

What the administration should have known all along should now be evident to it. This Congress is not going to pass any legislation which will return the country to the free and easy days of the Wagner Act when labor bosses rode roughshod over everyone and everything that got in their way in their drive for power.

The advantages and the advances obtained under the Taft-Hartley Act, admittedly not a perfect piece of legislation, are too evident to allow for its complete erasure, regardless of whether or not President Truman thinks he has a mandate from the people. He forgets that every Member of the House of Representatives also was elected in the November election and that their action can be taken as indicative of the sentiment of the people in their districts.

Had the administration produced a common sense bill, removing some of the obvious defects and injustices of the Taft-Hartley Act but retaining some of its good features, it probably could have passed it without any trouble. It chose instead to go whole hog for the power-hungry union bosses and as a result it wound up with the Taft-Hartley Act still on the books. And it is possible that it will still remain there when this Eighty-first Congress, of which Mr. Truman expected so much, is through its work.

The present Congress can still pass a labor law based on reason and justice, however. It can pass a law designed to give protection to the essential rights of workers and employers alike, not to one or the other. It can pass such a law if the administration forgets its pride and accepts its licking and gets down to work on sensible grounds as it should have done in the beginning.

WHO'S A COMMUNIST?

As the FBI continues to parade witness after witness to the stand in the New York trial of 11 Communist Party leaders, the question arises as to how long this procession of persons planted in the Communist ranks by the Government will go on.

Half a dozen or more persons already have taken the witness chair to tell how they worked as members of the Communist Party whereas in reality they were in contact with the FBI all the time. They have given extremely damaging testimony concerning secret workings of the Communist ranks.

It has reached a point where a Communist doesn't know who to trust anymore. He doesn't know who is a Communist and who isn't. His closest co-worker may be an agent of the FBI. Certainly it isn't doing the morale of the Communists any good.

The efficiency of the FBI coverage of Communist activity, as it is being revealed in the present trial, should be most reassuring to all Americans. Certainly the G-men have been on the job and doing most excellent work.

Federal Aid and the Challenge to Freedom in Education

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. LYNCH. Mr. Speaker, the annual banquet of the Fordham University Club of Washington, which was held in this city on May 3, 1949, was addressed by Rev. Laurence J. McGinley, S. J., the newly appointed president of Fordham University. An outstanding educator, Father McGinley discussed the problem which is now being considered by the Congress, namely, Federal aid to education. I believe the remarks of Father McGinley would be of interest to the Congress and, under the unanimous consent granted me, I am taking the privilege of inserting in the RECORD the remarks of Father McGinley on that occasion, which are as follows:

As an educator with a deep love and a firm belief in the Fordham boy and all he stands for, I would like to talk with you tonight about a cloud that has appeared on the Washington horizon. At present it is not much bigger than a man's hand. But it is rapidly looming larger and it may, unless the winds change engulf not only Fordham and other institutions of higher learning but our whole American tradition of freedom in education.

You know, of course, that just as the battle for men's minds is world-wide, the battle for the schools—in which the minds of the men of tomorrow are shaped—is going on in almost every country. In any dictatorship, schools are the first targets. The beloved Cardinal Mindszenty became intolerable to the Communist government of Hungary precisely because of his staunch opposition to the nationalization of the schools.

Unfortunately, other countries have also been fascinated by the idea of a monolithic educational system in which all training processes are shaped in a single mold designed by the state. In France, Belgium, Holland, and Germany, doctrinaire Socialists are still pressing for a control of education that in the final analysis differs very little from the Nazi or Communist model.

In the United States we are fully aware of this importance of education. We are not satisfied simply to have more schools and colleges than anywhere else in the world—we also want them to be the best. And we are determined that a child's opportunity to obtain an adequate education shall not be conditioned solely by the size of his father's purse.

Our strong feelings on this subject, and the unequal distribution of wealth which makes many communities unable to compete with their more fortunate neighbors in providing facilities, have crystallized this year in various proposals for Federal aid to education.

Now it is perfectly legitimate—particularly with regard to institutions of higher learning—to argue about the desirability of the Federal Government moving into the educational field. But I realize that in Washington you have to face political realities. And from what I am told, some form of Federal aid to education is considered a "must."

The practical concern of all of us, therefore, is that Federal aid—if and when it is granted—shall not interfere with freedom in education. That it shall preserve the right of parents to send their children to any school that provides an adequate education, and that it shall not upset the delicate system of checks and balances that are as important in the educational system as they are in government.

On the first point—for the moment, at least—we do not seem to have very much to worry about. As a general proposition it is true that what the people support through their taxes, they must likewise, through their representatives, to some extent control. Nevertheless, the tradition of educational freedom in the United States is so strong that practically every proposal for Federal aid has contained elaborate safeguards against interference by Government in the educational process.

Unfortunately, there are indirect as well as direct ways in which government can gain control of education, despite the best intentions in the world on the part of sponsors of certain Federal-aid proposals. To illustrate what I mean, let us consider briefly two fundamental concepts in our American education tradition.

The first of these is based on the dignity of the individual before the God who made him. As it applies in this case, it means that every child belongs not to the State but to the parents who act as trustees for Almighty God. And as a corollary of this, that every parent has the right to send his child to any school which provides an adequate education.

No one today seriously quarrels with this concept. It is not only implied in the Constitution but was specifically affirmed by the United States Supreme Court in a famous decision regarding the parochial schools of Oregon.

The second concept follows from the first. If parents have the right to send their children to any adequate school, public or independent, sectarian or nonsectarian, then obviously all these schools must be allowed to exist without unfair discrimination or undue favoritism.

Ours is a pluralistic democracy, not a monolithic one; that is, ours is a political system involving many different groups, and not a system that eliminates or even tries to eliminate all differences. "E pluribus unum" symbolizes this principle of our unity of purpose in diversity of groups. The slogan, "every child in a public school," is therefore a direct attack on this pluralistic system by which we grew strong and stayed free. It is a definitely totalitarian drive for regimented uniformity.

Now in a pluralistic system it is basic that the different groups are entitled to public aid in proportion to public service, to welfare benefits in proportion to need. Our Protestant, Jewish, and Catholic chaplains are paid alike in the armed forces because of the public service they render and because of the welfare need of our soldiers and sailors. In like manner, the children in our denominational schools have a right to welfare benefits not because of their creed but because they are Americans. These principles are basic.

Now we all know that here in Washington a powerful lobby is pressing for a Federal education bill, excluding aid to all except public-school pupils. The passage of that bill would seriously hurt our American education freedom. To begin with, it would officially brand Johnny Jones in the independent school as unworthy of the same help as Willie Brown in the public school. Again, it would tax Mr. Jones for using his right to choose Johnny's school—as if this right were only a privilege graciously conceded by the local school board. Finally, it would entrench in American education those organizations which are excogitating their own brand of nonsectarian ethical culture as the official religion of the public school.

Senator MCMAHON and others have worked out provisions for an equitable compromise. Unless some such principles are embodied in the education law to be passed by Congress, we have just grounds to fear that secularistic legislation will follow in all fields of education, in health, and in welfare. That spells the end of the independent school, the independent hospital, the independent welfare agency, and the beginning of the completely secular totalitarian state.

The issue is as fundamental as that. It touches not only grammar schools but those on the high-school and college level. For the maintenance of the essential variety, diversity, and independence of schooling, it is of the highest possible practical importance that both public and independent systems of education continue to flourish side by side.

As Henry Ford II put it recently in speaking of the problems of higher education, "The existence of a larger number of privately supported colleges and universities seems to be the best guaranty that our whole educational system will stay young and dynamic."

Much of what I have been saying to you here tonight looks to the future. But in one respect at least, we hope with all our hearts to turn back the clock to the Fordham of prewar days.

As Americans, we are trained in the virtues of mass production. This typically American development has helped us win two world wars, and in peacetime—materially, at any rate—it has made us the most prosperous people on earth.

But there are two things at least which we cannot mass produce. One is the human soul and the other is an educated man.

Almighty God does not create an immortal soul as He makes plants or planets—through secondary causes. Each of us in this room is individually created by Him with His fingerprints on each personal soul. God has destined each of us to be with Him

one day face to face, forever. He wills that in this life each of us must learn the truth and love the good and live the life of beauty which is His grace. Toward each of the individual 13,000 souls enrolled in Fordham today you and I have a solemn responsibility.

And that responsibility begins with recognition of the fact that pedagogically we should not, and morally we cannot, educate individual men and women on the assembly line. By right, by common sense and by Jesuit tradition we should have personal contact with every single one of our students.

That is why I say to you in very truth that all of our $10,000,000 physical plant, all of our 500 professors, all our research, our program of education and athletics and campus activities, all our great plans for the future, exist for one individual only.

He is the typical Fordham student, standing alone on the vast campus, looking in turn at the beautiful tower of Keating Hall, the rows of classrooms in Dealy, the gray bulk of the gymnasium, the ivy-covered brick of Collins, the ancient stone and newly paneled beauty of the University Church—seeking for guidance.

It is for him alone that Fordham exists. If figuratively we can take that individual boy by the hand as he enters the main gate on the first day as a freshman and lead him with wise devotion through the next 4 years; if we can give him friendly counsel and personal attention to his particular problems and individuality; if we can teach as though he alone sat in the classrooms, rejoice in his success and help him in his difficulties; if we can hand him his diploma as though the faculty in their black robes and the great throng of visitors seated in the June sunshine were there to do honor only to him; if we can send him forth with the seal of Fordham indelibly stamped on his immortal soul, then you and I, each in our own way, will have fulfilled our mission to God, to our country and to the world.

Funds to Administer the Employment Security Law

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following:

THE COMMONWEALTH OF MASSACHUSETTS,
DIVISION OF EMPLOYMENT SECURITY,
STATE ADVISORY COUNCIL,
Boston, May 9, 1949.

Hon. THOMAS J. LANE,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE: The members of the advisory council of the Massachusetts Division of Employment Security have spent and are still spending considerable time and effort in this current fiscal year in negotiations, discussions, and meetings with State and Federal officials, because of insufficiency of funds granted to Massachusetts for administration of its Employment Security Law.

As you know, Massachusetts was cut sharply in the distribution of funds appropriated by the Congress for the administration of the Employment Security program in the fiscal year 1949. We have made many vigorous protests regarding this cut, which in percentage was the third highest in the Nation. To date we have had only minor adjustments from the original grant, with the result that backlogs have piled up, certain operations have been curtailed, and other operations have been suspended completely.

It was our hope and expectation that the fund situation would be remedied for the fiscal year 1950 so that we could resume again our proper and efficient administration of the Massachusetts law. A preliminary estimate of our fund requirements for the fiscal year 1950 was prepared and submitted to the regional office several weeks ago. After review and discussion, these estimates were sent to the headquarters office of the Federal Security Agency in Washington. We have had brought to our attention this week the comments of the Washington office in regard to this preliminary estimate and the points on which that office disagrees with our request. This is a matter which we feel can be discussed by us with representatives of the Federal Security Agency.

There is, however, a further point which these representatives have brought to our attention. This is of such major importance to us and to the representatives of Massachusetts in Congress that we are bringing it to you immediately for your consideration and for appropriate action. This point may be stated briefly as follows:

Total funds requested in budgets submitted by the States and Territories for administration of their employment security laws in the fiscal year 1950	$203,000,000
These requested funds, after review, will be reduced by the Federal Security Agency by approximately	193,000,000
However, these approved requests must be further reduced by approximately 18 percent in order to live within the present proposed amount of the 1950 appropriation or to	157,500,000

If the Federal Security Agency proceeds as it has in the past, it will reduce each of the approved budget estimates by 18 percent, which means that all the problems with which we are contending at present because of our financial stringency will be continued on through the next fiscal year.

As we know the situation, the failure to have sufficient funds appropriated for the proper and efficient administration of the employment security program can be traced to several causes:

1. Failure on the part of Federal Security Agency to ask for sufficient funds. It is our understanding that funds approximating one hundred and fifty or one hundred and sixty millions of dollars were requested by the Agency, though now it appears willing to approve one hundred and ninety-three millions, based on the States' own estimates of their requirements.

2. Failure on the part of the Bureau of the Budget to approve all of the Federal Security Agency's request.

3. Failure on the part of Congress to appropriate sufficient funds.

Apparently one or both of the first two failures did occur, since we have just been informed that the representatives of the Federal Security Agency have again discussed this problem of 1950 financing with the Bureau of the Budget, and the Bureau is willing to approve a deficiency request for 1950 in the amount of $24,000,000.

The excise tax collected from Massachusetts employers under provisions of the Social Security Act relating to unemployment compensation is collected in order that the Government may have sufficient funds on hand to provide for proper and efficient administration of the act. This tax collection currently amounts to $9,000,000 per annum in Massachusetts, which is an amount far in excess of any annual expenditures by us to administer our State law. For example, our total expenditures for the fiscal year 1948 were $5,284,687 for administering our State law. The total excess of funds collected throughout the country by this tax, over funds appropriated for administration of the Employment Security Law, is now $880,000,000.

Employer associations and individual employers, the Massachusetts Taxpayers Association, labor organizations, and the general public have gone on record to the effect that they want sufficient grants made to this State so that efficient administration may be maintained.

As we stand now, Congress must approve the appropriation request of $157,500,000 and the deficiency request of $24,000,000 in order that Masschusetts may be provided with funds which will approximate its total requirements. Even though these two appropriation requests are approved, Massachusetts will still be faced with a reduction from its estimated requirements, since total provisions of funds will still be 11 or 12 million dollars short of the total of all the State fund requests.

We are requesting that you, as one of our elected representatives in Congress, do all you can to see that these two appropriations are passed.

We will appreciate your comments on the facts stated above and wish you to keep us informed of what steps you or any others have taken to see that adequate appropriation of funds is made.

Very truly yours,

JOSEPH A. DUNN,
Representative of Employers.
JACOB PRAGER,
Representative of Employees.
HERMAN J. DUMAS,
Representative of the Public.
STEPHEN V. DUFFY,
Representative of Employers.
DANIEL J. MCCARTHY,
Representative of Employees.
FRANCIS J. CARREIRO,
Representative of the Public.

Msgr. Alfonso Arcese

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. ROONEY. Mr. Speaker, under permission heretofore granted me by unanimous consent of the House I am pleased to include with these few remarks the following article by Violet Brown published in the Brooklyn Eagle of Sunday, May 8, 1949, entitled "Brooklyn's Man of the Week: Monsignor Arcese Begins Second Half Century as Priest."

This article portrays to some extent a most lovable kindly man who once again has assumed the pastorate of the Roman Catholic Church of Sacred Hearts of Jesus and Mary and St. Stephen's which is located in the Twelfth Congressional District.

I had the distinguished honor to be one of those present last Saturday evening at the dinner at the Towers Hotel in honor of Monsignor Arcese. Hon. Henry L. Ughetta, justice of the supreme court, who was host at the dinner, deserves the thanks of all who were present for a splendid celebration marking the fiftieth milestone in what I pray shall be a century of distinguished service by Monsignor Arcese to his God, his adopted

country, and the people of our community.

I am sure that every Member of this great body wholeheartedly concurs in this expression of sentiment and respect for one of God's noblemen, Msgr. Alfonso Arcese.

MONSIGNOR ARCESE BEGINS SECOND HALF CENTURY AS PRIEST

(By Violet Brown)

Benign, humorous, and rich with wisdom, Monsignor Alfonso Arcese celebrates 50 years in the priesthood this month up to his biretta in plans for the years to come.

"All I need is 50 years more in the priesthood," he said the other day, his eyes twinkling behind their rimless glasses, "and you should see what this parish would be like!"

He was sitting in the large rectory of Sacred Hearts of Jesus and Mary and St. Stephen's Parish on First Place to which he returned this year after an interlude at Our Lady of Mount Carmel.

During his first assignment at Sacred Hearts, he built the beautiful 27-classroom school on Hicks Street. Now he has a new project—dear to his own youthful heart—a young people's center at 135 Summit Street.

It opened only months ago, but is already flourishing with a dramatics group, four basketball teams, three baseball teams, four Scout troops, a confraternity. It is going to feature a cadet corps and band.

The center serves the youth of Red Hook, about whom there has been a certain amount of discussion, but Monsignor Arcese will have no truck with "juvenile delinquency."

"Too much talking about that," he said, shaking his head disapprovingly. "All exaggerated! Wait 10 years and your problem will be solved. The juveniles will be adults."

Then, seriously, he added:

"When you think of the conditions some of our boys have at home, the crowded conditions, the wonder is not that some go wrong, but that so many are good.

"Most of the young people are good, so very good I am always being amazed by them. We don't want our center to be a place of reform. We want it to help the many, many good young people stay good."

Monsignor Arcese comes of a remarkable family of priests. Three of his brothers were also elevated to monsignor rank and one sister has been a nun at Grotta Ferrara near Rome for 65 years.

Monsignor Vincent Arcese, the eldest, was a famous and beloved priest in Sullivan County before his death, a builder of many institutions and founder of St. Joseph's camps.

Monsignor Gaetano Arcese, who has a Harlem church, is consultor to Cardinal Spellman (Monsignor Alfonso Arcese is a diocesan consultor himself) and a prothonotary apostolic. Monsignor Leo Arcese, the youngest of the brothers, has a parish in Ozone Park.

They were all born in Arpino, Italy, a proud little town whose people, Monsignor Arcese likes to point out, became Roman citizens 365 B. C. The parish church where the Arceses were baptized was built over an ancient temple of Mercury.

And the town had a flourishing woolen industry prior to Christ, with 36 factories being operated by a population of only 10,000. Arpino was rich and its education heavily endowed. The Arcese brothers had excellent schooling there.

Monsignor Alfonso came to the United States in 1894 as a lad of 17. Just before World War II he went back to Arpino with Auxiliary Bishop Stephen Donahue, who was curious to see the Arcese family homestead. As they neared the place, an elderly blind man came up to them.

"I have been listening to you speak," he said, "and it seems to me this is the voice of our Don Alfonso."

It had been more than 40 years since the man had heard "Don Alfonso's" voice, and the monsignor is astounded to this day by the incident. Obviously, though, Arpino keeps the Arcese memory green.

As soon as he arrived in this country Monsignor Arcese's father, a teacher, sent him to St. Bonaventure's in Alleghany, N. Y., to study. He then went to St. Mary's in Baltimore and was ordained in May 1899.

His first assignment was as assistant at St. Joseph's Church, and his first pastorate was at St. Lucy's, where he started the foundation of the church in his first 3-year stay and finished the upper floors when he was reassigned in 1914.

Then Monsignor Leo Arcese finished the interior in a style which makes his older brother glow with pride. "It took two of us to build that church," he said.

The Arcese devotion to the city's Italian Catholic population follows a tradition set by an uncle, Father Julius of the Friars Order, the first priest to labor among Italian immigrants here.

There has been a startling change in the status of these Italian-Americans during the half century of Monsignor Arcese's priesthood, a change for which last night's affectionate dinner in his honor at the Hotel Towers could well serve as a symbol.

Many of the city's most important men were at that private affair and more of them than the first poor immigrants could possibly have imagined were the sons and grandsons of those immigrants.

"There were few Italian professional or political men here when I became a priest," Monsignor Arcese recalled. "The majority of the immigrants worked as laborers and were very poor, not only supporting themselves but sending their scant savings to their families in Italy.

"I remember some of the laborers at St. Lucy's back in 1905. They made $1.25 a day and tried to send $1 back to Italy to bring their wives and children here.

"Of course, the temptation was great to send their children to work as soon as they could get working papers for them, but we priests carried on a campaign to have the children get as much school as possible.

"At every confirmation Bishop Molloy used to stress that no matter how great the sacrifice, send them to school. And this campaign bore fruit, wonderful fruit."

Nor, under the tutelage of their priests, have the Italians here forgotten their homeland. They take care of their own through the Italian board of guardians, one of the monsignor's special projects, and they carry on big campaigns for relief to Italy, ably supported by Il Crociato, diocesan Italian weekly in which Monsignor Arcese has been greatly interested.

In this way the new generation of Americans keeps close to the best tradition of the old generation of Italians, what Monsignor Arcese calls a tradition of family life.

"You can see it," he said, "in the proportion of divorces in Brooklyn. Its divorce rate is the lowest in the State and that, I am sure, is because there are so many Italian marriages. The number of Italian divorces is negligible; our pride is that it keeps that way."

Reorganization of Franco's Spain

EXTENSION OF REMARKS

OF

HON. EARL T. WAGNER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. WAGNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cincinnati Post:

FRANCO SPAIN

The political committee of the United Nations General Assembly has voted 25 to 16 in favor of lifting the 1946 ban on the appointment of ambassadors and ministers to the Franco government in Spain. The question now goes to the General Assembly for final action, and the issue there is in doubt.

Representatives of the United States and 15 other nations did not vote. However, if we dodge the issue again in the General Assembly, our refusal to vote will be counted against the proposal, which requires a two-thirds majority for approval.

Franco's government isn't our kind of government, but if we exchanged diplomats only with those nations of which we approved in every particular, we would be doing business in a very restricted world.

Spain is under a dictatorship, yes, and we detest dictatorships. Yet the Soviet Union, Poland, Yugoslavia, Bulgaria, and Czechoslovakia—with all of which we have full diplomatic relations—also are under dictatorship.

Franco's particular crime is that he gained control of Spain with the assistance of Hitler and Mussolini. We voted to boycott Spain in 1946 largely as a sop to the Soviet Union. Our Government has had friendly relations with Spain since the war of 1898, and Franco has shown every evidenec that he desires to live at peace with the rest of the world. His country occupies a strategic area vital to us and the other members of the North Atlantic group. That is an important consideration which should weigh heavily in a decision to vote to lift this boycott.

Public Health and the Federal Government

EXTENSION OF REMARKS

OF

HON. ALBERT M. COLE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. COLE of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Kansas Optometric Association:

Resolution Committee A has formulated a resolution which the committee feels should be discussed at a time when the largest possible number of the membership is present. The resolution has the unanimous endorsement of the committee. Mr. President, I now present to you, and this assembly, the following resolution for your consideration:

"1. Whereas there is before the Congress of the United States a proposed law which contemplates the health needs of most, if not all, citizens from the cradle to the grave;

"2. Whereas such laudable undertaking is a very old history in the world, having been one of the chief planks of Emperor Diocletian of Rome;

"3. Whereas people are prone to give undue consideration to the promises of politicians, when promised gratuities by politicians: Gratuities the politician is not the owner of: Gratuities which only the receipient thereof has, or can produce;

"4. Whereas since the time of Emperor Diocletian, this same fraudulent ruse has been used numerous times in numerous nations, up to the present day, as witnessed in Russia and England, for the purpose of perpetuating political jobs;

"5. Whereas that since all of these past efforts have been, and as of now are dismal failures for all but the politician, at a cost to the producer that is leading to bankruptcy of the nations involved;

"6. Whereas such a program would lead to further regimentation of the Nation, and the loss of constitutional rights and liberities: Be it

"*Resolved*, That the Kansas Optometric Association assembled in the forty-ninth annual convention, April 25 and 26, 1949, go on record as opposed to any and all participation in public health by the Federal Government. That a copy of this resolution be transmitted to each Congressman and Senator from Kansas, and to the president of the American Optometric Association."

The American Motorist a Victim of Prices and Taxes

EXTENSION OF REMARKS
OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. ADDONIZIO. Mr. Speaker, the American motorist has long been the victim of financial exploitation of one variety or another. He has been taxed unmercifully by State and Federal governments. He has been subjected to the greed of conscienceless loan agencies. In general, he has fought an uphill battle since the turn of the century for fair treatment. Only a few weeks ago, the American car owner found himself victimized once again—this time by the oil industry.

Three major companies recently boosted gasoline prices on an average of one-half a cent per gallon. This increase came at a time when prices are sagging all across the economic horizon and oil profits are at their zenith in history.

To my way of thinking, this price rise represents an all too obvious example of economic opportunism on the part of the oil industry. How can the oil companies possibly justify it? The answer is that they cannot.

The injustice of this price increase was first called to the attention of the motoring public by the American Automobile Association, whose president, R. J. Schmunk, asked the industry for an explanation. However, none was forthcoming. William R. Boyd, president of the American Petroleum Institute, said he and the members of his organization were deaf, dumb and blind on the subject of petroleum price increases because of possible antitrust law infringements. He referred the AAA to the individual oil companies.

As Mr. Schmunk emphasized in his inquiry, the price boosts come at a time when gasoline stocks are running over the brim, and crude-oil supply is so plentiful that Texas and several other States have ordered cut-backs in allowable production. They come at a period when profits of the oil industry are jutting above all records in history, and the cost-of-living index is beginning to drop. Moreover, President Truman has just been informed by his Council of Economic Advisers that the Nation may expect yet another fall in the cost of living in the near future.

There is the evidence. Only one conclusion is possible. The oil interests are exploiting the Nation's more than 30,000,000 car owners for the sake of higher profits. It seems clear that this price boost represents the predatory practice of monopolists.

But let us document our evidence further. A survey of 16 major oil companies showed a net increase of $339,000,000 in profits last year, as compared with those of 1947. At the present time, the average price of gasoline throughout the Nation is 26.5 cents per gallon. At the close of the war, it was only 20.6 cents. Motor fuel is now costing the individual car owner $40 a year more than at the 1946 level, according to Mr. Schmunk. Motorists as a whole are paying $1,300,000,000 more each year, as a result of the avarice of the oil industry.

It is apparent that new and drastic steps must be taken to protect the Nation's motorists who stand defenseless before the power of the oil combine. I am convinced that a complete investigation of the oil industry by the Justice Department and the Federal Trade Commission is long overdue. I have sent letters to the Attorney General and the Acting Chairman of the FTC calling for such an inquiry.

The American Automobile Association is certainly to be commended for its forthright stand on this obvious attempt to exploit the American motorist. Its inquiry into the gasoline price increase carries added weight because of the AAA's long past record of impartial service to the entire motoring public.

For the full information of the Members I submit herewith the exchange of letters between the AAA and the American Petroleum Institute:

AMERICAN AUTOMOBILE ASSOCIATION,
Washington, D. C., April 14, 1949.

Mr. WILLIAM R. BOYD,
President, American Petroleum Institute, New York, N. Y.

DEAR MR. BOYD: Several major oil companies have recently increased gasoline prices. This has resulted in a substantial increase in the number of complaints reaching us on the issue of current gasoline prices. It is clear that no statement has been given to the public which has carried conviction as to the necessity for the increase at this time.

Beginning in the spring of 1946 the gasoline price structure started an upward spiral. The price of regular-grade gasoline at retail outlets, less taxes, on April 1, 1946, was 14.12 cents per gallon. On March 1, 1949, the price was 20.12 cents per gallon—an increase of 6 cents per gallon, or 42 percent. During the same period the average tax per gallon rose from 6.07 cents to 6.38 cents per gallon. Interpreted in terms of consumer cost, the price of gasoline during this period rose from 20.19 cents in April 1946, to 26.5 cents in March 1949.

Since the average motorist uses about 650 gallons a year, this increase of 6 cents a gallon means that he is paying about $40 a year more for the same amount of motor fuel than he would have paid at the prices prevailing 3 years ago. This means a total increase of roughly $1,300,000,000 in the cost of operating the Nation's 33,000,000 passenger cars.

There are several elements in the petroleum situation which normally might be expected to make for lower rather than higher prices:

1. The gasoline price increase comes at a time when gasoline stocks are at high levels; the total on April 2 of this year was 127,769,000 barrels as compared with 113,530,000 barrels on the corresponding date of last year.

2. The gasoline price increase comes at a time when crude-oil supply, domestic and imported, is at such a high level that Texas and several other States have ordered cutbacks in allowable production. This is done in the name of conservation, but it is natural that some will see in it an effort to maintain the price of crude oil at present levels.

3. The gasoline price increase comes at a time when profits of the oil industry are at a high level—a factor which naturally enters into public reaction to higher prices.

In addition to these factors within the industry the gasoline price increase comes at a time when the cost-of-living index is showing a downward trend; it has dropped nearly 6 points since last August—and when the prices of many things the motorist buys—notably new and used cars—are being reduced.

According to reports from trade circles, one reason for the recent increases lies in the fact that, because of the mild winter, fuel oil had to be unloaded at reduced prices and, in view of the continuing high price of crude, refineries increased their price of gasoline to make up their losses on fuel oil. I am sure you will agree that the car owners would find it very hard to understand why they should be penalized simply because a mild winter upset calculations as to the demand for fuel oil.

Because of the great public interest in this matter, any comment you care to make or any information you care to give us would be greatly appreciated.

Yours sincerely,

R. J. SCHMUNK,
President, American Automobile Association.

AMERICAN PETROLEUM INSTITUTE,
New York, N. Y., April 15, 1949.

Mr. R. J. SCHMUNK,
President, American Automobile Association, Washington, D. C.

DEAR MR. SCHMUNK: Naturally, I have been interested in reading your letter of April 14. In concluding it, you ask for "any comment you care to make or any information you care to give us."

Because of the Sherman Antitrust Act and its interpretation by the Department of Justice, the president and members of the staff of the American Petroleum Institute are deaf, dumb, and blind about the price at which petroleum or any refined product is sold. No discussions of price are conducted by or under the auspices of the institute and no information is given to us in advance or afterward about a price change or the reason therefor.

Occasionally we receive an inquiry similar to yours from some member of Congress or from representatives of the press or from organized groups or individuals. To all of them we must make the same reply I have given you.

Assuring you of our desire to cooperate fully with the American Automobile Association in matters coming within the proper scope of our activities, and with personal regards to you and your associate officers, I am,

Sincerely yours,

W. R. BOYD, Jr.,
President, American Petroleum Institute.

The Responsibility of Congress With Respect to State Government

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. REES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. Frank Carlson, Governor of Kansas:

THE RESPONSIBILITY OF CONGRESS WITH RESPECT TO STATE SOVEREIGNTY

(By Gov. Frank Carlson, of Kansas)

Speaking as chairman of the Interstate Oil Compact, I want to assure you that we are grateful to meet here today in your "Land of Flowers" and sunshine. Florida has long been a refuge from our northern winters. We in other States enjoy your fruits and vegetables the year round. The products of your soil seem to have no limit. Florida's favorable conditions for the accumulation of oil and gas should assure your future as a leading oil-producing State of the compact.

We feel that the States of the South command respect for their resolute stand to keep for themselves those rights not granted to the Federal Government by the Constitution. Nearly 90 years ago, Gen. Robert E. Lee, praised by Gen. Winfield Scott as America's very best soldier, refused command of the northern armies. This he did because of loyalty to his native South. General Lee, after the conflict between the North and South ended, refused to commercialize his name, even though it would have brought wealth to him. He accepted instead the direction of a small college. Again, he showed the spirit and integrity inherent to the South.

The War Between the States left the South with its property destroyed, its commerce wrecked, its factories razed, its money worthless, and yet the South struggled upward to recovery. It overcame the corruption wrought by the carpetbaggers without help from outside. In the years that have followed that upheaval, the South has furnished many of our Nation's leaders. They have headed our courts and directed our Nation, even from its highest office.

In recent years, the country united has fought and won two world wars. While in those wars we have been united successfully against a common enemy, I sincerely feel that the country is approaching another crisis from within. This time the division is not one of geographical distinction, but a clash of doctrines which threatens to divide our Nation.

On the one side, we have the adherence to our Constitution, and the rights of the States. On the other, we have growing within our Federal Government paternalism supported by bureaucrats who have pyramided Federal pay rolls. Our Constitution set up the Federal Government to coordinate, but not to dominate the States.

There are constantly increasing within our National Government, as we all know, forces prone to cast aside our Constitution. The compelling motive behind this movement is the urge for arbitrary power and entrenchment in office. The recent move toward encroachment on the rights of the States, so deeply resented in the South, is but one of the objectives of this group.

The future welfare of our Nation, and the maintenance of its position among world powers, in my opinion, depends upon State sovereignty. Unless the States assert and maintain their rights, we shall see history repeat itself. No nation, history records, has ever been able to maintain the freedom of its individual citizens when autocratic power is concentrated in a dictator or a small group of men.

I should like to quote here some recent remarks of General Eisenhower:

"In today's struggle, no free man, no free institution can be neutral.

"Government ownership or control of property is not to be decried principally because of the historic inefficiency of governmental management of productive enterprises; its real threat rests in the fact that * * * final concentration of ownership in the hands of government gives to it, in all practical effects, absolute power over lives.

"When shallow critics denounce the profit motive inherent in our system of enterprise, they ignore the fact that it is an economic support of every human right we possess, and that without it all rights would soon disappear."

Our Nation was founded by a group of individuals who had fled oppression. Under the democracy which they founded and guided by the Constitution they drafted, America became a nation of individuals. Our free government and the rugged frontiers of our country bred in our citizenship a creative spirit.

This creative spirit has led us forward to the highest standard of living in history. It has given mankind most of the inventions that have freed our lives from drudgery. It has given us the means of a fuller enjoyment of living. It has made our Nation a leader of the world. To destroy this creative spirit, developed in an environment of free enterprise, would be to destroy the mainspring of our way of life.

For nearly two decades our National Government has conducted a destructive drive against the system under which our American creative spirit has developed. Free enterprise has been insidiously attacked. Our National Government would now replace the system which has made us what we are with a paternalistic nationalization, which history reveals is a destroyer of human rights and freedom.

Insofar as our oil and gas industry is concerned, the drive of our centralized government now takes the form of three major offensives: The commandeering of tidelands oil of the coastal States; the replacement of State regulation of oil by Federal regulation; and bureaucratic control over the price received for natural gas by independent producers not connected with interstate commerce transportation.

For over 100 years our coastal States had undisputed ownership of their submerged lands. This ownership extended, in most cases, for three nautical miles, but in some cases was extended farther by treaty or otherwise when certain States entered the Union. In June 1947, as the culmination of a court proceeding instituted by the Federal Government, the Supreme Court dispossessed the State of California of its right to oil and minerals in its submerged coastal lands. The Court declared that a paramount right to these lands existed in the Federal Government.

The Seventy-ninth Congress passed a quitclaim resolution, relinquishing the Federal Government's claim to these lands. It was vetoed by the Chief Executive.

A similar quitclaim resolution was passed by the House of the Eightieth Congress by a vote of 257 to 29 in April 1948. The Senate committee voted the bill out too late for action on the floor.

A number of similar resolutions are pending in the Eighty-first Congfess. The general opinion seems to be that a quitclaim resolution might again be passed by Congress. It is also thought that it would again be vetoed by the Chief Executive. It is our hope that the Eighty-first Congress will pass a quitclaim resolution on this subject with such a majority that neither the Supreme Court nor the Chief Executive will deprive these States of their rightful property. The States can then go on to the maximum oil development of these submarginal lands, thus insuring our national safety.

Fourteen years ago, when our Interstate Oil Compact was formed under a provision of the Constitution, the oil industry was in a chaotic state. Oversupply was responsible for a price resulting in flagrant waste of this irreplaceable natural resource. The emergencies at that time were met by the State governments. In the years that have followed, a democratic system of State regulation has been developed. It has operated to eliminate this waste.

Under State regulation, scientific knowledge has developed and regulatory practices have improved. Nature's underground energy, stored in her oil reservoirs, has been conserved. As a result of this conservation through State regulation, our Nation at the beginning of World War II had ample reserves and abundant reservoir energy to produce greatly in excess of normal requirements. It is indisputable that without the potentiality of our oil reserves at the beginning of World War II, our armed forces could not have prevailed.

At the close of the war, owing to no fault of the States or of the industry, localized shortages occurred. They were due mainly to the war's heavy draft on materials and equipment. These shortages set off another drive by the National Government upon State regulation. The temporary local shortages, so eagerly seized upon for criticism vanished into thin air as the oil industry quickly rallied.

The complaint against State regulation, left groundless on this issue, then shifted to the cry that the States limit supply to demand solely for the purpose of maintaining prices. No one familiar with the years of trial and error in the legal and technical development of State regulation in oil-field control can believe this charge. The need for limiting supply to demand was a bitter issue for years, and advocates for and against limiting supply to demand existed both within the industry and in State governments. That preventing waste of petroleum depends upon adjusting supply to demand was learned the hard way, through experience. State statutes evolved only after bitter conflict between belligerent segments of the industry.

My own State of Kansas passed a statute providing for the limitation of supply to demand in order to prevent waste of this vital resource. Other States followed, including Louisiana, Michigan, Oklahoma, Texas, New Mexico, and your own State of Florida.

It has been developed throughout the years that production in excess of market demand means unnecessary storage, resulting in evaporation and waste. This resulted in the huge oil-field conflagrations which were so prevalent in years past. Thousands of barrels burned in single fields during electrical storms. Huge evaporative and leakage losses resulted from excess surface storage. Overflow oil filled the drainage channels and creeks. State regulations have corrected these conditions by limiting supply to demand and necessary working stocks.

It has been conclusively proved that the demand for oil from any source of supply must be scientifically and equitably allocated over the entire area of a field to prevent the dissipation of underground energy and to protect correlative rights. Inefficient utilization or loss of underground energy leaves irrecoverable oil in the oil-bearing strata. Scientific State regulations prevent this.

An adequate price is required to prevent waste. This has been forcefully brought to the attention of the State regulatory bodies.

An adequate price is necessary to keep in operation the multitudinous small oil wells. These wells have often been designated as the backbone of the oil-producing industry because they represent such a large proportion of the oil reserves.

If the price is not sufficient to keep these small wells in operation, they are abandoned. When these wells are abandoned, the reserves they represent are lost to the public. The loss of these reserves may mean future shortages and resulting high prices.

Those in our National Government who would criticize the regulation by the States within the compact give no credit to the record made by the oil industry under State regulation. These criticis do not mention the improvement in products and their universal availability and reasonable price. Nothing is said about oil-product prices having advanced the least among common commodities.

If the oil-producing States faithfully administer the conservation laws of their States, and limit the supply to demand under such laws, an adequate price may or may not result. If an adequate price be attained, and be the means of saving to the public vast reserves which would otherwise be forever lost, then the public interest is undoubtedly served. Is it not better to have ample supplies of petroleum products universally available at reasonable prices than to rely on high-cost synthetic products which cannot be made available except by subsidies from taxes?

Only recently has that portion of our petroleum industry responsible for the production of natural gas with oil furnished nearly one-half of our national gas supply. There is reason to believe that still greater quantities of our natural gas supply will be found in connection with oil production.

Eleven years ago, Congress passed the Natural Gas Act. It gave the Federal Power Commission authority to regulate interstate transportation of gas. Legislative history shows that the act was intended to cover only the transportation of gas in interstate commerce. It specifically prohibited regulation by the Federal Power Commission of the production and gathering of natural gas. This latter has been, and is properly, a function of the State administrative bodies. The States of our compact have so recognized it. Our conservation laws so provide.

Notwithstanding the restrictions placed upon the Federal Power Commission in connection with production and gathering, that Commission has continued to encroach upon this field of regulation. Under a decision of the Supreme Court nearly three years ago, the Federal Power Commission is seemingly given the authority to regulate natural gas back to the wellhead; and the majority members of the Federal Power Commission so interpret this decision.

The present Congress is now considering bills to clarify the original Natural Gas Act, and confine regulation by the Federal Power Commission solely to interstate commerce. These acts seek to leave to the States sole regulation of production and gathering up to transportation in interstate commerce.

Three of our greatest gas-producing States have acted, or have considered legislation to regulate the price of gas at the wellhead. These efforts are being made to avoid the waste of a natural resource being sold at a price conducive to waste.

There is a wide gap between present prices for gas and fuels with which it should be competitive.

Last month, before a congressional committee studying the need for an amendment of the Natural Gas Act, the majority leader of the Federal Power Commission made plain the doctrine of the majority membership. He does not believe in free competition. It is his avowed intent to maintain a low price for natural gas from all producers according to his dictates.

We have now a unique situation. States producing the great bulk of the Nation's gas, through their administrative bodies and legislatures, are seeking to establish a fair price for this natural resource. The price they seek would conserve the supply for the greater comfort and pleasure of the citizens of their own and other States.

At the same time, a Federal Commission, answering only to the President, is seeking to maintain a level of prices at the wellhead which would discourage, according to testimony before Congress, the finding of new gas reserves.

It is my opinion that the actual facts have not been properly presented to the American public. I am advised that the amendment to the Natural Gas Act given greatest consideration for passage, will affect only future arms-length sales of gas from those who produce it to those who transport it in interstate commerce. It should result in a fair bargaining price which can in no case go above the competing price of other fuels.

Against this position, the majority leader of the Federal Power Commission last month told a congressional committee that the Supreme Court's decision giving the Commission administrative power to the wellhead would be followed out. He intimated that the Supreme Court's authority was a proper interpretation of congressional intent in the passage of the original act. But only a few months ago he had joined in a unanimous request by the Federal Power Commission to have Congress clarify the act with respect to production and gathering of gas; and the Commission had issued a directive disclaiming any intent to regulate production and gathering. This majority leader of the Commission, however, last month told Congress that he had changed his mind.

In these three controversial issues before our oil- and gas-producing States, the cards seem to be stacked. We have both the executive and judicial departments of our Government seemingly against States' rights. We are thankful that we still have a Congress close to our people. We feel that Congress is still of and for the people. We feel that Congress looks first to the States in these controversial issues.

We are relying on that Congress to maintain the creative spirit of America. We are relying on that creative spirit, unhampered by Federal directives, to produce the greatest possible amount of oil and gas at the least cost to the public; to continue the administration by the sovereign States of the production of oil and gas so as to maintain an excess potential to produce. And we rely on Congress to leave to the States unchallenged the regulation of the production and gathering of natural gas.

We feel that the Congress of our people, in insuring the States control of their tidelands and the continued regulation of their oil and gas, will act in the best public interest.

Reorganization of the Executive Branch of the Government

EXTENSION OF REMARKS

OF

HON. LEONARD IRVING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. IRVING. Mr. Speaker, and fellow Members of the House, I wish to say that I am truly disappointed that the Senate has not acted upon the bill for reorganization of the executive branch of the Government.

One of my first votes as a Member of the House was in favor of that bill. I was pleased to support it because I was convinced that it would place into motion the machinery for reorganization of the executive branch along the lines recommended by former President Hoover and President Truman.

This legislation is not a complicated, involved matter, and could be acted upon very quickly if the Senate would just make up its mind to do so. Furthermore, any mistakes that might result from application of the provisions of the bill could be easily corrected later for Congress has the right to veto any reorganization changes which it felt the President had proposed which were not for the best interests of the country.

So that you may know the reaction to these delays in the Senate, I wish to call your attention to an editorial which appeared in the New York Times of May 11, 1949, censuring the Senate for delaying action on this important bill which should be the start toward saving the taxpayers' large sums of money annually. The editorial reads:

THE HOOVER REPORTS

Time, money, and an immense amount of genuinely devoted and inspired labor would be wasted if the excellent reports of the Hoover Commission on Organization of the Executive Branch of the Government should wind up as mere reports. There is a danger of this happening. Time and again, in the last half dozen administrations, commissions have been appointed to make studies of the huge bureaucracy in Washington; reports have been filed; recommendations have been made; and precious little, by way of constructive reform, has been accomplished.

It is in the light of this experience that we warmly endorse President Truman's message to Congress asking for authority to make administrative changes in the Government, in the light of the Hoover Commission's findings and in the interest of efficiency. Bills proposing to grant such authority are pending in both houses. Since they provide that no reorganization plan submitted by the President can become effective until it has survived a 60-day waiting period, without receiving congressional disapproval, it is clear that action must be taken soon if any reorganization plans at all are to be submitted to the present session. This adds an element of urgency to the President's request. We hope that Congress will heed this request while the whole matter of the Hoover reports is still fresh in the public's mind, and before these sharply revealing studies become lost in the log-jam of legislation that always piles up at the end of a session.

In conclusion I wish to say that I hope the Senate will heed the message from President Truman urging prompt action. The letters I have received and the editorial comments I have read and heard indicate that the President's mild prodding for action was fully justified in view of strong public opinion in favor of the economy in Government which both the President and the Hoover Commission hope to achieve through reorganization of the executive branch.

Gen. Lucius Clay

EXTENSION OF REMARKS

OF

HON. SAM RAYBURN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. RAYBURN. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include an article by Hon. Robert P. Patterson, former Secretary of War, with reference to the services of Gen. Lucius Clay. In my opinion General Clay is an outstanding statesman and soldier. His work in Germany is a tribute to him and to the Government which he represents.

CAREER OF GENERAL CLAY—FORMER SECRETARY OF WAR PAYS TRIBUTE TO RETIRING HEAD OF AMG

To the EDITOR OF THE NEW YORK TIMES:

The announcement that Gen. Lucius D. Clay will retire as head of the United States Military Government in Germany and as commander of the American military forces in Europe prompts me to call attention to the career of this remarkable soldier and to the extraordinary service he has rendered to his country. A soldier all his life, he has given us an example of skillful achievement and fearless devotion to duty that it would be hard to find the like of in our history.

On graduation from the Military Academy in 1918 he was commissioned in the Corps of Engineers and served in various Army posts. In the doldrums of the twenties and thirties he was a captain for 16 long years.

In the reorganization of the War Department after Pearl Harbor General Clay was entrusted with key responsibility for procurement and production of Army weapons, equipment and supplies. The credit for discovering his genius for that work belongs to General Somervell. As soon as he put his shoulder to the wheel, all of us connected with the supply program realized what an indispensable asset we had in Clay. His keen mind enabled him quickly to master the practical problems of industrial production. His driving energy pushed every phase of the program at top speed. His resourcefulness was the answer to innumerable emergencies. His faith in the American people and in their willingness to undergo any sacrifice in order to win the war guided his daily decisions. It is my considered judgment that to him more than to any other individual should go the credit for the success of the armament effort in the war years.

OVERSEAS SERVICE

He was always anxious for service in the field, but his appeals to go overseas simply could not be granted until 1944. He served in the European theater, until Mr. Byrnes in the Office of War Mobilization insisted on getting his services. There he remained until Secretary Stimson chose him to manage military government in Germany in behalf of the United States. The events of the past 4 years have shown how wise that choice was.

No American has ever had a harder assignment. As a soldier subordinate to the civil authority he has scrupulously carried out the directives he received from Washington. At the same time he has been compelled many times to make decisions of his own on the spur of the moment. His policies, whether in the field of political life, of economics, of finance, of commerce, or of military affairs, were those of an enlightened and conscientious statesman and soldier. As for his relations with the Russians, it suffices to say that he went to Berlin prepared to meet them more than halfway. When their provocative tactics were revealed, they found in Clay a man without fears and without nerves.

He had a working schedule that began at 7:30 in the morning and lasted without letup till 8 in the evening or longer. If he has had a rest or vacation in the past 8 years, I do not know of it.

Two years ago I sent a letter to him directing him to take a rest. I had been told that he was looking tired. Some time later someone who knew about the letter and knew also that no rest had been taken asked Clay if the Secretary of War had not ordered him to take a vacation. He said, "Yes, but he did not say when I should take it." If that be insubordination, make the most of it.

In the early days of occupation it was the fashion for writers to take a quick trip to Germany and tear off articles on our failure there. Gradually the articles disappeared. They were replaced by articles that told of steady progress. The latest chapters are the lifting of the blockade on Berlin and the formation of a democratic government for west Germany. The entire record is a credit to the American people, due largely to the fact that our interests there were in the care of the manly, modest soldier who will retire in a few days.

ROBERT P. PATTERSON.

NEW YORK, *May 5, 1949.*

Geological History of Western Colorado

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith the last two articles in regard to the geological history of western Colorado. The first articles appeared in the May 4 issue of the RECORD:

TIMELESS PROCESSES OF NATURE ARE MANUFACTURERS OF COUNTY WEALTH

(By Harry Chrisman)

DELTA REGION ONCE TROPICAL

At a time about 50,000,000 years ago, when the Cenozoic (new life) era began, the previous history of the earth had been one of a mild, often tropical climate. This era was no exception except for the cool climatic start and the cool end which foretold the ice age to come, a rare, latter-day exception in geological history. The greater part of the Cenozoic era, a period of several millions of years, was one of lush plentiful tropical plants abounding around the warm seas containing countless species of marine life.

For about 40,000,000 of years this condition existed over most of the earth. Nipa palms flourished where London now stands. All Europe was tropical. The mountain-making upheaval of the Mesozoic era had come to a close, changing the surface of Colorado from low-lying plains country to a broad plateau of 3,000 feet elevation with a mountain zone rising to over 14,000 feet in some areas. The seas that had once lain over the State for countless ages had left their contribution of organic matter, the dead leaves of plants and the bodies of insects, great reptiles we call dinosaurs, and other ancient life forms.

The higher elevation to which the land areas of the continent had risen caused the great salt-laden oceans to recede. During the oil-shale-forming period there were perhaps no salt seas, but rather large freshwater basins. The oil shales appear to be laid down in such basins, worked out by flooded rivers which carried the sedimentation down from high plateau lands and deposited it in the freshly made basins.

OIL SHALES PRODUCE EVEN PERFUME

Though called oil shales, these rocks contain very little, if any, free oil. What is contained in them is the remnant of organic matter which, if left another fifty or one hundred millions of years, would become crude petroleum. Man, however, speeds up the natural process. He puts these oil shales to a fairly high degree of temperature, causing them to yield up the substance which, when refined, gives up a lubricating oil of high quality as well as a gasoline said to be better gallon for gallon than our present gas. The kerosene from oil shales is said to be comparable to present illuminating oils, and other byproducts such as tars, cokes, and paraffine wax can be extracted. Residual products from the breaking down of oil shales are ammonium sulfate, dyestuffs, perfumes, medicines, and flavoring extracts.

The oil shale runs from deep brown color almost to black. The richer shales resist weathering better than the poorer shales and can be seen projecting out from the other eroded matter as cliffs and precipices, such as in the DeBeque area.

DELTA COUNTY HAS OIL SHALE BEDS

Delta County contains workable deposits of oil shales as do Rio Blanco, Garfield, Moffatt, and Mesa Counties. Locally, throughout Colorado, the seams exceed a total thickness of 80 feet, although an estimate of thickness of workable beds is placed at 20 feet. The Colorado oil shale beds have been estimated to contain as much as 56,000,000,000 barrels or more of oil, based upon a total thickness of 20 feet of shale beds yielding 20 gallons per ton. This estimate could no doubt be revised upward greatly, based upon recent discoveries of seams of greater thickness and with modern technical improvements applied to the process of oil extraction and shale mining.

The Oil Conservation Board, in 1928, estimated there was more than 47,000,000,000 barrels of recoverable oil in the Colorado oil shale beds.

In dealing with commercial exploitation of the oil shale lands many things must be taken into consideration—the success of the chemist and inventor to improve mining methods to enable the shale to be treated profitably by the entrepreneur, as well as the initial capital outlay to finance heavy, large-scale production in this field.

GOVERNMENT DEVELOPING OIL SHALE AREAS

The United States Bureau of Mines made tests at the Rulison area as early as 1926–27. The Seventy-ninth Congress enacted Public, 290, in 1944, authorizing $30,000,000 for use in constructing demonstration plants to produce synthetic fuels from coal, oil shale, and other substances. Much activity is present today at the Naval Oil Shale Reserve No. 1 at Rifle, Colo. The Interior Department in June 1944 appropriated $5,000,000 to carry out the provisions of the bill. A Navy appropriation of early 1944 in the amount of $2,000,000 was temporarily suspended and the Bureau of Mines granted permission to use the Navy's oil preserves to carry out the larger project.

With American oil policy driving us into international commercial conflict over the fields of Saudi Arabia and Iran it may bode well for this country to look further into Colorado's natural resources in oil and oil shale, since the outbreak of war abroad could

easily deprive us of the Middle East and its oil reserves.

The entire area of Colorado land classified by the United States Geological Survey as oil-shale land is 952,239 acres. With petroleum demand increasing because of the dependence upon it by our mechanical society, oil shale may easily solve our headache brought about by our utter dependence on marginal production of well oil for lubrication and locomotion. What is needed is not just enough oil from wells to get by, but a sufficient, if not unlimited, supply that may best serve the elastic needs of the Nation both in times of peace and war.

Here we see again how the events that transpired millions of years ago brought to our feet the riches that even a Croesus could scarcely comprehend.

CONSERVATION OF RESOURCES NEEDED

It might be well for us to remember, at this time, that the natural resources which it took a bountiful nature millions of years to create may be used up many thousands of times faster than they can be replaced. A tropical forest flourished many ages ago, leaving a 10-foot vein of coal covering many acres. This strip of coal may be mined out in two short human generations. A deposit of oil shale requiring a hundred million years to form may likewise be used up in a comparatively short time.

It is not wrong to use the natural resources given us by a beneficent providence. It is only wrong to misuse them—to waste them.

WESTERN COLORADO HAS ABUNDANCE OF BUILDING STONE AND MINERALS

(By Harry Chrisman)

We promised last week to take a look at the mineral ores of the western slope. Since no article of such length could possibly do justice to this phase of the natural resources of the State we shall include, as well, a brief history of the other valuable deposits of this and adjoining counties. By doing so it will at least call attention to the many buried treasures of our region rather than do an injustice to a few by such scant appraisal as this brief study could make.

GRANITE, MARBLE, WORKED ON SLOPE

Building stones have played a great part in man's upward climb. So we shall start at this point. We have, both at Aspen and Gunnison, workable deposits of granite. This rock is of great age, rugged strength, and of unexcelled beauty. It is excellently suited to statuary work as well as structural purposes. The Gunnison granite was used in the construction of the State Capitol building at Denver, 230,000 cubic feet being used.

The rich, mottled marbles and the pure white marble resembling the Carrara marble of Italy or the Pentelic of Greece are both found on Yule Creek, near Gunnison. The white is in such massive quantity that blocks of any dimension can be quarried. The State Capitol Annex at East Fourteenth Street and Sherman is constructed of this marble with Colorado travertine and marble interior. Such marbles are the result of dull limestone being twisted and kneaded under exceedingly high temperatures during our mountain-making eras. It might also be mentioned in passing that fine deposits of manganese are found in the Gunnison area and westward at Sapinero.

Limestones and clays, suitable for manufacturing cement, exist abundantly on the western slope. Rock cement is formed by burning the calcareous rocks to a clinker, then grinding it to a powder form. When water is added the mixture will harden into a rock-like mass. The limestone lime is used widely in the manufacture of beet sugar.

Many rock and earth substances suitable for abrasives exist nearby—sandstones for rough grinding such as used in grindstones; pumicide, a volcanic ash, for milder abrasion, and so forth.

There is no dearth of road-building materials on this side of the mountains. There are river sands in abundance as well as gravel, asphaltic sands and sandstones.

HUNDREDS OF MINERALS AVAILABLE

Scrap mica of this region is being fabricated into insulating boards for heat, sound and electrical insulation. Fuller's earth, a material for filtering fats and oils is found near Delta. There are countless chemical materials with a thousand and one different uses which can be found on the western slope—barite, obsidian, native sulfur, pyrite, cryolite, monzanite, alunite, potash and others.

As the writer looks at his Colorado mineral map, showing the natural resources available within 100 miles of Delta, he sees gold, silver, antimony, manganese, coal, oil, oil shale, uranium, vanadium, radium, natural gas, building stones, clays, and hydroelectric power—the widest range of materials suitable for fabricating and manufacturing needs. Here is the potential power and natural resources for a great industrial center.

The lay person can only guess at the richness of this buried treasure of the western slope. It requires the eye and mind of the trained and skilled chemist, engineer, and scientist to comprehend what this vast store of riches means in a functional sense.

Let us take a rock, one picked up at random, and see what it contains. Our geologist tells us it is "dolomite." The chemist says it is " * * * the carbonate of calcium and magnesium. It is used (dolomitic limestone) for lime. If it contains approximately equal proportions of the two carbonates it may be calcined and converted into a highly refractory material." "What would we use it for?" we ask our friend, the engineer. He smiles at us and says, "Why it makes excellent material for lining iron and steel furnaces."

There it is. Dolomite. A rock you step on while out hunting and fishing. Come home and who would ever think to look for it as the lining of their furnace?

GREATER MINERAL DEVELOPMENT NEEDED

The average yearly income from Colorado minerals is not high, yet in a 37-year period more than $2,000,000,000 has accrued to Coloradoans through the mining industries. Most of these raw materials left the State to be manufactured and fabricated elsewhere.

About 40 minerals are produced commercially. Gold ranked first until 1920; it was superseded by coal which, in turn, was superseded by molybdenum in 1939. Colorado in that year ranked sixteenth place among the States of the Nation in mineral production. Our nonmetallic minerals such as coal, petroleum, natural gas, fluorspar, gypsum, feldspar, clay, lime, and so forth, now exceed in value the output of metals. Much of this is now coming from the western slope area.

Western Colorado is the only domestic source of the widely discussed uranium ore. Carnotite, an ore of vanadium and uranium content, occurs locally over a wide area of western Colorado. It is thought to occur under the beds of the Cenozoic era laid down 50,000,000 years ago in Garfield and Rio Blanco Counties. Vanadium is now being mined at Naturita in Montrose County by the Vanadium Corp. of America and at Durango in La Plata County. It occurs as a yellow powder which impregnates sandstone in its seams and pockets. It is said to be commonly underlaid by a thin strata of greenish-colored shale which has influenced the circulation of the waters in depositing the ore.

URANIUM "UNMARKETABLE" IN 1927

An amusing incident concerning the mining of uranium ores appears in Prof. R. D. George's book, Geology and Natural Resources of Colorado, a book to which the writer is greatly indebted for much of the factual material of this series of articles. During the early period of mining of uranium-bearing ores (1918-19) it was the radium and vanadium content for which the vein was worked. The radium content of the ores, it was stated, was roughly proportional to the uranium content, 45,000 tons yielding 165 grams of radium. "Uranium," it was said by the writer, "was rarely marketable, and as a consequence the 900 tons of the oxide added but little to the value of the ore." One wonders where those tons of this useless and unmarketable uranium residue was dumped.

STEEL MANUFACTURING POSSIBLE

Iron ore, the basic metal of our steel age, is found in the mountain area near Aspen. Three to four million tons of the ore, perhaps more, are estimated to lie in this area. Molybdenum, a rare metal used in the manufacture of special steels, is mined at Climax, though not on the western slope. This mine furnishes 72 percent of our domestic output, and the domestic output of the United States (1939) made up 92 percent of the world's production of this metal. Known reserves in the Climax deposit are more than 100,000,000 tons.

In conclusion we might ask, What is the future of the western slope in regard to her valuable mineral deposits?

First, our sketchy inquiry has shown that the geological conditions, necessary to laying down ground riches in the form of ores, oil, coal, oil shales, and other wealth far beyond our present knowledge, have existed over the Colorado area in bygone times. Second, we must realize that man's search for mineral wealth has been severely limited by both his mental and physical vision. His eyes can see only the surface of the earth; the outcroppings alone have told him where to dig. His experience and training are limited further by his mental horizon. Uranium, for example, was once a useless, unmarketable residue left over when radium and vanadium had been removed from the ore.

New uses, however, will be found for old and perhaps easily accessible minerals, just as atomic fission was made possible by application of new knowledge concerning an existing unmarketable ore. About 250 metallic and nonmetallic minerals and compounds are known to exist in the State; many others undoubtedly exist for which new uses will be found.

BURIED WEALTH UNSEEN

The broad forests hide from the eye many of the rock outcroppings. Vast areas of the western slope are still unexplored from the geological point of view. The United States and the Colorado Geological Surveys are filling in these gaps in our knowledge. It is unreasonable to suppose that erosion has, or ever will, uncover the most valuable veins of mineral wealth or that man will find them lying exposed on the surface. New electronic and electromagnetic devices will aid in the discovery of the deeper lying deposits.

It would appear that where the combination of iron ore in plentiful quantity, ample power in the form of coal as well as hydroelectric power, and such a wide variety of accessible mineral ores existed, some use would be found for this potential. Here is the basis for a great plastic industry; here everything for an advanced glass industry exists. The mountain barriers to the east and the distance to eastern population centers may come to be replaced with the shorter transportation hauls to the southern and

western coastal regions. There is, and has always been throughout the history of the State, a natural affinity for trade with the southwest United States. Simple proximity to raw manufacturing materials and power facilities warrant strength of belief in the future of the western slope. War and attendant industrial decentralization in the East would undoubtedly find Colorado's western slope a protective harbor in the atomic storm.

INDUSTRIAL DEVELOPMENT DUE

Industrial development on the western slope will perhaps come slower than many would wish it. It may only supplement our agrarian economy for several years to come. Its slow development, though, should not blind us to the intrinsic importance of our mineral potential. While farming and ranching have sound basis in the rich soil and the plentiful supply of water for irrigation they need industrial development to bring the working population up in numbers to supply them with a broader local market.

We must let our concepts rise ahead of our accomplishments in working toward this industrial development. To make the community wealth more bountiful for all and to leave behind a generous heritage of material wealth in a cultured environment is a worthy and engaging task. To work toward this end with knowledge and understanding requires a sensitivity of the issue before us and intelligence of the tools and materials at hand. The task is to build industrially. The tools are our human resources and the treasures that lie buried on the western slope.

Colorado River

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. POULSON. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include an article which appeared in the Los Angeles Daily News of Tuesday, May 10, 1949, written by Matt Weinstock, one of the top columnists of the country. All Members should find this article on the Colorado River of interest as the bill to have these Colorado River water rights adjudicated in the Supreme Court is now before the Judiciary Committee of the House.

DON'T BE SURPRISED

(By Matt Weinstock)

In a sixth-floor office of the Colorado River Association on Third Street, there hangs a striking, enlarged color photo of the San Vicente Reservoir 25 miles northeast of San Diego.

It is a beautiful shot photographically but Bob Lee of the association tells you it is not a pretty picture. It was taken late last summer, when San Diego avoided water rationing only by frantic day and night capacity pumping from its Colorado River aqueduct line. The sloping sides of the reservoir, which supplies San Diego's water, are seen in the picture to be dry and the water level is very low—in fact the reservoir is 96 percent empty.

Yet it's safe to state few San Diegans appreciated how near they were to possible hardship, as few of the 3,500,000 persons living in the 28 southern California cities that tap the Colorado River for water realize they're in trouble too if the current water rights battle in Washington should be decided against California, in favor of Arizona. Particularly is this true of the thousands of newcomers to this area, unaware of the vision and planning that have gone into maintaining a water supply adequate for a tremendously increased population.

You turn on the faucet and you take it for granted that water will come out. As things stand, don't make any bets on this happening on a given date some years hence. Few visualize what would happen if nothing came out. Without water, this country would soon revert to desert. It would resemble sections of Mexico, engineers say, where the only greenery around many haciendas is a potted geranium or two. The rest, dust.

Every person in Los Angeles, according to estimates, uses 150 gallons of water daily. It goes for cooking, drinking, bathing, laundry, and plunging. Lawn sprinkling and other outside uses are extra. The figure makes the bottled water companies' formula of 8 glasses a day seem conservative and talk of the great unwashed a mere fiction.

Meanwhile, southern California apparently will continue its dry cycle. Rainfall this year was considerably above 1947 and 1948, driest consecutive years in history, but it was only half the normal 15 inches. Furthermore, it appears we've gotten all we're going to get.

Without imported water from the Owens and Colorado Rivers, Los Angeles would long ago have had water rationing. Even with Colorado River water, Long Beach last summer had to go easy. Along about August the squeeze again will be on. Santa Monica must get all its water from the Colorado; Pasadena and Long Beach about half.

The Colorado River Association doesn't want to alarm people, it wants them simply to be aware of the situation. All California asks is that the dispute be settled legally, by the Supreme Court. All its cards are on the table: The fact that it developed Colorado River water with its own initiative and money to care for 5,000,000 people and now Arizona, by what has been called shotgun rule, wants to swipe it for 25,000 persons living on a few thousand farms. Oddly enough, through legislative sleight-of-hand, Arizona seems to have an edge.

A Shocking Oversight

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. KEATING. Mr. Speaker, upon request, the Government furnishes to the next of kin of one of the fallen heroes of World War II a suitable headstone to be erected over his grave. The mother and father of one who gave his life for his country recently wrote the Department of the Army requesting one of these markers. Their son had never been found. For that reason their request was denied. Under the law, that is probably the only interpretation which could be given to the enabling statute.

After such a sacrifice, however, it is little wonder that this mother has written:

How can one collect the bones of an aviator shot down in action high over a burning city, and is he any less entitled to consideration than one who dies in a hospital? This seems to me * * * almost a deliberate insult to the memory of a brave boy and to his bereaved family.

To remedy this obvious and, I feel sure, unintended injustice, I have today introduced a bill which authorizes the Director of the National Park Service to erect a headstone in any cemetery upon application by the widow or next of kin of a deceased member of the military or naval forces who, during World War II, first, lost his life and is buried outside the United States; second, was lost at sea; third, is officially listed as missing while in the performance of duty. The measure provides that the headstone shall be of durable stone and similar in design, size, and weight to those erected in national cemeteries and shall be inscribed with the name and rank of the deceased veteran.

Certainly in a case where a man has been officially declared missing, after the thorough investigation which is made prior to such a determination, his loved ones should not be deprived of this modest recognition from a grateful Nation.

Employment of Physically Handicapped

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. SMATHERS. Mr. Speaker, because of the millions of persons who, though physically handicapped, could be gainfully employed, the President of the United States created a committee to further National Employ the Physically Handicapped Week. The chairman of that committee, Vice Adm. Ross T. McIntire, recently received a letter from a representative of the committee telling of the highly commendable cooperation in this program by a manufacturing firm in Miami, Fla. In only partial and certainly inadequate recognition of this firm's laudable efforts, I want to introduce in the CONGRESSIONAL RECORD a copy of the letter to Vice Admiral McIntire:

DEPARTMENT OF LABOR,
WAGE AND HOUR AND PUBLIC CONTRACTS DIVISIONS,
Washington D. C., April 12, 1949.

Vice Adm. ROSS T. MCINTIRE, USN,
President's Committee on National Employ the Physically Handicapped Week, Department of Labor, Washington, D. C.

DEAR ADMIRAL MCINTIRE: I think you will be interested in an example which has just come to my attention of what can be done when an employer is motivated by a compelling desire to provide employment opportunities to disabled persons.

The Empire Furniture Co., of Miami, Fla., manufacturers of rattan furniture, is a thriving family business owned by Leo Axlrod and

his wife. It appears that the Axlrod's son was a disabled veteran and he together with his father and mother set out to hire as many disabled veterans as they could fit into their plant. The son recently died but the family still carry on the practice.

Of the 30 employees in the place 9 are disabled veterans whose handicaps are such as to preclude their employment in the usual large factory. The Axlrods make it a practice to start these handicaped workers off at the same rate that is paid nonhandicapped workers in the plant. No one is paid less than 75 cents an hour to begin with and wages are increased in accordance with productivity.

Sincerely yours,

LOUISE MCGUIRE,
Wage and Hour and Public Contracts Representative on Your Committee.

We Must Reduce the Mounting Cost of Government

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1949

Mr. TABER. Mr. Speaker, some Democratic leaders and the President's own economists have finally come to the conclusion that we must reduce the terrific mounting cost of Government.

But actions speak louder than words.

On April 14, 1949, I placed in the RECORD a statement showing that the appropriations so far passed by the Congress exceeded the 1949 appropriations by $4,216,000,000. At that time the record of the House of Representatives was $299,000,000 below the budget. The Senate has now acted upon four regular bills. They add to the increase above last year $574,000,000 making the total increase $4,790,000,000 above last year.

The bills as reported by the Senate committee show an increase above the House bills of $158,000,000 in the civil-functions bill; $40,000,000 in the Treasury-Post Office bill; $22,000,000 in the agricultural bill; $185,000,000 in the Labor-Federal Security bill, making a total increase over the House bills—on just those four items—of $405,000,000. Five other bills are awaiting consideration by the Senate committee.

If those bills are passed by the Senate as recommended by the Senate Appropriations Committee and become law on that basis, they will be $106,000,000 above the President's budget.

In other words, we are playing with nearly $5,000,000,000 increased appropriations, and we are not even limiting ourselves to the President's budget figures.

The United States of America is presently paying in taxes 37 percent of its spendable income. Unless some very drastic action is taken in the Senate and unless the House conferees stand up, the fiscal year 1950 is going to show the United States Treasury in the red to the tune of $4,000,000,000 to $5,000,000,000, and we are going to have to increase taxes next year.

Federal expenditures, according to the Treasury statement for May 9, 1949, are $30,456,000,000—an increase of $2,100,000,000 above last year. The total expenditures last year—after this same date—were $8,800,000,000 so that the total expenditures this year, on the same percentage increase basis, would run our disbursements up to $39,800,000,000. The President estimates receipts of $39,580,000,000 so that we are to have a deficit this year—without the expenditure of $3,000,000,000 from the Foreign Economic Cooperation Trust Fund. Including that figure, we are to have a deficit of $3,300,000,000.

Will America wake up and stop spending before it is too late?

In the Eightieth Congress, we reduced total estimates of the President over $6,000,000,000 in the two sessions. With the Congress this year increasing the appropriations above the President's estimates and talking about appropriating nearly $5,000,000,000 more than was appropriated last year, we are heading for bankruptcy and disaster unless the President and the Democratic Congress heed the warnings of the President's economic advisers and such outstanding Democratic leaders as Senators BYRD and GEORGE and Representative DOUGHTON.

Congress and Labor Issues

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of May 8, 1949:

LABOR ISSUES—IN CONGRESS AND SHOP

About 15,600,000 working men and women belong to labor unions. They and their dependents total perhaps 50,000,000—one in every three Americans. Their relations with management are regulated by the controversial Taft-Hartley Act. Their wages—both as purchasing power and as a part of the cost of production—are a vital element in the national economy.

Last week labor was embarked upon a period of trial. Important tests were under way or at hand in the fields of legislation and of collective bargaining.

In the field of legislation, labor and the Truman administration suffered a severe setback in their efforts—pledged in last November's elections—to wipe out the Taft-Hartley Act. The set-back was so severe that there was some doubt that Congress would make any change in the act this year.

In the field of collective bargaining, the big unions in basic industries made ready for their 1949 fourth-round campaigns. In what was taken as a sign of labor's restiveness, Ford's auto empire was shut down by a strike over a relatively minor issue.

These tests seemed likely to react one upon the other. Congress' temper in working on labor law is likely to be affected by what takes place in the fourth-round drives. Labor's temper in turn is likely to be affected by the trend of events in Congress.

STAND-OFF ON TAFT-HARTLEY

During his campaign last fall President Truman said repeatedly:

"The Republicans shackled labor with that awful Taft-Hartley law. We will repeal it."

Last week it seemed certain that the Democratic-controlled Eighty-first Congress would not redeem that pledge on the President's terms. In the first test votes in the House, the administration barely headed off a drive to continue the Taft-Hartley Act largely intact. The result served to emphasize the administration's lack of control over Congress on an issue of deep controversy. It also raised large questions about the future political role of organized labor.

The administration sent its labor bill to Congress on January 29. The bill was approved by labor leaders. It called for repeal of the Taft-Hartley Act and reenactment of the Wagner Act of 1935 with minor curbs on unions. The House and Senate Labor Committees, both administration-controlled, approved the bill intact. The debate began in the House 12 days ago.

As the debate opened, the situation in the House was confused. So far as the party line-up is concerned, this is the picture:

Democrats	260
Republicans	171
American Labor	1
Vacancies	3

But there was deep disunity among the Democrats. Only about 180 could be counted on to go along with the administration. The others—mostly southerners—were either in doubt or firmly opposed to the administration.

As a result two opposing strategies took form in the House. On one side were forces supporting the administration bill, named for JOHN LESINSKI, of Michigan, chairman of the Labor Committee. On the other side were southern Democratic and Republican forces supporting an antiadministration bill named for JOHN S. WOOD, Georgia, Democrat. The Wood bill provided for retention of most of the provisions of the Taft-Hartley Act, but not its name.

DOUBTFUL VOTES

Between these two blocs was a sizable group of Representatives unwilling to vote for either extreme. The two groups bid for these doubtful votes by offering compromises—the Lesinski group by conceding some restrictions on unions, the Wood group by making concessions to labor.

The administration strategy became confused. Ten days ago administration and labor leaders agreed—privately—on five changes in the Lesinski bill. They provided for: Government seizure of plants in national emergency strikes; free speech for employers; and requirements that unions as well as management bargain collectively, that unions file financial reports with the Government, and that management as well as union officers disavow communism. Publicly, however, the union leaders continued to press for the Lesinski bill unchanged.

Last Monday Speaker SAM RAYBURN conferred at the White House, then announced that he was supporting an additional amendment—a provision paralleling the Taft-Hartley Act's machinery for court injunctions to halt national emergency strikes. Mr. RAYBURN said the President had not approved the injunction amendment. Nevertheless, a bill embodying all the amendments became the bill of the House leadership. It took the name of HUGO S. SIMS, JR., of South Carolina.

On Tuesday, as the show-down came, union leaders were still insisting publicly on the Lesinski bill. John L. Lewis and some other independent union chieftains also demanded the Lesinski bill privately. But CIO and A. F. of L. leaders passed the word that they would settle for the Sims bill. Their lobbyists said: "What else can we do?"

SIMS BILL DEFEATED

The first vote was on the Sims bill. It was beaten by 211 to 183. Then, on Tuesday night, there came what seemed to be the decisive test—a vote on the Wood bill. It passed by 217 to 203. This is the breakdown of the vote:

	For	*Against*
Republicans	146	22
Southern Democrats	67	29
Other Democrats	4	151
American Labor	0	1

The administration forces seemed demoralized in the face of a disastrous defeat. But they were reprieved at the last moment by a tactical maneuver by the American Laborite, VITO MARCANTONIO, of New York. As any House Member may do, he demanded that the bill be engrossed (specially printed) before the final vote. The move delayed the final vote until Wednesday.

Overnight, middle-of-the-road Democrats exacted a pledge from the Labor Committee. The pledge was that if the bill were recommitted to the committee it would write a new bill that the party could support. On Wednesday the move for recommittal was made. Because of the committee's pledge a group of southern Democrats who had supported the Wood bill voted for recommittal. These votes swung the balance. The bill was sent back to committee by a vote of 212 to 209. The administration forces burst into cheers. This was the break-down of the vote on recommittal:

	For	*Against*
Republicans	18	147
Southern Democrats	38	61
Other Democrats	155	1
American Labor	1	0

Thus, the labor measure, so far as the House was concerned, was back where it began. There was uncertainty over how the administration would move next. It could either work to get a new bill through the House Labor Committee or wait until the Senate passes a bill of its own and sends it to the House.

In any event, the consensus is that the crucial test will come in the Senate. Indications are that the administration bill will receive even rougher treatment in the Senate than in the House. The administration's Senate majority is proportionately smaller—54 to 42. Senator ROBERT A. TAFT's influence is expected to be strong. On Wednesday he introduced a substitute bill calling for 29 changes in details of the Taft-Hartley Act but retaining its basic structure.

Observers believe much depends on what course labor leaders take. The feeling is that they have been unrealistic in holding out so long for the administration bill, and too late in agreeing to strengthening amendments. Whether they can salvage the situation depends, it is thought, on their legislative policy in the next few weeks—as well as events in the field of collective bargaining.

FOURTH ROUND PRELUDE?

The national wage pattern is set in four great industries in which labor is solidly unionized. The pattern directly affects 3,000,000 workers in four big unions and indirectly affects other millions in other industries. These are the four unions and their timetable for this year:

United Mine Workers—contracts expire June 30; negotiations to start by early June.

United Automobile Workers—key talks expected at Ford, where contract expires July 15; talks start May 16.

United Steel Workers—talks on reopening contract begin about June 15, strike action possible after July 15.

United Electrical Workers—contracts to be reopened toward end of May.

Since the war these unions have won three rounds of wage increases. Each increase was an effort to bring wages into line with a steadily rising cost of living.

This year the climate is different. The cost of living has declined. In many lines production has caught up with demand. There have been lay-offs. As a result the unions' fourth-round discussions have been emphasizing—in the preliminary stage at least—long-range security instead of hourly wages. On last Thursday, for example, the steel workers announced they would demand comprehensive welfare and pension plans as well as a wage increase; the total cost to the companies would be the equivalent of a wage increase of 30 cents an hour.

UNION ARGUMENTS

In making these demands, labor's position is this: Security for the workers means stable purchasing power, and stable purchasing power is insurance against an accelerating recession. Companies can well afford to pay the cost out of their record profits.

Management's position is this: Higher labor costs can be met only by higher prices. At a time of increasing buyer resistance, higher prices would mean falling sales.

Domestic Business Trend Emphasizes Need of Foreign Trade

EXTENSION OF REMARKS

OF

HON. CHESTER A. CHESNEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. CHESNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following article which appeared in the Chicago Journal of Commerce of April 25, 1949, entitled "Domestic Business Trend Emphasizes Need of Foreign Trade":

DOMESTIC BUSINESS TREND EMPHASIZES NEED OF FOREIGN TRADE—UNITED STATES MUST FIND MARKETS FOR STEPPED-UP OUTPUT

(By William Noorlag, Jr.)

There is little doubt about the future need for vigorous United States participation in two-way international commerce in order to keep the economy clicking at home.

The suddenness with which our domestic order backlog was wiped out and the resulting price declines and layoffs are the best indication that our stepped-up production machinery is better geared to serving the world's 2,500,000,000 population than it is for 150,000,000 Americans alone.

AMERICA MUST ASSUME LEADING ROLE

Before such an expanded world market can become a reality, a great transformation must take place in the economically sick world. America must take a leading role in administering the healthy transfusion in such a way that both the patient and the donor not only survive but grow robust.

If our economic success is to be long-lived, it is obvious that the other nations of the world must also be prosperous. An ailing organ affects the whole body. A community without funds would soon ruin its merchants.

Other countries which preceded America in world leadership found their empires crumbling because ultimately, instead of sharing economic success, they exploited and drained others to achieve riches for themselves.

EXPANDED PRODUCTION TO REQUIRE MORE IMPORTS

In the quest for expanded markets for our stepped-up production we must not overlook the fact that the increased tempo also makes us dependent on other sections of the world for an increased volume of raw materials and other supplies.

Records show that America is producing about twice the prewar volume, but imports, despite being at an all-time high, have gone up only 13 percent in the same period. This would indicate that the import volume not only can but must rise still further to sustain our output.

This is indeed a happy circumstance as it is only through a fairly balanced exchange of goods that international commerce can become meaningful. Achieving the balance through gifts, regardless of the stated reason behind them, drains the resources of the giver and makes the recipient suspicious and finally resentful.

Furthermore, the constant outpouring of billions of dollars in foreign assistance of one kind or another not only has made the average American taxpayer resentful but it has distorted his thinking about the possibility of doing a constructive business beyond his own shores.

UNITED STATES SACRIFICE GOES UNNOTICED ABROAD

The average recipient abroad scarcely knows about his benefactors' sacrifice. This is best illustrated by the fact that Marshall plan aid, costing billions to America, averages out to only $18 per capita for western Europe. But it is no gift to the individual there—he has to pay in his own currency for the little he gets directly.

Measured out, like the 2 or 3 ounces of bacon the average Briton gets once a week, the gift fails to make much of an impression in an austere economy.

The regrettable part of our whole foreign program is that it is concentrated in only part of the world. Important as the European area may be, it is not so important as to warrant the obvious side-stepping of economic problems bogging down other sections of the world, particularly among our neighbors to the south.

LATIN-AMERICAN TRADE TOTALS $5,000,000,000 IN 1948

This does not mean more Government loans or gifts. It simply means a greater cooperation between Government and business in helping to solve the dire economic problems of the Latin-American Republics through establishment of a healthy climate for the investment of private capital, encouragement of two-way trade, promotion of travel, removal of trade barriers, research and development of latent natural resources, and other improvements in the development of trade with Latin America.

Last year, despite widespread trade restrictions, Latin-American trade represented about 25 percent of our total foreign commerce, over $5,000,000,000 worth.

INTELLIGENT POLICY CAN BOOST VOLUME HIGHER

Foreign traders at the Fourth Mississippi Valley World Trade Conference at New Orleans last week were exceptionally optimistic that this volume, great as it already is, could grow even larger, if aided by an intelligent trade policy.

Time is of the essence. European exporters, being helped back on their feet with billions of ECA dollars, are actively courting Latin America with products which for a number of years could only be supplied by the United States; hence, the United States cannot afford to remain aloof in helping to solve the behind-the-scenes problems confronting a real customer.

If we do, the results will rebound adversely, and this country will have lost one of its greatest opportunities in its newly found role of world leadership.

FCC and Frequency-Modulation Radio

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1949

Mr. WALTER. Mr. Speaker, I want to report a sequel to a matter which I brought to the attention of the House some few days ago. Since the day I reported that the Federal Communications Commission has been guilty of disservice to the Nation's progress by its hurtful impeding of frequency modulation radio my mail has been not only voluminous but also startling.

I have received requests for 10,000 copies of that speech, but more important, I have received information pointing to deliberate and contemptuous violations by the FCC, of the Federal Administrative Procedures Act.

At about the time I received this information the United States court of appeals reversed three decisions made by the FCC.

And in these cases the conduct of the FCC has been such that the appellate court deemed it necessary to excoriate the Federal agency for violations of this administrative procedures law.

This is a law conceived and enacted to protect the rights and interests of individuals and the public. If this indicting information is correct—and the appellate court apparently is satisfied that it is—then the FCC, operating on the policy of the public and the law be damned, is guilty of a calculating misfeasance in office.

There is no doubt that the Federal Communications Commission represents the ultimate in procrastination, with the result that objectives of the Communications Act of 1934, and the more recent Administrative Procedure Act, are in effect nullified.

Inaction by an administrative agency often avoids compliance with the essentials of administrative justice and allows the agency to regulate by rumor, dictum, and the "lifted eyebrow" technique.

The Communications Commission has had pending before it for many months, and in some instances many years, important matters of radio regulation, both of substance and procedure—yet no final action has been taken, and the general public as well as the radio industry is kept waiting in suspense, ever hopeful that the eventual outcome will not become too deleterious.

I need only refer to such long-standing items as the proposed change of regulations covering so-called clear channels, pending since before the war; the proposed rule on lotteries, on multiple ownership of radio stations, on editorializing, and on the requirement of public advertising for all broadcast applications.

There is also the other type of regulatory maneuver, attempted without proposed rule-making procedure, but by so-called dictum and policy pronouncement.

In this category is included the question of station ownership by newspapers, theaters, moving-picture producers, or the questions of programing dealing with political or religious broadcasts, or with the ethics of horse racing.

Neither a broadcaster nor his lawyer can say with certainty what is banned or what is permitted; yet these matters have been under consideration for years, but without action being taken one way or the other, even after hearings have been held.

Moreover, even in those instances where the Commission itself has suggested a proposed regulation in response to public demand and where there is no opposition to such proposed regulation, nothing happens.

I have in mind, as an example, a rule proposed by the Commission last summer by which the examiner's reports, made after hearing, would be released to the public at once without awaiting preparation of a proposed Commission decision.

It was then and is still now the practice to release the examiner's report simultaneously with the proposed decision. Everyone seemed to be in accord with this proposed change, which would serve to bring the Commission's practice within the intent and spirit of the Administrative Procedure Act.

The Commission wanted it, since it proposed the rule as one it intended to put into effect; the regulated industry wanted it, since it voiced no opposition; the practicing lawyers and bar associations wanted it, since they formally so advised the Commission when the Commission called for comments; the Commission's examiners wanted it, since they for the first time would be afforded the independence guaranteed by the Administrative Procedure Act.

No person or group was openly against it and all appeared to be openly for it.

Personnel of the Commission now engaged in reviewing and preparing proposed decisions would be available for other necessary work, and the costs of mimeographing would be considerably shaved.

Yet in nearly a year's time the Commission has taken no step to make the proposed rule effective as a final order.

It may well be that the Commissioners with the passage of time forget these matters as new ones are presented for consideration by the legal staff, and it may be that the legal staff has decided that the proposed rule would contract its own powers.

In any event it is another instance of inaction contrary to the best interests of the public.

It is a basic declaration of the Administrative Procedure Act that every agency shall proceed with reasonable dispatch to conclude any matter presented to it, and this has been obviously disregarded by the Commission.

I am becoming convinced that there can be no substantial or adequate reason for such procrastination by an administrative agency, and I believe the time has come for a special inquiry to be instituted.

Mr. Speaker, when funds are approved for the functions of the Judiciary Committee of the House, I propose to utilize some of them for the purpose of a thorough investigation of these apparently flagrant and willful violations of the Administrative Procedures Act by the Federal Communications Commission and its staff, in the matters brought to my attention which I have outlined to you.

Indians' Benefits

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1949

Mr. POULSON. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include a column of Mrs. Eleanor Roosevelt which calls to our attention some discriminations against the Indians of this country:

[From the New York World-Telegram of April 26, 1949]

INDIANS' BENEFITS

(By Eleanor Roosevelt)

Hidden away in the deficiency appropriations bill, H. R. 2632, reported out on March 22 by the Senate Appropriations Committee, is a provision which excludes the Indians in the States of Arizona and New Mexico from social security benefit payments. This seems to me an extraordinary action.

It establishes the principle of discrimination in social security, but is done in a very complicated way so that it is difficult to detect. The significant passage appears at the end of the last sentence of the committee's explanation, which says: "In striking out the House proviso and increasing the appropriations for the Navajo and Hopi service in the amount of $400,000 and the appropriation, 'Welfare of Indians' in the amount of $150,000, the committee does so with the understanding that the program of welfare assistance in the States of Arizona and New Mexico is to be carried on as in the past and that rates of assistance are not to be increased."

In the past, Indians have been excluded by these two States, Arizona and New Mexico, from the social-security rolls. The Social Security Administration made this clear recently by filing charges against these two States. Now, however, some Senators have decided to establish this discrimination and write it into Federal law. Those last words, freeing the rates of assistance, would mean that even though other people living near by might have their rates increased, the Indians would not be allowed to benefit.

One wonders, in a bill of this kind, whether all of the Senators knew exactly what they were doing or whether those who were interested put it over on their colleagues.

Certain legislation has been pending in Congress for 12 years in matters affecting this Indian situation, and all that Congress ever does is to reintroduced the legislation at every session and let it die. The committee is not honest enough, however, to say that it is putting through a basic change in the social-security law as part of an appropriation bill. It has heretofore been forbidden by law to have racial discrimination in the social-security law.

The President and the Bureau of the Budget recommended an appropriation of $385,000 under the heading of "Welfare of Indians," knowing that there were special emergency needs on the Indian reservations.

Occasionally in the past such emergency appropriations have been used for other than the purposes intended, and so the Budget Bureau proposed a special proviso to prevent this diversion of funds. This was done because in Arizona and New Mexico these emergency appropriations were used to set up a special social-security system under the Indian Bureau.

The House accepted this, but the Senate appropriation now tries to delete this proviso. If it is deleted, no Indian in New Mexico or Arizona will be eligible for old-age assistance, aid to the blind, or aid to dependent children.

Why is it we cannot seem to treat the first citizens of this country with decency and justice? It makes one ashamed.

Ten Big Points

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following from the Chelsea Record, Chelsea, Mass., May 10, 1949:

TEN BIG POINTS

These are days when changes are being made in our ways of life, in our Government at all levels.

The ideals and principles of the past are getting a pretty rugged going over and, unless we are careful to guard some of those ideals on which this Nation was founded, we may wake up some day and find them gone.

Here are 10 points which are vital in the preservation of our sound American way of life:

1. You cannot bring about prosperity by discouraging thrift.
2. You cannot strengthen the weak by weakening the strong.
3. You cannot help small men by tearing down big men.
4. You cannot help the poor by destroying the rich.
5. You cannot lift the wage earner by pulling down the wage payer.
6. You cannot keep out of trouble by spending more than your income.
7. You cannot further the brotherhood of man by inciting class hatred.
8. You cannot establish sound security on borrowed money.
9. You cannot build character and courage by taking away a man's initiative.
10. You cannot really help men by having the Government tax them to do for them what they can and should do for themselves.

Atomic Energy Commission Fellowships

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, May 13 (legislative day of Monday, April 11), 1949

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Freistadt, Atomic Energy Scholar," published in the Daily Tar Heel, a student publication at the University of North Carolina for May 12, 1949. This article gives the name of the student and discusses his activity at Chapel Hill. I placed in the body of the CONGRESSIONAL RECORD yesterday a letter which I had received from Mr. David E. Lilienthal, Chairman of the Atomic Energy Commission, in response to a letter I had addressed to him giving him the facts about this particular scholar. This editorial indicates what the student body at the University of North Carolina thinks about the action of the Atomic Energy Commission in awarding these valuable fellowships and scholarships to known Communists.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FREISTADT, ATOMIC-ENERGY SCHOLAR

Hans Freistadt, graduate student in physics and the leading exponent of communism on campus, is attending the university on a scholarship—given, amazingly enough, by the United States Atomic Energy Commission. Readers of this page are thoroughly familiar with Freistadt's philosophy, for the Stubbering, Austria, native is the most prolific letters-to-the-editor writer at Carolina. He has consistently attacked the American form of government, its theory, and its practice—the same Government which is giving him $1,600 to study in college.

The fact that it is the Atomic Energy Commission which is making it possible for Freistadt to attend Carolina makes the situation triply disgusting. It isn't necessary to point out that this is an explosive period all over the world, with the United States and Russia invariably on opposing sides. The situation is such that American youth are being drafted into the services for defense of the Nation, presumably against Russian aggression. Meanwhile, back home, the Government is paying a man who for all purposes is a Communist to attend college and further his background in physics for eventual study of atomic energy. If war should come, can't you imagine Mr. Freistadt perfecting some atomic weapon to be dropped on Russia? The idea is ridiculous.

Freistadt has held this atomic-energy scholarship some time. We had heard a rumor to the effect that he was here on scholarship but neglected to investigate the matter. Fulton Lewis, Jr., however, in his radio broadcast Tuesday night, finally unveiled the whole messy situation. Many students on campus disagree with Lewis on various issues and others follow him avidly. But his revelation that Freistadt is attending school on money paid by the Atomic Energy Commission is one which will arouse the entire student body.

The Commission certainly pulled a "boner" in selecting Freistadt for the award. One wonders just how naive a committee can get. Of all the 100 percent Americans with loyalty unquestioned, the Atomic Energy Commission has chosen Mr. Freistadt. Of all the thousands of students scraping to get through college, and the thousands of others never able to attend, Mr. Freistadt gets a $1,600 scholarship. Surely there are numbers of good physics students in the United States who do not have a background entangled in communism. What has happened to the Atomic Energy Commission's reason?

Freistadt came to Carolina from the University of Chicago, where he headed the Communist organization in that school. Here he is the leader in the propagation of the Communist doctrine and heads a little group which he calls the Karl Marx Study Club. He has been investigated by the FBI. We don't know if Hans has a card in the Communist Party or not, but to us it really doesn't matter. The opinions he espouses are enough to type him. He has all the earmarks of a Communist.

Who was responsible for Freistadt receiving his appointment to the scholarship? We don't know, but David Lilienthal and his Commission certainly showed recklessness and incompetence in giving Freistadt a scholarship.

The Atomic Energy Commission can compensate for its poor judgment by depriving Freistadt of his scholarship immediately. If they don't they are not only wasting the taxpayers' money but endangering the safety of the Nation.

We are told that right now Freistadt has no access to the atomic energy secrets. He is in the training period. But he is in line for advancement eventually to a post where he will have access to the secrets. However, we believe Hans Freistadt will never get that far. The American public will wake up one of these days. Still it is the height of foolishness to continue the scholarship which enables him to come to Carolina. It should be given to some person with loyalty unquestioned.

Meanwhile, Hans Freistadt sits back in Chapel Hill, pen in hand, writing out his Communist beliefs for publication in the paper, utilizing to the fullest extent Carolina's liberalism. It is one thing for Mr. Freistadt to go to school and criticize our Government while paying his own expenses. It is a horse of a different color for him to accept a scholarship from the United States and then turn on the hand that helps him. Just how Freistadt can eulogize Russia while exercising the freedom and generosity of America is beyond our comprehension.

And the really great sufferer in the whole affair is the University of North Carolina. Through rumor and exaggeration the word has gotten out that this institution is a hotbed of communism. Nothing could be farther from the truth. Ninety-nine and a fraction percent of the students have no interest in communism whatsoever. The university and students cannot help it if the Atomic Energy Commission sees fit to approve a scholarship to individuals with questionable reputations.

Many say that the best way to deal with communism is through not publicizing it. We are inclined to agree, but when one of its leading advocates is given a scholarship to prepare for eventual work in an atomic-energy laboratory, then the matter calls for action.

The students and Nation have just cause to be indignant. Hans Freistadt publicly brags of being a Communist. He in no way merits governmental assistance. He should be deprived of his scholarship immediately, for the sake of the good name of the University of North Carolina, the taxpayer's money, and the welfare of the Nation.

A Strange Way To Promote Economy

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Friday, May 13 (legislative day of Monday, April 11), 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Strange Way To Promote Economy," written by Arthur Krock, and published in the New York Times of today.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE NATION—A STRANGE WAY TO PROMOTE ECONOMY

(By Arthur Krock)

WASHINGTON, May 12.—The President at his press conference today bid for a reputation which it is doubtful contemporary opinion or history will accord him. He said he had always been for rigid economy and pointed to his budget for fiscal 1949 as an example.

If cutting down the amounts which the claimant agencies ask the Bureau of the Budget to recommend to the President is rigid economy, then Mr. Truman can qualify. He did, for instance, reduce to about $15,000,000,000 the $17,000,000,000 which the Budget Bureau allotted to the armed services after bringing down its claims from $22,000,000,000. But every President, including Franklin D. Roosevelt, has made similar reductions since there was any form of executive budget, and among Mr. Roosevelt's achievements rigid economy is not asserted by his most ardent admirers.

There is a better test of Mr. Truman's budget for fiscal 1949. In it he advocated legislation which would create 43 new spending Federal programs, but he did not advocate the curtailment or elimination of any spending program then current. Following this, the President recommended to Congress the spending of billions more for public health and other forms of social security, and for a new farm program, without attempting to estimate how many billions these would add to the Federal budget. And how completely the administration's policy of spending dominates its plans is demonstrated by the official proposal that, if the increased employer-employee pay-roll levies for expanded social security do not produce the estimated revenue of $6,400,000,000 required to finance these benefits, the Treasury will guarantee the deficit.

NO EXECUTIVE ENCOURAGEMENT

These are high points in the administration's fiscal record thus far, and they provide no support for the President's claim that he has always been the practitioner of the rigid economy he preaches. Also, it is the Democrats in Congress who are balking the effort of a majority of the Republicans and a few Democrats to require Federal officials to keep an unexpended reserve of a certain percentage of the funds allotted to their units. Congress is always disposed toward spending, and when it receives no encouragement from the Executive to reduce the costs of the Federal establishment it increases them over the most lavish Executive estimates.

That has been the story of the Eighty-first Congress, with a Democratic Party majority. And that was the story yesterday when three Republican attempts to reserve from spending $157,000,000 of Treasury-Post Office funds for the coming fiscal year were beaten down. The Senate further decided it had gone too fast and far on April 28 when it ordered a percentage saving of about $15,000,000 in the Labor-Federal Security bill. Democrats who had supported this and were backsliders yesterday were represented as being fearful of political reprisals from the widespread network of postal employees. But some Federal job holders stand in the path of economy at every turn.

Senators justified their opposition to the percentage requirement for saving by saying that this is a meat-ax method, and, of course, it is. But no one has suggested any other effective way of cutting down Federal costs. And the Senators who made this pious protest have no records as economizers; in fact two of them identify spending as the road to prosperity and the barrier against depressions.

IT HAS BEEN DONE

Yet what they opposed as a wrongful method has been used effectively without any of the lamentable results they prophesied. The difference, as Senator BREWSTER reminded them, was that the method was imposed by the then President, and without Presidential cooperation there is little prospect of economy. Mr. BREWSTER recalled that President Coolidge notified each department and agency of government that a 10-percent cut was required in the appropriations voted to them. He ordered this reserve set aside at the beginning of the fiscal year and the remainder divided into four parts. In no quarter of the year could a Federal unit spend more than the part allotted unless it could get the approval of the President and the Budget Bureau for the excess.

That system suited him, said Senator PEPPER. But there is nothing in Mr. Truman's record to invite the hope that he will follow the course adopted by President Coolidge. This leads to the conclusion that unless Congress enforces the saving it will not be made. The President does not need legislation to this end any more than Mr. Coolidge did, however, and if he wants to furnish the first substance for his claim that he is a champion of rigid economy this method is open to him.

It did not figure in his press conference remarks today. He clung to his proposal, made in a very different economic atmosphere than the present, for billions more in new taxes and strong Executive controls. And he did not remit his demand that Congress at this session legislate all the new spending programs he has recommended.

This is the sustained White House position at a time when anxiety is growing over the business (which means the Government revenue) prospect; when the anticipated Federal deficit may be larger than the estimates by five billions in the next two fiscal years; and when there are such plain danger-signals as the fact that copper, an excellent industrial barometer, is stagnant on the market at reduced prices.

Reduction of United States Spending

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, May 13 (legislative day of Monday, April 11), 1949

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the appendix of the RECORD a splendid article entitled "Reversal of Direction Is Noted in Move To Cut United States Spending," by Mr. Mark Sullivan.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REVERSAL OF DIRECTION IS NOTED IN MOVE TO CUT UNITED STATES SPENDING—MARK SULLIVAN ANALYZES PLAN, BEGUN BY BYRD, TO BALANCE BUDGET, CHECK RISE IN DEBT

(By Mark Sullivan)

Within the space of a week has come what at this writing seems to forecast a fundamental reversal of direction. It began with a speech by Senator HARRY F. BYRD, of Virginia, on May 6, in which he called for a check to Government spending—including especially and necessarily a check to the some 40 spending proposals which President Truman sent to Congress last January. The essence of the Byrd plea was that the Government do not spend more than it takes in; that the budget be balanced; that the National debt be not increased. The Byrd speech was, in his words, "an analysis of the Federal fiscal situation." It was so thorough and convincing and its conclusion so ominous, as to be an outstanding event.

Then came, rather sensationally, a news report about a change of position by the Council of Economic Advisers to the President. Previously the council had supported proposals for spending sent by Mr. Truman to Congress. Now, according to the report, the council advised restraint of Government spending, with other policies to the end of balancing the budget, of not increasing the National debt.

REVERSAL OF DIRECTION

If this course is followed, it will be a reversal of direction, and it is reversal of direction that is important. For 14 years, from 1932 to 1946, the national debt was increased every year. Then, for the last 3 years came reduction, easy because of the ending of war expenditures. If, now, after this brief interruption, increase of the national debt should be resumed, the effect is forecast by Senator BYRD in a portentous passage:

"Citizens who own bonds would ask themselves if the Government cannot balance its budget in this period of prosperity and in time of peace, will it ever be balanced again * * * our credit would be wrecked * * *." The ultimate consequence of wrecked national credit would be, in Senator BYRD's words, "our system of government destroyed."

If the reversal of direction now proposed actually takes place, the burden of it will be mainly on Congress. It is not easy for President Truman to recede from his demand for measures that entail increased spending. Suspension of the program of measures that entail increased spending would be in considerable part a suspension of the New Deal—and it is resumption and expansion of the New Deal that Mr. Truman embarked upon after his victory last fall.

The New Deal, the old one and the Truman resumption, is inherently and historically associated with increase of the national debt. Though by no means all the New Deal innovations have entailed Government spending, many have; and the sum and spirit of the whole resulted in an increase of the national debt in every year of the New Deal's birth and growth—that is, from 1933 to 1941, without reference to the war years that brought increase of the national debt for military purposes. With the New Deal philosophy went its politics. That was suggested in a widely current epigram, its authorship attributed to, though denied by, Roosevelt's lieutenant, Harry Hopkins, "We will spend and spend, and elect and elect."

The relation of President Roosevelt to increase of the national debt makes a strange record. The first increase was in the last year of President Hoover's administration, 1932. Under pressure of terrible depression, the national debt increased from some $17,000,000,000 to some $19,500,000,000. The deficit was fiercely denounced by Roosevelt in the 1932 campaign. Derisively he called Mr. Hoover "the greatest spending President in our peacetime history."

ROOSEVELT PROMISED CUT

For himself, Roosevelt promised that if elected he would reduce Government expenditure by 25 percent. This promise Roosevelt tried to carry out. After election he asked from Congress, and got authority to reduce the pay of Government employees, and also veterans' pensions, by the promised percentage. This was done for a time. But after some months Roosevelt adopted a policy of Government spending, occasionally called at the time "priming the pump."

Roosevelt never liked the reversal he had gone through, always hoped to return to economy. Examination of his messages to Congress shows that every message from 1933

to 1938 reflected hope on his part that the budget would be balanced the following year. It never was.

That phase of Roosevelt's administration, what part in it may have been played by his temperament, what part by associates in the New Deal, what part by force of circumstances, some of which were created by the course he took—all that should compose one of the most revealing chapters in any good biography of him or good history of the time.

Socialized Medicine

EXTENSION OF REMARKS
OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Friday, May 13 (legislative day of Monday, April 11), 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a provocative and sturdy speech which was recently delivered by Robert Richard Gros before the California Medical Association in San Francisco on April 29, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, distinguished Senators and other guests, my fellow Californians, as the chairman has mentioned, within the past year and a half it has been my privilege to study the "cold war" close-up, first-hand while circumnavigating the globe. And wherever one goes today he sees some evidence of the cold war—all the way from Berlin to Delhi, from the ancient capitals of Europe and Asia to the tiniest pinpoint coral atoll in the Western Pacific. It varies only in intensity and blatancy, but it is there in some form or another.

Like many of you perhaps, I have looked upon the cold war as a foreign affairs problem—removed from our day-to-day problems of keeping our customers happy or your patients healthy, of meeting the pay roll, and drawing our own pay check. This is not a thoughtful view for it dismisses some deep realities.

I did not realize how deeply we are enmeshed in the cold war in our every-day business and professional lives until I began thinking about my remarks on the subject we are concerned with here tonight. I find inescapable conclusions that in this home front cold war our entire system of individual freedoms is being shoved around plenty.

American business and the professions are up to their necks in this domestic cold war. The enemy is clever, ruthless, and effective. His objectives are clear. He makes no secret of them. His aim is to destroy the American way which exalts the individual and champions his economic and political freedom. I don't need to remind you ladies and gentlemen that the stakes are high. Individual freedom has been destroyed in much of the world—and is in jeopardy here at home, as we have heard here tonight. And what better evidence could we have than the fact that the medical profession—traditionally respected and untouched by the shackles of politics—should have to lay down its scalpel and take up the cudgels to fight for its very survival?

The welfare state idea—the negation of what Justice Brandeis called freedom to be let alone—is spreading throughout the world. In Britain people have become more enamored of security than of opportunity. We are living in an era of what I term false truisms. We've become victims of slogans and catch phrases—the Square Deal, then the New Deal, and now the Fair Deal. All piously profess faith in the American system of individual enterprise and government, but always move toward a welfare and a collective economy that stifles initiative and individual freedom.

The noble and much vaunted "four freedoms" is just about the greatest political catch phrase of all. Did it ever occur to you that "the bird in a gilded cage" has all four freedoms? He has freedom from want, for he is fed and watered daily. He has freedom from fear, for in his gilded cage he is safe from his enemes. He has freedom of speech, for he can trill and warble all he wants; and I assume he has freedom of belief. But this bird doesn't have life's most important freedom of all—freedom of individual initiative and action.

I speak to you tonight as a layman and as a citizen. From my point of view I see this question of socialized medicine as something far more sweeping—vastly more serious in its impact upon the lives of all of us—than is revealed by a cursory examination of the compulsory health-insurance bill.

I see it as another threat to American freedom and initiative. I see it as another segment of the socialistic encirclement that for so long, slowly but surely has been closing in upon the free institutions of the world. And, as has been emphasized eloquently here tonight, this is everybody's fight.

I was impressed a few minutes ago with Senator ELLENDER's eloquent tribute to "the sound American spirit of free enterprise and competition," contrasted with what he aptly termed the "government edict * * * savoring of politics."

This is no new subject to me, for I, as you may recall, labor in the public utility field. For many years—and the Senators will bear me witness—the power systems of America have been fighting for their lives against the encroachments of Government in business. The fight is in a decisive battle stage today in the Eighty-first Congress. Believe me, the proposal for socialized medicine is drawn from the identical pattern upon which the advance of statism against the utilities is moving.

I suspect that many doctors have felt that this fight of the utilities did not concern them or their profession. Perhaps some of them have even turned sympathetic ears to the siren lure of socialistic philosophy. Perhaps now you will be convinced that no part of our economic structure is immune from attack. The fight of the utilities is your fight, just as your fight is now ours—and steel's and the railroad's and scores of other basic industries.

After socialized medicine what next? Life insurance would be a natural—possibly merchandising. There is no limit to the greed of bureaucracy.

I don't deny that there is a real problem. I have nothing but praise for those who sincerely seek to raise the level of health in America. There can be no denial that sudden serious illness may mean catastrophe for the average unprotected citizen—results that are crushing in their effect upon pocketbook and morale.

To me, as a potential patient, health insurance is intelligent, common-sense protection against disaster. It is the most economical safeguard against personal bankruptcy in times of serious illness.

The argument then, as Senator CAIN illustrated clearly, is not whether we shall have health insurance but what kind of such insurance shall we have? Shall we continue to develop the already existing programs of voluntary health insurance with their expanding benefits to the prudent and farsighted, or shall we cast off the gains of past experience for a vicious bureaucratic system of compulsory insurance with all the waste, inefficiency, and political evils that inevitably would accompany Government control of the medical profession. The lives of our babies and their mothers, the survival of the critically ill of all ages, should not be made dependent upon the endless red tape, the fine-print acts of Congress, or bureaucratic rules and regulations.

The alternative poses a solemn challenge to the fraternity of doctors and to those of us who believe that except for the poor and indigent, the care of the sick and the treatment of the sick is not a function of government. It is up to us to demonstrate that we can do the job better—that by voluntary health insurance we can provide better health protection and care to our people—and at less cost—than can an impersonal, wasteful, inefficient bureaucratic system.

Senator ELLENDER very appropriately has offered sound advice that you doctors should cooperate with your lawmakers in an effort to remedy the conditions that give rise to the plans now being proposed. By the same motivation, I as a professional public-relations man would be derelict in my duty and should not feel I had earned my supper tonight, unless I offered a similar caution from the public-relations standpoint. "He who seeks equity must do equity," the lawyers tell us. And similarly, public relationswise, we must recognize that good public relations consist not of what we say, but what we do. Bluntly, gentlemen, I mean that before you doctors can make a telling case in the public mind against socialized medicine on the grounds that it destroys the traditional doctor-patient relationship, you must reexamine your own situation to reaffirm that this doctor-patient relationship does exist in your own practice.

By your own Hippocratic oath your profession is dedicated to the public interest. I urge you to police yourselves—to see to it that no single abuse be found in your practice to furnish ammunition to your opponents in this battle of socialized medicine. And surely it must be evident to the medical profession that you can win this fight only through unity in carrying your sound case before the American people—only through unity in alleviating the conditions that have developed this agitation for political medicine.

I am certain that we all agree that no American should be deprived of adequate medical care, regardless of whether he can pay for it or not. But, it just doesn't make good sense to argue that a compulsory insurance system for those of us who are self-supporting will do a better job of looking after our minority of unfortunates.

Certainly, too, there is an area—and a vital one—where Government has a job to do for public health. I refer to epidemic control, to laboratory research and sanitation, to periodic medical and dental examinations of all school children, to diagnostic clinics to immunization, child hygiene, to greater support of local health units in the recognition of the fact that health is not just a local problem. But do we need to create another alphabetical bureaucracy to do that job? I think not. It makes better sense to me to expand Federal aid for the development of hospital and clinical facilities.

From a thoroughly personal viewpoint, I as a patient, don't want to be pushed around. I don't want the factory production-belt method used to diagnose whether my headache stems from my eyes, my teeth, or just my belly. Last fall in England I talked with scores of British people, in all walks of life. Only this week I spent a fascinating hour here in San Francisco talking with a British doctor who broke his ties with England rather than continue prostituting his profession as it is now being practiced in Britain. Straight from the mouths of these Britishers I gleaned certain pearls of wisdom about Britain's experiment in socialized medicine.

In jolly old England there is developing a hypochondriacs' haven where every little squally-wobble, fleeting pain or twitch becomes the need for a free chassis overhaul of your carcass. You just queue up and have a grand old chat with fellow subjects in the long line of sad pans waiting to be processed. Here you learn to develop other symptoms so that you are in a constant state of care and repair. It must be a jolly game.

But, by the beard of Bernard Shaw, the busiest man of all on the tight little island is the dentitian. He has made and filled more craters than all of London had during the peak of blitz bombing. 'Tis wonderful to see how England is smiling through these days—through shiny new teeth, that is.

Under the perfectly human urge of getting all you can while the getting's good, there is a bargain-sale rush to get the tonsils trimmed free, to calm down palpitating ulcers, to have the appendix apprehended, or the very close veins made less varicose. And if you can think up a new painful ailment and practice faking your symptoms, what an opportunity for a free-board vacation with a beautiful nurse in solicitous attendance.

This is England's second ordeal of blood, sweat, and tears, but this time it is in the free clinics where government workers doctor your ills with bitter Laborite Socialist pills. But the real sweat and tears will come when the exchequer goes flat, and more shillings and bobs and pounds are taken from the aristocrats who have a job and work at it.

And as an American taxpayer, I am increasingly worried as to where we are heading with our constantly pyramiding taxes. If we, too, fall in love with this welfare state conception, aren't we likely to end up flat busted before we honeymoon in our utopia? The Truman plan is vague about costs, and I suspect purposely so. The fact remains, however, that at best estimates are at least 400,000 additional bureaucratic personnel would be required to administer the health program. The cost might easily exceed $10,000,000,000 per year. And the British experience is not encouraging. Costs have run 40 percent more than expected during the first 9 months of socialized medicine in Britain. Our own American experience of the past two decades has shown us what happens when you let bureaucrats feel such new intoxication. Would not these witch doctors on the Potomac conjure up further and more expensive means of helping us, extorting more and more dollars under the persuasive anesthesia of social security.

And what is is to become of the numerous voluntary insurance plans that are now rendering such a satisfactory, relatively economical and ever-expanding service? Fifty-five million Americans are now covered under voluntary health-insurance systems and 37,000,000 are insured against surgical and medical bills. In our own State, the California Physicians Service has multiplied its membership eightfold in the past 5 years, and today three-quarters of a million Californians are covered by CPS insurance.

The brand of democracy I have learned as a young American—the brand to which I have rededicated myself as I have seen its opposites in other parts of the world—denies the legitimacy of Government interference, unless a business or profession has got out of hand or failed to do its job.

Heaven knows the practice of medicine, like any other field, has abundant room for improvement. But must we resort to amputation just because the patient manifests mild halitosis? Political medicine men are bad medicine men in my book. I have yet to see any field of business or professional endeavor, outside the scope of normal and intended functions of Government, where bureaucrats have done a job comparable to that of free and unfettered practitioners.

Senator CAIN put his thumb upon the sore spot when he insisted that the paramount consideration is "What would happen to the American patients if they permitted their legislators in Washington to ensnarl them in a scheme of political medicine."

The problem is primarily one of protecting America's individual freedom—here in the last stronghold of individual liberty. Shall we now surrender one of those freedoms to the hocus-pocus of socialism which tries to spoof us into believing we can get something for nothing? Who believes the fraudulent theory of socialism that we could expect the same degree of efficiency and economy under political-managed medicine that we get from unshackled professional practitioners?

British free medicine threatens to bankrupt the nation. The British people are having a free ride but they are receiving inferior and inadequate medical service, and daily they are sinking deeper and deeper into the bondage of their tax collectors.

Without compulsion, here in the United States of America we have the best medicine in the world—and Security Administrator Ewing to the contrary notwithstanding, the health of the American people is good. We couldn't be too sickly a nation if, through the great and worth while EGA and other programs of aid, we are supporting or at least bolstering so much of the Western World today.

This is not a fight of the medical profession alone. It is your fight and my fight, regardless of our professions or fields of business. It's a basic fight between two opposite theories of economics, government, and political morality.

The greatness of America is not confined to our material resources, our productive capacity, our high literacy, or even our better health. We have not become the strongest nation on the earth through regimentation or a system that tends to level off to mediocrity. The strength of America stems from the strength of character of the American people—a character born in freedom, nurtured in American initiative and incentive and brought to its finest fulfillment under a system which assures the dignity of the individual, be he big or little in our scheme of things.

Let us not surrender any of our strength. Let us remain freemen. Let us reject the false philosophies of the welfare state.

Loan to Spain by Export-Import Bank

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, May 13 (legislative day of Monday, April 11), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the RECORD a press release of May 12, 1949, by the organization known as Americans for Democratic Action. The release has to do with the proposal to extend a loan to Spain through the Export-Import Bank.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

[Press release of Americans for Democratic Action, Washington, D. C., of Thursday, May 12, 1949]

Americans for Democratic Action today informed Secretary of State Acheson that 20 Senators as well as spokesmen for American cotton interests met secretly last Tuesday with a representative of France to arrange a United States loan to Spain, and asked him to resist any deals that would pay tribute to Fascists or to those Americans who would put their selfish economic interests above a successful democratic foreign policy.

ADA disclosed that Francisco Moreno, head of the Hispano-Americano Bank of Madrid and a close friend of Franco, met on Capitol Hill with the Senators and commercial representatives to work out plans for the loan, which would be obtained from the Export-Import Bank and would be used to buy cotton in this country. The information was contained in a telegram signed by Joseph L. Rauh, Jr., chairman of the ADA executive committee.

Declaring that an informal bipartisan committee of members of Congress had already approached the Export-Import Bank to urge approval of the loan following yesterday's conference, ADA pointed out that the loan would have to have State Department approval. ADA asked Acheson to resist this or any other move that would give direct or indirect aid to the Franco government.

The telegram follows:

MAY 11, 1949.

Hon. DEAN ACHESON,
Department of State,
Washington, D. C.:

A secret session of some twenty Members of the United States Senate, the representatives of American cotton interests, and Francisco Moreno of the Hispano-Americano Bank of Madrid took place yesterday on Capitol Hill for the purpose of working out a large United States loan to Franco for the purchase of cotton in the United States.

The fact that the intensified drive in Congress for full diplomatic recognition of Spain followed this conference by a matter of hours cannot be ignored. It is clear that a deal is under discussion which would threaten the basic structure of American foreign policy.

It would be preferable to dump the entire cotton surplus of America into the ocean rather than pay tribute to the Fascists who inspired these negotiations or to those Americans who would put their selfish economic interests above the success of a democratic foreign policy.

Some American statesmen who are publicly committed to United States foreign policy and to the thesis that our Nation must counter the cold war with constructive democratic alternatives, are clearly bolstering the Soviet position when they promote the interests of Franco. Such a deal at this time would provide Russia with the political and economic weapons she needs to capture the initiative in western Europe.

The Franco government has the temerity to seek United States loans amounting to millions of dollars. The attempt to win these loans by appealing to the special interests of public office holders is reprehensible but hardly surprising. It is characteristic of totalitarian governments.

An informal bipartisan committee of Members of Congress has already approached the Export-Import Bank to urge approval of the loan following yesterday's conference. Such a loan would naturally have to secure State Department approval and we most urgently request that our Government resist this or any move to give direct or indirect aid to the Franco government.

JOSEPH L. RAUH,
Chairman, Executive Committee,
Americans for Democratic Action.

Labor Legislation

EXTENSION OF REMARKS
OF
HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, May 13 (legislative day of Monday, April 11), 1949

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the RECORD a letter addressed by the President of the United States to Mr. A. F. Whitney, president of the Brotherhood of Railroad Trainmen, setting forth his attitude in regard to pending labor legislation.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
Washington, May 4, 1949.

Mr. A. F. WHITNEY,
President, Brotherhood of Railroad Trainmen,
Cleveland, Ohio.

DEAR MR. WHITNEY: I appreciated very much your good telegram of May 3.

I've never believed in any compromise on the labor program other than the amended Wagner Act which I sent to the Congress and which was reported out by the Labor Committees of both the House and the Senate.

I am in the same frame of mind you are, that it is much better to go down fighting for what is right than to compromise your principles. The compromises got nowhere, as I was sure they wouldn't, and they never had any consideration whatever from me.

We are going to continue to fight and we are going to win because we are right.

Sincerely yours,

HARRY S. TRUMAN.

American Policy Toward Spain

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Friday, May 13 (legislative day of Monday, April 11), 1949

Mr. O'CONOR. Mr. President, a pungent editorial in yesterday's Washington Evening Star titled "Wanted: A Spanish Policy," was so directly in line with the thinking of many of us in this body that it deserves to receive the utmost possible attention.

It is about time that those who shape our international policies stop trying to draw a distinction without a difference between this country's attitude to Communist Russia, the aggressor overlord of hundreds of millions of helpless persons in Europe and Asia, and the Government of Spain which is struggling amidst poverty and lack of resources to regain both economic stability and a place in the family of nations.

It is generally admitted, I believe, by everyone of reason and intelligence, that the United States and other nations were misled in 1946 in favoring the United Nations recommendation to withdraw ambassadors and ministers to Spain. Under such circumstances the proper thing to do would be to correct the mistake by readjusting our position on the matter.

If we are going to refuse to accord the usual international courtesies to Spain because some of our officials do not like the type of government under which they live, the only logical course to follow would be to withdraw our ambassadors from Moscow and all the Russian satellite countries.

Under present circumstances this may be an ill-timed, ill-judged move but not a bit more ill-timed or ill-judged than was our previous action with respect to Spain or our present refusal to admit that there was a mistake made which should be corrected.

The editorial to which I refer will strike a responsive chord, I know, in the hearts of all who respect consistency, even if they may not be particularly friendly to Spain. I ask unanimous consent that it be printed in the RECORD as a supplement to my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WANTED: A SPANISH POLICY

It is hard to distill anything that remotely resembles a policy from Secretary of State Acheson's latest remarks on our relations with Spain.

In 1946 the General Assembly of the United Nations adopted a resolution calling for the withdrawal by UN members of their ambassadors and ministers to Spain. Prior to that, Poland and the Soviet Union, with others, had tried to induce the Security Council to take drastic measures to bring about the downfall of the Franco government. They argued that Spain was a military threat to its neighbors, but a UN investigation soon exposed the falsity of that claim. The net result was a double-talk finding to the effect that Spain might some day become a threat to peace and, finally, the adoption of the Assembly resolution.

That whole deal was a cynical, fraudulent, and futile piece of international politics. No one in his right mind ever supposed that Poland and Russia had any interest in freedom for the Spanish people. They wanted to get rid of Franco, who has always been hostile to the Communists. If he could be overthrown the new regime, if not controlled by Communists, would at least be less antagonistic to Communist political aims. Presumably our people at the UN were well aware of this. But they went along, perhaps in misguided deference to left-wing sentiment in countries like France, Britain, and Italy. In any event, we lent ourselves to a shabby deal that has accomplished nothing except to reflect discredit on the United Nations.

Now there is an effort under way to rectify the 1946 mistake. Another resolution is before the General Assembly. It would modify the 1946 stand by giving each UN member full freedom of action with respect to diplomatic relations with Spain.

And what are we doing? Why, we are abstaining. The most influential Nation in the world, the Nation which does more talking than any other about international morality, declines to make any choice as between right and wrong. We will not use our influence, one way or the other. Why not? Secretary Acheson says that this is a "family" matter, and that for the United States to take one attitude or the other on the resolution would not lead to harmony.

That is a position which might be called a lot of things. But it cannot be called a policy that is worthy of the name. If this Government still thinks that the stupid, immoral and ineffectual position taken by the UN in 1946 is right, it ought to have the courage to say so. If it thinks the position is wrong it ought to have the courage to say that. We have every reason and justification, within the framework of the UN to take a stand on this matter. To hide behind the device of abstaining is shameful.

The Star, for one, welcomes the forthright stand in favor of sending an ambassador to Spain that has just been taken by men like Senators CONNALLY and VANDENBERG. It it too bad that there are not more like them in policy-making positions at the other end of Pennsylvania Avenue.

The President's Health Program

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1949

Mr. BIEMILLER. Mr. Speaker, our distinguished colleague the gentleman from Michigan [Mr. DINGELL] has long been a leader in the fight to establish a system of national health insurance so that the blessings of modern medical science may be brought to all the people. On April 23, along with the eminent physician, Dr. Channing Frothingham, of Boston, chairman of the Committee for the Nation's Health, he discussed President Truman's message to the Congress on health needs of the American people over the facilities of the American Broadcasting Co. Under leave to extend my remarks, I include the text of this very interesting discussion:

THE PRESIDENT'S HEALTH PROGRAM

(By Hon. JOHN D. DINGELL and Dr. Channing Frothingham)

Mr. DINGELL. President Truman's message to the Congress of yesterday again points the way toward the health and happiness that every American deserves. It charts the course under which the best doctors and nurses the world has ever seen will be furnished the finest facilities and the financial incentive to make available their beneficent skills to all the people. The President's health program will strengthen our national defense by insuring that never again, as during World War II, will 5,000,000 men be found unfit for the armed services of their country.

The President recommends to the Congress five major areas in which the people may join together with members of the medical profession to improve the Nation's health:

First, we need more doctors, dentists, nurses, and laboratory technicians. Anyone who has driven long distances, or waited hours, to see a doctor, or who has called vainly for aid in the emergency of night, knows this best. But doctors must first go to expensive schools, and we do not now have enough medical colleges, training schools, and teaching hospitals to do the job. And there is little chance of getting them in your lifetime unless the Federal Government steps in to help build new hospitals and medical colleges, and to provide scholarships for deserving students.

Second, we need more hospital beds in modern, fully staffed, fireproof hospitals.

The recent horrible tragedy of the hospital fire at Effingham, Ill., is a grim reminder that even our best efforts may not be good enough. Every year 325,000 people die needlessly—many of them because their busy doctors did not have the modern laboratories and equipment to diagnose their ailments in time, or because people did not have the opportunity to obtain or pay for medical care. Modern medicine must be made accessible to everyone. People who live in the country and in the small towns are entitled to better than third-rate medical care. And children of low-income families are just as deserving of good health as of good education.

Third, the President also recommends the expansion of public-health programs. An ounce of preventive medicine is worth a pound of cure. Pennies for public-health services will yield a bountiful harvest in health and happiness.

Fourth, medical research must meet the challenge of the dread diseases of cancer, polio, heart disease, rheumatic fever, and tuberculosis. Our laboratories, if given the funds for effective research, will discover new wonder drugs and explore the potentialities of atomic energy in the field of medicine. I think an essential part of an expanded program of medical research is acceleration of the production of newly discovered drugs and appliances.

Upon these four parts of the President's program—Federal aid for medical education, construction of hospitals and clinics, public health, and medical research—there is little disagreement.

The opposition now centers its attack principally upon an equally essential feature—a law under which our people may share the cost of improved medical care through a Nation-wide system of health insurance, and let me reemphasize I said, "Health insurance." Private hospitalization and medical insurance plans do not provide the needed protection against the calamity of extended serious illness. And if they did, the cost still is beyond the price range of two-thirds of the American people.

The leaders of the American Medical Association now champion these private health insurance plans which until recent years they have bitterly opposed. They try to hide the deficiencies of such plans behind such spurious charges as socialized medicine or free medicine leveled against the President's program. I say to you that national health insurance, as outlined in the Wagner-Murray-Dingell bills, is no more socialization than a mutual fire insurance company or the public school system. The people will get just what they pay for.

The application of the principle and purpose of insurance to the unexpected hazard of loss of health is not even debatable.

To argue against health insurance as being unwise or unnecessary does violence to the whole concept of insurance against any and all risks like life insurance, fire insurance, fire and theft, and crop and livestock insurance—all essential but not as important as is health insurance.

As the President said, "Our objective must be twofold: To make available enough medical services to go around and to see that everybody has a chance to obtain those services. We cannot attain one part of that objective unless we attain the other as well."

Under this program there will still be freedom of selection by both doctor and patient, just as today. But there will be more medical schools, more doctors and nurses, more hospitals, more and better clinics, and more laboratories.

By spreading the cost among all the people, we can make the miracles of modern medicine available to all.

In the words of the President: "We are striving in this country to see that the strength and flexibility of our political and economic institutions are used to bring the greatest possible good to our people. I consider this health program as part of that endeavor—to adjust to modern conditions without losing traditional values, to bring to the people of this country the full enjoyment of the benefits which our freedom makes possible."

We now hear from Dr. Channing Frothingham, former president of the Massachusetts State Medical Society and chairman of the Committee for the Nation's Health. Dr. Frothingham speaks from Boston.

Dr. FROTHINGHAM. I want to tell you why I, an active practicing physician for over 41 years, am in favor of the President's national health-insurance program which offers every one an equal chance to obtain good medical care.

During these few minutes I cannot cover all the significant aspects of the President's fine plan, but I wish to emphasize a few of its fundamental features which will extend good quality medical care to those of our citizens who do not now receive it and make the financial burden much less for those who do.

Most important the President's national health program will help eliminate the dollar barrier which now stops so many of our people from obtaining the full measure of the medical care which they need and to which, I believe, they have a right. By spreading the cost of medical care among all the people except the actually indigent on a proportional basis, national health insurance will make medical care available to all irrespective of the amount of care needed in any individual case.

It will enable you and your family to go to the physician of your choice without charge whenever you feel the need of medical care. He will be able to treat you personally and call in specialists to aid when needed, regardless of the cost involved. Your family physician will be available to give you preventive medical procedures to ward off disease without extra expense. Neither one of you need worry about the bills. Just medical care will be available to all on the basis of need, not on the size of your pocketbook. It will make good quality care available for the first time to all Americans, regardless of race, color, or economic circumstance.

The quality of medical care will be improved because high standards of practice will be developed for the plan. Yet the delivery of the care will be at the same local level as at present, which has proved so successful to American medicine today. The doctors would be in full charge of all the professional matters, but the layman will relieve the doctors of administrative burden and aid in solving the problem of the best methods of delivery of the care, which is one of the weaknesses of American medicine today, with the doctors trying to control delivery of care as well as the science of medicine.

As a doctor—perhaps a conservative by nature, after all I am from Boston—and a Republican—I would heartily oppose any plan which might jeopardize our free practice of medicine or dictate to any doctor what, where, when, or how he could practice medicine. The President's plan does none of these things. As a matter of fact he stresses freedom of choice for both patient and doctor. We doctors would have full freedom to serve under the national health insurance plan or not as we choose. We doctors would be free to accept or reject patients under the plan just as we do today. And incidentally, you the patient would have the same freedom to choose your own doctor just as you do now. The private relationship between a doctor and his patient would be fully preserved. The only difference under national health insurance is that neither you as a patient nor I as a doctor need worry about the bills. Those would be paid out of the national health insurance fund.

The President's plan places primary responsibility for the delivery of medical care to the individual upon each community. The role of the Federal Government would be strictly limited. The medical care would not be run from Washington but by the States and the localities. We would continue in private practice as we are now. Any fair-minded doctor, hospital chief, or other medical professional cannot fail to note the safeguards stressed by the President in his message or incorporated in the proposed national health insurance legislation to guarantee a continuance of all that is good in existing American practice and to make it available to all the people. His insistence on these safeguards would make it clear that those who speak of his program as socialized medicine in a derogatory sense are deliberately using smear propaganda.

Lest We Forget—Another Contribution From the Unofficial Poet of Congress

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, April 29, 1949

Mr. WHITE of Idaho. Mr. Speaker, with the consent of the House, I would like to have inserted the following verses contributed by the unofficial poet laureate of Congress, Horace C. Carlisle:

With these verses, I'm hoping to scatter
Through the RECORD, that goes everywhere,
What the Communists seem to be doing
To sink us to the depths of despair—
May our Congress awake to our danger
Before Russia, unheralded, comes
Over here, to wreck civilization,
With her Russian-built atomic bombs.
There is only one hope for the nations
That want war, with its horrors, to cease,
And that is, to wage war by the Golden
Rule of Christ, the Divine Prince of Peace;
For all things will on earth, as in heaven,
Work together in perfect accord,
Everywhere, when the nations, in earnest,
Become nations whose God is the Lord.

—*Horace C. Carlisle.*

Regional Development in the Columbia Valley

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 16 (legislative day of Monday, April 11), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Regional Development in the Columbia Valley," delivered by Assistant Secretary of the Interior G. Girard Davidson before the National Emergency Conference on Resources, in Washington, D. C., on May 13, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REGIONAL DEVELOPMENT IN THE COLUMBIA VALLEY

I am impressed by the breadth of the program for this conference. In these 3 days you have set for yourselves the task of discussing—and possibly acting on—some of the largest issues and problems in the field of resources development.

All through your agenda I see evidences of your earnest consideration of President Truman's bold new program for making the scientific and technological progress of this Nation in the field of resources development available to other peoples throughout the world. It is evident that you are pointed toward the great United Nations Scientific Conference on the Conservation and Utilization of Resources to take place in this country August 17 to September 6, 1949, at Lake Success. You are considering the significance of the Hoover Commission's recommendation for reorganization of Federal activities in this field to create a single Department of Natural Resources for the more effective development and administration of the basic wealth of the Nation. You will be talking about production of power and minerals which are basic to the expansion of our industrial capacity to assure full employment, maximum production, and national security for our people. You are even broaching the new field of atomic energy and its relationship to resources development.

This conference has gone very far since the Valley Authority Conference held in this same auditorium almost 3 years ago, which was sponsored by many of the same far-sighted men and women who have organized this meeting. While we are discussing these bold new programs, let's not forget a piece of unfinished business which has carried over from the earlier meeting.

The next forward step in carrying out what is now a proven system in river-basin development should be taken. We should promptly apply the lessons learned in the Tennessee Valley to the Columbia River and its tributaries out in the Pacific Northwest. In taking this step we have the support of President Truman and his administration, of a large block in Congress, and of all those sincerely interested in the conservation and utilization of our natural resources.

There is no longer a question about the necessity for speeding up Federal action for resources development in the Northwest. This rich region which promises to be our industrial base beyond the Rockies is now plagued with floods, power shortages, and unemployment, which frustrate its further growth. I need not remind you that last spring the Columbia River went on a rampage which resulted in the loss of at least 51 lives and property damage amounting to over $100,000,000, and that an equally devastating flood could occur again this year. I need not remind you that last winter electric power was voluntarily rationed in the Northwest, that the tremendous regional transmission network was overloaded to the point of breakage, that industries which would have created thousands of new jobs were prevented from locating in the region for lack of power—and that this same situation of power shortage under present development schedules will continue to be severe for at least the next 5 years. I need not remind you that unemployment in the Northwest ever since the end of the war has been running at least twice the national rate because jobs have not been created fast enough to keep pace with the phenomenal migration of people to that area which resulted in a population increase since 1940 of three times that of the Nation as a whole. One State alone—Oregon—increased almost 50 percent in population during that period.

These facts have national as well as regional significance. The spectacular Columbia River if totally developed could produce twice the amount of hydroelectric capacity now existing in the whole United States today. That power put to work in aluminum plants would begin to make up the current shortage of 300,000,000 pounds of aluminum a year, a shortage that has to be made up if we are to have a larger Air Force.

In the Pacific Northwest there is, and has for sometime been, general agreement on the need for more effective and speedier development of the basic resources so that industry and agriculture can go forward with new investments to provide new jobs and greater taxable wealth. There is general agreement that the only fiscal agency large enough to advance the capital needed to finance this tremendous system of multiple-purpose river-control structures is the Federal Government. There is general agreement that the existing Federal agencies working at this task, with the best will in the world, simply do not have the legal authority for the type of comprehensive planning and coordinated and decisive action which is needed. There is general agreement that the administration for regional development shall be located in the region and that there should be a large measure of local participation.

Generally speaking, these points on which people are agreed are the principles which guide the Tennessee Valley Authority in its operations.

The President, in a letter to the executive departments, directed that legislation be prepared for a Columbia Valley Administration embodying the lessons of our prior experiences. Of course, the actual operating practices of the TVA were reviewed so that we could profit from their errors as well as their virtues—for instance, the CVA provides for a solution to the soil-conservation problem which is still pending in the Tennessee Valley. The President also requested that the legislation be especially tailored to fit the peculiar and different requirements of the Columbia Valley region and its people. These objectives have been met in bills for the establishment of a Columbia Valley Administration which are now pending both in the House and Senate.

The CVA bill is, in the real sense of the word, a true conservation measure. For years there have been people who have interpreted conservation to mean locking up our great natural wealth. There have been others who have attempted to use up our resources without regard to the needs of future generations. The CVA bill would spell out in law a balance between these two forces. If the bill were enacted, the region would obtain a comprehensive program for both conservation and the wise use and development of the resources, recognizing their interrelationship.

To the many groups interested in soil conservation, watershed protection, sound management of forest and range lands, protection of fish and wildlife and of recreational areas, the CVA bill offers a tremendous opportunity. These programs are given equal status with the glamorous work of building record-breaking dams which are headline news and which are supported by powerful lobbies. In the CVA bill, a plan is being put forward to redress the balance in Federal investment and expenditure between these two types of conservation activities.

Let me remind you of the existing lack of balance which the CVA is designed to correct.

While the Army Corps of Engineers is spending millions of dollars to build dams to hold back floodwaters in the lower reaches of the Columbia River, in the upstream watershed the snow melt coursing down the hillsides denuded of vegetative and forest cover greatly increases the flood menace and in time will silt up the storage dams. The agencies responsible for upstream forest protection are unable to get appropriations to do their jobs. The Forest Service is anxious to reforest 5,000,000 acres of burned-over alpine forests in the Cascades watersheds. The Bureau of Land Management is seeking to restore 7,800,000 acres of denuded range lands which would take 25 years to accomplish even if the agency were given sufficient funds to move 20 times faster than the present rate.

News pictures are not taken of trees growing and there is little publicity about the cover crops which prevent erosion. Under the present plans which Federal agencies are required to follow, different congressional committees have jurisdiction to appropriate funds for what are thought to be such diverse subjects as dam construction and soil and forest conservation. Thus under the present system even the Congress is frustrated in any attempt it makes to strike a proper balance.

The Bureau of Reclamation is spending millions of dollars to bring into production through irrigation thousands of new farms in the middle reaches of the Columbia, while each year the region is losing its existing farms through soil erosion. Last summer's floods in the Columbia washed off the land 160,000,000 tons of soil, which is equivalent to 1,200 farms of 80 acres each.

There is no relation whatsoever at the present time between the amount spent by the Federal Government in that region in bringing into cultivation new land through irrigation and the amount spent in preventing existing land from washing away. I want to emphasize that, without some type of legislation along the lines suggested by the CVA bill, there can be no proper relationship established by the Federal agencies or by congressional Appropriations Committees.

The proposed construction of dams in the lower Columbia River is threatening the $20,000,000-a-year salmon-fishing industry by preventing the fish from going up river to spawn.

I believe that we can have both fish and dams. I believe that we can protect our existing farms from soil erosion at the same time we irrigate new farms. I believe that we can save ourselves millions by practicing flood control with upstream watershed protection along with downstream storage reservoirs. We can do this, however, only through producing a comprehensive region-wide program such as envisaged in the CVA legislation.

In its preparation the CVA bill was discussed with representatives of many conservation organizations and it embodies a number of provisions suggested by them.

The proposed CVA would absorb the Bureau of Reclamation, the civil works functions of the Corps of Engineers, and the Bonneville Power Administration in the Pacific Northwest. However, all other Federal agencies, including the Forest Service, Soil Conservation Service, Fish and Wildlife Service would retain their independent status.

The CVA bill specifically provides for protection of the fish and wildlife resources in connection with its construction program.

The bill requires that Federal programs and activities in the region be effectively coordinated with established national policies and programs such as those of the conservation agencies.

The bill makes it possible for representatives of conservative groups to advise with CVA directors during the initial planning stages of any projected development. This would be done through advisory boards and councils which would have the right to send their comments and recommendations directly to the President and the Congress through the annual report of the administration.

The comprehensive development program to be made by the Columbia Valley Admin-

istration must be prepared in cooperation with not only the Federal but also the State and local agencies in the conservation and development field. When this comprehensive program is presented to the Budget Bureau and the President, who may present it to the Congress, it will for the first time embody in a single statement the requirements for work to be done not only for power, flood control and irrigation, but also for soil conservation, pollution control, fish and wildlife protection, and forest and range management. Thus, for the first time, the Budget Bureau and the Congress will be in a position to know the real budgetary needs of the different conservation agencies operating in the Pacific Northwest.

There is a further provision in the CVA bill which makes it possible for the CVA to supplement the activities of the conservation agencies. The Administration would be specifically authorized to receive money for development and conservation of forest, mineral and fish and wildlife resources, for conservation of recreational resources, for conservation of lands, and for promotion of sanitation and pollution control. In utilizing these funds the CVA may—and when so directed by the President, must—conduct its activities through or in cooperation with other Federal agencies and it may also operate in the same way through local, public, and private bodies. This is a provision which makes it possible for conservation agencies to obtain the financial wherewithal to do the job they all know must be done.

As one would expect, the opposition to the CVA bill comes from the people who have always been opposed to conservation and who have sought to exploit the resources of the public domain for selfish interest. In the forefront as always are the private utility corporations, the power lobbies. As is their custom, they are operating behind front organizations financed largely by them such as the development associations, reclamation associations and water users protective councils recently organized in the Northwest mainly for the purpose of defeating the CVA bill. The railroads, too, have been contributing to these front outfits and the chambers of commerce, of course, have fallen in line. These are the people who have always said that there is nothing wrong with the situation as it now exists. These are the people who want to be let alone so that they can exploit the wealth which rightfully belongs to all the people.

I want to remind you again, as you set yours sights on bold new programs, not to overlook the unfinished business of extending the tried and true practices which have always promoted the best kind of conservation in the United States. I am sure that you will want to put this bit of unfinished business—the CVA—on your action list.

Editorial Tributes to Hon. Harry Flood Byrd, of Virginia

EXTENSION OF REMARKS

OF

HON. RICHARD B. RUSSELL

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, May 16 (legislative day of Monday, April 11), 1949

Mr. RUSSELL. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD seven editorials based upon the statement recently attributed to the President of the United States relating to the senior Senator from Virginia [Mr. BYRD]. These are only a few of a vast number which have been printed with respect to the statement, in various sections of the country, showing the trend of editorial opinion on the services and character of the Senator from Virginia.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Clarke Courier, Berryville, Va., of May 12, 1949]

ONE BYRD TOO MANY

United States Senator HARRY F. BYRD's position in the Nation was strengthened considerably this week by the statement of President Truman that there are "too many BYRDS in Congress." The President was speaking to a veterans' organization, and if his statement is to be construed that he will attempt to purge Senator BYRD, here again he is doomed to disappointment as he was on the appointment of Mon C. Wallgren whose appointment to the National Security Resources Board was blocked by Mr. BYRD because he didn't think Mr. Wallgren was big enough for the job.

Senator BYRD has always been a champion of sound economy in Government. It is something for which he has preached and fought since he entered the Senate in 1933, but so far his cries have fallen on deaf ears and his has been a voice "crying in the wilderness" so ably depicted by Cartoonist Berryman in the Washington Star Monday. His continual fight has irked the President no end, but he continues relentlessly in what appears to be a vain attempt to put this Nation on a sound fiscal basis. He has opposed wild spending of the taxpayer's money, overlapping bureaus and agencies, Government hand-outs and doles and unconstitutional legislation.

If the President has been irked by Senator BYRD in trying to halt this orgy of spending then he is irked by a true statesman who has forever placed the welfare and the honor of his country above party ties.

If the President has been irked by Senator BYRD who has played a leading role in blocking legislation which the President has seen fit to force upon sections and peoples of the country, notably the civil-rights issue, then he is irked by a man who lives and breathes constitutional government.

There are not too many BYRDS in Congress. There are not enough of them. There should be more, imbued with the same principles and beliefs as the lone Senator BYRD has. Besides the aspect of national bankruptcy if we continue to spend more than we have coming in in taxes, there is another danger of excessive spending which makes us slaves to Government. If we depend on Government for farm parities, education, and the like, one of these days we might be told by the Government which newspaper to read, which radio program to listen to, or what doctor to call in during an illness. This is just not idle chatter. It can easily happen once we throw constitutional government by the wayside, as so many countries in Europe have done.

So far as a purge of Senator BYRD is concerned, the Senator said he will be on hand when the purging starts. He did not say this in a manner of a braggadocio, but simply stated a fact and a challenge. The late President Roosevelt attempted to purge Senator TYDINGS, of Maryland, and Senator GEORGE, of Georgia, but failed miserably when these two men were reelected by overwhelming majorities. The CIO tried to purge Senator BYRD in his reelection in 1946 and failed dismally. Virginians and natives of other States don't like to be told who to elect to posts in their National Government, be he a President or otherwise.

The President, however, is treading on thin ground. During his campaign last fall he kept repeating that his Congress at that time was the worst he had ever seen. His criticism while leveled at Congress was indirectly aimed at the people, for it was the people who elected that Congress, and it is the people who elected the present lawmakers, many of whom like Senator BYRD, can't see eye to eye with him on many legislative matters.

It is good and with a deep sense of satisfaction that we have one BYRD in Congress, and we observe that one BYRD in Congress is worth two in the bush.

[From the Newport News (Va.) Times-Herald of May 11, 1949]

MR. BYRD, THE PURGE, AND WASTE

Senator HARRY F. BYRD and President Truman are feudin' again and here's how it happened:

Last week the Virginia Senator, who is a constant advocate of Government efficiency and economy, brought out some statistical forecasts that indicated a growing deficit of billions in the National Treasury. He made a biting attack against the spending program of the administration in advocating a minimum 10-percent cut in Government outlays.

Mr. Truman came back Monday in a talk to a group of veterans with a crack about there being "too many BYRDS in Congress" (there being only one, Senator BYRD, of course), adding that he wanted Congressmen elected who are able to see things in terms of the national interest rather than local interest and make large plans rather than small plans.

To which Senator BYRD has replied that: "If the President means he intends to purge me from the Senate because I will not accept his dictation in matters of legislation, then I'll be on hand when the purging starts."

Mr. BYRD, on the record, has the better part of the argument. He received wide support for his vote in committee which laid on the shelf the President's appointment of his pal, former Gov. Monrad C. Wallgren, of Washington, as Chairman of the National Security Resources Board. That was the initial move of the recent break. And in his plea for efficiency and economy Senator BYRD has the powerful and authoritative backing of the Hoover Commission on Reorganization of the Executive Branch of the Government.

For an expert of the Hoover Commission in a statement yesterday claimed that "billions of dollars are being squandered on duplicating badly engineered projects" by the Army engineers and the Department of the Interior's Bureau of Reclamation. That is the latest in revelations by the Hoover Commission of waste and extravagance. The charge is made by Leslie A. Miller, Chairman of the Natural Resources Committee, who writes for the Saturday Evening Post with a foreword by Mr. Hoover himself which says: "Opposition to effective corrective measures is already rampant * * *. The battlers for the bureaus must be overcome by sheer force of public opinion if our free system is to be saved for future generations."

Mr. Miller paints a picture of two Government agencies so jealous of each other that they vie for projects by underestimating and in effect "bamboozling Congress into easy acquiescence" in costly projects thereby. He charges that both agencies "stoop to deception in furtherance of their efforts to stake out claims or projects" and that both agencies are guilty of "brazen and pernicious lobbying to achieve their ends."

That isn't a pretty picture and it is the thing, along with a lot of other like practices of waste and extravagance at which Senator BYRD has been aiming his fire for years. That sort of extravagance is a threat to the national welfare. In trying to bring some efficiency out of this welter of charged inefficiency, who is the man thinking of the national welfare, Senator BYRD or his critic?

Who is thinking "big" in trying to get a dollar's worth of service from a dollar's worth of taxes? The answer is obvious. Rare is the bureaucrat who does not try to spend more and expand beyond the public need to give more prestige to his bureau. The legislator who seeks to curb that trend is desperately needed in Washington. We marvel not at Senator BYRD's efforts but the President's criticisms.

[From the New Haven (Conn.) Register of May 11, 1949]

TOO MANY BYRDS?

With his usual unwarranted self-assurance President Truman has now indicated displeasure with the attitudes of Senator HARRY F. BYRD, of Virginia. In Mr. Truman's view there are "too many BYRDS in Congress." But it is the opinion of most careful observers of the Washington scene that there are not enough men like BYRD in any of the branches of Government.

For BYRD has consistently, through almost 16 years in the Senate, fought for the improvement and the advancement of the United States—and has sought to sponsor such progress in a logical, money-wise pattern. In an era in which Government spending has soared to stratospheric heights, this emphasis on economy and financial caution has not made HARRY FLOOD BYRD a popular man with the administrators. Franklin D. Roosevelt as well as Harry Truman found him a serious stumbling block to the blank-check excesses which have masqueraded as Federal business for almost two decades.

On every important issue of the times, from the Federal reorganization schemes of the Roosevelt era, through the war with its massive defense programs, down to the immediate pipe dreams of the Fair Deal's exponents, HARRY F. BYRD has thought first of what was best for the country and secondly of what would be the best, most efficient, and most economical way of doing it. He has followed his own conscience and won wide respect and recogition for so doing.

The veiled Truman threat of a political purge of the Democratic Senator is the latest in the President's long series of ill-considered actions on the national and international scene. Fortunately, it stands about as little chance of success as have some of the administration's more grandiose schemes of late. The Virginia constituents who have sent Senator BYRD to Washington repeatedly since 1933 seem well-content with his representation. Great numbers of Americans from all parts of the country consider him one of the most important "watchdog" legislators in Washington. Only President Truman seems to find Senator BYRD's devotion to efficiency and economy a burden.

[From the Shreveport (La.) Journal of May 12, 1949]

MR. BYRD WON'T SCARE

If President Truman thinks he can frighten Senator HARRY F. BYRD, of Virginia, by shooting criticism at his policy of economy in public spending or any of his other senatorial services, he has another think coming. Mr. BYRD simply doesn't scare, even when the adversary is the United States Chief Executive. He does his duty as he conscientiously sees it, and can be depended upon to serve the public to the best of his ability.

The Byrds of Virginia represent the highest type of American citizenship, and politicians, regardless of the size of their clubs, can't shove them about.

The President let his tongue do some slipping during a visit from Gilbert Harrison, Los Angeles, national chairman of the American Veterans Committee, whose call had to do with housing legislation. According to Mr. Harrison's reported statement, Mr. Truman urged veterans to work for the election of Members of Congress "who think in terms of national, rather than local, interests; in terms of large plans instead of small plans," and then reputedly remarked that the slow-moving Congress contained too many BYRDS. At any rate, Mr. Harrison reported him to that effect, which, as was to be expected of the Byrds of Virginia, brought prompt rebuke from the Senator at whom he was aiming, presumably, as the Virginian accepted it, hinting at an attempting purge.

Mr. BYRD probably would enjoy nothing more than a tangle with Mr. Truman before Virginia Democrats. And those making wagers could place no odds with more safety than to put them on the Byrds of Virginia, who represent their State always with credit and without swerving from the path of integrity.

That Senator BYRD would genuinely welcome a purge which the President may have been driving toward, is seen from his remarks:

"If the President means he will attempt to purge me from the Senate because I will not accept his dictatorship in matters of legislation, then I will be on hand when the purging starts. I owe my allegiance to my constituency of Virginia. So long as I remain in the Senate I will vote as my conscience dictates and to represent the wishes of my constituents."

Mr. Truman had some reason for complaining about their being too many BYRDS in Congress, evidently meaning all Members who oppose his tax-raising and socialistic proposals. Just 3 days before his caustic remark about the anti-New Deal Virginian, Mr. BYRD gave Congress a formula for slashing the Presidential budget by $4,000,000,000, with an appeal to those favoring welfare measures to delay action and a call upon members of congressional committees to defeat proposals for which competent estimates of annual and long-range costs have not been provided."

As reported by the United Press, Senator BYRD, who consistently and fearlessly advocates economy in Government, told Congress that every governmental agency "could absorb a 10-percent cut in administrative costs without impairing essential services. His recommendations for obtaining relief from the uptrend of taxation, especially for slicing the Truman budget to the tune of four billion, are, says the UP story:

"Reduce Government spending by $1,000,000,000 by ignoring or postponing nonessential legislative proposals of the President.

"Save $500,000,000 by eliminating or postponing other nonessentials already authorized.

"Cut $1,000,000,000 through effective unification of the armed services.

"Cut $1,000,000,000 by reducing the Government pay roll.

"Save an additional $500,000,000 through prudent appropriating and efficient administration."

President Truman's demands for upping taxes are opposed not only by the BYRDS but by some of the Truman aides, who, realizing the unpopularity of the President's policy, are advising the lightening of some of the existing tax burdens and the scaling down of the administration's proposal for $4,000,000,000 more from new levies. What these economic advisers now are doing is what Senator BYRD has been urging all along.

President Truman and his administration may consider there are too many BYRDS in Congress, but pray tell us what would happen if there weren't some conscientious, clear-thinking capable BYRDS to fight the people's cause?

[From the Tampa (Fla.) Morning Tribune of May 11, 1949]

GIVE US MORE BYRDS

Mr. Truman is again indulging in his favorite pastime of nagging Congress. This time he directs an ill-tempered thrust at congressional advocates of economy in saying that "there are too many BYRDS in Congress."

The reference is, of course, to the Virginia Senator who for years has been attacking waste and extravagance in Federal expenditures and demanding drastic curtailment in the cost of Government.

Our answer—and the answer of a large majority of American taxpayers—to that blast is that we need many more BYRDS in Congress. It is unfortunate for the people that there are only a few of that species—the forthright Virginian himself and those who join with him in urging governmental economies.

It may be that the President's singling out of Senator BYRD as the target for his latest shot at Congress was provoked by the Senator's masterful speech in the Senate last week, in which he vividly described the Nation's financial situation and again emphasized the necessity of curtailing waste and extravagance.

We quote several passages from Senator BYRD's speech:

"If we are to take the (President's) program in full, we would be called upon—in a period of extremely sensitive economic uncertainty—to exceed all previous peacetime spending records, lay an additional levy of $2,000,000,000 in pay-roll taxes, increase postage rates to bring in an additional $250,000,000, and enact $4,000,000,000 in proposed new general fund taxes on income for the next fiscal year, and more new taxes in fiscal 1951, or, in effect, to authorize a deficit of three to four billion dollars in the coming fiscal year, with prospects of an even greater deficit in fiscal 1951.

"By all the rules, new taxes at such a time as this may easily accelerate a minor business decline into a major depression.

"When we analyze the President's budget requests for fiscal 1950, which begins July 1, we know that the Federal Government is permeated with waste and inefficiency. We know that with the exception of interest on the debt and several other items of similar character, there is not a single category in the expenditure side of the budget that could not absorb a full 10-percent reduction in administrative costs without impairment of essential functions.

"In the year before Pearl Harbor, Federal taxes amounted to 7 percent of income. In the current year they amount to 17 percent of income. If the President's budget were enacted, the Federal tax bill would amount to 21 percent of income.

"If the President's program for fiscal year 1950 is substantially enacted in this session of Congress, the increasing momentum of existing commitments combined with the new ones to be assumed under the President's proposals, are certain to drive Federal expenditures to a dangerous height in fiscal 1951."

Senator BYRD estimated a deficit of 9 to 14 billion by fiscal 1951—and his estimate does not include the expanded Air Force; the farm plan or national health insurance. These will make the deficit much greater.

Such clear and convincing statements prompt the cry: Give us more BYRDS.

[From the Columbia (S. C.) State of May 11, 1949]

PLANNING A PURGE?

President Truman is reported to have remarked, "There are too many BYRDS in Congress."

Senator HARRY BYRD, of Virginia, who has fought valiantly against the President's fiscal policies as well as lavish Federal spending in general for years, accepted any veiled challenge the remark might have carried and retorted that he'd be on hand for the purging.

That we can believe. We cannot imagine a BYRD of Virginia failing to welcome a fight, whether it be in the armed forces, with pistols at dawn over the corners of a handkerchief, in verbal debate, or political.

Nor could we feel much doubt at the outcome if Harry Truman should invade Virginia in an attempt to unseat Senator BYRD. We fancy that in this event the President would come out as nothing more than a little man from Missouri. He would not be taken seriously. Virginia voted for him as the regular Democratic nominee last November, sticking to its traditions. An invasion from outside with an attempt to dictate whom the Old Dominion should send to the Congress would be greeted with the same indignation that awaited other outside influences during the last century and meet the same warm reception that was accorded a certain invader at a place called Bull Run.

There is an old saw, "I'd rather be right than be President." Mr. Truman's attitude shows how wrong a man can be even if he is President. For our money—and do we mean money—there are far too few BYRDS in Congress. There are far too few willing to carry on the same type of militant campaign for economy and against the gimmes in Federal Government.

Now if the President was misquoted in his spelling, and meant to say there were too many birds in Congress, he might have had something on his side.

[From the San Antonio Express of May 11, 1949]

TRUMAN VERSUS BYRD: A SIGHT TO MAKE ANGELS WEEP

When President Truman remarks—as Gilbert Harrison of the American Veterans Committee lately quoted him—that "there are too many BYRDS in Congress," he directly antagonizes the great mass of enlightened opinion.

What this country needs—and in these difficult times needs desperately—is more statesmen of HARRY F. BYRD's caliber in both branches of Congress. Certainly the Nation today has no more conscientious, farsighted, outspoken, and useful public servant than the senior Senator from Virginia. Even though he has failed to stem the rising tide of public expenditure, the people could not spare this watchdog of the Treasury.

When Senator BYRD speaks, the Nation listens because it must. His voice is that of common sense, addressed to level-headed men, who agree with him. Mr. BYRD is the Senate's and the Nation's ablest spokesman for fiscal sanity, as opposed to the fallacies which in this day and time have swept millions off their feet. He stands upon the solid earth, to which, when they shall have had their fling, men and nations must return—to start on the slow, toilsome way to solvency.

A perplexed, tax-burdened, debt-carrying, but dollar-happy America riding at high tide could not do without BYRD. He is the great stabilizer, not only in Congress, but in the Nation's thinking.

It follows that Senator BYRD has no need of apologizing for the allegiance which he pays to his constituency in Virginia. By his unyielding fight on governmental extravagance and the bloated bureaucracy he has served the Nation admirably. Like his great predecessors, he is also serving mankind—for, as he repeatedly has asserted, only a strong, solvent America can save the world.

Truman's Phony Mandate

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, Frank Kent, in the Washington Sunday Star, contends that President Truman had a phony mandate to which he now attributes all the trouble confronting him. Under leave to extend my remarks, I am including the article in question.

BLAMES PHONY MANDATE FOR PRESIDENT'S TROUBLES—POPULAR SUPPORT HELD LACKING FOR MOST CAMPAIGN PROMISES

(By Frank R. Kent)

If it is true President Truman fooled the politicians, pollsters, newspaper editors, columnists, and bettors about the result of the last election, it is also true he fooled himself quite as badly concerning the meaning of the result. If the experts missed the signs that pointed to his victory, Mr. Truman and his advisers certainly misread the significance of the returns.

Proof of this is the exceedingly sick state in which his so-called fair-deal program now finds itself after 4 months of Congress. Chief reason for this is administration acceptance not only of the labor bosses' interpretation of the Truman success as a mandate to repeal the Taft-Hartley Act but the unwarranted administration expansion of the mandate idea to include numerous campaign promises more or less desperately made when there seemed almost no chance of his election. That was a mistake. On this assumption a gigantic program was developed which would have been fantastic even if the Truman victory had been overwhelming and the country ripe for socialistic experimentation.

That program bears no relation to realities and it is not surprising it has bogged down. The flattest failure is the effort to wipe off the books the Taft-Hartley law. It is perfectly clear now that this is not going to be done. Though, in addition to the full weight of the labor bosses and the full weight of the White House, Mr. Truman has used the full weight of Federal patronage, the repeal proposals are stuck. On this issue Mr. Truman and the labor lobbies, despite their belligerent proclamation and claims, are in retreat. On this issue the mandate has been exposed as particularly silly. Although left-wing columnists who speak for the CIO insist that a Truman victory is still possible and are trying to cajole the easily cajolable liberal Republican Senators, such as IVES, MORSE, and AIKEN, this is recognized as propaganda and everybody knows the repeal fight has been lost.

Final result at this session will be passage of a bill modifying the existing law as proposed or agreed to by Senator TAFT but retaining the chief features of the Taft-Hartley Act. Whether the name is changed or not is immaterial. The main point is that the attempt to kill the only piece of labor legislation in 16 years affording the public any protection at all and go back to the original Wagner Act under which the labor bosses wielded—and abused—unrestricted power, has failed. For that, the average American can be grateful. Any other result would have been degrading and devastating.

But other parts of the Fair Deal program seem just as thoroughly mired now as the labor part. For example, the new farm bill, evolved by Secretary of Agriculture Brannan, designed to increase the subsidies to the farmers and decrease the price of food to the consumers by direct payments out of the Treasury. This would be pretty tough on the taxpayer and further unstabilize our unstable Federal finances. Even Mr. Brannan can only guess what the cost would be. In any event the best guess is that the bill will not pass. Nor will the Truman compulsory health-insurance bill; nor the extraordinary Economic Stabilization Act of 1949. Nor the Truman tax proposals; nor the Truman proposals to expand the Social Security Act so as to take in 20,000,000 more individuals at an almost incredible cost; nor his civil-rights proposals.

Altogether, only a negligible part of the President's domestic program seems scheduled to go through this session. The situation, of course, may change but experienced observers do not now think so. As they see it, there was never a more underbaked and untimely program presented nor one more completely stalled. And this is especially remarkable when it is considered that Mr. Truman, a newly elected President with 4 years of his term stretching ahead, has a Democratic majority in both branches of Congress and a great many offices to fill.

The effort to ascribe this failure to a sinister coalition of Republicans and southern Democrats is strained. The word "coalition" is regularly used to explain the fact that a majority in Congress—and in the country—favors neither the subservience to the labor "bullies" exhibited by the administration nor the huge cost and drastic character of the welfare legislation proposed. Above all, what the state of the President's program shows is that there is behind it nothing resembling a popular mandate. Talk from the administration politicians and the labor publicists about taking "our case" to the people in 1950 is "bunk." There isn't any way to arouse the people in favor of this program. They were not for it last year and they are very unlikely to be next.

Making Oil from Coal—Experiments at Gorgas, Ala.

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. ELLIOTT. Mr. Speaker, experiments are presently being carried on at Gorgas, Ala., by the Department of the Interior in cooperation with the Alabama Power Co. to determine whether or not it is practical to convert thin-seam coal into oil and gas.

If these and other experiments are successful, we will have the problem of a diminishing oil supply under control.

These experiments are of the utmost importance to Walker County, a part of the district which I have the honor to represent here. In Walker County we have great deposits of coal. Bigger seams in other sections, and a discriminatory freight rate make it difficult for many of our coal mines to operate with profit.

I hope that the Congress will see these experiments through. The making of oil and gas from coal will open up a great

new industry in this country. It will bring employment to thousands. An adequate oil supply will be assured.

As a part of my remarks I include an editorial on this subject from the Thursday, May 12, 1949, issue of the Mountain Eagle published at Jasper, Ala.:

MAKING OIL FROM COAL

A dispatch from Louisiana, Mo., Sunday reported that a method by which it is hoped to save the Nation from an oil shortage for generations to come, by making oil out of coal, was dedicated in a formal ceremony at that place. The Government is perfecting the process in two demonstration plants at Louisiana. Julius Krug, Secretary of the Interior, was present at the ceremony and made a very optimistic speech on the subject of making oil out of coal. "We have one tremendously important step yet to take—the construction of one of two full-scale commercial plants," he said.

Making oil out of coal, which has been done already, is a matter of great importance to Walker County, which has almost inexhaustible deposits of coal and operators looking for a market for it.

The United States Bureau of Mines has found that gasoline can be made from coal for 12 and 15 cents a gallon, but counting byproducts the cost can be reduced 8 or 10 cents. Plants for making gasoline from coal are very expensive, and it has been suggested that the Federal Government make loans for the construction of such plants.

Extension of Readjustment Allowances; More Hospital Beds—Definition of "Willful Misconduct" Cases for Veterans

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. ELLIOTT. Mr. Speaker, it is with regret that I notice a tendency in this country to minimize the sacrifices made by our veterans in the recent wars.

For instance, readjustment allowances under the GI bill will expire on July 25, 1949.

These readjustment allowances are of particular importance to the veteran of World War II, because he has not had time to become completely assimilated into the labor market. In a great many instances our veterans have not had sufficient employment experience to qualify fully for normal unemployment compensation benefits.

Unless this Congress continues and extends the readjustment allowance benefits provided by the GI bill, the veterans will suffer.

The veterans' hospital construction program has been reduced by some 16,000 beds. These beds are badly needed. I am in favor of this Congress furnishing these beds by way of restoring them to the hospital construction program.

Under present law, veterans are denied benefits for disabilities resulting from so-called willful misconduct. From the letters and expressions which I receive, I believe that mistakes have been made in classifying some disabilities as being the result of willful misconduct. I do not condone willful misconduct on the part of anyone, but I do think that it is very important that we not allow a loose administrative construction of the term "willful misconduct" to bar veterans from benefits, when a close examination of the facts would indicate that they are entitled to the benefits under veterans laws.

As a part of my remarks, I include a letter from Hon. C. C. Horton, director of the Department of Veterans' Affairs of the State of Alabama, together with three resolutions recently passed by the veterans committee of the southern governors' conference, and by the southeastern conference of State service officers:

STATE OF ALABAMA,
DEPARTMENT OF VETERANS AFFAIRS,
Montgomery, Ala., May 10, 1949.

Hon. CARL ELLIOTT, M. C.
House Office Building,
Washington, D. C.

DEAR CARL: I have been requested to forward to the members of the Alabama delegation the enclosed resolutions which were adopted at a recent veterans conference in Mobile. The conference represented 14 Southern States. I am sure that these resolutions will have your careful consideration.

I might add for your information that Mr. Sloan is director of the Veterans' Service Bureau of South Carolina, and Mr. McGovran is the director of the Department of Veterans' Affairs of West Virginia.

Respectfully,

C. C. HORTON,
Director.

"Whereas the expiration date of the readjustment allowance benefits provided by the GI bill, expire on July 25, 1949; and

"Whereas almost one-third of our unemployed are veterans receiving such allowances. Our experience indicates that the veterans have not yet been completely assimilated into the labor market. He lacks seniority—and is consequently the first laid off and the last to return to work. Most of our veterans have not yet acquired such employment experience as to qualify fully for normal unemployment compensation benefits. As a consequence, unless servicemen's readjustment allowances are continued, these veterans and the States will suffer considerably: Therefore be it

"*Resolved*, That the veterans committee of the southern governors' conference and the southeastern conference of State service officers at its meeting at Mobile, Ala., April 14, 15, 16, 1949, go on record favoring the extension of the benefits now provided."

The above resolution was passed by the veterans' affairs committee of the southern governors' conference and southeastern State service officers, in a joint meeting at Mobile, Ala., April 16, 1949.

Attest: R. S. SLOAN,
T. H. MCGOWAN,
Cochairmen.

"Whereas under recent decisions, the hospital construction program was reduced by some 16,000 beds; and

"Whereas it has been determined by a recent survey that these beds are badly needed to take care of the present load: Now, therefore, be it

"*Resolved*, That the veterans committee of the southern governors' conference and the southeastern conference of State service officers, favoring the immediate restoration of the original hospital construction plan, which we feel would only meet the minimum by the time the beds have been constructed."

The above resolution was passed by the veterans affairs committee of the southern governors' conference and southeastern State service officers, in a joint meeting at Mobile, Ala., April 16, 1949.

Attest: R. S. SLOAN,
T. H. MCGOWAN,
Cochairmen.

"Whereas present legislation does not provide for payment of benefits to veterans having disabilities resulting from so-called willful misconduct; and

"Whereas from years of experience it has been clearly demonstrated that many of these claims so classed as willful misconduct are in fact not misconduct at all; and

"Whereas veterans serving in World War I were treated for misconduct disabilities and advised when returned to full duty such conditions were cured; and

"Whereas these men served faithfully throughout the period of war, returning to their homeland and jobs with the belief they had no disease, carrying on their occupation for many years without recurrence of the disease; and

"Whereas at the present time many of these men are found hopelessly disabled with no chance of cure at this late date and are denied benefits on the basis that their disability was due to willful misconduct, thereby working a hardship on the veteran and his dependents: Therefore be it

"*Resolved*, That the veterans committee of the southern governors' conference, and the southeastern conference of State service officers, go on record that immediate steps be taken by Congress to amend the law providing payments to veterans who are otherwise entitled, for conditions now considered willful misconduct, so as to deny only such cases that are definitely proven to be willful misconduct."

The above resolution was passed by the veterans' affairs committee of southern governors' conference and southeastern State service officers, in a joint meeting at Mobile, Ala., April 16, 1949.

Attest: R. S. SLOAN,
T. H. MCGOWAN,
Cochairmen.

Discrimination and Segregation in the Bureau of Engraving and Printing

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 16 (legislative day of Monday, April 11), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject discrimination and segregation among employees of the Bureau of Engraving and Printing, delivered by Mrs. Margaret Gilmore, one of the outstanding women in Washington, at a mass meeting at the Bethel Baptist Church in Washington, D. C., on Sunday, May 15, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are here assembled for the second time in a mass meeting to protest the continued discrimination and segregation under which the employees of the Bureau of Engraving and Printing are forced to work. There are many of you here this evening who do not

know the extent to which minority groups, particularly Negroes, are discriminated against in this agency of the Federal Government.

We are also assembled here to protest the possible displacement of 1,800 women—1,500 of them Negro women. These young women served faithfully all during the war; some have been employed for 7 years or more; all are highly skilled in their jobs.

Some of you may wonder why we say there is discrimination in the plan of the Civil Service Commission to displace these young women. Let me tell you why:

These women with the exception of a very few must pass a civil-service examination to be certified to the position of printer's assistant at the Bureau of Engraving and Printing. The printers with whom they work, side by side, day after day, have only to file a Form 57 with the personnel office and are immediately given permanent status; no worries at all. Full security from the start. That is one reason why we say there is discrimination. The Bureau claims that the need for printers is so great, they do not have time to wait for them to compete in an examination. Well, isn't the need for these skilled assistants just as great since they must work side by side with these printers?

The United Public Workers of America, CIO, one of the few truly democratic unions in existence in this country, has been successfully organizing our forces at the Bureau. Our plan is to bring this matter before the President of the United States for this is our last resort. We have appealed to all the officials, low and high, who have any jurisdiction whatever over these employees. We have had no success. Now it is up to the President. The fight to save these 1,800 jobs will not only benefit the Negro women but the white women as well because without the fight of the union the question of status would have been decided adversely by the Civil Service Commission without any chance of appeal to the President. Thank God for that success.

Another form of discrimination and segregation is the refusal to hire Negro clerks and supervisors in the production division. The Bureau has also refused to admit Negroes to the crafts which consists of electricians, carpenters, painters, and others. We are segregated in seating arrangements in the various sections—the whites in the front, the colored in the back. There are segregated locker rooms as well. Only through union activity have we been able to make even a small dent in the breaking down of this discrimination. The Bureau has hired a few colored clerks—to be specific: About 6 and 1 assistant supervisor—this out of an enrollment of 3,200 Negro employees.

This is what the Bureau of Engraving considers conforming to the rules of the President's Executive Order 9980 which he stated was designed to eliminate discrimination from all agencies of the Federal Government. We say this agency has not conformed. It has ignored the order completely.

The last and most disgraceful form of discrimination in open defiance of the Presidential order is the refusal to give 35 Negro veterans, who are permanent employees, an opportunity to take an examination to become apprentice printers. This would eventually enable them to become printers. Is this what America promised to Negro veterans, men who honorably answered the "call to the colors" in order to make this country a better place to live in?

Today is: I am an American Day. Why not live up to this motto and make it work by asking the President of the United States to wipe out this disgraceful pattern of discrimination and segregation at the Bureau of Engraving and Printing? Let us make this Government truly a Government of all the people.

The Position of the American Negro in Event of War

EXTENSION OF REMARKS
OF
HON. CLYDE M. REED
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Monday, May 16 (legislative day of Monday, April 11), 1949

Mr. REED. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of a letter received by me from one of the reputable Negro citizens of Kansas, J. E. Henderson, of Independence. I think Mr. Henderson's letter more nearly represents the spirit of the American Negro than did Paul Robeson's traitorous statement at the Communist-sponsored meeting in Paris.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

INDEPENDENCE, KANS., *April 20, 1949.*

Mr. CLYDE REED,
Washington, D. C.

DEAR SIR: I was sitting at my radio Wednesday night listening to a broadcast. I heard a commentator say as I listened to the broadcast that the Negroes will never fight the Russians. I would like for you to tell the world that at any time that any country thinks that they can invade America without having hell with the Negro of America, there will be a hot old time in the old town in Georgia.

When any country ties into us and thinks that the Negro will not fight, they are fooled. This is the Negro's country. Germany, Italy, or any other country doesn't belong to the Negroes, but this one does. If anyone thinks that he can lead his army to attack any part of America he will have more hell than hell can offer. The flag of Old Glory will never drag the dirt as long as the Negro of America lives. We have fought every war and will fight again to keep this country free from any Nazi. Don't let them be fooled.

J. E. HENDERSON.

Appraisal of the Welfare State

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Monday, May 16 (legislative day of Monday, April 11), 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Appraisal of the Welfare State" by Prof. Henry Steele Commager, appearing in the New York Times magazine section of Sunday, May 15, 1949.

In this article the author describes the growth of liberal legislation in the United States as a solution of the problems of modern industrialism and the paralyzing effects of concentrated wealth and monopoly.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

APPRAISAL OF THE WELFARE STATE
(By Henry Steele Commager)

Mr. Truman has made clear that he proposes to continue the New Deal. That policy, which some critics thought an aberration, which others hoped was merely a temporary concession to the depression, is now seen to be a permanent feature of American political history.

Perhaps the best brief description of the New Deal is the term "welfare state." Beginning in 1933 the state has openly, and as a normal rather than an exceptional policy, taken the responsibility for the welfare of the mass of the American people—for social security, working conditions, farming, conservation and, less aggressively, for housing, civil rights, health, and education. It has taken this responsibility not only by standing between the individual and disaster but in the more positive fashion of protecting and advancing his prosperity and happiness.

Though it is common to regard the welfare state as an invention—or a borrowing—of Franklin Roosevelt and to describe it as a foreign importation, or a Communist plot, it is, in fact, older than, let us say, the doctrine of "liberty of contract," long celebrated by rugged individualists, and more native than the doctrine of laissez-faire, whose very name advertises its foreign origin.

The beginnings of the welfare state may be traced back at least to the decades of the eighties and nineties of the last century, to the rise of modern industry and capitalism and urban life in the United States. In other words, the concept and the practice of the welfare state is about 60 years old—a short period, perhaps, in history, but over one-third the history of the Republic.

In the beginning the Government—first State, then Federal—addressed itself to regulation rather than to control or to creation. This function of Governemnt is now so widely accepted that it seems almost irrelevant to mention it; yet in its day such things as Federal supervision of railroads, the income tax, conservation and agricultural relief were denounced as subversive, socialistic and communistic, and Federal centralization was held destructive of the foundations of the Republic. Indeed, the trumpets and alarms over centralization sounded a good deal earlier in our history:

"The Government," we read, "has been fundamentally altered * * * instead of confining itself in time of peace to the diplomatic and commercial relations of the country, it is seeking out employment for itself by interfering in the domestic concerns of society, and threatens in the course of a very few years to control in the most offensive and despotic manner all the pursuits, the interests, the opinions, and the conduct of men."

Thus Hugh Legaré, at one time Secretary of State, writing in 1828.

What, then, are some of the antecedents of the welfare state? First, perhaps, the program of internal improvements which President John Quincy Adams (it was against him that Legaré directed his diatribe) wanted to make the cornerstone of his Presidential policy. A titanic debate raged, for over half a century, over this program; who now recalls it but the historian, or who questions the propriety of Federal action in this arena?

A second major antecedent of the welfare state is the land grant and homestead policy of the Government formulated in the 1850's and launched during the Civil War. The Federal Government subsidized the construction of western railroads to the tune of about 180,000,000 acres of public land, while

States added additional tens of millions. At the same time the Homestead Act of 1862, and subsequent land acts, gave over 200,000,000 acres of public lands to farmers, ranchers, and timbermen. It was, in a sense, a relief program; it was, too, a welfare program.

A third body of antecedents came during the period when William Graham Sumner was preaching the Spencerian gospel of laissez-faire. But it was the period, too, when the philosophical foundations for the welfare state were being built. Lester Ward, greatest of American sociologists, drew the blueprints; a group of economists and historians, including John R. Commons, Richard Ely, E. A. Ross, Simon Patten, and Woodrow Wilson, proceeded to construct the edifice—construct it with the aid of practical workingmen like the elder LaFollette, Altgeld, Pingree, and Bryan.

Responding to the problems of modern industrialism State after State legislated to regulate railroads and trusts, assist farmers and workingmen. State action soon proved ineffectual, for local regulation could not cope with national problems and the responsibility was inevitably transferred to the Federal Government. Whatever we may think of the speed of the process of centralization today, it is a historical fact that the Federal Government was both slow and cautious in assuming supervisory responsibility, even in those areas where the constitutional authority was clear. Thus it required a century for the National Government to enact general legislation on immigration (1882), interstate business (1887), and restraint of trade (1890).

Leadership in the creation of the welfare state was the monopoly of no one party. The Populists originally took the lead, demanding, among other things, Government ownership of railroads, telephone and telegraph, a graduated income tax, Government-directed inflation; to these Bryan shortly added labor legislation and guaranty of bank deposits. The Republicans, under Theodore Roosevelt, translated some of the Populist demands into legislation; the Democrats, under Woodrow Wilson, carried the welfare program into new fields. And meantime such states as Wisconsin, Oregon, Kansas, and Massachusetts were embarking upon experiments which foreshadowed the legislation of the New Deal years.

There was no great difference between Roosevelt's Square Deal and Wilson's New Freedom, except that Wilson more clearly formulated a philosophy to justify the new role of government and insisted upon Presidential leadership in the translation of these ideas into laws. "There has been something crude and heartless and unfeeling in our haste to succeed and be great," he said, in his first inaugural address, as he called upon the Nation to abandon laissez-faire, reform the tariff, modernize the banking and currency system, remake the industrial system, give new vitality to agriculture through "the instrumentality of science taken directly to the farm," and to embark upon a program of conservation of natural and human resources.

"There can be no equality of opportunity," he added, in words that anticipated those Franklin Roosevelt was to use again and again, "if men and women and children be not shielded in their lives, their very vitality, from the consequences of great industrial and social processes which they cannot alter, control, or singly cope with. Society must see to it that it does not itself crush or weaken or damage its own constituent parts. The first duty of law is to keep sound the society it serves. Sanitary laws, pure-food laws, and laws determining conditions of labor which individuals are powerless to determine for themselves are intimate parts of the very business of justice and legal efficiency."

The first Wilson administration saw more important social and economic legislation than any administration since that of Washington—the Federal Reserve Act, the income tax, the Federal Trade Commission, and the Clayton Antitrust Act, the Adamson Act, a series of acts to help the farmers. Yet it was an advance that did little more than keep up with the mounting problems of modern economy.

The modern period of the welfare state, inaugurated in 1933—not in 1929 as some apologists for the Hoover administration now insist—is familiar enough. Confronted by a depression which business could not surmount, the Roosevelt administration undertook a program which was heatedly denounced by the champions of rugged individualism. But once written into the law of the land and endorsed by the courts, it came to be generally accepted. Nothing better proves that than its endorsement, in substance, by the Republican platforms of 1940, 1944, and 1948. If it can ever be said that anything is permanent in American politics, it can be said that the New Deal is permanent.

Granted that it is permanent, where is the line to be drawn between the welfare state and socialism, between a planned and a controlled economy? Granted that business can no longer remain wholly private, where is the line to be drawn between the regulation and the destruction of private enterprise?

These are valid questions. They are given immediate urgency by President Truman's proposals for the enlargement of the New Deal into the Fair Deal, and specifically by his recommendation of Federal aid to education and to public health, and his suggestion that the Government might find it necessary to construct its own steel plants. Are we, in fact, as Mark Sullivan has charged, slipping into socialism? Is this program in fact, as Senator TAFT has alleged, the program of totalitarianism?

The critics of the welfare state have only themselves to blame if Americans refuse to be excited by these charges or be aroused by rusty clichés and overworked shibboleths. Yet proponents of the welfare state themselves must be concerned by any departure from American tradition or any deviation from the logic of governmental activity in a democracy. How do Truman's three proposals fit—or deviate from—that tradition and that logic?

The principle and policy of State aid to education is, needless to say, very old. Its origins go back, interestingly enough, even before the Constitution. Jefferson's ordinance of 1785 provided for the use of public lands to advance education, and the Northwest ordinance of 1787—one of the basic laws of our history—specifically set aside certain sections in each township and certain townships in each State for the support of public schools, and this on the principle that "religion, morality, and knowledge, being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged."

Thereafter public lands—that is originally Federal lands—were freely devoted to support of public schools and institutions of higher education. In 1862 the Morrill Land Grant Act set aside additional millions of acres of public lands for the support of agricultural and industrial schools, and most of the great State universities of the country are land-grant colleges. In the 1880's the Hatch Act granted public lands to establish agricultural experiment stations. Incidental but not irrelevant to this is the long-accepted use of Federal funds for the support of such educational institutions as the Library of Congress, the Smithsonian Institution, and the Geological Survey. To date there has been no important instance of improper interference by the Federal Government with educational activities.

In the last decade the Federal Government has entered energetically into the field of education. The logic of this is clear enough. Rejections from the Army on account of illiteracy ran to some 4 percent. Future warfare will demand trained intelligence—above all, scientific intelligence. A government which has the responsibility of national defense, and which can conscript all the manpower of the nation for defense, has a legitimate interest in education. It is against the background of this over-all military situation that we can best appreciate the significance of such varying developments as the GI bill, the program of research scholarships, the subsidizing of scientific research, and the Fulbright bill. It is against this background, too, that we must consider the proposal to use Federal funds to equalize educational opportunities and to subsidize brains.

Although the United States Public Health Service dates back to 1798, the antecedents of Federal intervention in the realm of public health are more recent—as is indeed the whole concept of public health. The police power of the State to interfere in matters of public health has never been successfully challenged—the right to establish quarantines, to insist upon compulsory vaccination, to require health certificates for marriage—and States established boards of health as early as 1855.

The Federal Government entered tardily into the field, and almost surreptitiously. The Pure Food and Drug Act and the Meat Inspection Act of the Theodore Roosevelt Administration were early assertions of interest; so, too, the work of the Bureau of Public Health in combating malaria and yellow fever. Under the New Deal Federal contributions to public health expanded—in construction of hospitals by the WPA, for example, in the health work of the CCC, in the programs of maternity aid, aid to the blind and the crippled, and to State public health agencies under the Social Security System.

As yet, however, there has been no such large-scale invasion of the health field as of the field of education. Yet the logic behind Federal interest in public health is at least as convincing as that behind Federal interest in education. For where illiteracy accounted for only a small percentage of rejections from the armed services, health accounted for a shockingly large percentage. In many States that percentage ran as high as one-quarter or one-third; in North Carolina it ran to one-half. A government which has the responsibility of maintaining its armed services and which requires certain physical standards for those services, may well insist upon its obligation to raise standards of public health.

There remains the most perplexing question of all—that of Government competition in the realm of production. It is one thing to assert the public interest in an enlightened citizenry and in a population that is physically fit. It is, perhaps another thing to embark upon a program of industrial production. Here President Truman may have overstepped that intangible line which separates the welfare from the socialistic state.

Yet here, too, there are antecedents, and here some logical support. It is relevant to remember that from an early date States built turnpikes, canals, and railroads. In our own day local governments have commonly entered the field of the public utilities, and public ownership and operation of water, gas, electrical, and even transportation facilities is familiar enough. And if the Federal Reserve System has not actually nationalized the banks of the Nation, it has assimilated most of them to the Federal Government.

Undoubtedly, however, the most obvious peacetime precedent for governmental intervention in the field of production is the TVA. It is probably a safe generalization that Government will, in the future, use the spur of competition either to prevent monopoly or to increase production in those industries intimately and indissolubly related to the national defense.

Nor is there any reason to suppose that the program of the welfare state will be confined to what has been accomplished by the New Deal and proposed by President Truman. Walter Lippmann, who can scarcely be called a socialist, suggested some years ago as part of the agenda of liberalism "large social expenditures on eugenics and on education; the conservation of the people's patrimony in the land and natural resources; * * * insurance and indemnification against the risks and losses of technological and economic change; and many other things such as providing the opportunities for recreation which would not otherwise exist in specialized and congested communities."

To health, education, and recreation will doubtless be added more vigorous support to slum clearance and housing, a positive program in the realm of civil rights, systematic development of scientific research, and especially of the manifold possibilities of atomic energy, a program of conservation and internal improvements dwarfing anything as yet undertaken, and numerous other items.

Historically, what the welfare state undertakes is to give real equality of opportunity so far as that is possible, to undermine monopoly, to equalize actual burdens, to safeguard the common wealth in natural and human resources. It attempts to do this by regulating economy, by planning for economic and social development, by protecting men and women in their civil rights, by safeguarding the health and intelligence of the people.

Whatever this may be, it is not socialism. The essence of socialism is the public ownership and management of the means of production, capital, land, and property, by the state. Soviet Russia is, in large measure, a socialist country; Britain and Scandinavia are as yet far from true socialism. By contrast the United States retains, even after two generations of public regulation, even after 16 years of the New Deal, an economy of private enterprise. By contrast the American program remains a conservative one, and—it is proper to add—a democratic one. We do well to remember the warning which President Roosevelt sounded in 1938:

"Democracy has disappeared in several other great nations, not because the people of those nations disliked democracy but because they had grown tired of unemployment and insecurity. * * * In desperation they chose to sacrifice liberty in the hope of getting something to eat. We in America know that our democratic institutions can be preserved and made to work. But in order to preserve them we need * * * to prove that the practical operation of democratic government is equal to the task of protecting the security of the people."

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks, I wish to include the following address which I delivered before the United Polish Societies of South Brooklyn, Sunday, May 15, 1949, at Prospect Hall, Brooklyn, N. Y.:

Mr. Chairman, Madam Chairlady, Reverend Father, ladies and gentlemen, I am proud to have the privilege to join with you today in this celebration to commemorate the 3d of May constitution of Poland of 1791. I am grateful to your committee for their cordial invitation to once again address you on this great occasion and particularly to my loyal and esteemed friend, Walter T. Thomas, the chairman of your reception committee.

Throughout the length and breadth of America, Polish societies of sterling American citizens celebrate this historical event of 158 years ago. It was less than two short years after the adoption of our great American Charter of Government that the people of Poland adopted for themselves a similar manifesto of freedom. May 3, 1791, became the Fourth of July for the Polish nation.

The Polish patriots of 1791 can, indeed, be numbered among the advance guard of those who blazed a trail to new liberties. They left living memories stamped in the hearts and hopes of the Polish people through over a century of suppression under alien yokes.

The constitution of May 3, 1791, abolished the abuses from which Poland had for centuries been festering. Through the abolition of the most vitiating political evils of the old regime, the formation of a strong executive, and the granting of increased freedom of action to the middle and lower classes, it marked a great advance upon all previous attempts at reform in Poland. The peasants were placed under the protection of the law, where heretofore they had been defenseless, and their serfdom was mitigated preparatory to its entire abolition. Absolute religious toleration was established. The constitution afforded the possibility of a new, sound, and progressive national life. It was a heroic breach with the past and an eager reach toward the future.

There are many ties between the United States and Poland and one of the earliest is a mutual veneration for a figure bright in the history of both Polish and American independence. Kosciusko had fought valiantly in the American cause and in 1784 had returned to his native land, eager to apply the lessons he had learned overseas in the emancipation of his own country. His experience was put to good use, for the constitutional reforms which had been expected to give Poland a new life soon brought about her complete undoing. A liberal form of government could not be tolerated among the fortresses of unlimited autocracies. In 1792, Catherine of Russia declared war on Poland and after 3 months of an unequal struggle gallant Kosciusko and the Polish Army were defeated. The constitution of the 3d of May did not become incorporated into the life of the Polish people but became a legacy cherished during the long years when the name of Poland did not appear on any of the maps of the world.

As we reflect on those old days of the past and then think back to the present, it is clear that certain basic ideas have always been inherent in the evolution of democratic constitutional government, to the traditions of which both Poland and the United States are heirs: The idea that sovereignty resides in the people and political power is vested in the electorate, which is considered as equivalent to the people; the idea of universal suffrage and the right of the majority to rule; and the idea of certain inalienable individual rights which must be protected and guaranteed. In the last century and a half peoples have embodied their faith in these ideas in written constitutions, which have run into the hundreds. Among these, the good constitutions have provided an adequate law for the government, and safeguarded human rights. They have embodied in precise and enduring language a test for official conduct. They have been, in the words of Macaulay, "infinitely better than the best despot," when upheld.

It was not until the year 1918 that the philosophy of the Polish Constitution of 1791 became a living reality. From then until the iron curtain was rung down, Poland was proudly in the forefront of the ranks of the democratic nations of the world, respected by liberty-loving men and nations everywhere.

It is truly sad to note that the nation which first came under the heel of Nazi oppression should now find itself under the yoke of Communist despotism. But the entire history of the people of Poland has been a continued series of sacrifices and hardships, a valian crusade for liberty.

In the interim between the two World Wars, the liberties of the individual which democratic constitutional governments sought to establish were assailed by economic forces and alien political ideologies. Then—and now—they were attacked at their very roots, which are a respect for humanity, a profound conception of human dignity, of a religious and moral essence.

It was for these very liberties that Poles and Americans fought as allies during World War II. Every right thinking American today share the bitter disappointment of the Polish people over the fact that the communistic tyrants of Soviet Russia through intimidation, force, and chicanery have brought about the enslavement of Poland. People of our Nation, of all religious faiths and creeds are saddended at heart by Poland's present plight, and it is my fervent hope and prayer that the time will soon come when the valiant Polish people will no longer be isolated from us by the iron curtain.

As a nation whose hopes and aspirations have always been closely entwined with those of the United States of America, as a land which generously sent us many heroes to aid us in our own struggle for freedom and independence, the hearts and minds of the people of our great Nation have always felt deep sympathy and keen understanding for the valiant people of Poland. There is no doubt but that that sympathy and understanding shall survive the present Communist regime in Poland.

On this anniversary of the Polish constitution, we salute the people of Poland, not its Red Fascist government. Mind you, the peoples of Poland and America and of the world shall yet witness the day when the godless totalitarian Soviet Government crumbles into dust, when the iron curtain is raised forever, and when the people of that God-fearing country reestablish a free and independent Poland.

When that happy day arrives, and God grant that it is not far away, a new and free Poland, released of the chains of communism which have fettered her independence and freedom, will take her place once again as a bulwark of democracy in eastern Europe.

Michigan Does Something for the Veterans

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, because letters have come in,

complaining that veterans are not being given any consideration, from the Grand Rapids (Mich.) Press of a few days ago the following statement is reprinted.

It shows not what the Federal Government has paid or is paying, but what the State of Michigan has paid or will pay, to assist veterans, who, we all admit, are entitled to generous consideration, but who cannot charge, as a few do, that they have not been given any consideration.

The statement is as follows:

GENEROUS MICHIGAN

The latest report from the adjutant general's department on Michigan's World War II bonus contains this interesting statement:

"Through April 30, 544,127 claims totaling $193,281,980 had been paid to residents of Michigan, out of the grand total of 602,450 for $215,989,115."

This indicates that 58,323 nonresident veterans have shared $22,708,135 of the State bonus. It is estimated that 634,505 veterans are eligible to receive the bonus. Approximately 95 percent of the eligibles, therefore, have been paid. If present trends hold true, an additional 3,000 nonresidents will be cut in on the bonus to the tune of another $1,170,000. That will bring total nonresident bonus payments to approximately $24,000,000

Michigan taxpayers are paying out this $24,000,000 to residents of other States because the legislature stipulated that any veteran who had lived in Michigan for 6 months before induction could qualify for the bonus. At the time, the legislators professed not to know how many nonresidents might benefit from this generous residence requirement. They know now. And without too much effort they could find out how many of the nonresidents who are receiving Michigan-paid bonuses are also receiving bonuses from their actual State of legal residence.

Debasement of the Food Supply

REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. KEEFE. Mr. Speaker, from time to time during the present session of Congress I have been trying to call the attention of the Congress and the people of the Nation to what I conceive to be a very, very astounding fact in connection with the debasement of the food supplies of this country. I have a resolution pending before the House Committee on Rules calling for an investigation.

As evidence of the need for such investigation, I ask unanimous consent to incorporate as part of these remarks a speech made on May 5 by Dr. Paul B. Dunbar, Commissioner of Food and Drugs of the Federal Security Agency, on the question: "The Food and Drug Administration looks at insecticides."

Every Member of Congress ought to read this magnificent statement of Dr. Dunbar, and it ought to point the way for action on the part of this Congress before it is too late, so that we may have a proper and suitable investigation by the Congress of this threat to your health and to the health of the people of this Nation.

The speech by Dr. Dunbar follows:

THE FOOD AND DRUG ADMINISTRATION LOOKS AT INSECTICIDES

In the briefest and least technical way I want to tell you of the thinking of the Food and Drug Administration about the use and abuse of poisonous sprays in the production of foods. Our concern, of course, is from the standpoint of our obligation to protect the consumer through the enforcement of the Food, Drug, and Cosmetic Act.

When your Secretary, Mr. Hitchner, asked me to attend this meeting he impressed me with the sincerity of his belief that this association is committed to a policy of safeguarding the distribution and uses of insecticides. I hope that what I have to say will assist you in implementing such a program.

To begin with, let me state a few fundamentals. (1) The Food and Drug Administration recognizes that the use of insecticides is necessary both to bring many agricultural food crops to maturity in a condition suitable for human consumption and to protect many foods against insect depredations during manufacturing operations and storage. (2) By and large insecticides are poisons. If they were not poisonous they would be of no value as insecticides. Their toxicity varies only in degree. (3) The terms of the Federal Food, Drug, and Cosmetic Act do not preclude the use of insecticides but they do make provisions to guarantee that when they must be used consumer safety shall be assured.

In drafting this law Congress obviously had in mind that under modern conditions we humans are exposed to traces of toxic substances from many sources. They recognized that the sum total of our intake of these minute quantities of toxic substances may be hazardous unless appropriate steps are taken to safeguard the public in every possible way. And so when they came to legislate about the purity of foods they held that a food is adulterated if it bears or contains any poisonous or deleterious substance which may render it injurious to health, regardless of whether that substance is a natural component of the food or is added. They went further and said that any poisonous or deleterious substance added to a food shall be deemed to be unsafe, regardless of the amount added, but recognizing that this would outlaw the use of necessary insecticides and severely curtail food production they provided an exception when it can be shown that the use of a poisonous substance is required in production or cannot be avoided by good manufacturing practice. In such cases they directed the Administrator to promulgate regulations setting safe tolerances which have the force and effect of law. They enjoined him when setting such tolerances to take into account, not only the extent to which the use of the poison is required or cannot be avoided, but also the other ways in which consumers are exposed to the same or other poisonous substances.

That provision of the law imposed a heavy responsibility on the Food and Drug Administration. I confess that we have not fully met our obligation. The law was passed in 1938; the war intervened and made it impossible for us to hold the necessary hearings to establish tolerances. We did hold a hearing and set up a tolerance for fluorides on apples and pears in 1944. That regulation was invalidated by a decision of the Ninth Circuit Court of Appeals. Following the termination of the war, we began preparations to reopen the hearings and set up tolerances under the law for a variety of insecticides which were coming into extensive use. Then we were confronted with a difficult situation. During the war a large number of new and very potent insecticides had been developed. Little was known about their toxicity either to the person who applied the sprays or to the consumer who ate the finished food product. In several cases we didn't even have methods for accurate estimation of the residual spray left on or absorbed by the food product. We didn't know whether the residues remained intact, whether they were altered by weathering to nontoxic or more toxic residues, whether they could be removed by washing, or whether they were absorbed into the plant structures and therefore could not be removed. We knew too little about many of these insecticides to hold hearings and establish safe tolerances.

When the toxicologist talks about poisons he views the subject in two ways; first, the possibility of acute poisoning, and, second, the possibility of chronic poisoning. Acute poisoning is something that doesn't worry us very much today in connection with spray residues on fruits and vegetables. Such poisoning occurs only through negligence. What the toxicologist is worried about is chronic poisoning resulting from the long-time consumption of minute amounts of a poison which may eventually build up in the system to produce a serious physical disturbance. That is what they call cumulative poisoning. It has long been known that arsenic and lead have cumulative effects. We are just beginning to acquire knowledge about the cumulative toxicity of a few of the newer insecticides.

To avoid overtaxing your patience, I am going to talk from here on about DDT. It will illustrate the general problem of all insecticides. DDT is a tremendously useful pesticide. You began manufacturing it in enormous quantities about the middle of the Second World War and I don't think there is any doubt but that its use saved the lives of many thousands of our boys who otherwise would have succumbed to typhus and malaria. There wasn't any question, even in those war years, but that DDT was poisonous. Work in the Public Health Service laboratories and in our own, done at the request of the military authorities, proved that; but we were able to reach the conclusion that it was a reasonably calculated military risk to use DDT as a typhus and malaria preventive, and that the risk of poisoning was less serious than the risk of exposure to these diseases. In reaching that conclusion the toxicologists believed that, while exposure to DDT would be fairly heavy, it would not be long-continued, and that the risks of cumulative poisoning would therefore be low. Since the war, DDT has deservedly retained its popularity as an extremely efficient insecticide. But by the same token there is an increasing danger of exposure of the general public to small continued intakes of DDT from many sources and for long periods with the resultant hazards of cumulative effect, particularly since the public has come to believe that it is not poisonous. We don't know how serious this hazard is in terms of human damage. We do know this: that experimental rats fed rations containing very small amounts of DDT, amounts of but one part per million or thereabouts, will in the course of time, and well before the end of a normal rat lifetime, store DDT in the fat and with five parts per million will develop liver damage that is minimal but characteristic; that female dogs exposed to cumulative effects of DDT secrete DDT in the milk; further, that mother rats fed 50 parts per million, or more, in their diet produce smaller weanling rats and fewer survivals to a litter than control animals. Now we cannot perform similar experiments on babies. We cannot exactly translate the results of rat experiments into terms of human effects. Certainly in any study of possible toxicity, if we know that

one species of animal is affected, there is only one course to follow and that is to play safe and assume that the same results would follow if we could use human animals as experimental subjects.

While DDT is an extremely useful insecticide, I am satisfied, as I have said, that the public has been more or less educated to believe that it is completely harmless. That undoubtedly has led to careless use by consumers in the household, and by food producers. The other day I received a pathetic letter from a lady in Georgia who stated that she had a small house and garden in a country area, and that nearby farms were being literally deluged with poisonous sprays. To quote her, "Our home is in a smother of poisons from surrounding farms from early spring until late autumn. Our continued illness, particularly my own during this time, has occurred after being exposed to these poison dusts and sprays." She goes on for several pages to recite the ills which she and her family have suffered and she sincerely believes, and perhaps correctly, that these ills are attributable, at least in part, to these continued exposures. Apparently her doctor believes so, too.

Now, gentlemen, as I said at the outset, poisonous sprays are a necessary and a very valuable part of our program of producing sound and edible food supplies, and of combating harmful and destructive insect pests. But the time has come when I am certain that this industry which you represent should and does recognize that discretion and discrimination must be employed in the use of poisons and that the ever-present objective must be the protection of human beings from undue exposure.

Until a few months ago we didn't have the infomation we now have about the cumulative effect of small doses of DDT. Such experiments require several years. Only recently have the experiments of the Bureau of Entomology and Plant Quarantine been carried to a point where it was necessary for them to say that if dairy cows are fed silage bearing DDT, if dairy cows are sprayed with DDT, or even if DDT is used in dairy barns, the milk from those cattle will contain DDT. Prior to that discovery it was our view that with proper precautions to protect the food from contamination, DDT was a useful and safe insecticide to use in connection with food production of every type. However, when inquiry was made of us, following the report of these results, by the Bureau of Entomology and Plant Quarantine, as to whether DDT was a safe substance for use in dairy practice, there was only one answer to make. Milk is a most important and universal food. It is the principal food of many babies from almost the day of their birth. It is an important food of children, and important as an item of the diet throughout our lifetime. Its purity must be safeguarded in every possible way. The Food and Drug Administration will not and cannot set up a tolerance for DDT in milk. It is plain common sense that dairy practice shall be so conducted as to protect the milk supply. Fortunately, the Bureau of Entomology and Plant Quarantine was ready to suggest alternative and far less objectionable substitutes for DDT. I cannot say too much in praise of the action of that Bureau in promptly adjusting its spray recommendations to fit the new situation. There is no ground for hysteria about our milk supply. The dairy industry will certainly abandon its practice of using DDT in favor of some less objectionable substance. After all, in many areas of the country the fly population is no problem during the winter months, and in summer the cattle are in pasture, unexposed to DDT. The impression that a vast number of our population are consuming harmful quantities of DDT in milk is unfounded. Our spot checks of market milk throughout the United States justify that statement.

But the risk exists; and therefore I can do nothing but to advise you to back up your executive secretary, Mr. Hitchner, in his efforts to encourage the discriminating use of insecticides.

A paper entitled "Pharmacological Considerations of Insecticides" was delivered by Dr. Arnold J. Lehman, Chief of our Division of Pharmacology, at the San Francisco meeting of the American Chemical Society in April. He discussed the results, not only of his own investigations, but also other scientific studies, and then listed those insecticides on which sufficient scientific evidence has now been accumulated to warrant us in believing that hearings can be held under the Federal Food, Drug, and Cosmetic Act and safe tolerances set up. His suggestions are not tolerances. Tolerances can only be set up in legal form after hearings. They are his ideas as to the location of the danger threshold. I am not going to read them all, but I do want to mention his views about DDT. He says that in his judgment the danger point should be under one part per million if a large part of the food consumed is contaminated, but that five parts per million approaches that point if DDT is found only in single items. By that he means that if it can be shown, for example, that the spray schedules can be so controlled by the entomologist and by you manufacturers that the harvested crop of most fruits and vegetables will contain no DDT, but that, perhaps, apples and pears may contain some unavoidable residues, then it may be permissible to set up a legal limit of five parts per million for apples and pears. On the other hand, if it turns out that a great many other foods, in order to be brought to maturity without being destroyed or badly damaged by insect infestation, must contain some DDT, then a wider range of products must be provided with tolerances. In that case, since the consumer intake would come from so many sources, a tolerance as low as one part per million may be required. The Food and Drug Administration will never be able to, nor should it, set up a DDT tolerance for every variety of food product. Certainly milk is one product where we will not do so. In general, baby foods of every type are in this category. Other foods which are less continually and less universally used may properly be permitted to be sold under a tolerance which quite possibly may not be as large as five parts per million but should be sufficiently liberal to permit effective but discriminating spraying.

I am quite confident that, with the determination on the part of insecticide manufacturers so to control their labels and distribution as to protect the consumer, and with the able guidance of the entomologists in the Department of Agriculture and in the various State organizations, it will be possible to work out a program that will not only protect the food supply but also will guarantee consumer protection. Such a program should call for avoidance of the use of insecticides in food production unless a real need for such use exists. It should obviously envisage the abandonment for food production of any type of insecticide which is too poisonous for safe use on foods.

May I close with the suggestion that there is a moral obligation upon each of you to bend every effort toward the synthesis, and economical manufacture, of pesticides which show promise of combining low human toxicity with high insecticidal value. A corollary obligation, it seems to me, is research in your own organization on methods of chemical analysis of new pesticides that will afford an accurate index of residues, not only on, but in our foods, in all those cases where presence of that particular pesticide is necessary. Such methods will also be invaluable to the industry and Government pharmacologists in estimating the effects of the pesticide on human beings. There are heartening indications that certain of you are fully conscious of both these obligations and are conducting research which, while in the short view may not seem to be productive in profits, will, in my estimation, pay tangible dividends in the long run. I heartily congratulate those concerns and, to the others say, "Go thou and do likewise."

Secretary of the Navy John L. Sullivan

REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. FEIGHAN. Mr. Speaker, the Secretary of the Navy will soon retire from public life, having rendered years of distinguished service to our country. This dynamic personality so inspired those with whom he came in contact that they, too, became imbued with his patriotic fervor. Possessed of leadership, brilliance of mind, and boundless driving force, his accomplishments were quickly perceivable. His outstanding executive ability, demonstrated in every office to which he was appointed, was readily recognized and he soon was chosen to head the greatest Navy in the world in its gravest conflict.

John Lawrence Sullivan of Manchester, N. H., first Secretary of the Navy to serve under the National Defense Act of 1947, was appointed to that office by President Harry S. Truman on August 21, 1947, and was sworn into office in the Pentagon by Chief Justice Fred M. Vinson on September 18, 1947.

As Secretary of the Navy he succeeded the Honorable James Forrestal, who became the Nation's first Secretary of Defense. Previously, Mr. Sullivan had served as Assistant Secretary of the Navy for Air from July 1, 1945, to June 17, 1946, and as Under Secretary of the Navy from June 17, 1946, to September 18, 1947. In both latter offices he succeeded the Honorable Artemus L. Gates.

ADVOCATE OF NAVAL PREPAREDNESS

During his tenure of office as Secretary, Mr. Sullivan has been the protagonist of strong and efficient submarine and carrier forces for the Navy, of utmost cooperation between the Navy and its industrial suppliers, revision of naval justice procedures and the building up of expanded Naval Reserve components, technically trained and including a Naval Research Reserve, which can be mobilized for instant service in case of emergency. He has been a persistent advocate of naval preparedness as an important factor in national security and as a prerequisite to international stability and peace.

His induction into office as Assistant Secretary for Air took place under dramatic wartime circumstances aboard a fighting aircraft carrier off the Japanese mainland on July 2, 1945 (July 1, 1945, Washington date). The incident was characteristic of Mr. Sullivan's avidity for first-hand information about the problems under his jurisdiction.

A lawyer by profession and a veteran of World War I, in which he served the Navy as a blue jacket, Mr. Sullivan brought to the Navy Department a background of legal activity in his native New Hampshire, 5 years' service as Assistant Secretary of the Treasury, and close association with veterans', civic, and welfare organizations.

TOURED COMBAT AREAS

Mr. Sullivan's trip to the Pacific combat areas in mid-1945, which was high lighted by his taking the oath of office aboard the carrier U. S. S. *Shangri-La*, flagship of the late Vice Adm. John S. McCain, United States Navy, commander of the Second Carrier Task Force, began on June 21, 1945, and was completed on July 15, 1945. He traveled more than 20,000 miles by air and about 5,000 miles by ship, conferring along the route with top Navy and Marine Corps leaders and with fliers and fighters from the ranks. The information and impressions gleaned during this trip and subsequent trips aboard surface and undersea craft have served Mr. Sullivan often in the determination of varied naval problems.

The swearing in at sea was an unusual ceremony, with the deck of the carrier as the setting. Officers and men wore helmets, ready for action. The oath of office was administered by Admiral Aubrey W. Fitch, United States Navy (retired), who was then Deputy Chief of Naval Operations for Air. Aloft, patrol planes dotted the sky, and standing by were other warships of the task force. After he had taken the oath, Mr. Sullivan told the assembly on the carrier's deck:

> We are engaged in so applying our vast sea-air power that this war may be won quickly and with as little sacrifice as possible. And with this war won, we hope that this same sea-air power will be preserved and stand ever ready to prevent new wars.

Mr. Sullivan was born in Manchester, N. H., June 16, 1899, son of Patrick Henry Sullivan and Ellen J. Harrington Sullivan. His father was personal counsel to the late Secretary of the Navy Frank Knox, a newspaper owner in that city, and subsequently Mr. Sullivan became an intimate friend of the late Secretary Knox and served as counsel for Mr. Knox's Manchester papers.

SERVED AS BLUE JACKET

During the First World War Mr. Sullivan entered the United States Naval Reserve Force as an apprentice seaman, being enrolled at New Haven, Conn. He reported for active duty with the naval unit at Yale University at New Haven. On December 22, 1819, he was released from active duty and on September 30, 1921, was discharged from the United States Naval Reserve force in the First Naval District, Boston, Mass.

Mr. Sullivan received his bachelor of arts degree at Dartmouth College in 1921 and his bachelor of laws degree from Harvard Law School in 1924. He was admitted to the New Hampshire Bar in 1923 and entered the practice of law with his father in 1924, as a member of the firm of Sullivan & White, of Manchester, N. H. From 1929 until 1933 he was county solicitor for Hillsborough County, N. H., a post formerly held by his father. In 1930 he became a partner in the firm of Sullivan & Sullivan, of Manchester, and in 1931 he became sole owner. He is now senior partner in the firm of Sullivan & Wynot, of Manchester.

Mr. Sullivan was appointed assistant to the Commissioner of Internal Revenue in September 1939, and became Assistant Secretary of the Treasury on January 17, 1940. At the Treasury Department he was in charge of the Bureau of Internal Revenue, Legislative Bureau and Procurement Division. He left the Treasury post in November 1944.

RECEIVED MEDAL FOR MERIT

Mr. Sullivan on January 27, 1948, was awarded the Medal for Merit by President Truman, with the following citation:

> John Lawrence Sullivan, for exceptionally meritorious conduct in the performance of outstanding services to the United States from January 1940 to December 1946. Mr. Sullivan, as Assistant Secretary of the Treasury from January 1940 to November 1944, displayed great tact, skill, and knowledge in formulating and coordinating the Treasury Department's tax legislation, which gained for him national prominence as an authority on taxation matters. As Assistant Secretary of the Navy for Air, and as Under Secretary of the Navy, he was a vital factor in the operation and administration of the Navy Department, and has made, by his vision, courage, and intelligent approach to the many problems of national significance, a contribution to the administration of the Government of this country which is outstanding in every respect. Mr. Sullivan's forceful performance of his duties has been in keeping with the highest traditions of the United States, and worthy of the greatest praise.

RECEIVED TREASURY AWARD

In February 1947 Mr. Sullivan was awarded the Treasury Department's Distinguished Service Award and Silver Medal for services rendered during the war finance program from 1941 to 1945. In June 1948 he was awarded the honorary degree of doctor of laws by Duquesne University, Pittsburgh, Pa.

Mr. Sullivan has been an important figure in Democratic circles in New England. Interested in civic and welfare organizations, is a director of the New Hampshire Children's Aid and Protective Society; a trustee of the Daniel Webster Council, Boy Scouts of America; and a trustee of Camp Carpenter.

Mr. Sullivan is a member of the New Hampshire Bar Association, the American Bar Association, the American Legion—having served as commander of the New Hampshire Department in 1937.

The service of Secretary John L. Sullivan is keenly appreciated and he has earned the gratitude of the Nation.

Article by the Late Honorable Sol Bloom

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1949

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by the late Congressman Sol Bloom which will appear in the June 1949 issue of Coronet magazine:

MESSAGE FROM MY MOTHER

(By the late Congressman Sol Bloom)

There is an ancient saying full of comfort and hope—"One with God is a majority."

This truth was stamped upon my mind by my mother who, in the midst of poverty and hardship, was always sustained by faith in God. I can remember, as if it were yesterday, the music of her voice as she strove to teach me.

"God is goodness, and truth, and right," she said. "You will be a man some day, and you will be asked to do wrong. The wrong will be painted in bright colors. You will be in doubt, not knowing what is right and what is wrong.

"At that time, while you are in doubt, listen to the small voice in your heart. But God does not thunder to you. You will not see the truth flashed across the sky. God will whisper to your heart, 'This is right; that is wrong.'

"This whisper will be very faint, and your temptation will be very strong. If you do wrong, you will have company and support. If you do right, you will seem to be alone and deserted. You may even think you are losing your friends.

"But no, my son, you will not be alone. God will be with you. He is your friend. He is the creator of truth itself. And with God standing with you in the right, you can win against all the world. Do not fear the struggle, my son—you are sure to win, for God and you together are stronger than those who would do wrong, even if they number in the millions.

"In all things, ask your heart, 'Which side does God choose? What does God wish me to do?' "

My dear mother! How often, through the years, have I heard that soft voice telling me: "Listen to the whisper from God."

Youth Assistance

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. JAVITS. Mr. Speaker, following is a story from the New York Times of Sunday, May 8, 1949, describing the work of the Manhattanville Neighborhood Center which is located at 514 West One Hundred and Twenty-sixth Street in New York. This center is doing a magnificent job of helping youth to avoid delinquency and of dealing with juvenile delinquency where it is found. It emphasizes the need for the national youth assistance bill, H. R. 1760, which I have introduced seeking $50,000,000 for aid to States and cities dealing with the problem directly or through such organizations as the Manhattanville Neighborhood Center. Dr. Harry Emerson Fosdick, pastor emeritus of Riverside Church is chairman of the board of Manhattanville Neighborhood Center, and Prof. Albert C. Jacobs, provost of Columbia University is its vice chairman:

NEW SYSTEM COPES WITH STREET GANGS—MANHATTANVILLE AGENCY'S FOUR FIELD AGENTS USE FRIENDLY APPROACH AS BASIS

(By Douglas Dales)

When teen-agers wrecked the dining room of the Manhattanville Neighborhood Center

at 514 West One Hundred and Twenty-sixth Street, directors of the institution decided it was time to revise their technique in dealing with street gangs.

As a result they began an experiment that has provided a mass of original material on how and why gangs are organized and why they act the way they do. It is expected to furnish valuable guidance to social workers trying to cope with the anti-social behavior of these groups.

The decision made was to send four trained social workers into the streets of the area—one of the most underprivileged in New York—to work intimately with youthful gangs. They were to establish contact where they could—in bars, poolrooms, candy stores, and all-night restaurant hangouts, and on street corners. They were to become gang associates, not "spies" or "policemen."

Jules Schrager, who has been executive secretary since the agency was developed 5 years ago from a wartime child care center, regards the "street club project" as the most advanced innovation in group work in recent years.

"Most organizations use the 'surgical approach' in dealing with bad cases of anti-social behavior within their buildings," he said yesterday in discussing the experiment.

"What usually happens is this," he explained. "Members of a gang are induced to come to the agency's building. They're rough and hostile, but they sign up and are assigned to a leader. Their behavior is good for 3 days, but on the fourth someone decides to heave a chair through a window.

"The result is that the agency, to protect its property, ejects the antisocial youth. That's the surgical approach. You weed the bad one out and let the good ones stay. Those ejected don't mind too much for after all there are more glass, street lamps, and other things to be broken outside than in the center."

The Manhattanville Center directors, faced with the need of preserving its property but at the same time determined to do something for the youths who needed help most, decided to try to work with street gangs outside the four walls of the center.

Manhattanville, sometimes called the valley, lies astride the flow of the migrant Puerto Rican and Negro populations as they spread out from Harlem and the south, searching for space in an already overcrowded neighborhood. It is a 36-block area between One Hundred and Twenty-second and One Hundred and Thirty-fifth Streets, from Convent Avenue to the Hudson. Sixty thousand persons, one-third Negro, one-third Puerto Rican, and the rest representing a score of national backgrounds, live there.

Towering above the tenements of Manhattanville immediately to the south is Morningside Heights, where some of the world's great cultural institutions are located. The contrast between the neighborhoods has pricked the conscience of the hill, with the result that the institutions there, including Columbia University, the Jewish and Union Theological Seminaries, and eight other institutions have joined in sponsoring the Manhattanville Neighborhood Center in a broad effort to redeem the valley.

The street-club project, as the work with street gangs is referred to, is one of the phases of the redemption process.

A set of broad guides for action was adopted before the four workers were placed in the field. They were to introduce themselves to the street groups as naturally as possible and associate informally with them on a nonprivileged basis. When a close relationship had been established and the groups were ready to come into the center, the field worker was to maintain his primary relationship with the group by coming to the center and engaging in activities as a group member. While the worker's role as an agency employee was not to be concealed, neither was it to intrude in the relationship.

When the gangs, now clubs, come into the center and destroy property they are kicked out as before. And this happens frequently.

"But there is this difference," Mr. Schrager points out. When the boys are sent away now, the agency worker goes, too, and contact is maintained between the agency and the club.

In this fashion, working in the field 15 hours a week, the 4 field workers have developed a close relationship with about 150 youths. From their daily reports data have been compiled on the composition and operation of street gangs, the codes and psychology that motivate actions.

The street-club project, only one of many activities conducted by the center, costs $600 a month and has been a heavy drain on the organization's budget, which has grown in 4 years from $30,000 to $98,000. There has been some recent talk that the project may be aided by the city youth board.

The center is being used by 750 persons, about the maximum the present staff can work with effectively. It is housed in the former Speyer School, a five-story structure, that was turned over to the center by Columbia Teachers' College, renovated at a cost of $170,000 and opened early last year.

The directors, of whom Dr. Harry Emerson Fosdick, pastor emeritus of Riverside Church, is chairman, have charted a new plan to begin July 1. On that date Clyde E. Murray, now headworker at Union Settlement, will be added to the staff of Provost Albert C. Jacobs, of Columbia University, who is vice chairman of the Manhattanville Center. Mr. Murray will serve as administrator of the center and will coordinate aid available from "the Hill."

Additional Clerk Hire for Members of Congress

REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, last Thursday when there were less than a hundred Members on the floor, the chairman of the Committee on House Administration, standing over here at my right and down by that desk, offered a resolution granting Congressmen $3,000 additional clerk hire. I intended to object but did not get the opportunity.

Extravagant and wasteful spending in the executive departments increased so rapidly in recent years that it became evident that, if continued, the tax burden would become unbearable. So Congress appropriated approximately $2,000,000 and created the Hoover Commission to investigate and to point out to the Congress in what manner the taxpayer's dollar could be saved and made to give better service.

That Commission made a report which indicated that billions could be saved if the Congress would enact certain legislation. Congressional committees, one of which is the House Committee on Expenditures in the Executive Departments, are now endeavoring to report out legislation which will give the taxpayer more for his dollar. That is all to the good.

But on Thursday last in the House an incident occurred which indicates that the present administration, including the legislative branch, does not intend to economize.

House leaders each week outline the legislative program for the next week, but the outline which last week came to the Republican Members of the House—and it is prepared by the Republican whip on information furnished by the Democratic leadership—did not contain any information which would indicate that the clerk hire of Congressmen was to be increased.

On Thursday, May 13, the chairman of the House Committee on House Administration, going down into the well of the House and standing close to the rail by the stenographer's desk, after calling up four routine privileged resolutions and two resolutions which called for but $500 and asking for immediate consideration, called up a bill providing for the payment of certain telephone and telegraph items incurred by Congressmen, and making available to each Congressman, for additional clerk hire, the sum of $3,000.

That bill was not on any calendar of the House and the Members had no reason to anticipate its consideration. There were less than 100 Members on the floor at the time.

I had learned through the press that such a measure was contemplated and, when the chairman of the committee walked down to the well, I moved to the front so as to be on the watch for that particular bill. Although I listened carefully, I was unable to hear enough of what either the chairman of the committee or the Clerk of the House said to learn that the measure I was watching for was up for consideration.

In the confusion, the bill making available to each Congressman an additional $3,000 for clerk hire passed the House without objection, without a voice or roll-call vote. It will cost the taxpayers of this country over a million dollars. In my opinion, two-thirds of the Members of the House knew nothing of the passage of this bill.

I am endeavoring to have the House rescind the action taken and am offering a resolution for that purpose.

Knowing as we do that there must be a lessening in Federal expenditures, there is, in my humble opinion, no excuse for the Members of Congress not setting the example.

President Truman may think, although I doubt it, that the Eightieth Congress was the second worst in history, but the Eighty-first Congress seems determined to make a record as a wasteful, spending, extravagant, ineffective legislative body. The House should rescind today the action taken last Thursday.

I ask unanimous consent for consideration of a resolution rescinding that action of the House.

The SPEAKER. The Chair does not recognize the gentleman for that purpose; the gentleman has not spoken to the Chair about his desires.

The Same Dean Acheson

EXTENSION OF REMARKS
OF
HON. L. GARY CLEMENTE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. CLEMENTE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article entitled "The Same Dean Acheson," which appeared in the Tablet Saturday, May 14, 1949:

THE SAME DEAN ACHESON

In December of 1945 the then Under Secretary of State Dean Acheson received two militant anti-Christian Spaniards who were active in perpetrating the foul persecution of religion before and during the civil war in Spain. As a matter of fact one was a brigand of the first order and had escaped from Spain just before the police could lay hands on him. This reception by Mr. Acheson, as well as his sitting down to discuss Spain's future with other enemies of the country, prompted the Tablet on December 29, 1945, to say the following in an editorial:

"All we can say is that Acheson does not represent the American people. His spoiling for additional trouble in Spain may be a sop to the Communist and the other anti-Christian forces, but Americans, whether they support Franco or not, are united in saying it's about time our Department of State minded its own business and if it is looking for action abroad it should stop the appeasement of Red Fascist regimes and uphold the agreements pledged in the Atlantic Charter and the "four freedoms" for the nations upon whose cause we have sacrificed thousands and thousands of American lives and billions of American dollars.

"Spain has not fought the United States, as former Ambassador Carlton Hayes has said; she was benevolently neutral in the recent war and befriended the United States. Neither is Spain any threat to the United States in the future. Let Dean Acheson, the confidant of Spanish anti-Christians, take care that in doing his bit for revolution in Spain he does not bite off more than he can chew. The American people are fed up with progressive acts of betrayal to their basic Christian teaching and morality."

Now, that Mr. Acheson is Secretary of State his seeming prejudice has not changed, nor has his willingness to listen to certain members of the United States delegation to the United Nations—a delegation from which, as an item on page 11 shows, Catholics are barred. On Wednesday of this week he sought to justify the attitude of the United States in not working to renew proper diplomatic relations with Spain—relations which were broken in order to appease the Soviet Union when it was the fashion to kow-tow to the Red dictatorship. It will be recalled that only a few days previously a majority of voting nations in the Political Committee of the General Assembly had voted to withdraw the Soviet-dictated resolution on Spain and leave the issue of sending an ambassador to Madrid up to the individual member nations.

Dean Acheson's statement was an excellent presentation of double-talk and a fitting demonstration of arrant hypocrisy. Spain, he said, did not enjoy the "fundamental liberties" essential to membership in "the family of western Europe." If there was any consistency or honesty in such a position—and there seems to be none—then we would at once withdraw ambassadors from every country behind the iron curtain—every Communist-held nation wherein not only are fundamental liberties denied but hatred of the United States and its people are taught.

The rest of Mr. Acheson's statement followed the usual pro-Communist, anti-Christian line against Spain. Hitler and Mussolini, fascism, jails, etc., were all dragged in but neither Mr. Churchill nor the late President Roosevelt was quoted. Says Mr. Churchill in his memoirs: "General Franco disliked and feared Hitler. * * * Gratitude to Hitler and Mussolini for their help never entered his head. * * * His Majesty's government was content with the attitude of Spain. Nothing was easier than for the Spaniards to mount or allow to be mounted a dozen heavy guns in the hills dominating Gibraltar and the narrow passage to the Mediterranean. Spain held the key to all British enterprise in the Mediterranean and never in the darkest hour did she turn the lock against us." And on November 8, 1942, the then President Roosevelt sent the following letter to the Spanish Government.

"MY DEAR GENERAL FRANCO: It is because your nation and mine are friends in the best sense of the world and because you and I are sincerely desirous of the continuation of that friendship for our mutual good that I want very simply to tell you of the compelling reasons that have forced me to send a powerful American military force to the assistance of the French possessions in North Africa."

Appealing to Franco's "wide military experience," Mr. Roosevelt outlined the scope of the contemplated action and concluded with the promise:

"I hope you will accept my full assurance that these moves are in no shape, manner, or form directed against the Government or people of Spain or Spanish Morocco or Spanish territories—metropolitan or overseas. * * * Spain has nothing to fear from the United States. I am, my dear General, your sincere friend, Franklin Roosevelt."

The fact is, of course, Members of the Senate—Democratic as well as Republican, Protestants as well as Catholics—earlier in the week tore off the mask of hypocrisy which has been covering our attitude toward Spain. They rightly started a move to fully recognize, and rightly assist, Spain as we have a dozen other nations and to restore the words "honor and consistency" in our dealings with a country which is the one nation that has defeated and rooted out communism, which is our friend in Europe and which neither owes anything to us nor begs anything from us.

When one considers the way the State Department has treated Spain—and its people—and everyone notes the rushed recognition, with no pledges of any kind, given the new Israel—which in a matter of a few hours after recognition announced it would support the Soviet-inspired ban on Spain—one wonders why the President of the United States and the Congress do not clear out from the State Department the pro-Soviet coterie who by their contradictory and anti-Christian attitude make of diplomacy a mockery.

Student Program of Atomic Energy Commission

REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, I join with the distinguished gentleman from New York [Mr. COLE] in denouncing the conduct of the Atomic Energy Commission in giving fellowships to two known Communists. From Chapel Hill, N. C., comes the brazen admission by Hans Freistadt that he is a member of the Communist Party.

In view of that admission, Mr. Speaker, I call for the resignation of all members of the Atomic Energy Commission and for an extensive investigation by the proper committee of this House.

Chairman David Lilienthal cannot hide behind the National Research Council in this matter, nor can the other members of the Commission. The record is abundantly clear that these men had knowledge that Freistadt and one other were subversive individuals, yet they were awarded valuable scholarships in a most important field of national defense.

Mr. Speaker, the Congress is on notice; it should act at once by demanding the resignations of those responsible for this attack on our national security. We want action now. I sometimes wonder if we really want to contain communism.

[From the Washington Post of Friday, May 13, 1949]

TWO COMMUNIST STUDENTS GOT AEC AID, HICKENLOOPER SAYS

(By Mary Spargo)

The Atomic Energy Commission was accused in Congress yesterday of giving fellowships for advanced atomic study to two known Communists.

Senator BOURKE B. HICKENLOOPER, Republican, Iowa, a member of the Joint Atomic Energy Committee, further disclosed that the Commission, after agreeing to have FBI investigations made of fellowship applicants, had dropped the projects last fall after only 46 out of 246 applicants had undergone a loyalty investigation.

The Commission, HICKENLOOPER said, never gave a satisfactory or adequate explanation for dropping the investigations although the first 46 disclosed not only 1 known Communist but 4 or 5 other persons who "could never be cleared for confidential work."

The issue of whether taxpayers' money should be used to foot the bill for stipends to known Communists broke loose on both sides of the Capitol yesterday.

HICKENLOOPER brought up the question of the need for thorough FBI investigations of fellowship applicants at a hearing of the joint committee on the confirmation of Dr. Henry D. Smyth, Princeton University physicist, and author of the famous atomic weapons report bearing his name.

In the House, Representative W. STERLING COLE, Republican, New York, in a statement inserted in the RECORD, identified one fellowship student as a "professed Communist" named Hans Freistadt, a native of Austria, now taking postgraduate work in physics at the University of North Carolina, Chapel Hill.

Freistadt, recipient of a $1,600-a-year fellowship, acknowledged at Chapel Hill, according to the Associated Press, that he is a Communist. He told reporters that "nothing was said in the application for the scholarship about political affiliations." There is an FBI report on Freistadt, COLE said.

Another FBI investigation, HICKENLOOPER said, disclosed that a man doing postgraduate work, on public funds of $3,600 to $3,800 a year, was known to be a Communist Party member, and his wife was also known as a Communist.

The Iowa Senator said he would not name the $3,600-a-year Communist at this time,

but he said his name appears in the fifth annual report of the Commission.

HICKENLOOPER told the Washington Post that he brought the matter up privately to the Commission as far back as last fall and had hoped the Commission would take action. When it didn't, he said, it was time to bring the matter out into the open.

He said he had quite an exchange of correspondence with Chairman David E. Lilienthal about the matter but that Lilienthal never gave any explanation for dropping FBI investigations of such persons.

There is no question, HICKENLOOPER said, about the Communist Party membership of the applicant to whom he referred.

"I know the Communist Party cell to which he belongs and the Communist Party cell to which his wife belongs," HICKENLOOPER told the Washington Post.

The Atomic Energy Commission last night issued a statement in respect to its policy in granting scholarships for advanced work in nuclear physics.

The Commission said the selection of fellows for training was delegated to the National Research Council.

COUNCIL SET STANDARDS

"The funds for the fellowship program were made available to the council and it has set the standards for the selection of fellows," the AEC said.

"The Commission believes these standards to be the right ones and it endorses them.

"The Commission does not influence the selection of the fellows and does not require FBI investigation if the training program proposed by the applicant is nonsecret work in such fields as biology, medicine, biochemistry, agricultural sciences, nuclear physics, mathematics, and metallurgy.

"If, however, the program of study proposed by the applicant involves access to data that is secret as defined by the Atomic Energy Act, a full FBI investigation and clearance by the Commission is required in accordance with the terms of the act.

"The award by the National Research Council of an AEC-supported fellowship does not constitute any commitment on the part of the applicant or the commission to employ the fellow after completion of the training."

NONSECRET FIELDS

"The Commission believes that in the interest of science in the United States and the maintenance of a strong program of research in fields related to atomic energy, the investigative and clearance procedures required in the Atomic Energy Act should not be extended into nonsecret fields of science, nor should these procedures be applied to students entering the initial phases of their professional training."

HICKENLOOPER reiterated last night that he will press for full FBI investigation of all applicants for AEC fellowships.

It just doesn't make sense to him, he said, for taxpayers' money to be used to support members of the Communist Party.

Chairman BRIEN MCMAHON, Democrat, Connecticut, said there will be a full public hearing into the operation of the fellowship program on May 23.

Commenting that it certainly would not set well with millions of Americans if they felt their tax money was going to pay stipends to subversives, MCMAHON suggested possibility that applicants might be required to swear to loyalty forms, including all the organizations to which they belong. If they lied, MCMAHON pointed out, they would be subject to prosecution for perjury.

Smyth said he saw no objections to such an oath, but he said he felt full FBI loyalty investigations should wait until the applicant actually wants a restricted job. Young scientists, he said, were prone to be politically naive.

In Chapel Hill, Freistadt said he was perfectly willing to undergo a loyalty investigation.

"You can put it down that I consider myself a loyal citizen of this country," he told the United Press. "I am bound by my oath of citizenship to defend this country against any aggressor."

COLE's statement to the House said of Freistadt:

"He is said to be the means of distributing Communist literature at the university and was a recent host to one of the Communist leaders now on trial in New York City."

Senator CLYDE R. HOEY, Democrat, North Carolina, told his colleagues they would be "amazed to know that the money of the taxpayers is being used to provide scholarships for known Communists through the Atomic Energy Commission."

FREISTADT ADMITS PARTY MEMBERSHIP

CHAPEL HILL, N. C., May 12.—Austrian-born Hans Freistadt, 23, recently awarded a $1,600 fellowship by the Atomic Energy Commission, today said: "I belong to the Communist Party in Chapel Hill, but I consider myself a loyal citizen of this country."

The Atomic Energy Commission awarded the young graduate physics instructor at the University of North Carolina a $1,600 fellowship for advanced atomic study and was attacked for the action in Congress.

Congressmen charged Freistadt was a "professed Communist."

[From the Washington Sunday Star of May 15, 1949]

HICKENLOOPER SAYS ANOTHER RED RECEIVED ATOMIC SCHOLARSHIP

Senator HICKENLOOPER, Republican, of Iowa, charged yesterday that another Communist has received a scholarship of the Atomic Energy Commission—and that the Commission let him have it after its own investigation showed what he was.

The Iowa Senator told a reporter it was a $3,600-a-year science scholarship and that he has protested to the Commission. But he said that so far as he and other members of the Senate-House Atomic Committee can learn, the award has not been canceled.

It is the second case cited by a Member of Congress of a Commission scholarship going to a student described as a Communist.

On Thursday, Hans Freistadt, a physics student at the University of North Carolina, who got a Commission scholarship, acknowledged he was a Communist after this was disclosed to the House by Representative COLE, Republican, of New York. School officials said Mr. Freistadt's study will be relativity and that it is of nonsecret nature.

Mr. COLE said that the Commission had a FBI report on Mr. Freistadt and the scholarship was granted him in the face of that fact. Senator HICKENLOOPER said, however, that his reference was to another student.

Senator HICKENLOOPER refused to identify the second student other than to say he is enrolled at an eastern university. But he said he is prepared to document his charge when the committee opens hearings May 23 on operations of the Commission's fellowship fund.

"I think it is ominously dangerous to help educate people with public money who are subversive and are known to be subversive," Senator HICKENLOOPER said. "The investigation records of the Commission show beyond any shadow of a doubt that the student is a Communist and was known to be a Communist when the fellowship award was made."

The Commission has explained it does not require advance security check-up of a student when the course involves no atomic secrets. It explained this would menace freedom of inquiry and education. It said a full investigation is required if the program of study proposed by the applicant involves access to secret data.

MUST PASS SECURITY TESTS

The scholarship program, intended to combat the shortage of scientists, is administered by the National Research Council and the Commission does not interfere with its selections, the Commission explained. Senator HICKENLOOPER said, however, that the final decision on awards is the Commission's.

Chairman David E. Lilienthal has noted that all who are employed by the Commission must pass security tests.

Senator HICKENLOOPER said some of those being aided by Federal funds, therefore, could not be employed by the Commission. He said the student he refused to name fell in this class.

A Commission spokesman would not comment on Senator HICKENLOOPER's remarks.

The Iowa Senator said that when the Commission started its fellowship program—on which it plans to spend $23,378,000 in the year beginning July 1—security checks were made of all applicants for aid funds.

FORTY APPLICANTS INVESTIGATED

About 40 such applicants were investigated by the FBI and reports made to the Commission before it changed its policy so as not to require future investigations of this sort, he said.

The student to whom he is objecting was included in this group of 40, Senator HICKENLOOPER said, adding that he got the Commission award despite the report on his background.

"The Commission must accept the responsibility for this and other cases," the Iowan declared. "It cannot hide behind the fact that it has set up fellowship boards to make recommendations on the applicants. The final decision on who gets the awards is the Commission's."

Senator RUSSELL, Democrat, of Georgia, joined Senator MCCARRAN, Democrat, of Nevada, in agreeing that it might be wise for the Senate Appropriations Committee to limit the Atomic Energy Commission's use of its fellowship funds unless it agrees to screen out Communists from the program.

Navy Ships Visit Seward

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. BARTLETT. Mr. Speaker, not too many weeks ago two ships of the United States Navy visited Seward, Alaska, and the people of that community were so delighted with the cordial relationships that were formed and with the demeanor and behavior of the visitors that they have written me giving written expression of the pleasure of Seward at having been able to act as host to the United States Navy. For those who do not know, Mr. Speaker, Seward is the southern terminus of the Alaska Railroad. It is located on Resurrection Bay, discovered in 1790, and is named in honor of the far-sighted Secretary of State responsible for the purchase of Alaska. It is one of the finest little towns in the world. I have letters from both Mayor Lanier and Mr. W. C. Erwin of the chamber of commerce

pertaining to the Navy visitation. They are reprinted here:

CITY OF SEWARD,
Seward, Alaska.

Hon. E. L. BARTLETT,
Delegate from Alaska,
House of Representatives,
Washington, D. C.

DEAR DELEGATE BARTLETT: The United States Navy visited Seward February 17, 18, 19, and 20, as represented by the personnel of the U. S. S. *Salisbury Sound* and the U. S. S. *Suisun*. Crews of both ships together numbered about 700 and about 50 percent were allowed liberty ashore at one time. Seward residents expressed great satisfaction at seeing the navy blues on the streets, and the city officials stated that the crew members were extremely well behaved and orderly. Seward extends its welcome to the Navy to visit them at any time.

Captain E. J. S. Young, commander of the detachment extended the invitation to an "open house" aboard the ships on the Saturday and Sunday afternoons they were in port to adults and children of our city. The town turned out in great numbers to board the ships and take advantage of the opportunity to see first-hand how the ships of our Navy are manned and equipped. The members of the crews were excellent guides and hosts and made a great impression on the youngsters. When the ships steamed out of the harbor they left behind them a fine feeling of friendliness and mutual hospitality and the people of Seward extend a wholehearted invitation for them to come back again.

Very truly yours,
EUGENE N. LANIER, *Mayor.*

SEWARD CHAMBER OF COMMERCE,
Seward, Alaska.

Hon. E. L. BARTLETT,
Delegate, House of Representatives,
Washington, D. C.

DEAR MR. BARTLETT: We are taking the liberty of writing you relative to the visit to the port of Seward of two naval vessels during the month of February.

As you know, we had the pleasure of entertaining two Navy vessels, the U. S. S. *Salisbury Sound*, Captain E. J. S. Young, commanding, and the U. S. S. *Suisun*, Captain F. A. Brandley, commanding, when they were in the North Pacific last winter and spent some time in Resurrection Bay at Seward.

We are pleased to attach a program which the citizens of Seward arranged for their entertainment, and we are also very pleased to state that the officers and enlisted personnel of these vessels cooperated with us in every way and conducted themselves with the highest deportment of any armed force personnel we have had the pleasure of entertaining. The stay of both officers and enlisted personnel in Seward was a credit to the Navy Department, and we, the citizens of Seward, regretted the necessity that made their stay in Seward so short. We will appreciate it, Mr. BARTLETT, if you would convey to the proper naval officer thanks for a pleasant time and for the excellent conduct of their officers and enlisted personnel while in Seward.

We thank you for your part in arranging for these vessels to call at Seward and sincerely hope that they or similar vessels will be able to call at the port of Seward more often. We assure you that the entire personnel will be welcome, and we will do all we can to make their stay enjoyable.

Asking your cooperation in conveying our best regards to the Commander of the Navy, we are,

Sincerely yours,
W. C. ERWIN,
Committee Chairman.

The Danes Know the Communists—We Americans Had Best Take Heed

---

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks, I include an article on the economic condition of Denmark, by Mr. Frank Gervasi which appeared in the Washington Post May 15, 1949. This article gives us a lot of food for thought, especially since it explains the Communist problem in Denmark and which we in America are also facing, as well as is the rest of the world today.

STATE OF DENMARK: AN ILLUSORY CALM
(By Frank Gervasi)

COPENHAGEN, May 14.—Pastoral little Denmark, a butter and bacon kingdom less than twice the size of Massachusetts, is outwardly calm.

Farmers feed their pink pigs, milk the square red cows, coax prodigious quantities of potatoes from their weary acres, eat cabbage soup, drink schnapps and beer and seem content. So do the trench-coated workers as they pedal to and from their jobs through the swept streets of Aarhus, Odense, Aalborg and Copenhagen.

Sustained by Marshall plan dollars, the country gives an impression of well-being and prosperity. Smoke from factory stacks pencils the Scandinavian sky. Shops display quality wares ranging from fine furniture to smart silverware. Stores are bursting with canned goods and staples, and with the innumerable smoked, pickled, dried, and sauced ingredients of the inevitable smorrebrod, Danish equivalent of Swedish smorgasbord.

But the abundance is as illusory as the political calm and the air of contentment. Danes eat less than they did before the war and, of things like butter and bacon, less than under German occupation. Not that the Danes are suffering. They have probably the highest per capita food consumption in all Europe. But they're only eating about 3,000 calories now compared to nearly 3,500 before the Germans came.

They are also short of raw materials for their light industries, and lack machinery for farms and factories, and need fuel. Except for some peat in northern Jutland and a little brown coal, Denmark has no fuel, as it is almost totally lacking in natural resources. Even in first-class apartments there is hot water only once a week. Danes keep clean at the public baths or do the best they can with cold water.

While Danish farmers are well off, there is real hardship in industrial centers like Copenhagen, where nearly a fourth of the country's 4,000,000 inhabitants are concentrated.

PACT IS NO SOLACE

Even when they are full of schnapps, beer, and smorrebrod, uneasiness bleeds out of Danes' conversation whenever the talk becomes political. And that is often. War and peace, the Atlantic Pact and the Marshall plan, the Nazi occupation and the democratic liberation inevitably drop into conversations with businessmen, politicians, factory foremen and farmers.

There is anxiety here, a dread of the future and of the new war it might bring. In Britain there was uncertainty only until the signing of the Atlantic Pact. Then war came to be regarded as a rather remote possibility which could, by sound statesmanship and much keeping of the powder dry, be averted.

The pact did not have the same effect in Denmark. People here talk of war as a real probability.

Many Danes, principally the businessmen and merchants of the Conservative Party and the prosperous farmers of the Moderate Liberal group, favored Denmark's adherence to the pact. But the Social Democrats, who constitute the government although they do not hold a majority in the Rigsdag, were at best lukewarm. The Radical Liberals opposed it outright, as did the Communists.

It was only by clever parliamentarianism and smart intraparty politicking that Social Democrat Prime Minister Hans Hedtoft, an energetic, 46-year-old former printer, was able to sway Denmark into the pact. Most Social Democrats would have preferred continuance of the policy of neutrality adopted back in 1864 when Denmark lost Schlesvig-Holstein to Prussia. Or, if neutrality was impossible, they would have welcomed a Scandinavian defense alliance. Efforts in that direction ran into a wall of Swedish stubborness, but Norway chose to join the Atlantic powers and Denmark tagged along.

The only advantage which Danes see in the pact, aside from a guaranty of continued Marshall aid, is that the country will have arms to defend itself in the event of an attack. Danes will not soon forget the ignominity of being invaded at dawn and conquered by noon as happened on April 8, 1940.

A history studded with defeats, costly sieges, and the gradual contraction of Denmark to its present 16,000 boggy square miles of strategic vulnerability, influences the Danish attitude toward the East-West struggle. Loss of valuable Schlesvig-Holstein, last of many parings of Danish real estate, still rankles, and Danes hope to do something, through due process of law, to regain it. But sharpest in Danish memories is the German occupation. They do not want another.

The Germans drained the country of some $2,250,000,000 worth of food, industrial products, and services, a staggering sum for a nation whose annual budget is less than $500,000,000. Worse than the economic drain was the corruption which the Nazis left behind.

Nearly 12,000 Danes were sentenced for collaborating with the enemy.

For the first 2 or 3 years, most Danes recall, life under the Germans was "not so bad." The Danes ate well. They held out beef, butter, bacon, and eggs on the Nazis. Things grew difficult only when the Allies began to win the war, giving the Danish underground courage to rise and cause the Germans trouble. Then there was shooting, looting, burning, and terror.

"But it will be worse, much worse," said a Jutland pig farmer, "if the Russians come. They will not be so nice to us. They will treat us like they did the Poles and the Finns, the Latvians, and the Estonians."

And how was that? Well, he did not know exactly, but it was "bad, very bad."

Much the same degree of anxiety about the future was expressed by minor government officials, former underground workers, businessmen, and farmers with whom I talked on a motor trip through Zealand, Funen, and Jutland. A few, Copenhagen people, were almost nostalgic about the Germans, violent about the Russians.

"At least we could talk to the Germans," a former newspaperman said. "And they got things done. We argued for years whether the Store Kongensgarde (a main street in the capital) should be a one-way street or not. The day after the Germans arrived it was a one-way street.

"But we couldn't talk to the Russians. They're tougher than the Germans. Be-

sides, the Russians have a strong fifth column here in Denmark—the Communists."

ELECTION BELIED FEARS

It is the presence inside Denmark of a substantial number of Communists, rather than any immediate threat of Russian aggression, which most worries the Danes. Out of a total vote of 2,000,000 at the last election in October 1947, the Communists polled 140,000 and got 9 seats in the Folkeding (Lower House) out of 150. The nine seats represented a serious setback for the Communists—they had held 18 before—but anti-Russian Danes ignore that.

Aksel Larsen, Communist leader, is a bully-boy of the Kremlin school. He has publicly echoed the prediction of Italy's Togliatti and France's Thorez that, in the event of a war with Russia, Danish Communists would side with Moscow. Most of his following is on the docks and in the mills and factories of Copenhagen and vicinity. He and his followers are considered so much a menace by the more conservative elements of Danish society that an actual underground army has been organized to protect bridges, railroad stations, docks, factories, and public utilities against Communist sabotage in the event of war.

One of the leaders of this organization, a man in his late thirties who was an underground fighter against the Germans, described the outfit to me. He admitted that originally the anti-Nazi underground contained many Communists. The Danes, he said, are "very grateful for what they did for us then."

"But that was when the Russians were fighting on our side," he continued. "Then the war ended. They went their way and we went ours. The underground split into two groups, one siding with the West and the other with the Kremlin. We think we have the better organization. But the Communists have many secreted weapons. We have more men, but we wish we had more weapons.

"No, we don't believe that the Marshall plan or the Atlantic Pact will prevent a war. We are told by your officials like Mr. [Paul] Hoffman that if our countries here in Europe become strong enough, war will be avoided. In our opinion, war will begin as soon as Russia is ready for it.

"Yes, the Atlantic Pact is a good thing. We welcome it. But not because it will prevent war. We welcome it because it means that America will be at our side from the moment that war begins and because it means that we will have weapons in our hands and will be able to fight.

"Yes, the Marshall plan is a good thing, but again not because it will prevent war but because it provides us with dollars. These dollars we use to buy feeding stuffs for our animals and raw materials and machinery for our industries. Thus we are able to export more and to keep men at work. And so we are able to fight Communist influence within our country."

MANEUVER DISCOUNTED

The underground leader's point of view was reflected in more or less the same words even by members of the Social Democrat government in unofficial conversations. Not even the lifting of the Berlin blockade and relaxation of West-East tension calmed Danish anxiety.

"The Russian move," said one highly placed Danish official, "is merely a maneuver to kill the Atlantic Pact or, more accurately, to dampen any enthusiasm in America for arming Europe. If the Russians succeed in that, they will then make other gestures of cooperation with the west and lull us all into false security."

That attitude is echoed by large sections of the Danish press. But if the Danes mistrust the Soviet Union, the latter has only itself to blame. Back in 1940, the invasion of Finland, a short bomber run from Denmark, frightened the Danes. Then came the occupation of the neighboring Baltic States, and finally the Russian occupation of Bornholm, Danish soil.

Bornholm is an island about 15 miles long and 10 wide in the Oestersund, midway between Zealand and the Russian-occupied zone of Germany. It is, potentially, the Malta of the Baltic, in the path of Russian sea traffic into the Skaggerat and the Kattegat. The Germans tried to fortify it, but built their fortifications on quicksand, with some encouragement from Danish engineers who quietly left the island when the foundations began to sink.

A few days before VE-day, the Russians subjected Bornholm to severe bombardment. The Danes have never forgiven the Soviets for this. The Russians, they are convinced, bombed the place merely to appear as liberators or conquerors—the Germans had already left.

No one was killed, however. The population was warned of the coming attack by the Russians themselves. The Dancs are still working on the repairs and cussing the Soviets, who stayed on the island only a short time. They cleaned it of wrist watches and mattresses and cleared out. Practical Danes saw no sense in the whole performance.

READY FOR FIGHT

Danish uncertainty about the future is less marked now than it was a year ago. Then it verged on fear. The more well-to-do families were ready to evacuate the country and many kept standing reservations on planes and ships. Some actually did leave.

Now anxiety expresses itself in the fact that farmers are reluctant to sell their horses to buy tractors. Those who had tractors couldn't get gasoline or Diesel oil with which to run them during the last war. Their farms deteriorated. They're hanging on to their horses now.

Probably the best evidence of uncertainty, however, is reluctance to invest. Capital is taking as few risks as possible. Net investments in 1947 were only 268,000,000 kroner, about $52,000,000. They rose slightly to 315,000,000 kroner in 1948. The anticipated 1949 investment of about $90,000,000 has not developed as rapidly as was hoped.

Meanwhile, the task of American diplomacy in Denmark is clear; it is to restore Danish faith in the future. A first-class ambassador might help. He must be something more than a socialite political appointee.

Squandering and Spending

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, Mr. Henry Hazlitt in May 9 issue of Newsweek has a very interesting article entitled "Salvation Through Squandering?" Under leave to extend my remarks, I am including the article in question.

SALVATION THROUGH SQUANDERING?

(By Henry Hazlitt)

We are now being told that our prosperity has been kept going in the last few years by our huge Government spending, particularly on armaments and foreign aid. Any decline in this spending, we are now warned, would bring a recession. We are told, in fact, that if further signs of recession develop the Government must spend still more to keep the boom whipped up.

This doctrine is completely false. Assuming a balanced budget, an increase in Government spending does not on net balance stimulate business activity at all. For every dollar that the Government spends, the taxpayers have been deprived of a dollar to spend. All that a heavy Government spending program can do is to divert spending from one channel into another. If we give Europeans more money to buy American goods, we have just that much less money left to buy our own goods. If we spend more for armament, we have just that much less left for television sets, refrigerators, or food. Even the Nazis knew they were choosing between guns and butter.

A huge Government spending program with a balanced budget not only fails to stimulate economic activity but greatly reduces economic welfare. A $15,300,000,000 armament program, regardless of its military justification, leaves us just that much less resources to build new housing or to increase or improve our tools of production for civilian goods. Whether or not our new $5,000,000,000 ERP donation is now needed in Europe, it must obviously force us either to reduce our own consumption or to retard our own capital development by that amount. We cannot give our cake away and eat it too.

The more sophisticated advocates of a "compensated economy" recognize that huge Government expenditures do not in themselves create prosperity. They put their emphasis on the amount of monetary purchasing power that Government spending adds. This, they point out, is determined by the excess of Government expenditures over tax collections. Put more bluntly, the prosperity would be brought about by Government deficits. It is not the total size of the Government expenditures but the size of the deficits that "adds to purchasing power."

But when the compensated-economy doctrine is clearly stated in this form it has implications that its proponents have never clearly recognized. The official estimate of Government receipts for the 1950 fiscal year is $41,000,000,000. Suppose it were decided that what was necessary to keep the boom whirling was a deficit of $5,000,000,000. This could, of course, be achieved by spending $46,000,000,000 (Mr. Truman has already put forward more than enough schemes to do that easily). But the inflationary deficit could be achieved just as well by holding expenditures to $41,000,000,000 and reducing taxes to $36,000,000,000. Or even by reducing expenditures to $36,000,000,000 and reducing taxes to $31,000,000,000. We could cut expenditures indefinitely, in other words, and still get our added inflation, provided only that we cut taxes still more.

Moreover, taxes could be either reduced or restored quicker than expenditures could be increased or halted. Increased expenditures create determined vested interests and tend to become permanent. Higher taxes to support higher spending destroy incentives and production. Lower taxes increase incentives and production. In short, if we wish to embark upon deficit financing again to keep our inflationary boom going, doing it through tax reductions is more flexible, more effective, and less dangerous than doing it through higher Government spending.

But all this merely emphasizes the bankruptcy of the whole compensated-economy doctrine. Increased Government expenditures balanced by increased taxes do not keep a boom going at all. Only deficits, financed by the creation of more money and bank credit, could do that. But this would mean merely a resumption of monetary inflation. It could prolong the boom only at the eventual cost of a bigger bust.

Is Big Business Too Big?

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, May 16 (legislative day of Monday, April 11), 1949

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a timely and challenging article in the April issue of the Reader's Digest by the distinguished senior Senator from Wyoming [Mr. O'MAHONEY] on the subject Is Big Business Too Big?

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IS BIG BUSINESS TOO BIG?

(By JOSEPH C. O'MAHONEY, United States Senator from Wyoming)

Is American big business getting too big to be good for business or for America?

Consider the startling story of what happened to the 10-cent pack of cigarettes. Made from somewhat lower grades of tobacco than standard brands, the 10-cent pack was launched some years ago by enterprising independent manufacturers on the assumption that, to most Americans, a nickel or a dime is worth saving. In less than 2 years, so well did they catch on, one-fourth of all the cigarettes sold in America were these cheaper brands. Then, just as suddenly, they disappeared and smoking Americans were left with only the standard, more expensive brands to choose from.

Last year before a committee of the United States House of Representatives testimony was presented to the effect that, despite consumer demand, the economy brands were killed off by pressure from the tobacco industry's all-powerful Big Three. How the Big Three have grown to such life-or-death proportions is a sample of what is widely happening in American industry.

At the turn of the century the tobacco industry, with thousands of big and little companies engaged in it, was highly competitive. Soon, by merger and consolidation, the big fellows got big enough to swallow up or squeeze out the little fellows. They so completely controlled and monopolized the market that, in 1911, the tobacco trust was dissolved as a result of Federal action.

By 1940, however, the Big Three had become so big that each of these companies, by itself, was larger than the tobacco trust had been. Again the United States Government brought suit for monopolistic practices. Convictions and fines and a severe denouncing by the Supreme Court resulted. But this did not stop the Big Three's growth. When the Government's suit was brought in 1940, these companies did less than 68 percent of the country's cigarette business. By 1948 they were doing 86 percent.

This was the power which the independents, with their economy brands, were up against. Witnesses who appeared before the House committee testified that, to destroy this competition, the Big Three simultaneously reduced prices on their own brands to below-cost figures. To increase the costs of the independents and cut off their source of supply, they went into the market and systematically bid up the price of leaf tobacco; they bought large quantities of the poorer grades used in the 10-cent brands. From having one-fourth of the market, the economy brands, under this pressure, soon dropped to one-half of 1 percent. Their competition thus virtually wiped out, the Big Three promptly boosted their prices to the usual level.

The tobacco industry is not unique in being dominated by a few companies. Three milling corporations produce 38 percent of all flour consumed in the United States; three meat-packing companies produce 43 percent of all processed meat; three dairy companies produce 44 percent of all condensed and evaporated milk and 63 percent of all cheese; three baking companies produce 74 percent of all biscuits and crackers; three companies produce 80 percent of all soap; and three others, 85 percent of all fruit jars.

In Maryland the 5-cent loaf of bread, baked and sold by independents, went the way of 10-cent cigarettes when the organized "big bakers"—later convicted of conspiracy in restraint of trade—told the independents to withdraw their 5-cent loaf or face an all-out price war. Other independents, marketing a longer, heavier loaf than that sold at the same price by the big bakers, refused to be coerced. The ensuing price war threatened to bankrupt them and the long loaf disappeared.

A congressional witness testified that, despite a great increase in the market for bakery products, half the wholesale and retail bakeries in Oklahoma had been swallowed up or run out of business in the last 25 years. A Fort Worth, Tex., soap manufacturer testified that his company, alone, out of more than 25 formerly in business in his area, had been able to survive the price-cutting, discriminatory competition of the soap industry's Big Three.

In our heavy industries, bigness seems to have taken over even more completely. Three corporations in each of the following fields produce from 66 to 91 percent of the total output: chemicals, window glass, farm tractors, rubber tires, copper, tin cans, passenger automobiles, primary aluminum.

The steel-barrel business, up to a few years ago, was almost wholly in the hands of small, highly competitive concerns. Then the big boys began to move in. By denying the smaller companies sheet steel they gradually squeezed them out of the market, some of them out of business. Today six basic-steel companies control 87 percent of the country's steel-drum capacity.

Let me quote from a congressional report last year on the tactics used by automobile manufacturers to expand their control over the auto-parts business: "The practices included removal and destruction from dealers' stock bins of parts not supplied by the car manufacturers; threats of revoking dealers' franchises unless they purchased parts solely from manufacturers; premiums paid to dealers to destroy used parts, thus creating a bigger and more profitable market for new replacements from car manufacturers. Testimony showed that a great many parts which could easily and cheaply be rebuilt and repaired, thus saving the car owner much money, were being destroyed by car manufacturers in order to give them a greater and more profitable turn-over in new part replacements."

In 7 years, 1940–47, more than 2,450 formerly independent manufacturing companies, with $5,200,000,000 total assets, were swallowed up to make big business even bigger. How many more, as part of the same process, were put out of business altogether there is no way of knowing.

The most exclusive club in the world is not, as is sometimes supposed, the United States Senate, but the "Billion Dollar Club," membership in which is limited to United States corporations with assets of more than $1,000,000,000. In 1929 this "club" had 20 members; in 1939, 28; in 1945, 40. Today it has 48 members. Several of these corporations have more employees than the total population of some of our States. Some of them have assets which total considerably more than the assessed value of all property, real and personal, in many of our States.

As such corporations increase in number and in assets the people, through their city and State governments, become less competent to cope with them and so turn to the Federal Government and build up the Washington bureaucracy which business management is so ready to denounce. Central power in business produces central power in government.

"Year after year," declares the Council of Economic Advisers' 1948 Report to the President, "the control of the market is passing more and more into the hands of large corporations, not only by internal growth but by the absorption of smaller firms."

Could it be that some of us have an economic blind spot? We say we don't like big Government. But isn't it true that what we most detest about Government is its adoption of techniques characteristic of many of our business organizations? And isn't it likely that one good way to prevent public regimentation by big Government is to prevent private regimentation by big business?

We say we don't like big unions. But can't the growth of big unions be traced to big business, with which only big unions could deal on an equal footing?

We reject the aims of the collectivists—Fascist, Communist, and Socialist—to destroy competition and control the economy through vast, state-run monopolies. But isn't it evident that their aims are more easily achieved where competition is already being weakened and the economy increasingly controlled by vast, privately run monopolies?

Mussolini called his Fascist economy the corporative state—meaning the state managed according to the pattern of the huge corporation. Germany's vast industrial and financial concentrations were the easy victims of and the natural basis for Nazi collectivism. The extent to which British economy has been dominated by private monopolies and cartels served the collectivist purpose of Britain's Socialist Government to make that economy a monopoly of the state.

A 1948 report of the Federal Trade Commission says: "No great stretch of the imagination is required to foresee that, if nothing is done to check the growth in concentration, collectivism will have triumphed over free enterprise and the theory of competition will have been relegated to the limbo of well-intentioned but ineffective ideals. Either this country is going down the road to collectivism or it must stand and fight for competition as the protector of all that is embodied in free enterprise."

Not only free enterprise but every freedom is at stake in that struggle. For it is the plain lesson of recent history that economic and political freedom are inseparable; that we cannot have free government unless we have a free economy; that, in our time, people have lost their power to direct their own Government after they lost their power to direct their own economy.

Since the loss of freedom begins with the weakening of economic freedom, it is there—in the economic field—that we must act to safeguard democracy. The extension and strengthening of economic democracy does not mean that the modern industrial organization should be scrapped or big business atomized. Without the modern corporation we could not develop or effectively use

the tools and techniques which this industrial age requires.

Modern science and technology require large organization, but economic democracy requires business that is more responsive to the social and economic needs of the people and government which is more responsive to the economic needs and opportunities of business. Government bureaus, for example, should not be permitted to be both judge and jury in the enforcement of administrative laws. That's why, a few years ago, Congress provided standards for the guidance of the bureaus and a method of appeal to the courts from bureau regulations. But neither should national or international business be permitted to be a law unto itself.

If it be thought there is now a developing danger from too much Government meddling and regimentation in our economy, it is largely, I believe, because we have not taken the time and trouble to draw an adequate constitution for the guidance of private economic organizations. That is why I have proposed that there should be national charters for national business. Such charters would establish national standards of power and responsibility for corporations engaged in interstate commerce, and curtail expansion of big business into unrelated fields. Far from hampering legitimate business, this plan—to the benefit of all of us—would make and keep business free. With national standards of power clearly defined, our business organizations would not be at the mercy of what Federal bureaus—at their own discretion—decide the regulations are or ought to be.

Let's not fool ourselves. If collectivism carries the day, it will not be because of plots hatched in the Kremlin. It will be because of what—by our own short-sightedness and delay—we have allowed to happen here in the United States of America.

Thinking People Favor Hoover's Program

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. JENKINS. Mr. Speaker, under leave to extend my remarks, I wish to have printed in the RECORD an editorial that appeared in a recent issue of the Cleveland Plain Dealer and an editorial that appeared in a recent issue of the Columbus (Ohio) Evening Dispatch.

[From the Cleveland Plain Dealer]

ELDER STATESMAN AGAIN

The observation of former President Herbert Hoover on the administration proposal to increase the social security pay roll tax should be read and considered carefully by Congress and by all thinking Americans.

Two points of especial importance were made in the former President's letter to Congressman ROBERT L. DOUGHTON, chairman of the Ways and Means Committee.

The first was that with a Federal budget almost five times as large as it was when the Social Security Act was passed we must give serious thought to what we can and cannot support in the way of welfare legislation. Mr. Hoover makes a pertinent comment when he says there are many things every American home would like to have, "but its income compels it to deny them, at least temporarily." A similar situation, he aptly observed, prevails now with the Nation.

At the present time the cost of government is absorbing 30 percent of the national income. When government requires as much as 40 percent, the records indicate, production and investment are impeded and stagnation and deterioration follow as a matter of course. In the face of this fact the importance of holding down over-all Government costs in the United States and of maintaining the present narrow margin between economic soundness and unsoundness, possibly solvency and insolvency, needs little demonstration.

In passing it might be observed that many of the same objections Hoover offers in opposition to an increase in the pay-roll tax argue with the same effectiveness against the compulsory health insurance program which the President recommended to Congress a week ago. By the same token they are arguments against every increase in Government costs that can be avoided without involving demonstrable hardship, or entailing real danger to the Nation.

The second point Hoover made is an old one. Nevertheless it, too, should be the subject of careful study looking toward a change in prevailing practice. It has to do with the fact that the social-security pay-roll tax has produced, and is producing currently, a great deal more revenue than is required for benefit payments, and that the surplus has gone to meet the ordinary expenses of the Government. Thus, as Hoover points out, when benefits increase and the Treasury must "redeem its I O U's from the trust fund * * * the money must come from the general taxpayer. * * * As those who have already paid their pay-roll deductions are also taxpayers, they will, to some extent, be paying for their insurance twice over."

The situation would be met, of course, by reducing the pay-roll tax, of making no more contributions to the trust fund, and of placing the "whole business on a collect-and-pay-as-you-go basis."

Whether this latter suggestion be adopted or not, no serious exception can be taken by anyone to these two propositions; first, that the Nation should assume only such public obligations as are consistent with its income; second, that the security afforded by evidences of public debt, which is money already spent, is at best transitory and uncertain.

[From the Columbus (Ohio) Evening Dispatch]

HOOVER'S STATEMENT

Politics is no respecter of arithmetic. Being expedient in nature it does not depend on logic for its successful practice. Yet if it would best serve those men and women in whose interest it is most hotly played it must at times recognize the fact that, no matter how you arrange them, the numbers two and two always add up to make four. Sometimes good sense is necessary.

It was in support of this simple and obvious proposition that former President Hoover spoke the other day when he gave it as his opinion that already our economy is up to the limit of endurance under this—the tax—load. I believe we should go slow and hold further additions to this burden to the absolute minimum.

In looking around the world it is evident that much of the economic grief being suffered by such nations as Great Britain has come from an effort to be overgenerous in governmental benefits and governmental spending projects at a time when bankruptcy as a result of a long, dreadful, and exhausting war was threatening. Britain would have needed far less of our billions and perhaps none of the Marshall funds at all had she tightened her belt after the war and decided to live within her income. Certainly she would not have needed to load down her own people so heavily. Instead she went on an unprecedented spending spree which she could not and cannot now support. America consented to finance her in large part, and thus placed herself in the same position of being overgenerous with her funds at a time when every circumstance called for caution and economy.

Mr. Hoover was asked by Chairman DOUGHTON of the House Ways and Means Committee to comment on the President's demands for a vast expansion of the social-security program. In replying he pointed out what is clearly obvious, namely, that social-security taxes, like any other kind of taxes, still are taxes and must be collected out of the earned incomes of those who work and produce; that the American tax burden already is up to the limit of its endurance and that to add further to this burden at a time when the cold war demands so large a part of our resources is unwise and dangerous.

It isn't likely that any of the Washington spenders will listen for a moment to Mr. Hoover's warning. Yet, as a result of his long and productive efforts in behalf of Mr. Truman to find ways and means of organizing the Government on a more economical basis he probably knows more about the Nation's economy at this time than any other individual in the United States.

The Basing-Point System and the State of Iowa—Six Cement Mills in Iowa but Only One Basing Point—Iowa and Iowans Pay Fancy Figure for Phantom Freight—Basing-Point Bidders Attempt Face-Saving Device To Make Bids Look Competitive—Cement Trust Arguments on Justification for Identical Prices Were Struck Down by Supreme Court—Small Business Gains by Abolition of Basing-Point System

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. PATMAN. Mr. Speaker, out where the tall corn grows, and men and women with hearts of gold are noted for their spontaneity in extending a helpful hand to neighbors far and near, the basing-point system operated with unparalleled viciousness. Iowa was a leader in the movement to assist her neighbors in Europe with quantities of seed, food, and clothing for the children, and many other items badly needed, immediately after the devastation wrought by World War II. For Iowans, like all Americans, are a freedom-loving people with a progressive history unmatched in our country. Iowans are strong for individual initiative and enterprise—free enterprise—but like all of her sister

States, Iowa has had to pay the price exacted as ransom by the exponents of the basing-point pricing system. Iowa's well chosen and stirring motto is: "Our Liberties We Prize and Our Rights We Will Maintain."

In Iowa's recent history of progress no better evidence is to be found than her adherence to the program of good roads. To build highways of permanence is an expensive operation. Not only to be considered is the grading and draining of the road bed, but the miles upon miles of concrete containing cement, steel, fine and coarse aggregates and all of the essentials necessary to highway construction. The bridging of rivers, the spanning of creeks and even the tiniest culvert in these days of modern road building require cement and steel. Prior to the Supreme Court decision in the Cement case April 26, 1948, all of the steel and the cement used in Iowa's good road system was purchased under the basing-point system of pricing.

BASING-POINT SYSTEM PERFECTLY OPERATED IN IOWA

Iowa is possessed of many types of natural resources for the manufacture of cement. Limestone, chalk, marl, shale, and clay are found in great quantities in Iowa, in practically every section of the State, and coal is mined in abundance from her many seams. Six cement mills have been built within her borders. Two of these cement mills are located in the heart of the State at Des Moines and nearby; one mill is located on the eastern border at Davenport and three other mills in the north central section, one at Gilmore City—dismantled in 1943—and two at Mason City. In addition, right across her western border at Louisville, Nebr., is another cement mill, so for all practical purposes Iowa had the great advantage of location and production—cement-wise. But, prior to the outlawing of the basing-point system, this natural advantage was destroyed through the use by the cement trust of the arbitrary and artificial basing-point pricing system.

All cement mills in Iowa, with the exception of the two located at Mason City, were nonbasing-point mills and the mill across the western border at Louisville, Nebr., was also a nonbasing-point mill. The basing-points other than Mason City for shipment into Iowa were La Salle and Oglesby, Ill., in the north central section of the State; Hannibal and Sugar Creek in Missouri, some distance south of the Iowa border; and Bonner Springs in Kansas. Iowa was so divided up by the basing-point and monopoly boys, that a cement map of the State looked like the proverbial crossword puzzle.

The Mason City basing-point was not in reality installed for the benefit of Iowa. Historically, it was merely a coincidental feature of the Lehigh Portland Cement Co.'s bid together with the Ideal Cement Co. for the control of territory west of the Mississippi River. Mason City was included as a basing-point by Lehigh together with Lehigh's mills at Iola, Kans., and Metaline Falls, Wash., and Ideal's two Colorado plants. This tie-up effectually accomplished the control of all cement prices and markets in our great Northwestern States.

IOWA PAID PHANTOM FREIGHT TO CEMENT TRUST

In docket No. 3167 in the matter of the Cement Institute et al., in a brief before the Federal Trade Commission, it is stated:

> Respondents Pennsylvania-Dixie and Hawkeye, with nonbase mills at or near Des Moines, Iowa, during April 1938, both made delivered price quotations to their customers in Des Moines of $2.42 per barrel in paper and $2.67 per barrel in cloth sacks, based on the basing-point price of $1.70 Sugar Creek (Kansas City), plus freight therefrom to Des Moines, Iowa, with resulted mill nets at Des Moines of more than $2.15 per barrel.

That statement in the record of the cement case meant that during the period stated every barrel of cement shipped to or near Des Moines had included in the price 45 cents per barrel phantom freight. With two cement mills in the heart of the State, one in the city of Des Moines and one nearby, the Highway Department of the State of Iowa, highway contractors, cement dealers and all other users of cement paid freight from Sugar Creek, Mo., thereby paying for cement nearly one-third more than they would have paid had not the Des Moines mills been a part and parcel of the basing-point system.

Over at Davenport on the eastern border was the cement mill of the Dewey Portland Cement Co.—a nonbase mill. Cement should have been cheap in the vicinity of Davenport and it would have been if the customers of the Davenport mill of the Dewey Portland Cement Co. had been allowed to purchase cement f. o. b. that mill. But no—Davenport's nearest basing point was La Salle, Ill. Docket No. 3167 recites the fact that Dewey, in April 1938, with a $1.80 La Salle base, forced its customers to pay a fictitious freight charge of 30 cents per barrel from La Salle to Davenport. However, proximity of a basing point to any given destination was no criterion that the close-by basing point was in fact the basing point for such destination. Many, many times, unfortunately for the purchaser, it may have been some more distant point, selected for strategic or tactical purposes.

BASING-POINT PROPONENTS CLAIM CEMENT MUST SELL AT SAME PRICE AT ANY DESTINATION

In the docket and the brief referred to above are these words by a spokesman for the Pennsylvania-Dixie Cement Corp.:

> Because of your familiarity with the cement business you realize that cement, being a standardized product, must be sold to all customers of the same class, at the same place, at the same time, at the same or substantially the same price.

If this fallacious argument of a spokesman for the Cement Trust was true, it would even then be no argument for the basing-point system but an argument for a better distribution of cement producing facilities. Of course, what the gentleman did not say was that by the Cement Trust continuing its business on the basis he described had first, restrained trade; second, destroyed competition; third, created a monopoly; fourth, overcharged its customers by the inclusion of phantom freight; fifth, prevented the development of further productive capacity; sixth, divided the United States up like a checkerboard in order to reap the highest price possible in the sale of cement; seventh, on every sale discriminated against customers of the same class by depriving them of a free and open competitive market; eighth, subverted the antitrust laws and the Clayton and Robinson-Patman Acts; ninth, used the basing-point pricing system to eliminate possible competitors, and tenth, had aided and abetted the destruction of free enterprise in the United States. The gentleman might as well have gone a step further and stated that the aggregates that went into concrete—the sand, the gravel, the crushed limestone, the traprock, the slag—are all standardized products subject to rigid specifications when purchased by Federal, State, county, or municipal governments. Architects and builders as well have standardized specifications for concrete aggregates. I am sticking to concrete for comparison but one could, as a matter of fact, easily name many other products which are standardized but nevertheless are sold freely in open competition on the basis of f. o. b. shipping-point or at f. o. b. destination prices.

The Supreme Court, in the cement case decision handed down April 26, 1948, in this connection said:

> The belief is prevalent in the industry that because of the standardized nature of cement, among other reasons, price competition is wholly unsuited to it. That belief is historic. It has resulted in concerted activities to devise means and measures to do away with competition in the industry. Out of those activities came the multiple basing-point delivered price system.

Thus, the arguments of standardization by Cement Trust spokesmen were effectively disposed of by the Supreme Court and the real purpose of the claim of standardization was shown to be merely a plea for the grant of a charter for fixing prices and controlling markets through the use of the multiple basing-point system.

ABSTRACTS OF BIDS FOR ANY YEAR SHOW IDENTICAL PRICES

On December 5, 1929, the Iowa State Highway Commission received bids on approximately 2,000,000 barrels of portland cement to 44 destinations within the State. These bids show the identity of prices inherent in the basing-point system which were encountered in any day, month, or year during the operation of the basing-point system—the system that has now been outlawed—April 26, 1948—but which the cement and steel industries hope to put in service again in the very near future.

A casual inspection of the table which will follow of bids to the Iowa State High-

way Commiss.on will create the feeling that the prices bid to the different destinations are in some cases higher or lower as between the bidders. It is necessary, in order to get the real picture, for the reader to examine the table closely and to note the variety of bidding methods in this particular tabulation. Some of the destination prices are bid on a net-price basis. Other bidders bid with 10 cents per barrel discount and still others bid 10 cents and 10 cents, a total of 20 cents, discount. There were 15 bidders bidding, as follows:

Name of bidder	Method of bidding destination price	Total discounts
Monarch Portland Cement Co.	Discount per barrel, 10 cents and 10 cents.	$0.20
Lone Star Cement Corp.	do	.20
Northwestern States Portland Cement Co.	do	.20
Missouri Portland Cement Co.	Discount per barrel, 10 cents.	.10
Universal Cement Co.[1]	Discount per barrel, 10 cents and 10 cents.	$0.20
Consolidated Cement Corp.	Discount per barrel, 10 cents.	.10
Dewey Portland Cement Co.	do	.10
Ash Grove Lime & Portland Cement Co.	Discount per barrel, 10 cents and 10 cents.	.20
Medusa Portland Cement Co.	Net price	
Lehigh Portland Cement Co.	Discount per barrel, 10 cents and 10 cents.	.20
Pennsylvania-Dixie Cement Corp.	do	.20
Atlas Portland Cement Co.[1]	do	.20
Nebraska Cement Co.[2]	do	.20
Hawkeye Portland Cement Co.[2]	do	.20
Marquette Cement Manufacturing Co.	Net price	

[1] Universal and Atlas now Universal-Atlas Cement Co., a division of the United States Steel Corp.
[2] A division of the Ideal Cement Co.
[3] Now a division of the Marquette Cement Manufacturing Co.

It is rather apparent that the different methods of bidding were in all probability for the purpose of concealment. No doubt with 2,000,000 barrels of cement at stake the bidders hoped that variety in bidding methods would produce a semblance of competition in the eyes of the public. Of course, no one familiar with cement bids, such as are the trusted officials of our highway departments, will be deceived for even a split second. It really borders on the naive for perpetrators of the basing-point system to trot out such obviously sleight-of-hand tricks when bids are submitted to intelligent officials of governmental agencies. While in the case of such bids it makes no difference insofar as the buyer is concerned, it does show the lengths to which exponents and users of the basing-point system of pricing will go to create the impression that competition exists where there is in fact no competition. The Iowa table follows:

Cement—Bids by manufacturers to Iowa State Highway Commission on Dec. 5, 1929 for 2,000,000 barrels of cement

[1] All bids same as other producers when difference in discounts per barrel is considered.
[2] Net amounts bid are identical with net amounts of others after discounts except as footnoted 3 or 4.
[3] Low bid.
[4] High bid.

ANALYSIS OF BASING-POINT BIDS TO IOWA STATE HIGHWAY COMMISSION SET FORTH IN TABLE ABOVE

It is well to analyze these particular bids in order that the significance of bids under the basing-point system may be clearly portrayed when attempt at concealment, however clumsy such concealment may be, is so apparent. Of the 15 bidders, 10 named a price with two discounts of 10 cents per barrel, a total of 20 cents per barrel. Three bidders named prices with one discount of 10 cents per barrel, and two bidders, Medusa and Marquette, submitted prices at destination with no discount, in other words, net prices.

When all discounts are deducted from the bid prices the following degree of identity in the bid prices is discovered:

Total identical bids—all destinations	460
Nonidentical bids lower than basing-point prices, all of which were bid by Marquette	3
Nonidentical bids which were higher than basing-point prices, all of which were made by Marquette	8
Total of bids	471

Percentage of identical bids, 97.7 percent.

In order to give a complete and lasting picture I am including the following table which gives a complete break-down of bids to each destination. This table follows:

Cement—Summary of identical bids by manufacturers to Iowa State Highway Commission, December 5, 1929, for 2,000,000 barrels for delivery at 44 destinations

[Source: Federal Trade Commission Docket 3167, Commission's exhibits 1851—A through L

43. Clear Lake	7	7		
44. Iowa Falls	8	8		
Total	471	460	3	8

Percentage of identical bids, 97.7.

Of course I cannot attempt to fathom the Marquette Cement Manufacturing Co.'s reasons for making the three low bids, all to destinations in eastern Iowa which would be nearby territory to Marquette. Two of these bids were to the destinations, Muscatine and Wilton Junction, in the Dewey Portland Cement Co.'s territory near Davenport. Dewey's Davenport plant, you will recall, was a non-basing-point plant while Marquette's plant at Oglesby, Ill., was basing-point plant. But, Marquette's munificence was only to the extent of 5 cents per barrel to the three destinations—a very small difference on a barrel price of around $1.80. This departure from normal by Marquette may have been motivated by a feeble resolution to jump the fence on the basing-point system, or it may be that the business to the points mentioned was particularly desirable. On the other hand, it may have been a potshot at the Dewey Portland Cement Co.

Whatever Marquette's reason was for being low at three destinations in eastern Iowa, Marquette entered high bids for eight other destinations which, with one or two exceptions, were destinations in the western half of the State, thereby, indicating a disinclination for that business. Marquette used the same system—the basing-point system—as the rest of the bidders and these bids may have been mistakes but I doubt it very much.

BASING-POINT SYSTEM CONTROLS PRICES AND MARKETS

The basing-point system as a monopolistic device to control prices and markets had no better illustration of its effectiveness than the way the system operated in Iowa. Operate has several different shades of meanings but the meaning I have in mind today is the skillful operation to remove something. No surgeon ever grasped his scalpel and operated with more skillful precision than the basing-point and monopoly proponents when using the handy instrument of the basing-point system to remove unearned dollars from the body politic. The Supreme Court in its decision in the Cement case so described the basing-point system—"A handy instrument to bring about the elimination of any kind of price competition." Mr. Justice Black, who delivered the majority opinion of the court, after an exhaustive review, said in his concluding paragraph:

> Many other arguments have been presented by the respondents. All have been examined, but we find them without merit.

Thus came to an end the basing-point system in Iowa and every other State in the Union. Thus, the good-roads movement, the reclamation program, our flood-control projects, and all of our public works were placed in a competitive position. A position where "the lowest and best bid" took on its old familiar meaning in the purchase of cement, steel, and other construction materials, and the indefinable twaddle, regarding the alleged competition in the basing-point system of pricing, was quieted for a time.

BASING-POINT SYSTEM WANTED BACK BY CEMENT AND STEEL TRUSTS—NEVER ABSORB FREIGHT

In the inception of the move to return the basing-point system to the American scene, it was frankly stated by industry proponents of the basing-point system that the legalization of the system was the objective. As opposition has grown against legislative action which would in anywise weaken our antitrust laws, there is indication of a different attack. Now industry spokesmen are quoted in the press as being eager to pay freight charges and to absorb such charges. I do not believe any more deceiving or ridiculous arguments could possibly be devised. Neither the Cement Trust nor the Steel Trust ever made a practice of prepaying freight. Historically, the buyer always paid the freight on steel and cement. That he was glad to do, but what the purchaser did not like to pay was the freight charge that was not there. The freight charge which made him pay freight from Pittsburgh when he bought the steel from a steel plant in his home town. Nor did the purchaser of cement like to pay freight charges from a cement mill 200 miles away when he could see the cement mill from his office window.

No; there will be no general rush to prepay freight charges on steel or cement, come either the moratorium or the millennium. These industries just do not do business that way and never have undertaken to do so. The only thing these monopolies want at the moment is some excuse, valid or otherwise, to return to the basing-point system. Iowa, nor any other State within our United States, neither needs nor desires this unfair system in the sale and distribution of our basic commodities.

SMALL BUSINESS IN IOWA GAINS THROUGH ABOLITION OF BASING-POINT SYSTEM

As the competitive forces in business come back into action, the abolition of the basing-point system will prove to be a great boon to small business in Iowa and elsewhere. As manufacturers are able to purchase non-basing-point system, the savings will be reflected in the prices of manufactured products. Since fictitious freight charges have been abolished, small merchants, as well as manufacturers, may have a competitive choice in purchases of steel and other products for sale and resale. Small manufacturers of farm supplies and equipment, and distributors as well, in Iowa, may feel secure from the punitive effects of the basing-point system. This is because purchases of steel, cement, and other commodities, may now be made from the nearest source of supply without payment of phantom freight. It places such manufacturers and distributors in a much better cost position and allows a greater cushioning effect against their giant competitors.

I do not feel that it would be repetitious to again quote Iowa's motto for it is one to be remembered in these days of monopolistic aggression and assaults upon our national existence. It is good, I repeat, to remember and treasure Iowa's flaming words of courage, "Our liberties we prize and our rights we will maintain."

Why Not a PVA for Potomac Area?

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. SANBORN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an editorial from the May 1, 1949, issue of the Idaho Sunday Statesman:

A NEIGHBOR TO THE NORTH APTLY PROPOSES THAT THOSE WHO WOULD DOCTOR US BE GIVEN THEIR OWN MEDICINE

Just about everybody in the Northwest has a slant on topic A for these days: The proposed Columbia Valley Administration. If there are those who haven't, their numbers will diminish as time goes by, since President Truman and his bigger-Government boys are determined to saddle us with a CVA, and a lot of northwestern people who are doing all right without Federal advice and control are just as determined to keep their States free of the proposed governmental intrusion on these parts.

After a few more months of the controversy, it will be a rare Idahoan or Oregonian or Washingtonian who doesn't have an opinion on the subject, so much will have been said about it pro and con.

Meanwhile, most of the sentiment in favor of the CVA comes, ironically enough, from points east and generally outside the area to be affected by a CVA. Along this line, the Spokesman-Review, of Spokane, taking note of the peculiar situation, has a suggestion about it in an editorial entitled "Why Not a PVA for Potomac Area?" which we think hits the nail on the head.

It goes like this:

"One of the several Government officeholders who constitute the chief backers for the idea of a Columbia Valley Administration has sent the Spokesman-Review copies of editorials from three Washington, D. C., newspapers and the New York Times. Those editorials support the CVA idea and are all for putting it into effect promptly.

"In almost the same mail there arrived another budget of editorials, all clipped from Pacific Northwest newspapers and forwarded by the Pacific Northwest Development Association. They were all as uniformly skeptical as the eastern newspapers were satisfied with the idea.

"To the Spokesman-Review this is significant of the whole alinement on the CVA question. The push and the promotion for CVA all comes from outside the region, save for the little group of Democratic Members of Congress from here who are working with the administration to create a CVA. The fact that spokesmen in Washington, D. C., and in New York City want a CVA is not convincing evidence that we here should open our arms to it. On the contrary, it is reason why we should examine it still more closely.

"The Governors of the States most affected by the CVA proposal are against it. Most of the region's Congressmen will probably be against it. Most of the area's newspapers are either against it or await further evidence that it is necessary or desirable.

"Suppose we in the Northwest should start a move for a Potomac Valley Administration, to be managed from here, but with some members of the governing board to be chosen from the population of Washington, D. C., in order to give them a voice in management. From many sources we hear that the Potomac region is backward, wasteful, and inefficient. Our Potomac Valley Administration would see to it that things were changed in the National Capital. We would coordinate the existing agencies and shape things to the pattern of our own ideas.

"If we were to propose that, perhaps the people who are sponsoring the CVA from the National Capital would understand a little better the feeling that we have for their proposal."

The Battle That Squanders Billions

EXTENSION OF REMARKS
OF
HON. GUY M. GILLETTE
OF IOWA
IN THE SENATE OF THE UNITED STATES
Monday, May 16 (legislative day of Monday, April 11), 1949

Mr. GILLETTE. Mr. President, in the Saturday Evening Post of last week there was published an article entitled "The Battle That Squanders Billions." The article was written by Leslie A. Miller, chairman, Natural Resources Committee, Hoover Commission, and ex-Governor of Wyoming. The article was referred to by the senior Senator from Wyoming [Mr. O'MAHONEY] in a statement he made on the floor of the Senate last week. I ask unanimous consent that the article, as excised, on which I have received an estimate of cost of $225, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BATTLE THAT SQUANDERS BILLIONS

(By Leslie A. Miller, chairman, Natural Resources Committee, Hoover Commission; ex-Governor of Wyoming)

When former President Herbert Hoover asked me to serve on the Natural Resources Committee, one of the task forces of his Commission on Organization of the Executive Branch of the Government, I went into the job with my eyes open. I knew it would be a sort of surgeon's job. And I suspected just enough about the swollen, pork-fed condition of our two principal prospective patients—the autocratic Army Engineers and the Department of the Interior's spendthrift Bureau of Reclamation—to know they would scream loudly when we sank the surgeon's knife into some of their diseased tissues.

I said I went into the job with my eyes open. They are open a lot wider now. As close as we thought we were to the problem of how the taxpayers money is being spent for irrigation, flood control, and power development, my seven committee colleagues and I were amazed and dismayed to learn how bad the situation really is—how billions are being squandered on duplicating, badly engineered projects.

John Q. Taxpayer doesn't realize it, but efforts are being made to place his name as cosigner on a note for $52,706,500,000—or, to break it down, about $1,500 in tax obligations for the average American family. That is the staggering amount estimated as the cost of water-resources-development projects now in the construction and planning stages, and it does not include the $4,779,700,000 spent on projects already completed. All but a fraction of these projects originate with the Engineers or the Reclamation Bureau:

As a westerner who has been in public service for a good part of my life, I yield to no reasonable man in my appreciation of water resources and what their proper development can mean to my part of the country and to the Nation as a whole. But $52,706,500,000 worth is a terrific water bill.

* * * * *

The principal charges I must bring against the Army Engineers and the Bureau of Reclamation, as result of my investigations as chairman of the Hoover Commission's natural resources task force, are these:

1. The two agencies are so violently jealous of each other that an extravagant and wholly senseless competition has sprung up. They will encroach on each other's territory and stake out rival claims simply to beat out each other in the race to construct expensive projects. Naturally, it is the taxpayer who suffers.

2. In their indecent zeal to extend their empires, both agencies are guilty of underestimating—apparently deliberately—the cost of the projects they propose to build. This underestimating has the effect of bamboozling Congress into easy acquiescence to proposed projects. Then, after the first batch of concrete is poured, the engineers and reclamationists always can come back with a request for a supplemental appropriation. For instance, if the whole $52,706,500,000 water-development program should be approved by Congress, the entire job when completed, on the basis of past performances in estimating by the Engineers and Bureau of Reclamation, probably would cost more than double that figure.

3. Both agencies stoop to deception in furtherance of their efforts to stake out claims on projects. The Engineers will use navigation and flood control as a guise for a hydroelectric project; the reclamationists use irrigation as their alibi for hydroelectric development. While there may be much to say in favor of Government construction of hydroelectric projects, it is my impresssion that the United States still is not a socialistic country and that the production and sale of electricity remains a matter for private enterprise. I say this with full appreciation of the Tennessee Valley Authority experiment, which has served a useful purpose, but which, our task force concluded, should not serve as an excuse for setting up similar independent authorities throughout the Nation.

4. Both agencies are guilty of brazen and pernicious lobbying to achieve their ends.

Of course, I must plead guilty to a certain amount of bias in expressing my opinions. When I became Governor of Wyoming in 1933, I inherited a $1,000,000 overdraft that had been on our books for some 20 years. I got rid of it simply by not spending money on certain projects that would have been nice, but unnecessary. I never have believed in living above our means, and never shall.

Let me cite two cases which our task force uncovered as examples of wastefulness and bad planning on the part of both agencies. First, the case of the Reclamation Bureau and Boysen Dam: Out in the central part of my State of Wyoming is a rugged canyon through which the Big Horn River runs. To the head of this canyon some 30 or 40 years ago came an enterprising Minnesotan, one Asmus Boysen, who built a small power dam. It was strictly a private enterprise. Then came the Burlington Railroad, which built a track alongside his dam, and the State followed suit with a paralleling highway.

Boysen overlooked one thing: silt—the curse of all dam builders, even the mighty engineers and reclamationists. In a relatively short period of years, the silt had built up behind Boysen's dam so thoroughly that his power production was seriously impaired. He built a superstructure on his dam to raise the water higher. With that, the railroad went into court and charged that the dam

was a menace to its roadbed. After a long and expensive suit, which almost broke Boysen, the courts held the dam was a nuisance and ordered it dynamited.

Now, a few years ago, when Reclamation plunged into the wild race to stake out projects in the Missouri Basin ahead of the rival Engineers, it hit upon the idea of again damming up the Big Horn at Boysen's old site. A reconnaissance survey fixed the cost at $8,200,000. Reclamation started building a mighty structure designed to aid flood control, supply irrigation water and produce power; in my opinion the need, if any, for additional power in that area could be provided more consistently by enlarging the capacity of existing installations or of projects already under way. The structure was designed at least 10 percent larger than its purposes required, in order to cope with the siltation problem.

But the railroad and highway people were no more anxious to be flooded than they had been 30 years before. So Reclamation had to shoulder the cost of relocating the railroad and highway. To relocate the highway alone, I am informed, will cost $1,642,000. The cost of relocating the railroad will be staggering—$15,096,000 at the latest estimate. It calls for several miles of construction work through solid rock, including the blasting of a tunnel, well over a mile long, through armorlike diorite and granite.

At last count, Reclamation itself was admitting that the project would cost $29,726,000; only time will tell how much more it will run. The budget request for the 1950 fiscal year alone is $8,000,000. If I were the arbiter, I'd say let's wash out the eight to ten millions that Reclamation already has squandered and not pour another $20,000,000 or more into this ill-starred silt trap.

Now for an example of how the Army Engineers, in their zeal for pouring concrete, persist bullheadedly in spending money for projects of doubtful necessity. At the city of Denver, Colo., an inconsequential stream known as Cherry Creek flows into the South Platte River. Cherry Creek ordinarily is placid, but occasionally it floods, causing relatively minor damage in portions of Denver. Some years ago, Kenwood Dam, a structure designed for a maximum flood discharge of 70,000 second-feet, was built as a PWA project to protect Denver against Cherry Creek floods. According to a committee of the Colorado Section, American Society of Civil Engineers, the worst Cherry Creek flood ever measured in Denver occurred in 1885 and had a peak discharge of some 20,000 second-feet.

The Engineers have stepped in, however, and, by a decidedly roundabout means of figuring, have come up with the conclusion that a flood of 113,000 second-feet—a figure that is 5.65 times as great as the maximum flood of record—is theoretically possible.

So now the Engineers are engaged in a truly massive project on this trifling creek—a dam 14,300 feet long and 140 feet high, with a control structure 174 feet in height. Needless to say, it will eliminate the existing dam, which local engineers think is adequate. Cost: $15,700,000 for the dam alone; about $21,000,000 if storage and operating facilities for irrigation-water storage, now being eyed by the Bureau of Reclamation, are included. The Engineers went ahead with this project despite the forthright opposition of the Denver engineers, who declared that, by even the most generous figures, the project was not worth the cost. The local engineers significantly pointed out that if the Denver taxpayers instead of Uncle Sam were directly footing the bill they never would commit themselves to such a project. But, it would appear, nothing can stop the Army Engineers.

* * * * *

The great public fallacy concerning the Engineers is an impression that the Corps is a peacetime group of Army officers and soldiers gaining valuable experience for war while working on construction projects. That is a lot of brass-encased baloney. The truth of the matter is that only some 215 Army officers are assigned to this inland-water-development program. They are the "brass" who supervise the tasks of more than 40,000 civilian Government employees.

Among these civilians are highly educated, efficient engineers who ordinarily would be granted advancement to top posts which their achievements warranted. But the way the Engineers have the system organized, the Army "brass" holds all the top positions and takes all the credit for the accomplishments. So the notion that Army personnel is getting valuable training for war through the Corps of Engineers is plain silly. Furthermore, in wartime Army engineers are not called upon to build dikes and dams for flood control and power production—their job with respect to such structures is to blast them out of existence.

To put it mildly, the Engineers seem to have gone hog-wild in lining up projects. There is a segment of the engineering mind which seems to gaze on a God-made landscape with a critical eye. A river must be dammed. A beautiful natural lake must be converted into a reservoir. A swamp which may be a major factor in maintaining water tables in adjacent areas must be drained. If it is "engineeringly feasible," something must be done forthwith, because God didn't do a proper job in the first place and the Engineers can improve on His handiwork.

In the past few years, the Corps of Engineers has started muscling in on the field of power-producing and irrigation dams, which properly is the responsibility of Reclamation. This has produced considerable agitation within the Reclamation Bureau. The Engineers may bestow a project upon an area at low cost to the local citizens, while Reclamation is supposed to set up contracts whereby those who glean the benefits eventually repay the Government. Naturally human nature being what it is, most communities begin favoring the cheaper projects offered by the Engineers over the quasi-pay-as-you-go projects of Reclamation. Reclamation's only weapon, if it is to maintain its hallowed bureaucratic status as the do-gooding, easy-spending patron of the west, is to think up and execute projects faster than the Engineers. So a ruinous and costly competition has developed, particularly in the Missouri Valley and the Central Valley of California.

Can I back up these accusations with figures? I'll let Lt. Gen. Raymond A. Wheeler, the recently retired Chief of Engineers, do it for me. In response to a request last fall from one of the rivers-and-harbors-bloc Senators, General Wheeler, then Chief of the corps, prepared an analysis of what all the Federal agencies—Engineers, Reclamation, Department of Agriculture, and the Federal Power Commission—had spent and were planning to spend on water-resources development. By far the lion's share, of course, were Engineers and Reclamation projects. The figures, as taken from the CONGRESSIONAL RECORD, are:

	Cost
1. Work already completed	$4,779,700,000
2. Projects under construction	4,593,000,000
3. Projects definitely planned	18,980,900,000
4. Projects planned for the long-range future	29,152,600,000
Total	57,506,200,000

It is highly significant to note that by far the largest single amount—$24,086,900,000—is earmarked for Government development of hydroelectric power. The amount is twice the expenditure planned for flood control, and nearly three times as much as is planned for irrigation. If the Government agencies got the green light on all their plans for power development, the new facilities thus constructed would provide more than three times the amount of hydroelectric power that exists in all the United States today.

* * * * *

The Reclamation Bureau was established in Theodore Roosevelt's time to save western farmers from ruinous drought. Though a younger agency than the Corps of Engineers, it has grown up fast. Its activities are principally in the 11 Western States. Because of the popular illusion that all reclamation projects are on the side of the angels, whenever anyone in Congress lifts a questioning voice about this Bureau's expenditures, 22 western Senators—Republicans and Democrats working as brethren—and their colleagues in the House rise as a phalanx to beat down the opposition.

Originally, the Reclamation Bureau was supposed to be a self-sustaining project; now it is drawing appropriations from the Treasury that run up as high as $246,619,139 a year—not counting the supplementary appropriations which the Bureau regularly wheedles or blackjacks from Congress. The Bureau's budget request for the coming fiscal year, pending before Congress as this was written, was a record $373,328,500. Personnelwise, the Bureau has grown from 2,853 employees in 1935 to 16,522 in 1948.

Naturally, two such powerful and pork-dispensing organizations have drawn the support of potent lobbies. The National Reclamation Association is one of the more powerful lobbies doing yeoman service for the Bureau of Reclamation. The Engineers have a whole string of lobbies behind them, including the aggressive Mississippi Valley Association and the wealthy, influential National Rivers and Harbors Congress.

* * * * *

It would be arrogant and intolerant of me to say that no good has come of any projects of the Engineers and Reclamation Bureau. The early projects, before they began to dream in the grandiose, wholesale manner, were particularly inspired and beneficial. But I do charge that the performance record now is shot through with examples of rotten planning and wasteful execution.

The most shameful example of piecemeal planning, wasteful competition and political compromising on the part of both the Engineers and Reclamation is the Missouri Basin story. For years, the Missouri Basin, approximately one-sixth of the Nation's land area, scene of flood and drought disasters, and a prime example of the need for carefully planned conservation and development, has been the battleground for various bureaus and private pressure groups with axes to grind.

The Engineers finally had come up with the ambitious Pick plan, prepared by Lewis A. Pick, now a major general and the new Chief of Engineers. Reclamation produced its equally ambitious Sloan Plan, fathered by W. G. Sloan. The trouble with the two plans was that in many respects they were bitterly contradictory of each other. The engineers, downstream, would be dredging a channel to serve the needs of unnecessary river traffic; upstream, Reclamation would be building a storage dam for irrigation that would deprive the channel of water it required.

In 1944, President Roosevelt recommended a Missouri Valley Authority similar to the Tennessee Valley Authority. That did the trick. The President didn't get his MVA, but the bitter rivals, Engineers and Reclamation, were driven into each other's arms for self-preservation. "A shameless, loveless, shotgun wedding!" James G. Patton, president of the National Farmers Union, termed it.

Anyway, a Pick-Sloan plan was agreed upon—a conscienceless bit of political compromising. For example, whereas Sloan formerly objected to two proposed Engineers

dams—Garrison and Gavin in the Dakotas—as wholly unnecessary and wasteful, he now agreed to the two projects, which will cost some $211,000,000. Garrison already is under construction, and Gavin is planned for the future. The Pick-Sloan plan, which is under way, will cost the taxpayers some $6,300,000,000 an "estimate"—and it will not serve the needs of the Missouri Valley adequately as it still is a crazy quilt, nonintegrated program.

I will go a step further and predict that, unless firm steps are taken, President Truman will have trouble in bringing about his proposed Columbia Valley Authority plan. Both Engineers and Reclamation have staked out claims on this area. I have seen the fourteen volumes of plans that the Engineers have prepared for Columbia River development; the documents weigh forty-one pounds and make a stack more than a foot and a half high. Unless the President can be effectively tough—and the Engineers have sabotaged the wishes of Presidents many times in the past—another Pick-Sloan deal may result for the Columbia Valley.

The Colorado-Big Thompson project is still another example of malodorous planning of an undertaking designed to consume millions of the taxpayers' dollars—this one on the part of Reclamation. Big Thompson is a colossal scheme to pump water from the western slope of the Rockies to the Eastern slope by tunneling thirteen and one half miles through the mighty Continental Divide, that granite backbone of the American continent. Reclamation went blithely ahead, estimated the project would cost $44,000,000, obtained congressional approval on that basis, and even made contracts with the eastern-slope farmers to deliver water for supplemental irrigation.

The project got under way; then it began expanding. Those usual difficulties and modifications that were not anticipated began cropping up. At last count, the $44,000,000 job and grown into a $144,581,000 project, of which $68,000,000 already had been expended. And the latest development is the discovery that Colorado-Big Thompson will not provide the amount of water Reclamation has guaranteed to deliver to the eastern slope after all, so a new study will be launched to discover other water sources and develop them. We'll be lucky if we get off for $200,000,000.

This building of great irrigation dams by Reclamation without determining whether water will be available is, unfortunately, common. To mention just one example, Kendrick project, in Wyoming, a $24,000,000 job, was built in 1934–35, and no surplus water was available for it until 1947. The Federal Government, according to a survey which has been made for me, has lost at least $9,000,000 on various projects through just this kind of unreliable estimating, and farmers have lost many millions more. As far back as 1936, the National Resources Committee reported that "abandoned farms * * * now stand as pathetic monuments to misplaced confidence in fragmentary data."

* * * * *

Our task force made three principal recommendations designed to correct the particular evils which I have discussed. They were:

1. That the Corps of Engineers be stripped of its civil river-development functions; that a consolidated water development service be established to take over these functions, plus all functions of the Bureau of Reclamation, plus other power-marketing and river-development functions administered by the Departments of Interior and State, the Federal Power Commission and the Bonneville and Southwestern Power Administrations. In this connection, we recommended retention of TVA, but opposed establishment of additional valley authorities.

2. Abolition of the Department of Interior and creation of a new Department of Natural Resources to administer the consolidated Water Development Service and other affiliated Federal activities now loosely administered in various departments.

3. Establishment within the President's office of a Board of Coordination and Review to pass on every major water-development project from the time it is first proposed, in order to make certain that "boondoggles," frills, and duplicating activities are chopped off before they sprout.

Even before our task-force report was made public, the fight was launched to keep the Army Engineers firmly entrenched in the civilian contracting business. The Engineers' lobby got to work, and soon contractors, civic groups, and Congressmen were deluged by thousands of identically worded telegrams and resolutions, asking them to join the fight to save the Engineers. One of the ridiculous arguments advanced was that only the Army Corps of Engineers had the engineering know-how to carry out these projects. "Bunk." As I pointed out earlier, there are only 215 Army Engineer officers supervising the work of 40,000 civilians, and the civilians could carry on beautifully without the brass.

The situation became so bad that Mr. Hoover found it necessary to make a public denunciation of these propaganda efforts by the Engineers. The Chief of Engineers thereupon disclaimed responsibility for the pressure campaign; nevertheless, the Hoover Commission has in its files transcripts of antireorganization speeches made throughout the country by district engineers.

* * * * *

No one realizes better than I that it is almost a Don Quixote gesture to tilt a lance at the solidly anchored windmill that is the Army Engineers' lobby. But I feel that if the long-suffering taxpayers can be aroused through publication of this article, perhaps enough blows can unsettle that expensive windmill.

The most brazen example of autocracy on the part of the Army Engineers is related in the portion of our task-force report dealing with the Kings River project in the basin of the Central Valley of California. Our committee is indebted to Arthur A. Maas, of Harvard University, who served as one of our consultants on water resources, for his thorough and documented case history of the Kings River project, wherein the Army Engineers repeatedly—and successfully—defied two Presidents of the United States to achieve jurisdiction over a construction job which was not rightfully theirs.

The Central Valley basin, containing more than one-third of California's acreage for years has been faced by an increasingly urgent water-development problem. Though the flood factor is present, the problem primarily is one of irrigation for the farmers of the area. Thus, the responsibility fell squarely within the jurisdiction of the Bureau of Reclamation. Notwithstanding this, the Corps of Engineers in 1937 entered into competition with Reclamation to grab off a $20,000,000 project in the Kings River area.

President Roosevelt's attention was called to this senseless and costly conflict, and he took time from his more pressing duties to order that the conflicting surveys be cleared with the Water Resources Committee of his National Resources Planning Board and then sent to him before being submitted to Congress. Reclamation followed his instructions. The Engineers, who traditionally have felt they are responsible to Congress rather than to the President, sidetracked the Water Resources Committee and sent the report directly to the White House. Through some unexplained circumstance—believed to be a clerical error—Roosevelt's wishes were frustrated by the White House administrative machinery, which slipped up and forwarded the report to Congress.

Thus, in 1940, Congress received the two conflicting and nonintegrated reports.

Then began a seven-year struggle over the project. Roosevelt repeatedly and often curtly warned his Secretary of War that he wanted the Kings River project built by Interior. Just as repeatedly, the Corps of Engineers went to Congress and were able to balk the President's wishes. The point at stake was that, under the Reclamation system of repayment by the consumers for water supplied by the Government, the Federal Treasury would receive a greater return than under the Engineers' plan of relatively insignificant participation by the consumers.

All during the war, President Roosevelt had to take time out to battle with the Engineers. After Mr. Roosevelt died, President Truman took up the fight just as firmly. These efforts by two Commanders in Chief bothered the Engineers not one bit. Their will prevailed: Congress gave the Engineers authority and funds to build the Kings River project, and the Federal Treasury is going to suffer considerably as a result of this.

* * * * *

It's no wonder that both Presidents Hoover and Roosevelt used to exclaim privately that, if someone only could show them how to curb the Army Engineers, they really could save some money for the United States.

The whole thing is as fantastically ridiculous as if General Eisenhower, on the eve of the Normandy invasion, were to have been overruled by his sergeant chauffeur, who might have wanted to spend the next week end in London instead of France.

But it is no laughing matter, I submit that, when agencies such as the Army Corps of Engineers or any others can whip Presidents and Congress all around the stump, there's something vitally wrong with our system of democratic government.

Why Labor Hates Injunctions

EXTENSION OF REMARKS
OF
HON. GEORGE D. O'BRIEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following article from the American Federationist entitled "Why Labor Hates Injunctions," by George Meany:

There are many features embodied in the Taft-Hartley Act which are obnoxious and which have caused millions of fair-minded citizens, apart from the members of organized labor, to decide that this statute must be eliminated as quickly as possible.

Of all the distasteful provisions of the Taft-Hartley Act, there is one which stands forth as particularly vicious. This is the provision under which government by injunction, one of the foremost evils recorded in American history of the late Nineteenth and early Twentieth Centuries, has been brought back to life.

Labor hates the injunction. Working people of this Nation can never be reconciled to the use of judicial writs in disputes between labor and management. No other practice is so universally reviled among men and women who depend for life upon what they earn by their toil. And many millions of

other Americans who believe in fair play join with labor in this detestation of government by injunction. Represented in this group are a substantial number of enlightened employers.

Why is it that labor hates the injunction process? Is labor's attitude toward injunctions the result of some inexplicable emotion? Or is there a good reason—or many good reasons—for labor's resentment of the injunction? Why does labor feel the way it does?

In order to understand why American labor will never accept the employment of judicial injunctions in labor-management controversies, it is necessary to dip back into history. The record must be studied—and when once this has been done, the answer becomes clear.

Our Nation is a nation of free men. We are governed by the Constitution of the United States and by the laws enacted by Congress within the framework of the Constitution. The most fundamental principle of our American governmental process is that the laws are written solely by the legislative representatives of the people—in other words, by men and women sitting in Congress and the State legislatures who have been elected by the people. As a corollary of this principle, there is the rule that the law-making prerogative must never be usurped—not even to an infinitesimal degree—by the courts. The courts have their important work to perform—but this does not embrace the taking unto themselves of extra-legal powers.

It is also important to recall that the Constitution under which we live guarantees to each one of us certain rights—rights which are most precious and which are not to be set aside or nullified either by Congress or by a judge or by any other person or institution. These rights, whose exercise has helped tremendously in making the United States the great Nation that it is, are freedom of speech, freedom of assemblage, freedom of the press, and freedom of religion. In the defense of these rights, which enable human beings to be free and protect human dignity against those who scorn it, the founders of this land fought and died. Since that day other Americans have demonstrated an equal willingness to sacrifice without limit in order to defend these precious rights that accompany American citizenship.

Nowhere does the Constitution speak of any right to issue injunctions to throttle the aforementioned freedoms and to crush the lawful associations which wage earners form to protect themselves against the arbitrary, brutal acts of greedy and ruthless employers. There is no such right under the Constitution—but in the latter part of the nineteenth century and for the first three decades of the present century a flood of antilabor injunctions, compelling workers to desist from the exercise of freedom of speech, freedom of assemblage, and freedom of the press, poured from the courts of the Nation.

The courts which issued the injunctions were taking sides in the contest between workers and employers. And almost without exception, they took the side of the employer against the workers. Seldom, if ever, did a court hand down an injunction ordering an unscrupulous, grasping employer to deal fairly with his employees, to sit down around the table with the representatives of his workers and practice collective bargaining. Seldom if ever did a court hand down an injunction ordering an employer to stop employing children 8 to 12 years of age for 50 to 60 hours a week in the mills, as children were employed in Massachusetts and other States for decades. No, injustices perpetrated by employers were not of interest to the same courts which were ready to issue sweeping injunctions against workingmen.

Equal justice under law is a concept which may be regarded as the very cornerstone of our democracy. But in the half century of the antilabor injunction's heyday this principle was constantly flouted by the courts themselves. Instead of equal justice under law, the judges' writs of injunction represented unequal justice under an absence of law.

With the courts available for duty as highly effective strikebreakers, the antilabor corporations laughed at labor's struggle to bring the working people of the Nation out of the mire of the 14-hour day and wages of a few pitiful dollars a week. In some industries the worker often had only a slip of paper at the end of the week showing that he owed the company money—after deductions for rent of a company-owned hovel and for purchases at the company's food store.

It takes little imagination to appreciate the jubilation of the mighty antiunion barons when they discovered that their dirty work was gladly performed for them by lawless judges. The Fricks and the Pullmans, whose aim was not only to block any betterment of the workers' conditions but to smash and destroy the workers' unions, slashed wages, fired union members, did everything imaginable to provoke their employees to strike action and then they sent their lawyers into court.

The corporation's attorney would pull out of his pocket a sweeping injunction against the workers. The document would be all ready for the judge. Usually the judge would affix his signature without the change of a comma. The injunction would go into effect. Immediately, the news would be spread over the front pages of the newspapers. The law-abiding citizen, with his deep respect for the law, would conclude that the workers were in the wrong, that they were to be regarded as criminals whom the law had to restrain.

The newspapers, even more sweepingly biased against labor in those days when it was easier to hoodwink the public than it is now, would never carry a line to intimate that the true lawbreaker was the judge himself, since his action in issuing an injunction was without any basis either in the Constitution or in the enactments of Congress. This was the truth, of course, but to tell the truth would be to spoil a colossal swindle which was highly profitable to big business.

The evil of government by injunction was a cancer. For half a century it ate at the vitals of our democracy. Had it not been excised, as it finally was in 1932, the consequences to this Nation would undoubtedly have been extremely serious.

Just think how the wage earners of the injunction era felt. Driven by low wages, long hours, and health-shattering working conditions, they would join with their fellow workers to form a union. Acting with their fellows and through their newly established organization, they would appeal to their employer for consideration of their grievances. The employer would refuse to talk to them. He wouldn't negotiate. He wouldn't arbitrate. He wouldn't do anything of a reasonable nature. Not infrequently his answer would be to fire his work force and lock them out. Sometimes he would just fire some and slash the wages of those remaining.

The workers would meet at their union hall. They would discuss the situation. Given no alternative, they would vote to strike.

But the employer, having a powerful ally in the court, would quickly confront the strikers with an injunction. This is how a typical injunction would read:

"The workers aforesaid are hereby restrained from combining together or with others with the design or purpose of causing a strike at the John Doe Co., and from ordering, recommending, or approving or advising others to quit the service of the John Doe Co.

"The workers aforesaid are hereby further restrained from carrying, or in any manner or in anywise, exhibiting any banner, sign, reading, printing, dodger, card, or notice of any character having upon the same any statement that the John Doe Co. is unfair to said workers.

"The workers aforesaid are additionally restrained from conveying, directly or indirectly, by means of any act or statement, or printing of any kind, in any publication of said defendants, any statement of the facts, or from which such facts could be reasonably inferred, that the plaintiff and his firm were or are unfair to organized labor."

Such an injunction was shattering to the workers and their legitimate cause. It is no wonder that sometimes, after the issuance of such an injunction, a trade union was destroyed, not to reappear at the employer's plant until decades later.

One does not have to be a lawyer to note, in a quick scrutiny of the typical injunction recorded above, that the court had wiped out the workers' freedoms of speech, assemblage, and the press.

The American Federation of Labor fought the injunction disease from the very beginning. The unfairness of the use of injunctions against workers was pointed out time and again. Appeals were made to public opinion. And eventually the tide began to turn.

Long before 1932, when the Norris-LaGuardia Act was put on the Federal statute books by a Republican Congress and a Republican President, voices against the injunction evil began to be heard. Even judges spoke out against this criminal abuse of the power of the judiciary which was undermining public confidence in the courts and the administration of justice.

Thus, Justice Howard of the New York State Supreme Court, writing many years before the passage of the Norris-LaGuardia Act, said:

"The courts should not carelessly cast the weight of their mandates into the strife between employers and employees.

"In an evenly balanced labor struggle, an edict of the court leveled at the strikers shakes the morale of the workingmen. This is not the purpose of an injunction, although it is frequently, and perhaps generally, the purpose of the employer who seeks it.

"The moral effect of an injunction order in such cases is tremendous. At once it gives the impression in the community that the strikers have violated the law. The court seems to have taken a hand in the struggle. This is the layman's view. The injunction, thus shaping public opinion, is often decisive."

The National Association of Manufacturers, the National Metal Trades Association and other defenders of antilabor corporations and their nefarious practices fought stubbornly to preserve the best strikebreaking tool in the book. They argued insistently that the injunction merely maintained the status quo. They averred that labor could appeal, and if labor was right, the injunction would be vacated.

Of course, these arguments were specious. One of the most objectionable features of the antilabor injunction was that the injury which it did to the workers could not be repaired. In one memorable case, the Hitchman case, 10 years elapsed between the issuance of the injunction and the final determination by the Supreme Court. Long before 10 years had passed, the fight was over. In another case, there was an interval of 7 years. Invariably, a long period of time elapsed between the issuance of the original injunction and the final decision of the Supreme Court.

While the weeks and months and years rolled on, the employer operated his plant and collected his profits. His workers, whom he had abused and induced to walk out,

either crawled back, unfairly defeated, or they starved. This was called justice.

At last, after the open-shop drive of the 1920's and then the Wall Street crash of 1929, the country felt that it could not permit this cancer to continue—this system of one kind of justice for the employer and another kind of justice for the worker.

The Seventy-second Congress, with Republicans in the majority, and with President Herbert Hoover, a Republican, occupying the White House, took action to restore the average citizen's confidence in the fairness and justice of the American system. That Congress, in the year 1932, passed a bill sponsoring jointly by Senator Norris of Nebraska and Congressman LaGuardia of New York.

From 1932 until 1947 the Norris-LaGuardia Act continued in effect. It was a boon not only to working people. It was a boon to the Nation as a whole. It was a valuable asset to the Nation in its conduct of foreign relations, demonstrating to the world that the United States did not oppress and persecute its working people.

Then, in 1947, in a fit of hysteria and stupidity, the reactionary Eightieth Congress turned the clock back. It restored the tragedy of government by injunction. This provision of the Taft-Hartley Act is surely one of the most malicious and destructive features of the entire law.

Now, when a new law is to be written, a law which all reasonable citizens hope will make it possible for American labor and American management to live and work together, it is imperative that the ruinous action of the Eightieth Congress shall be corrected.

Equal justice under law must ever prevail in the United States. If there is to be equal justice in the realm of labor-management relations, employers must not have an unfair weapon.

Let us put government by injunction back in the grave—for all time.

Compulsory Health Insurance

EXTENSION OF REMARKS
OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following brief on compulsory health insurance under Federal legislation. This will become an increasingly troublesome subject of controversy in the months ahead. The brief is a comprehensive analysis of the facts, as contrasted with theories, opinions, and propaganda. I believe Members will find it of greatest value in getting the data necessary for sound and reasoned conclusions.

The article is by Kenneth C. Crain, an editor of Hospital Management, and is reprinted from the January 1949 issue of that journal:

TO THE CONGRESS OF THE UNITED STATES: A BRIEF ON COMPULSORY HEALTH INSURANCE UNDER FEDERAL LEGISLATION

(By Kenneth C. Crain)

It is proposed to examine in this discussion, in such detail as may be necessary, the following points:

1. The reasons advanced in support of the proposal for a compulsory health insurance system, and their fallacy, including the matter of rejections for Selective Service.

2. The fashion in which the present system of individual health care operates, as to both medical and hospital services; the care of those who cannot pay for such services, and the methods of arranging prepayment.

3. The record of government-controlled health care, in this country and in others, including Germany, Great Britain, and New Zealand.

4. The cost of a compulsory health-insurance system under Social Security, and the difficulties already confronting Social Security and the taxpayer, without this added burden.

The above outline indicates that this is an attempt to place before the Congress, fully but as briefly as possible, all of the considerations involved in the proposal to adopt by Federal legislation a compulsory system of health insurance. The reasons advanced in support of these proposals will be examined, as well as the arguments against them. The subject not only deserves, but demands, the most serious attention of this Congress, because the Federal plan transcends partisan political considerations, and approaches the revolutionary in its theory and its probable effect upon American life.

It should be emphasized at the outset, especially in the light of the necessity for the most careful examination of the whole matter strictly on its merits, that it was in no accurate sense subjected to a referendum of the people in the recent election. While health insurance was mentioned in the Democratic national platform and in the campaign, the 21-point legislative program submitted to Congress by the President in his message of September 6, 1945, which on November 16, 1948, he indicated still to contain what he termed the main bearings of the course of his new administration, conspicuously omits the subject. It might reasonable be inferred that some of the serious difficulties involved, financial, administrative, and ethical, led to this omission.

It is pertinent in this connection, moreover, without any attempt at detailed and controversial analysis, to refer to the fact that out of a total of around 95,000,000 possible voters, only 48,690,075 actually did vote, and that of this total about 24,100,000, or less than one-fourth of the possible grand total, voted for the winning national ticket. Under the American constitutional system, this decided the result; but it conferred no mandate for any purpose, and it would be the gravest injustice to the country to press for passage a compulsory health-insurance plan on the plea, so obviously ill-founded, that the people demand it.

Let us therefore examine the concept of a Federal compulsory system of health-care insurance, to see whether it should for sound reasons be enacted into law, or whether it should for sound reasons be rejected. This is the responsibility of the Congress to the whole people, as well as to the professional groups who have as their personal and professional responsibility the care of the people's health.

THE ARGUMENTS FOR A FEDERAL PLAN

The reasons advanced in support of the idea of taking all individual health care under permanent Federal control have become so well known that it is necessary to refer to them only briefly. They rest upon the general assertion that the American system of care, with the free practice of medicine, dentistry, and nursing, and various types of hospital care, including especially the voluntary nonprofit community hospitals used by most people, while good in many respects, has become inadequate. They refer particularly to the fact that many people are unable because of limited resources to pay the costs of their health care, and therefore propose a compulsory insurance system to be paid for by Federal taxes levied upon all who work and their employers. They compliment the present extensive and rapidly expanding nonprofit and commercial prepayment plans, but again, condemn them as inadequate. They appear to agree that the utmost possible degree of freedom, except the freedom not to be taxed for it, should under a Federal system be left to the individual citizen as well as to those who must render the required services, and promise that no real deprivation of liberty will result, whereas on the other hand they confidently assume a great improvement in individual health care.

An enormous mass of conflicting evidence, of statements pro and con, has been accumulated in the course of the attempts of Congress for several years to examine this subject in connection with the several bills which have been introduced relating to it; and undoubtedly many conscientious Members of both Houses have mined this mass for information. Eight volumes of reports of the hearings on the general subject of the so-called national health program before committees of the Seventy-ninth and Eightieth Congresses alone offer nearly 5,000 pages of material to the investigator, and search will produce valuable results. Some reference will be made later to specific material in these volumes.

The total is mentioned only to show how extensive and earnest the investigation has been. It is also true that a large part of the material consists of material from Government employees in the offices which would be greatly expanded in authority and power by the enactment of such a law, and there are also extensive contributions by some of the legislators strongly in favor of it. Numerous organizations with no actual knowledge of the subject have recorded their views, as well as representatives of organized labor and of the medical, hospital and other professional and technical groups interested.

The scope of the proposal is virtually unlimited, in view of the present plan, which will have to be examined and converted into legislation in advance of the health-insurance idea, to extend the coverage of the social-security system to all who work, including the self-employed such as farmers, professional and small businessmen, and members of the armed forces. Directly connected with this extension of social security is the conceded necessity for increasing the present painfully inadequate benefits under the old-age and survivors' insurance set-up which at present comprises a major part of the social-security system. The costs which this will involve are very large, and this and other aspects of the extension plan will be considered later in some detail. The scope of the health-insurance plan, in this light, would add to the social-security problem the individual health needs of the entire present population of about 147,000,000 persons, and the plan must be thought of in that light.

THE PRESENT SYSTEM OF INDIVIDUAL HEALTH CARE

How do Americans, for the most part self-supporting and self-respecting, see to their own and their families' health as things now are? Well, they must in the first place always use some judgment as to what to do, notably as to whether to visit or to call in the doctor, with such factors involved, stressed by the advocates of Federal care, as the nature of the illness, the accessibility of facilities, and the cost. Under a national health-insurance scheme the matter of cost would not be a deterrent, since the bill would go to the Government, with certain results which will be examined later. Accessible facilities would not automatically follow Government insurance and control, either, though this has been lightly assumed.

While it is true in some cases necessary care is at present not sought because of the cost, it is certainly also true that virtually everywhere a serious need is attended to by doctors and hospitals, regardless of the patient's ability to pay. This fact is not challenged. A survey conducted by Hospital Management in 1943 revealed no instance where a hospital would refuse to care for a

person needing care, regardless of his lack of money. The free work done by most doctors as a part of their professional duty to the community is extensive but unadvertised, and is accepted as a matter of course.

Medical care

The medical needs of the country are served by the largest and best-trained corps of physicians and surgeons in the world, of whom the great majority, about 140,000 are members of the American Medical Association, which is strongly opposed to working under a Federal compulsory health-insurance system. Other practitioners of the healing art, including dentists, may produce a grand total of 250,000, while registered nurses number about 435,000. These men and women are scattered all over the country, roughly in proportion to the population.

Some of them work for hospitals or other institutions, governmental or otherwise; but the majority of the physicians and dentists are engaged in private practice under what is known as the fee-for-service system. That is, they treat the patient according to his needs, and charge him as a rule according to his ability to pay; which means that in some cases he pays little or nothing, while in others he pays too much. The latter kind of case has impressed the average cautious citizen with the desirability of negotiating in advance in case of the danger of an excessive bill.

In general, it may be asserted that the system works. In defense of it, it may be stated with emphasis that it is a great deal better, both in the availability and in the quality of the services rendered than any other system in the world, and that it shines with special brilliance by comparison with the systems of care operated by government, here or anywhere else. One important point is that, contrary to the assertions which have been made by the advocates of Federal care, the number of physicians is increasing steadily, and at a more rapid rate than the general population. According to reliable authorities, 10 years ago there was one doctor to every 800 persons in the country. There is now 1 to every 760 persons, and by 1960 there will be 1 for every 700 persons. More physicians are being trained than ever before in the country's history. This situation is worth comparing with the recent British permission for a doctor to handle a maximum of 4,000 patients, under the National Health Service.

The Blue Shield plan

Medical men themselves have recognized the desirability of making it possible for the self-supporting citizen to provide for his medical care by some form of insurance prepayment, as bills have grown larger with the advance in medical knowledge and scope of treatment, and major surgery, with its unavoidably high costs, has become fairly common. The Blue Shield non-profit prepayment plan was therefore inaugurated a few years ago, with the active sponsorship and cooperation of the doctors, and like Blue Cross, has grown so rapidly that it already has over 10,000,000 members.

Operating in effective liaison with the Blue Cross hospital-care plans, and in many cases administered and sold by the same organization, it promises eventually to make available to the whole country, at moderate cost, the opportunity to secure protection against the cost of medical care, as well as assurance by the doctors themselves, as sponsors of the plan, of the availability of such care. Of course, only the compulsion of a Federal statute can force people to buy medical and hospital-care insurance, and the widespread objection to such compulsion, enforced by an income tax in addition to all other taxes, is entirely sound.

This objection is characterized by the advocates of the Federal plan as emotional, which it may very well be, since the American people have a strongly emotional feeling about their personal liberty; but it happens to be based on the principle of individual responsibility which is the very root of the American national character, and which will be lost or destroyed at grave risk to the country's future.

The doctors and dentists themselves are of course among the most vigorous opponents of Federal compulsion, to be exerted not only on them and their fellow workers in individual health care, but upon virtually the entire population. Their objections are based upon a variety of sound reasons, some of which will be dealt with in detail elsewhere.

The professional man is above all an individualist, or he would not enter work which calls for ten years of intensive study following his secondary schooling, and for sufficient initiative thereafter to enable him, in the typical case, to select his location in some American community, settle down in it, and eventually to earn a living as an independent doctor or dentist. His objection, therefore, to being placed permanently under the intensive regulatory control of a government bureau as to his practice, including who may and may not be his patients, his fees, records, reports, method of billing, and so forth, is easy to understand. He can point, moreover to the fact that such a system has recorded unvarying failure in other countries.

He recognizes the desirability of aiding the public, including his own patients, to pay for his services, and for that purpose he has cooperated in the establishment of the Blue Shield plan. He does not want this plan controlled in any respect by others than doctors, and this, too, can be understood. He and his fellows are making this plan workable and generally accessible to the public, at reasonable cost. That is all that may properly be asked of him.

Has this system of medical care been the costly failure which is alleged by those who declare that only Federal compulsion can produce good health? On the contrary, American health is actually the best in the world. A current bit of convincing evidence is the recent report by a leading life-insurance medical authority, Dr. Louis I. Dublin, of the Metropolitan Life Insurance Co., indicating that the American people were never healthier than in 1948, and that prospects for the coming year are for continued improvement. The 1948 death rate established a new all-time low, with a figure slightly below 10 per 1,000 population, according to Dr. Dublin, despite such changes in the population structure as a large increase in the number of infants, on the one hand, and the proportion of old people, on the other, both tending to increase the death rate. Mortality rates in 1948 fell at every age level.

The increase in hospital service from 1931 to 1947

	General hospital		All hospitals	
	Beds	Patients admitted	Beds	Patients admitted
Totals:				
1947	592,453	14,665,195	1,425,222	15,829,51
1946	641,331	14,051,508	1,468,714	15,153,45
1945	922,549	15,228,270	1,738,944	16,257,40
1944	925,818	15,060,403	1,729,945	16,036,84
1943	850,576	14,454,628	1,649,254	15,374,60
1942	594,260	11,634,288	1,383,827	12,545,61
1941	533,498	10,646,947	1,324,381	11,596,18
1940	462,360	9,219,496	1,226,245	10,087,54
1939	444,947	9,018,316	1,193,026	9,879,24
1938	425,324	8,545,930	1,161,380	9,421,07
1937	412,091	8,349,773	1,124,548	9,221,51
1936	402,605	7,752,848	1,096,721	8,646,88
1935	406,174	6,875,182	1,075,139	7,717,15
1934	393,425	6,291,556	1,048,101	7,147,41
1933	386,713	6,071,512	1,027,046	7,037,98
1932	395,543	6,303,573	1,014,354	7,228,15
1931	384,333	6,321,861	974,115	7,155,97

This is by no means a picture which condemns the present system of free medical practice and of independent community hospitals. Those who would risk the destruction of that system by deliberately enforcing its exchange for one whose unvarying record in other countries has been bad in every respect may be motivated by a real desire to improve American health; but they must nonetheless meet the suggestion that the methods which they propose appear to be founded on ignorance and a failure to understand all of the implications of their proposals.

The selective service rejections

So much has been made and continues to be made, in many cases by those who should know better, of the alleged 5,000,000 rejections in Selective Service because of remediable defects, that the facts on this matter should be recorded here, in order that this false but persuasive argument may no longer have any weight with Congress. Conclusive and detailed evidence, by medical men of the highest character, has been placed before the Senate committees which in the past 2 or 3 years have been holding the exhaustive hearings referred to, to the effect that these rejections for remediable defects are several million less than charged, when analyzed, and that there is in the whole matter no relationship to the question of the character, cost, and availability of medical care. In fact, one of these medical men, Dr. Maurice H. Friedman, of Washington, D. C., pointed out that in many large groups of rejectees their handicaps, instead of being due to lack of medical care, were due precisely to the fact that they had had medical care. Said Dr. Friedman:

"In the first place, a great many of the defects discovered and listed have very little significance to health. That is not only my opinion, but it was repeatedly pointed out in the official bulletins of the selective service statistics.

"Over one-half of the defects listed are structural abnormalities rather than diseases. They might be minor things. A man might have the tip of one finger knocked off or something of that sort. Of the remainder of all these defects, a significant number are related to education rather than to medicine or health.

"Considering only the structural abnormalities, it is a bit ironical that rather than being the result of a lack of medical care, many of these defects are the direct result of medical care. For example, amputations are frequently done as a lifesaving measure or for surgical or medical purposes. Amputations, therefore, are the kind of defect which is a direct result of medical care, not the absence of medical care. Surgical perforations of the middle ear are another example of a medical care which produces a defect for the relief of a disease. We have many other examples.

"The fact that diabetics live long enough to be registered by a draft board is only due to our medical services. They are then recorded as a defect. Every child with rheumatic fever nursed into adult life by skillful medical care will live with a defect. Every invalided infant who survives the tetralogy of Fallot by skillful surgery will increase the recorded number of rejectees. We might ask ourselves: Is a corpse healthier than a rejectee with diabetes?" (Pt. 4, hearings before a subcommittee of the Committee on Labor and Public Welfare, U. S. Senate, p. 2129.)

Dr. Lowell S. Goin, of Los Angeles, Calif., appeared before the Senate Committee on Education and Labor on April 17, 1946, and made a statement on this and related subjects which is reported in part 2 of the committee's report of hearings, beginning at page 623. He pointed out many obvious factors contributing to the actual total of

4,217,000 rejectees which have no relation to the need for or quality of medical care, such as the inclusion of 444,800 "manifestly disqualified," the armless and the legless, the totally blind, the totally deaf, and the like, with this comment:

"What medical care could have made this group whole? How shall the amputated leg be restored, and who knows how to cure optic disease? The modern concept is that mental disease is largely a constitutional inborn inability to cope with reality. What has medical care to do with it, 582,100 were rejected for mental deficiency. * * * Even a very slight knowledge of eugenics will persuade anyone that this group does not constitute a medical-care problem. Together, these three groups (idiots, imbeciles, low-grade morons) reach a total of 1,727,600, or more than a third of the rejectees. If they are now excluded, there remain 2,426,500, a little less than one-half of the famous 5,000,000.

"Three hundred and twenty thousand of those were rejected for musculo-skeletal defects. That is the congenitally short leg, the clubfoot, the withered arm, the absence of a half vertebra and the consequent crooked back. How, I ask, would medical care have restored these unfortunates to usefulness? Two hundred and eighty thousand were rejected for syphilis. Treatment for syphilis is offered freely everywhere. As a matter of fact, our statute books are simply loaded about syphilis prevention. I doubt that there is a community in which a syphilitic may not receive treatment from a department of public health. One wonders how compulsory health insurance would have eliminated this group.

"Two hundred and twenty thousand were rejected for hernia, probably for hernias so severe that the Army was unwilling to attempt repair. I mean by that that likely these were bad hernias, because I did think the Army repaired some. Hernia is the result of a congenital defect in the inguinal or femoral canal, presumably due to a defect in the germ plasm. If such a defect exists, its bearer is likely to have a hernia, and medical care has nothing whatever to do with the occurrence of hernia."

Pointing to the eye defects which are largely congenital, and computing a total of about 1,000,000 men suffering from these last three groups of defects causing rejections, Dr. Goin commented:

"The rejections which might be due to a lack of medical care are thus reduced to about 1,500,000, or about one-third of the shocking figure of 5,000,000. Although it is quite problematical whether any program of medical care would have altered substantially this figure, we may rest upon it, confident that the figures fall a good bit short of establishing an urgent need for the enactment of compulsory health insurance."

The detailed analysis by these brilliant medical men of the Selective Service figures destroys completely any save an imaginary basis in these figures for the Federal plan, and justifies the suggestion that any person who hereafter refers to them in support of compulsory health insurance does so either in ignorance or in bad faith. None the less, such references will undoubtedly be made. Informed Members of Congress will know how to evaluate them.

Medical care in these United States is not perfect; it is only the best in the world. It is, of course, not everywhere instantly available, without money and without price, to all comers; but it can be had. Its superiority to any government-controlled plan is literally beyond expression.

THE AMERICAN HOSPITAL SYSTEM

The hospital system of the country is essentially simple, but is not always fully understood, although the facts are authoritatively and in great detail recorded each year in the study published by the American Medical Association entitled "Hospital Service in the United States." Most of the figures referred to herein are taken from that work covering the year 1947.

For most people the only need for hospitalization arises in connection with serious illness, surgery, or maternity. These cases are cared for in general hospitals, and it is in this category that the great majority of the group of community institutions known as voluntary nonprofit hospitals falls. In addition to these nonprofit voluntary hospitals there are also general hospitals operated by various governments (Federal, State, county, city) and those operated by private owners for profit.

Since, as stated, it is the general hospital, regardless of ownership, in which most people receive needed service, it is these hospitals which handle much the greatest part of all hospital service, in terms both of numbers of patients and of patient-days of care. They handled in 1947, 14,665,195 patients, who received 166,717,765 days of service, a handsome total for the 4,539 hospitals involved. That patient-day total is considerably over one hospital day for every man, woman, and child in the country.

There is another large group of hospitals which cares for the chronic or long-term patient, the two largest classes involved being tuberculosis and mental cases. Typically these hospitals are operated by Government, chiefly by the several States; and since for various obvious reasons the care of these patients has long been recognized as a governmental responsibility, this entire group of 1,737 hospitals is not taken into account in this study, nor is their 1947 record of 1,164,319 patients.

How about payment?

The question of payment for hospital care thus narrows down to the nearly 15,000,000 patients who were cared for in the general hospitals; and since it is this same question of payment, by or for the patient, which looms largest in the broad proposal that for all who work payment should be insured through a Federal tax, one point should be emphasized. It is that for the large number of patients cared for in the general hospitals operated by various governmental agencies the taxpayer pays. The patient in such hospitals (the Veterans' Administration hospitals, for example, or the typical city hospital) is virtually always there as the word of the Government operating the hospital. He is cared for without charge, therefore, in the proper discharge of the Government's responsibility to him and to the community.

In 1947 the volume of general hospital care handled in these tax-supported hospitals ran to the following figures:

Government	Hospitals	Beds	Average census	Births	Admissions
Federal	317	132,258	96,294	46,048	1,179,560
State	57	21,599	15,484	50,134	353,899
County	267	43,994	32,662	109,332	717,921
City	286	51,736	41,278	191,539	1,144,613
City-county	42	8,297	5,958	32,605	184,429
Total	969	257,884	191,676	429,658	3,580,422

These totals are impressive, especially when considered, as they should be, in relation to the fact that they relate almost entirely to the groups which cannot afford to pay for service in the voluntary nonprofit hospitals. This is true of very nearly all of these patients except veterans entitled to service without charge in veterans' hospitals because of service-connected disabilities. The entire costly and generally efficient system of tax-supported hospitals was established and is being continually expanded and operated for the purpose of caring for that part of the public with low or no income, including the group known as the medically indigent, which consists of the self-supporting to whom the cost of so-called catastrophic illness is too heavy a burden.

This care is universally accepted as a community responsibility, and in all of the larger cities and the more thickly populated counties it is met by the facilities of the hospitals established and maintained for that explicit purpose, as the above figures indicate. In addition to this extensive care for the patient who cannot afford to pay, the voluntary hospitals also provide a widely utilized service for the low-income group, free or below cost, with some payment either by the patient or from tax sources. Since it is largely to the group thus especially provided for that much of the concern expressed by proponents of the Federal plan is directed, it is reasonable to suggest that the Congress take all of these facilities into account.

The fact is that while the plight of those who cannot afford to pay has been cited as one of the strongest reasons for the Federal plan, this plan would have a rather painful effect upon such of them as are employed to the extent which would subject them to the proposed gross income taxes, since they would lose this much of their inadequate incomes for the purpose of providing payment for hospital care which they now receive to a very considerable extent for nothing. The problem offered by these who have no income at all—the completely indigent—has not yet been given any considerable degree of attention by those who think that the Federal Government has a responsibility for the care of individual health. It is a subject which may be commended to the attention of Congress, and it is not in any necessary degree related to the imposition of a compulsory health-insurance plan upon those who are not indigent.

A factor which also deserves serious consideration by Congress is that which is involved in the Federal proposal to make eligible for care in other than Government hospitals, through compulsory insurance, many thousands who are now adequately and properly cared for in their local tax-supported institutions. These institutions, which are naturally jealous of their long-established function and of their place in the hospital field, must be taken into account from all of the angles involved. There will always be a need for their services, even under the Federal plan, but this need would certainly be diminished to the precise extent that low-income patients were unfairly taxed and then thrust into the voluntary nonprofit hospitals.

Should taxpayers everywhere, large and small, be asked to contribute through new and potentially unlimited taxes to a system which would to a considerable extent, remove responsibility and control from local taxpayers. The answer may depend upon the point of view, but the American point of view has always been that local self-government and local responsibility for the care of those in the community unable to look after themselves are for every possible reason to be preferred to the distant authority and the distant tax collector.

The reasonable conclusions on the general subject are admirably stated in the Brookings Institute report of February 1948:

"The United States has some individuals and families not possessed of the resources to enable them to pay for adequate medical care. In the future, as in the past, provision must be made for them through public funds or philanthropy. The evidence suggests that many of them are elderly, impaired, or underendowed, or are widows or deserted women or their dependents. It is

doubtful if they could be effectively covered by compulsory insurance because they would lack the means to attain and maintain an insured status.

"The large majority of American families have the resources to pay for adequate medical care if they elect to give it a high priority among the several objects of expenditure. The issue is not whether they can afford medical care, but whether they should be compelled by law to pool their risks and to give payment for medical care a top priority. The major alternative for people with ability to pay is to leave them free to determine for themselves what medical care they desire and whether they will pool their risks through voluntary arrangements."

THE VOLUNTARY NONPROFIT HOSPITALS

The voluntary nonprofit community hospitals, as stated above, are those which care for most of the self-supporting population when hospital care is needed. They comprise the group most completely independent in every way, most characteristic of the American spirit in that they were in every instance founded by leaders of the community to meet the needs of the community, and they are virtually unanimous, in the same spirit of independence and community control in which they were founded, in their opposition to a Federal plan which would make practically all of their patients Federal patients.

These hospitals fall into two groups—the church hospitals and the local nonsectarian community hospitals. Their service in 1947 is shown by the following figures:

Type	Number	Beds	Average census	Births	Admissions
Church	924	130,653	109,648	946,158	4,454,767
Nonsectarian	1,578	167,390	131,686	1,118,280	5,297,145
Total	2,502	298,043	241,334	2,064,438	9,751,912

It might be added here that another group of general hospitals comprises those under private ownership, operated for profit, and performing a useful service in many localities. They number 1,067, and in 1947 served 1,332,498 patients, this very considerable number presumably paying their own way, with or without some prepayment assistance.

As the figures relating to the great nonprofit group clearly indicate, these hospitals, founded and operated as independent community services, and having about 300,000 beds, are actually carrying the lion's share of the general-hospital load. Of the total admissions to general hospitals, 14,665,195, these church and nonsectarian community institutions handle, for example, just about two-thirds, as against the one-third handled by all other general hospitals, governmental, and proprietary. Of the total of 2,837,139 births in hospitals of all types, their proportion is even higher—over 72 percent. Incidentally, official estimates declare that 82 percent of all live births in the United States in 1947 were in hospitals, as eventually, of course, it is hoped all births may be; but the present record is a magnificent achievement of the American system of hospital and medical care as it is, and eloquent proof of the fashion in which it is serving the people.

The patients in these hospitals are for the most part pay patients, sent by their physicians or surgeons. Some have private rooms, for which they pay more than actual cost to the hospitals because they want complete privacy or some other aspects of luxury care. A large proportion, to an increasing extent, Blue Cross subscribers, since these prepayment plans now cover the country, occupy beds in rooms with one to two or three other patients, where the charges are lower than for private rooms; and others are in the large wards, where many of them are cared for without any charge, or at rates considerably below cost. But all who enter the doors of these hospitals are cared for; and their doors are never closed.

For some people, notably those who occupy private rooms, the bill involved in the complex of services offered by the hospitals—bed and board, general nursing service, laboratory, X-ray, operating or delivery room—may be taken in stride. For most, however, either careful saving in advance of the contingency or some form of prepayment is highly advisable. People save for vacations, for Christmas; they do not always save for serious illness or surgery because these matters are not predictable, and, of course, are not anticipated with pleasure, if at all. Nonetheless, the citizen who knows that accidents may happen and that death and taxes—especially taxes—are certain is to an increasing extent taking care of the needs of his family for hospital care by some form of insurance.

Blue Cross plans and the commercial insurance companies offer various means of prepayment which are everywhere available, the latter also covering medical and surgical care, for which on a voluntary nonprofit basis the Blue Shield plans sponsored by the doctors are increasingly available. Taking into account all of the methods by which the self-supporting and self-respecting American may, exercising his own choice and consulting his own means, arrange for the insurance of his hospital, medical, and surgical care in case of need, over 61,000,000 persons are thus to some extent protected.

An estimate of the total situation might be attempted along these lines: Covered in some sort of prepayment plan, 61,000,000; indigent or medically indigent who actually received hospital care (1947 admissions to government hospitals plus care in voluntary hospitals) about 5,000,000; able to pay without insurance protection, perhaps 10,000,000; total, 76,000,000. Subtracting this from the total population of 147,000,000, that would seem to leave about 71,000,000, including heads of families and their dependents as well as the unmarried adults, or in the neighborhood of 20,000,000 families. It should not be forgotten, either, that included in the total population are the 24,000,000 persons who according to the recent Hoover report receive more or less medical and hospital care from the Federal government. It is a question, therefore, how many members of the 20,000,000 families estimated above have needed medical or hospital care, or, needing it, fail to secure it, out of their own resources or from the facilities at their disposal as citizens. Roughly one in nine of the population actually did receive hospital care in 1947. In any event, only a relatively small fraction of the group would need the protection they had deliberately refused to provide for themselves; and in case of need the typical case is certainly that they are cared for—at their own expense, as a ward of Government, or as part of the free service accorded by the present system.

National income, taxes, and debt, 1929 to 1949

Year	(A) National income (in billions)	(B) Federal budget (in millions)	(B) as percent of (A)	Federal debt (in millions)
1929	$87.4	$3,300	3.8	$16,931
1933	39.6	3,900	9.9	22,539
1934	48.6	6,011	12.3	27,053
1935	56.8	7,010	12.3	28,701
1936	66.9	8,666	12.9	33,778
1937	73.6	8,177	11.2	36,425
1938	67.4	7,239	10.7	37,165
1939	72.5	9,027	12.4	40,440
1940	81.3	9,297	11.4	42,968
1941	103.8	13,765	13.3	48,961
1942	136.5	34,290	25.2	72,422
1943	168.3	79,702	47.5	136,696
1944	182.4	95,573	52.3	201,003
1945	$181.7	$100,398	57.2	$258,682
1946	179.3	63,714	35.5	269,422
1947	202.5	42,523	21.0	260,400
1948	[1] 227.3	42,200	19.2	260,200
1949 (estimated)	(220.0)	(45,000)	(20.5)	(260,200)

[1] Projected figure.

As to those of the working population whose incomes are so limited that it is said, with sympathy, that they cannot afford either to pay as they go or to pay Blue Cross and similar premium charges, they are to be compelled to pay Federal charges, which may count to 5 or 6 percent, or more, of their pay, out of their own pockets, in addition to all other taxes, whether they can afford it or not. Of this seriously illogical and self-contradictory proposal, more later.

The Blue Cross plans

Speaking of prepayment arrangements, look at Blue Cross, because it is by all odds the most successful and popular of all hospital prepayment methods—guaranteeing the needed service instead of providing a limited cash payment—and because it is hospital-sponsored and nonprofit. The total coverage of the Blue Cross (United States and Canada) is now 31,841,136, of which total 29,468,675 are in this country. The growth of Blue Cross from 1937 to 1948, from 1,164,126 to the total indicated, is certainly responsible for the fact that during the same period general hospital admissions rose from 8,349,773 to 14,665,195. In 1947 Blue Cross plans paid the hospitals for services rendered to subscribers $211,392,000, covering 21,700,000 days of care.

When it is considered that this has been accomplished in about 12 short years, and that every State excepting Nevada is now represented in the roll of some 90 approved plans, it must be said at least that it is a remarkable and commendable achievement. Even "the enemies of Caesar must say this," and the Federal Security Administration's representatives have from time to time paid tribute to the accomplishment, which, however, they regret they must brand as inadequate, and which must, they feel, be wiped out by the compulsory blanket substitution of a Nation-wide Federal system.

They suggest some such employment for Blue Cross plans, thus rendered futile, as their use in collections or bookkeeping; but such suggestions need not be taken seriously. The enactment of Federal legislation setting up a tax system for the support of national health insurance would by necessary consequence destroy Blue Cross, for the obvious reason that nobody would need to be twice protected against the cost of illness, nor would anybody voluntarily pay twice for such protection. Blue Cross would be dead, slain by the deliberate action of the Federal Government. Surely Congress will desire to think of this long and seriously before signing the death warrant.

There is another factor, characteristically American also, which will have to be taken into account while universal health-tax legislation is being considered. It is the fact that organized labor (which in general officially favors the Federal plan because half the cost would be taken from the employer) is rapidly leaning not only to the idea that arrangements for health and retirement purposes are appropriate items in collective bargaining, but that Blue Cross gives the best hospital deal; as it does.

The United Mine Workers, for example, have been conspicuously successful in this

respect, with a welfare tax per ton of coal mined which has produced a very handsome fund. Just as the pensions made possible by this fund ($100 a month) are very considerably in excess of the pathetic retirement payments of social security, its ability to provide medical care for eligible workers, through Blue Cross or otherwise, might well be much greater than that of even a Federal tax-based fund. Certainly the case for welfare arrangements in collective bargaining would be seriously weakened should a Federal plan be adopted, for here, again, the employer, who would have to pay both ways, would be well within reason in objecting to paying twice. Thus the Federal plan would inevitably tend to destroy welfare provisions arrived at through collective bargaining by organized labor, precisely as it would destroy Blue Cross and other voluntary plans.

An eloquent tribute was paid recently to the part which Blue Cross plans have played in enabling organized labor to bargain for protection against the costs of hospitalization, by Harry Becker, director of the social security department of the International UAW-CIO, Detroit. Mr. Becker said:

"What labor wants for the one out of four families who are going to have a hospital bill this next year is a slip on leaving the hospital which reads: 'Your hospital bill has been paid in full.' There was a time when this goal was 'skypilot' thinking; but today this idea does not belong in the stratosphere—we have demonstrated that through collective bargaining we have a practical approach to the problem of financing on a prepaid basis full prepayment of the costs of hospital care for every workingman and his family. This demonstration has been made possible because of the kind of joint labor-Blue Cross cooperation existing in such instances as the Michigan Hospital Service and the International UAW-CIO."

In the light of a very recent development, the completion of plans under which employers operating in more than one State will be able to enroll their employees in Blue Cross on a national uniform basis, if desired, as in commercial insurance plans, Mr. Becker's further remarks are especially interesting:

"As unions move into social security as a major collective bargaining issue we are looking to Blue Cross to take the next important step. This step is a national Blue Cross plan which will provide for universal coverage with the same standard of full-payment benefits for all of the employees of a single employer even though the employees may be living in a number of different States. This means Nation-wide cooperation among all Blue Cross plans to assure national coverage of workers, wherever they may live, when a national labor-management program is set up under collective bargaining contracts whether negotiated in Detroit, Pittsburgh or Los Angeles. Labor is expecting that Blue Cross will not delay taking this next step—now."

Blue Cross has taken this step, as stated, largely in direct response to the reasonable demands of labor for national Blue Cross coverage, with complete service contracts guaranteed (as they are) by the voluntary nonprofit hospitals who are the actual partners of Blue Cross. The destructive effects of a compulsory Federal plan would thus involve directly not only Blue Cross, but the results gained in its utilization in industry through collective bargaining for hospital-care arrangements.

Would this be wise, or just? Is it necessary? Is it desirable?

THE FAILURE OF GOVERNMENT MEDICINE

Henry, the young Virginia orator of the Revolution, remarked on an historical occasion: "I have but one lamp by which my feet are guided, and that is the lamp of experience. I know of but one way of judging the future, and that is by the past."

This is a sound view. Holding up the lamp of experience, therefore, in connection with the question of whether under Federal control a compulsory system of individual health care should be imposed, and attempting as well as may be to judge the future by the past should such a system be established, several matters suggest themselves for consideration. One concerns the operation of hospital and medical care by Government, particularly by the Federal Government, in this country, and another concerns the operation of social-insurance systems, including health care, in other countries, such as Germany, Great Britain, and New Zealand; all of which have furnished a record of experience in this line.

Remember the Navajos?

In this country there is an exceptionally impressive example of Government medicine as it actually works, in the case of the Navajo Indians, as reported about a year ago to the Department of the Interior by Dr. Haven Emerson, one of the country's most widely known and experienced physicians, on behalf of the Association of American Indian Affairs. This report, which was widely publicized, covered in detail the disgraceful conditions prevailing as to health among the 81,000 Navajos, wards of the Federal Government ever since their final conquest in the seventies.

Dr. Emerson's report stated that with grazing for their flocks arbitrarily reduced, also by Federal authority, the Navajos are existing on 1,200 calories a day, less than the Germans received immediately after the war; that many of them are so weak because of this inadequate diet that they cannot stand sustained exertion; that there is one social-service worker for the entire tribe; that more than 10,000 are eligible for old-age assistance, aid to dependent children and aid to the blind, but are not receiving these services; and that mortality rates are so high, resulting from the total or partial lack of the medical services they need and are therefore entitled to, that Government economy in this respect appears to be purchased routinely with Navajo lives. A tuberculosis infection rate 14 times the average of the country as a whole is one pointed index of the situation.

The number of hospital beds in the generally excellent institutions operated by the Bureau of Indian Affairs appears to be adequate; but roads are almost entirely lacking, and the Navajos do not possess cars. The situation, in brief, has been and remains perfect for the kind of active public and individual health care, outside of or in the hospital (including out-patient care), of which the Federal authorities think they should be given permanent and exclusive charge for everybody. But medical care, in particular, has hardly been given at all to the Navajos, the very special wards of the Government.

Apprised of the situation somewhat belatedly, Congress has taken steps to remove this disgrace from the Government's continuing record of ineptitude in health matters; but the facts constitute an unanswerable challenge to the ability of a distant central Government to give even minimum health care to the Nation as a whole, since it has failed so miserably in this limited area.

Aside from this curious, significant and depressing instance, and with the qualification that, of course, there are good hospitals operated by Government, including the Federal Government, and without raking up old ashes—some not so old—to start fresh fires, it must be said that as a rule the voluntary nonprofit community hospital, of which this country fortunately has so many fine examples, averages very much better indeed than the Government hospital. There have been and doubtless still are some hospitals in the voluntary group which are not as good as they should be; but there have been among them no such scandals of corruption, mismanagement and bad service as has risen to the horrified view of the public from the institutions operated by Government at all levels.

It is not always remembered, as an outstanding example of an important aspect of medical care chiefly under Government control, that mental cases are almost entirely hospitalized in tax-supported institutions, State or Federal, and that the record of these institutions, for whatever reasons, has furnished the unpleasantly authenticated background for such recent studies as The Snake Pit. As a leading psychiatric authority commented 2 years ago (Dr. C. Charles Burlingame, Hartford, Conn.). "For over a hundred years 95 percent of the practice of psychiatry has been State medicine," adding that "before going farther along the road toward political handling of medical care, the people should demand that the ability of State medicine be demonstrated first in its present responsibilities." Said Dr. Burlingame further:

"Why ask for new worlds to conquer when the obligations already belonging to socialized medicine have been so scandalously neglected? Why ask for more when a concentration of all efforts and resources in this one field, which is already the Government's, offers the greatest single opportunity to bring health to the greatest number?"

There has been no adequate answer to this logical question, from any quarter.

The painstaking investigation of the veterans' hospitals, for example, by the American Legion and other organizations of former servicemen, occurred not too long ago for the memory to be quite fresh of the conditions which they revealed. The mess, once revealed, was finally cleaned up by the prompt and aggressive action of the new head of the Veterans' Administration and his able assistants; but the record of what miserable conditions had accumulated over the years, under complete and undisputed Federal control, should not be forgotten. The tendency of hospitals operated or in any sense controlled by Government toward such conditions will always remain, for reasons which everybody understands. The curious thing is that, this being the case, there are people who are not only willing, but anxious and determined, to turn over to governmental control, in the fullest sense of the word, all individual health care. Congress will have to consider with the utmost seriousness this tendency, which was explicitly referred to some time ago by a great hospital authority, the late Dr. S. S. Goldwater, a personal friend of the late President Franklin D. Roosevelt.

Dr. Goldwater was Commissioner of Hospitals in New York City long enough to find out something about the effect of political control on hospital care. He spent the last years of his life as president of the vast Associated Hospital Service, the metropolitan New York Blue Cross plan, and incidentally in fighting bitterly the then new threat of a Federal compulsory plan. In an address on this subject delivered in Philadelphia in 1942, the year of his death, he said:

"Local organization and control will produce the best results in hospitalization, and any Federal approach to interference with the fiscal affairs of hospitals, leading eventually to control by a central government bureau, would be a tragic affair for the people of this country. There is justification for the interest of a humane government in the question of whether hospital service has been made available on suitable terms to the great mass of the people, but this inquiry should also take into account the fact that the voluntary, locally directed hospital service plans have made Government intervention unnecessary.

"Assumptions that we must do as other countries have done, regardless of our achievements, are certainly not justified,

especially in a country where freedom is valued and where the principle of local self-government is supposed to be sacred. Even the different sections of our country differ in various ways, so that an actually even performance, uniform everywhere, could hardly be secured if it were desired. I don't want it; we could have it only under strict Government control, and it would be on a level far below what can be achieved under the system we have been developing for so long and so successfully.

"Moreover, failure in a locality, if it must occur, is not the tragic thing that a country-wide failure would be. Hospitals must be left free to take such action as their communities require, without having to wait for approval from Washington based on imperfect knowledge of local conditions and needs."

Speaking specifically of hospital conditions under Government control, of which his experience in New York gave him ample knowledge, Dr. Goldwater said, with the utmost earnestness.

"My own experience in New York showed me how far short Government hospitals can fall from the perfection which has been attributed to them. Perfect conditions do not exist anywhere, and even in New York, where as head of the city's hospitals, I worked under conditions as favorable as can be expected in Government, the story has not been told of the impediments placed by Government circumlocution in the way of anybody attempting to administer a large group of hospitals from a central office. The system as a whole failed to accomplish what I had in mind for the city because of the onerous conditions under which Government work of all sorts has to be done. It could hardly be otherwise if the Federal Government attempted to exercise any measure of control over the voluntary hospitals, as it would inevitably do, sooner or later, under the plans proposed by the Social Security Board."

The fact is that not enough has been said about the tendency of medical service to degenerate under Government control, in this country as well as everywhere else. Dr. Goldwater's comments are to the point, and they are supported strongly by some 1946 remarks by Dr. Frank H. Lahey, of Boston, the famous head of the Lahey Clinic who ran the system of medical officer procurement for the Federal Government during the war. After pointing to the fact that the great loss in medical care under Government is the disappearance of quality competition, Dr. Lahey said, addressing a group of surgeons:

"Veterans' care is an example of Government-directed medicine. I say this with regret, because after all, who is responsible for veterans' care? We are. It is only recently that we have shouted about it. We have known how bad it was, and we have not done anything about it. It has been under our eyes for years. I doubt if there is a surgeon here who has not been rescueman for a veterans' hospital, and has undone and done over things that have made him know that the medicine and surgery in many of them were not good. It has been excellent in some of them, and therefore we must not damn the whole thing for a relative percentage. But the point is this: If you want a living example of Government-directed medicine look at the Veterans' Bureau as it was. It was Government-directed medicine at its worst. It is not fair to say that it was Government medicine as it will be under the present national program of veterans' care, but it is an actual completed experiment of what a national program of Government-directed medicine did degenerate to. It is for that reason that I plead that it is so easy to promote a plan and not foresee its possible future consequences.

"I should think that this country after its experience with trying to legislate morals and sex and an appetite for alcohol would have learned by now that there are some things that must come by evolution and education and not by compulsion. They cannot come by compulsion."

The Congress will undoubtedly give evidence of this character, coming from men of great ability, wide experience, and unimpeachable standing, the thoughtful consideration which it demands; and in this connection, the personal observation of many Members of both Houses will stand them in good stead as to the quality of Government operation or control of various activities.

It is of course true that the Federal Government would not at first literally take over the operation of the voluntary nonprofit hospitals, although the British experience shows clearly that eventually that would have to be expected. It is asserted by those who favor the plan that it concerns only the payment of the bill, and that otherwise the people and the institutions rendering individual health service would remain precisely as now. Both President Truman and the Federal Security Administrator, among others, have declared that they do not wish to injure or interfere with the voluntary hospitals, and that a compulsory Federal plan would not do this.

Unfortunately, that view takes no account of the fact that with the payment of all medical and hospital bills, for everybody who works, in the hands of a Government agency, control would follow as a matter of inevitable direct consequence. It is not only that "he who pays the fiddler calls the tune." It is the fact that where a Government agency disburses tax funds it has a duty to inspect the goods or audit the services for which the funds are paid. Whether this duty is intelligently and ably performed or not, it must be performed, and the fact of its performance would constitute effective control.

The mass of Federal regulations having the force of law which would necessarily flow from the attempt to operate a Federal health-care plan would be enormous, detailed, explicit, and crippling. The fees and charges allowed would be only the beginning. Every move of the patient, the doctor, the dentist, the nurse, the hospital admitting office and the rest of the personnel engaged in its necessary activities would have to be covered in detail, as would the whole record of many millions of workers and their employers. That is why estimates of the additional Government personnel run as high as 1,500,000, based on actual experience abroad indicating one additional employee for each 100 persons covered by the system.

There is actually no way under a government system to avoid this. It has to be attempted, wherever government payments and controls enter. It includes the inescapable fact that functionaries almost automatically try to broaden their scope and importance, regardless of efficiency and cost. It is always confusing and hampering and in the peculiarly and essentially individualistic work of caring for the sick it has always proved to be deadly. It is known as red tape. It repels the best type of professional man, and the simple fact is that any such system in this country would prevent the expansion and improvement of medical care, instead of aiding it, because the men who would make the best doctors would not under such a system choose to become doctors at all.

Hence the opposition

It is of course this consideration, with all that is implied in it, which accounts for the consistent and uncompromising opposition to any compulsory Federal health insurance plan of the American Medical Association, the American Dental Association, the American Hospital Association, the American Protestant Hospital Association, the Catholic Hospital Association, and innumerable allied organizations. They have in their meetings, at public assemblies, in the press and before committees of Congress, stated repeatedly and in detail the explicit and reasonable grounds on which they most earnestly believe that Federal compulsory health insurance would mean Federal control, and that Federal control would mean inferior service to the American people, at vast and unpredictable cost.

There is no question about this virtually unanimous opposition on the part of the professional and technical groups who under the Federal plan as now would have to do the work of caring for the health of the people. It has been urgently, eloquently, and repeatedly expressed. Why have the views of these people, who must be regarded as the only available experts in medical and hospital care and the means of paying for it, been so deliberately and extensively ignored by the advocates of the Federal plan? This is a question which demands an answer, if there is one.

In all other affairs where national legislation is considered, the advice of the people who know, the people who do the work, is not only sought but followed. In the legislation concerning farms and mines and factories, Congress would consider itself, and would properly be considered, as failing in its constitutional function as representative of all the people, and in its duty to consult the facts and the wisest counsel on the situation, if it did not secure and act upon the views of the qualified and experienced workers in the field involved. Would a completely new and radical farm program be adopted by Congress against the advice and wishes of farmers and farm-organization leaders? Would a system of control and payment covering all coal mining be imposed under Federal legislation over the opposition of both mine operators and coal miners? Of course not. The questions are ridiculous.

But it has been proposed time and again, for reasons which on their face are entirely inadequate to support the idea, to impose upon the hundreds of thousands of experienced, able, and intelligent people whose lives are devoted to the medical, dental, hospital, and other individual health care of Americans a system to which they are utterly opposed, on what must be accepted as sound grounds. And this system, condemned as inefficient and costly by the professional and technical personnel most intimately acquainted with the whole subject, is also to be imposed upon the people as a whole, with all of the risks involved of inferior service and increasingly burdensome cost.

Would Congress be wise to do this, in any situation short of a national emergency? Should not the informed opinion of the whole group of workers in the field be consulted and heeded, even against the weight of whatever pressures and arguments may be brought forth by the Government and other interested groups supporting the Federal plan? Should not the unhappy experience of other countries, far gone in paternalistic and collectivist controls of all sorts, be sufficient in itself to bar such moves in a nation conceived in liberty?

Germany, a pioneer in social insurance, Britain and New Zealand have all furnished examples of what happens under government control of individual health care, and these are worth a brief review, since it may give some additional warning against the dangerous folly of imposing a compulsory health-care system in the United States.

GOVERNMENT HEALTH INSURANCE IN ACTION

The experience of other countries, ranging from that of Germany for over 60 years

to New Zealand's much more recent but similar record, shows that—

1. Costs skyrocket to incredible levels, due to over-use and other abuses.

2. Those who render the service tend to become cynical and careless in their role of government dependents, as users do in their desire to get everything they have paid for, and the quality of all services deteriorates rapidly.

An authoritative study of the German system by Gustav Hartz, a Berlin labor economist, was published in 1935 by the Pennsylvania Self-Insurers Association of Philadelphia, and its statement of the record has not been challenged seriously. Since the war began in 1939, the study is probably the best prewar examination of the German system before the Hitler regime consumed everything. It is, of course, a matter of historical fact that the beginnings of social insurance in Germany were made by Bismarck, probably for the purpose of defeating the Socialists by outdoing them in this respect. At any rate, the system was established.

A broad introductory comment by the author is worth quoting, since it applies to the whole idea of social insurance, where Germany's experience was so long and so discouraging:

"Of all the risks in social insurance, only old age, death, and the number of dependents can be exactly established. These are therefore the only cases in which an unobjectionable actuarial basis and an unquestioned legal claim are possible. Everything else is hazy and uncontrollable."

Thus, with an average payment to those receiving old-age or disability insurance of $7 per month, the system also produced a rise in the average number of days of sickness (inability to work) from 5½ to 28 per year. Some of the very human factors contributing to this result are described in the following language:

"The sick insurance provides the workman with medical attendance free of charge, with medicine and other necessities, and with an allowance. Anyone will at first sight consider this as a great blessing for the workmen, as well as for national health. The reality, however, is very different.

"Dread of illness obsesses most people, and this has been pressed into a system 'illness made easy' by which the will to be well is strangled. The doctor is consulted a dozen times where once would be sufficient—the insurance pays. The prescribing of medicine, bandages, etc., is desired. When they have been obtained they lie about until they are no longer fit to be used and must be thrown away—the insurance pays. Besides, it is nice to get something in return for the premiums paid year in and year out. Excessive 'overdoctoring' is the result and fear of illness that shakes the will for recovery, the best aid to health. Pretenders and hypochondriacs are bred and the use of medicine becomes excessive."

As a result, efforts at regulation were naturally made, with the cause and the result of the situation reported in these words, following the comment that the "social budget amounted to 2,100,000,000 marks in 1913, but in 1930 this budget reached 18,000,000,000 marks":

"In the first months of the year the applications for cures to the disability and employees' insurances pour in because many are anxious to take their summer holiday at the expense of the social insurances. Matters soon made an extensive controlling system necessary. This ended in badgering all persons concerned. Patients are visited in their homes by controlling officials who have to convince themselves that the patient is really ill and not doing any work. The patients are therefore allowed certain hours for going out by the doctors.

"The sick insurance engages so-called confidential doctors who have to submit the patient to a final examination to see whether he is too ill to work. The results of such examinations are to a great extent startling. Here is one instance from among thousands: 2,008 patients were ordered to appear for a final examination. Eight hundred sixteen of them at once declared their complete recovery; 289 were found to be well by the confidential doctor. So nearly 50 percent were not ill at all.

"The confidential doctor is, so to say, the medical policeman, who not only controls the patients but also his fellow doctors who are treating them. The genuine patient is justly indignant to find that the existence of his illness is doubted, and that he who has always paid his premiums regularly and has a right to demand conscientious attendance is considered a cheat.

"This system, together with the rest of the bureaucratic apparatus, has wedged itself between doctor and patient, completely destroying the patient's confidence in his physician, which greatly retards all recovery. The sound idea of sick insurance has become thoroughly unsound, and the harm it does far outweighs its advantages."

But here is the net result in terms to be borne clearly in mind when the modest cost estimates are heard for an American Federal social-security system expanded to cover all individual health care:

"Premiums started on a modest basis. The first were 1½ percent for the employee and ¾ percent for the employer. Today, the entire premium averages almost one-fifth (20 percent) of the amount of the wages, and for miners it is nearly 30 percent."

What right or logic is there in any assumption, by anybody, that results in this country would be different, either in cost or in the deterioration of service, should the United States, in a supreme ironical about-face, follow Germany's old example?

And in Great Britain—

It should be remembered that while health insurance was initiated in Great Britain in 1911, under David Lloyd George, with a system of pay-roll taxes to support it, the recent complete socialization of all medical and hospital care in that country discards all pretense of insurance, and makes individual health care something like a government monopoly, which incidentally stopped short only of taking over the Catholic hospitals. While this result may be assumed to be a part of the rapid trend toward state socialism in Britain, it may also be inferred that the first step, compulsory health insurance, leads by natural consequence to the last, government monopoly.

At any rate, some dispatches from London since the new system went into effect are at least informative, and bear a strong family resemblance in their report of what is now going on there to what happened in Germany. For instance, according to the Journal of the American Medical Association's London correspondent, August 14, 1948:

"In their enthusiasm for medical socialism its advocates entirely overlook its drawbacks. In a letter to the Times a physician who has had much experience with it in the panel system shows how much time is wasted. At least one-third of his patients come in for no medical purpose at all. They come for certificates of a great variety or for the repeat of a prescription. Here lies the main difference between panel and private practice and the main reason for so much unnecessary work, which clutters up the office and prevents good work for those needing a physician's care. The private patient, having seen his doctor, can get his prescription repeated as often as necessary by simply going to the pharmacist, but the panel prescription can be dispensed only once. For every fresh bottle the panel patient must visit the physician to obtain a fresh prescription, wasting his own time and the physician's time. It may be asked: 'Why not make a new regulation abolishing the difference?' The answer reveals another drawback of medical socialism. The panel patient gets his medicine free, and with the universal craving for a bottle of medicine of the hypochondriacs of the English masses, the waste which exists under the panel system would be multiplied."

Commenting on this situation, admittedly a disturbing proof of the unfortunately general eagerness to claim too much of anything that is offered without limit, Minister of Health Bevan is quoted as saying:

"Because things are free is no reason why people should abuse their opportunities. This is a very great test of the maturity of the British people, insofar as they have all of the resources of the medical profession at their disposal without charge. The general practitioner has a very great responsibility. Overprescribing can be as bad as underprescribing. Some general practitioners are very conscious of the impressiveness of the long lists of drugs in their prescriptions on the psychology of their patients. We want the general practitioner to prescribe what he believes is necessary, and put nothing in his way. But we want to impress on him that it is not a good thing to evoke merely a psychologic response by prescribing too expensive drugs."

"We want to impress on him?" A stern warning from the Minister of Health, himself not a physician, to all general practitioners, about prescribing "too expensive drugs"? This is indeed government medicine in operation. But, after all, with expenses going up and excessive use of both doctors and drugs recorded, naturally the Minister of Health is concerned at the situation, as well he may be. The reader is inescapably reminded of the pathos of Sir Stafford Cripps' weary restatement of the facts of life to the British unionists, when he pointed out that wages had to come out of production, and that wiping out profits entirely would add only fourpence a week, or some such trifle, to wages.

It is reported that "the rush for spectacles has been so great that it has overtaken productive capacity," and that (this too according to Mr. Bevan) the number of prescriptions of all sorts dispensed has reached a phenomenal level, at a rate twice that under the former national health insurance plan. An annual total of 140,000,000 to 150,000,000 prescriptions was estimated in consequence. The demand for dental care, a comparatively minor item in the health system, it was thought, has reached a cost of over $600,000 a day, or $180,000,000 a year, as compared with the estimated cost of $28,000,000 a year. In brief, all of the estimates, of use and therefore of cost, were far too low. This is the sort of thing which must be taken into account in any reasonable effort, if indeed such an effort can be made reasonably, to estimate the cost of complete individual health care in this country.

Among the resulting complications, entirely aside from the matter of the effect on Government finances, now substantially supported by contributions from this capitalistic land, is the overcrowding of all facilities, with some consequences of the most tragic sort. It is a curious reflection on the operation of a compulsory health-care system in England for 37 years that it did not produce by direct result enough hospital beds, enough doctors or enough dentists for the country. Thus a question anxiously placed before the legal department of the British Medical Journal, according to its issue of November 22, 1947, growing out of the grave shortage of hospital beds after 36 years of compulsory health insurance:

"Question: A. B. is referred by his medical attendant to a particular consultant at a

hospital. A diagnosis of early carcinoma of the stomach is made and confirmed. The patient is advised to have an operation, to which he agrees, and he is put on the waiting list for admission. Presumably the consultant has entered into a contract with the patient and his doctor to carry out the treatment. The patient is not admitted for 6 or even 12 months, and the growth becomes inoperable."

The legal obligations involved are not such; the Journal's expert is said to have advised that any liability results, since "neither the consultant nor the hospital is required to do the impossible." But the patient, it must be assumed, died without the benefit of the surgery which might have saved his life. Perhaps such a case could occur in this country, but the odds are against it. American hospitals, voluntary and tax-supported together, rendered in 1947, 444,288,585 days of patient care, and handled in addition at low or no charge over 40,000,000 out-patient calls, where dangerous conditions calling for further treatment, including surgery, can be caught in time. In this country if a bed is needed for a serious case, the bed is there. This does not appear to be so under the highly socialized British system. So much for government control.

Still, there is something to be said for the National Health Service, compelled, both by the excessive and unnecessary demands which free service always produces and by the same inadequacy of facilities which, under similar handicaps, would certainly appear in this country, to let a cancer patient die when he might have been saved. It has recently been announced that the Ministry of Health, no doubt after consulting both its financial situation and the demands of the public, is issuing an average of 200 utility toupees weekly, at a cost of $40 each. To meet this demand for the toupee as an indispensable health adjunct, 23 wig makers, participating gleefully in the scheme, are working night and day, with an estimated total potential production of approximately 100,000 wigs. That is $4,000,000; and another $400,000 out of the apparently unlimited resources of the national health account (if not unlimited, why this absurdity?) will be devoted to the cost of cleaning wigs for those beneficiaries fortunate enough to have two, since one of these may be cleaned and dressed at government expense every 2 months. Wigs are supplied by the Health Ministry in all sizes and colors, and women are offered five different models.

But people wait until they die for hospital beds, and this, too, is government medicine.

And in New Zealand

In this small and highly-socialized country, with a homogeneous population (except for the remaining native Maoris) which it might be supposed would have a fair chance of avoiding the major difficulties of placing all medical care under Government control, 7 years of experience have shown once more that there are no exceptions to the rule of increased cost due to excessive use of all facilities, and decreasing standards of care. So serious, in fact, have these and related defects in the system become that the Government and the medical profession are earnestly attempting to arrive at some practical revision of the program. Meanwhile, the major problem facing Government and people is indicated by the single simple fact that the tax bill for medical services rose from less than $8,000,000 in 1942 to over $20,000,000 in 1947. The cost of drugs rose from $2,000,000 in 1943 to over $4,000,000 in 1947. Thus the medical-care program contributes a growing share of the social-security budget, which is now one-third of the national budget, and therefore of the total tax load.

Moreover, while reports indicate that many doctors, and not by any means the best or the leaders of the profession, were earning fantastic incomes by vigorous exploitation of the system, both the profession as a whole and the public have found it unsatisfactory. A striking omission from it, also, is that even the excessive cost being experienced does not cover the cost of major surgery, the most serious burden to the average citizen, and the one which he is typically most anxious to cover through some form of insurance. Medical care, hospitalization, and drugs are the items covered.

A chief complaint in New Zealand is related to the fact that while all may resort to the doctor at will, with most (but not all) of the cost covered out of the insurance fund, there is no way of making the doctor stay in his office on holidays, week ends, and at night. This is attributed in part to the fact that there is no incentive for the doctor to work harder or longer because of his own income taxes, as well as to the amount of work forced upon him during the week. The demand for medical services tripled from 1941, when the system was put in force, to 1945, while many doctors were still with the armed forces, and there were not enough at home to meet the demand. When the war was over, with the demand for care still rising, the costs rose to the serious level referred to. Whether the Government will find a solution satisfactory to its financial advisers as well as to the public and the medical and dental professions remains to be seen. Suggestions from the Government to the doctors, in a semiconfidential vein as contrasted with its promises to the public, of reduced care, were properly rejected by the doctors. Recall Mr. Bevin's peevish comment about excessive use of expensive drugs in Great Britain. These systems seem to work the same way everywhere. That is to say, they produce excessive use, a correspondingly serious and unwarranted drain on contributors and the Government finances, and unsatisfactory service.

The present American system shines brightly by comparison with anything they have or have ever had in medical care in Germany, in Great Britain, or in New Zealand.

THE COST OF A FEDERAL SYSTEM

There is literally no way of finding out what the proposed compulsory Federal system for the care of individual health would cost, especially when the inevitable tendency toward excessive demands on the free services promised is considered. Estimates may be made, however, and these of course should be based upon such facts as are available, and not upon sheer optimism or a desire to make the prospective bill seem less than it will probably be.

Even with the health-insurance plan in mind, or perhaps with it especially in mind, the first necessity confronting the Congress is that of framing the legislation under which the coverage of existing social security system will be expanded to take in the groups not now included, among which are the farmers and other self-employed, members of the armed forces, and the employees of nonprofit institutions. This, it is estimated, will produce a total under the system, including dependents, of about 120,000,000 persons, or 85 percent of the population. This is to all intent universal coverage.

At the same time the problem is to be faced, as it must, of making the system meet more nearly, if possible, the broad promise of social security implied in its title, by providing benefits which are not so low as to compel the beneficiary, as at present, to apply for old-age assistance in order to avoid starvation. On this there is no argument whatever, as the facts on the OASI payments now made speak for themselves, and the Federal Security Administrator was very recently quoted to the following effect: "Today the average amount of old-age insurance paid to elderly couples is $39.30 per month. The present scale of payments was fixed in 1939, but since then the cost of living has increased nearly 75 percent, and the cost of food over 100 percent. Today old people who are entirely dependent upon their social-security payments are actually enduring slow starvation."

That estimate of the situation is not exaggerated. It should be added, moreover, that in the case of the elderly couples mentioned, unless both man and wife are over 65, which, of course, is not always the case, the only payment is to the man, and that its average is now around $25 a month. No such amount would have furnished as much as a bare subsistence in 1939, either, so that even then the promise of security under the system was a delusion. The delusion has merely become more evident with the increased cost of living. The whole situation has been recorded in immense and painstaking detail in Issues in Social Security, the report of the Calhoun social-security technical staff to the Committee on Ways and Means, ordered by the Seventy-ninth Congress. None of the facts can be disputed.

This is all emphasized, for the attention which it powerfully demands from Congress, not only because it happens to be true, and because the proposed remedial legislation will heavily increase the individual's and the Nation's tax burden, but because it offers an immediately relevant and striking proof of the failure of Government performance to live up to the glowing promise. Here, as elsewhere in the world, the promise is broad, the performance is meager, and while the costs go up and the burden on the economy increases, the individual is progressively deprived of any chance to protect his own future. Meanwhile the control of Government becomes steadily greater as its provision for its wards becomes more difficult and more expensive.

Figuring the taxes

The present social-security tax of 1 percent each on employer and employee will have to be increased immediately to not less than 1½ percent each, on a base of $4,800 instead of the present $3,000, according to the Social Security Board's own figures. The self-employed, including farmers, may be let off with a tax of only one and one-half times the employee rate, instead of double, as it should be, so that this group would be asked to pay 2¼ percent of income up to $4,800 for the present system, providing only OASI and related benefits.

These taxes, chiefly for retirement benefits, on a grossly inadequate basis even if the proposed 50 percent rise is approved, are estimated to produce over $4,000,000,000 a year instead of the present $2,750,000,000; and they will add to the present $10,000,000,000 reserves in the system about two billions a year, up to the time when payments will exceed income, with the growth of the number of beneficiaries, and the Government will have to pay about one-third of the total out of general taxes to be levied on all alike. The board's own estimates, again, point to an annual cost for the OASI system of five to six billions in 1960, seven to nine billions in 1970, and nine to twelve billions in 1980. It becomes clear, as these figures are considered, that it really makes little difference how the taxes are levied, since all will have to bear them in one way or another, and the so-called reserves are in simple fact only Government obligations, for the payment of which, when cash is needed, the Treasury will have to provide.

Add to this, then, the proposed health-insurance system. The board estimates its cost in the first year at four billions, with an additional two billions should a disability insurance coverage be provided. These estimates appear to be in line with a conservative view of limited use of medical and hospital-care facilities, but not at all with the generally recorded fact of excessive use, when the Government is compelled to make good on its promises of unlimited care and medicines for everybody. In Great Britain, for example, in

spite of the country's experience of 37 years with health insurance, the cost of the Government's operation of all health care was underestimated for the first 3 months alone at the rate of $872,000,000 a year. An equivalent error in similar estimates in this country, on the basis of relative population, would mean over $2,500,000,000 a year; which might matter.

However, taking the estimates as a basis, at least, of the tax which will in the beginning be asked of Congress for health insurance alone, with increased rates later as rising costs force the issue, 1½ percent each for employer and employee will be added to the social-security taxes, and presumably, for the self-employed another 2¼ percent, all applying to pay or self-earned income up to $4,800. Thus for the farmer who can be shown to have netted that amount, and there are a good many of them, there will be a gross income tax, in addition to all other taxes, of $216 a year—at the beginning. At the higher rates which will almost certainly become necessary as time goes on, the tax will be proportionately higher.

Thus at the very least and lowest, and without taking into account the depressing indications, in the experience of other countries, that health-insurance cost will be double or triple the highly conservative estimates, the Social Security Board itself believes that taxes will have to be levied annually for its operations, in addition to all other taxes, to the amount of not less than $8,000,000,000, with $2,000,000,000 more for disability insurance. That makes $10,000,000,000.

The Congress is to be faced immediately, aside from all this, with the tax and other problems related to a general budget of $45,000,000,000 or thereabouts. The tax bill which will be drawn to meet that enormous sum, without repeating the dangerous resort to deficit financing, will necessarily rely chiefly upon individual and corporate income taxes. These taxes, burdensome as they are when raised to the levels designed to meet such vast budget figures, will receive the most earnest scrutiny from Government experts, including Members of Congress, concerned both for their effect upon the general economy, especially upon industrial productivity and employment, and their impact upon the individual taxpayer.

With the country's now extensive experience in meeting enormous Federal governmental costs at least in part by taxes—the debt of $250,000,000,000 has accumulated in addition to taxes and remains as a continuous threat—realization has become general that there are no new sources of revenue. The only source of revenue is the American citizen. He pays and will continue to pay the entire bill, in his daily expenses, in his production, in the effect upon his and his family's standards of living and their arrangements for the future, as well as in direct taxes.

He has been paying in direct taxes for social-security purposes his half of the current take of $2,750,000,000. Under the new plans for the expansion of the system, not including health insurance, he will be asked to pay half of the increased levy of $4,000,000,000; and yet the payments to the OASI beneficiaries, it must be remembered, will remain so small (50 percent over the present average would be $37.50 a month) as still to force the lucky recipients to accept old-age assistance or stop eating.

Then ask him to pay half of an assessment of another four billions for health insurance, whether he wants it or not, and whether he needs it or not; and still another two billions for disability insurance. Ask him.

There is no need to doubt that many of the proponents of the idea of the Federal Government assuming full charge of individual health care, as of individual security in old age, mean well. But to mean well is not enough, if the results should be disastrous in terms of promises not kept, of the encouragement of abuse of medical facilities, the degeneration and discouragement of the profession of healing, and rising taxes and Government debt. Even the supporters of the Federal plan estimate an eventual cost for the program of somewhere between 15 and 20 percent of pay rolls. (Readings in Social Security, Cohen & Haber.) The Congress will have to bear all this in mind in attempting to decide wisely whether to embark upon a course so radical, so costly in both money and in the human factors involved, and so unlikely to accomplish the desired results, if experience both in this country and elsewhere means anything at all.

SUMMARY

The reasons advanced in favor of expanding the social-security system, admittedly a failure in its operation up to now, to cover individual health care, are not sufficient to warrant the serious risks involved.

Government plans for individual health care in other countries have produced uncontrollably excessive demands upon doctors, hospitals and auxiliary services, without any possibility of reasonable check once the deterrent of individual cost has been removed, and with resulting excessive cost to the insurance fund and to government.

Medical, hospital and related individual health services in this country are now the best in the world, under a system which has developed according to the best traditions of the American character; and these services are available to the vast majority of the people, at charges they can pay with or without the increasing scope of voluntary prepayment plans, or without charge. Government may assist, but should not be permitted to destroy, this magnificent system.

Something must be said, in addition to all of the above, of the destruction of traditional liberty which is directly and unavoidably involved in the plan to bring individual health care under government control by compulsory legislation. There is a point at which the right and the duty of government to legislate, even for the general welfare, conflicts with the right of the citizen to be let alone. "Stop" signs are necessary on the public highways; but no citizen would permit them to be placed by government on his private road.

The parallel alleged between compulsory health insurance and compulsory school attendance is not accurate. School attendance is required of children, not adults; and it exists only under State law, not under Federal law. When every citizen is required not merely to submit to heavy deductions from his pay for Federal health insurance, but to call upon his doctor and his dentist on such dates as may be fixed by the Federal authority, the parallel will be complete, and the compulsory system will have developed to its logical conclusion. Such compulsion as to visits for medical and dental examinations is in fact the only possible way in which the results promised may even hope to be achieved. Will Congress go this far?

Under the still free American system, education of the individual to the desirability of proper professional advice on health matters, so that he may himself voluntarily take advantage of the available facilities, including prepayment for health care, is the only sound and practical and acceptable method.

Liberty is still the dearest possession of the American. Liberty always implies responsibility; and the exercise of responsibility develops ability to meet it, in every aspect of existence, including the care of one's health. The alternative of destroying personal and professional liberty is the alternative of the paternalistic and collectivist State. It is unacceptable to the traditions and the spirit of a free people. It should not be imposed for the purpose of taking over the control of individual health care or for any other purpose.

The Hoover Commission

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. REED of New York. Mr. Speaker, it is with pleasure that I introduce as a part of my remarks under unanimous consent heretofore granted an address delivered by Dr. Robert L. Johnson, chairman of the Citizens Committee for Reorganization of the Executive Branch of the Government, before the Massachusetts Federation of Taxpayers Associations, Inc., at Boston, May 7, 1949.

I am glad to see that the citizens of this country are becoming aroused over the delay in taking legislative steps to carry out the recommendations for greater efficiency and greater economy in the Federal Government, as recommended by our former President, Herbert Hoover. I commend the reading of Dr. Johnson's address to all who are interested in the great work of the Hoover Commission on Reorganization of the Executive Branch of the Government.

We are meeting today to honor the work of the Commission on Organization of the Executive Branch of the Government and its chairman, former President Herbert Hoover.

There is something to ponder in the fact that your federation, meeting here in Boston, should have chosen this theme at this time.

Certainly there are tides in the affairs of men and these tides have often broken first on the shores of New England. The destiny of a new Nation was shaped here, in no small part, by men whose nearby monuments remind us of a great heritage.

To do justice to the memory of men like Samuel Adams, Paul Revere, and Hancock we need to remember some of their greatest qualities. No matter how they differed individually, the colonial patriots united freely in their resistance to tyranny. They faced facts without fear. And they always looked a new idea squarely in the eye.

Ever since those early days Americans everywhere have shown that they will unite in a crisis, meet facts head-on, and look to the future together.

Today we face the danger of a new tyranny. It is not the tyranny of a greedy and stupid monarch 3,000 miles away. It is a more dangerous tyranny of our own making.

To face it is the task of tough-minded citizens whose sense of the future is strong.

Something of this sort must have been in the mind of your distinguished Senator LODGE when, in July 1947, he sponsored the measure which brought the Hoover Commission into being. It is notable that in these times of quarrels and dissensions the action of the Congress in creating the Commission was unanimous.

It is also notable and gratifying that here in Massachusetts there has been founded a bipartisan commission, similar to the national commission, under the chairmanship of a former Democratic Governor, Joseph B. Ely.

I like to think of the Lodge-Brown Act as "An act to give the American people one more chance to master their Government before they become its slaves." Under this act, the Commission's assignment was to find ways of limiting Government expenditures to essentials, by eliminating duplication and overlapping of services. I like

to think of that assignment as "the construction of a guidepost on the road to freedom."

Destiny placed us on that road originally and destiny may have had a hand in the unanimous congressional approval of the act and in the appointment of six Democrats and six Republicans as members of the commission. Destiny, inspiration, or both may have moved Speaker JOE MARTIN of Massachusetts to choose Mr. Hoover as a member and President Truman to propose him as chairman with Dean Acheson, now Secretary of State, as vice chairman.

After that it seemed for a time as though destiny had forgotten this particular bit of handiwork. For many months thereafter the commission was inconspicuous. It was busy, however, in organizing its research.

You will recall that some 25 major problems of government were selected for study. Research committees, called task forces, were appointed to get to the bottom of each problem. Some 300 task force members, specialists all, worked from 10 to 14 months, gathering facts, analyzing figures, delving into history, and preparing voluminous reports. The contribution made by Massachusetts to the expert personnel of these task forces was unusually large.

The task forces finally presented their reports to the Commission which, in turn, set about fashioning its own report to the Congress.

The task force reports alone totaled over 2,000,000 words of concentrated fact and thought—by far the most monumental work of government research in all history. For some months the Commission met as often as three days a week in almost complete obscurity. There must have been times when they felt as lonely as the little band of men who met long ago to frame an unheard-of document called the Constitution of the United States.

There must have been times, too, when the Commissioners felt more like the little girl to whom Mr. Hoover referred in a recent talk. This little girl had expressed an interest in penguins to an elderly friend who thereupon sent her a book on the subject. At a much later date she duly acknowledged the gift.

"Thank you for the book about penguins," she said. "It tells more about penguins than I really want to know."

Nevertheless, the Commission hewed hard to its task. In this the members had an excellent example. Mr. Hoover, a lifelong enemy of idleness, worked throughout that period at a pace that would have exhausted most men half his age. He presided at all meetings and throughout each day, including week ends; he devoted 10, 12, and even 14 hours to shaping the reports into what he called an orderly pattern of government.

On February 7, 1949, the Commission sent the first section of its official report to Congress. In 17 subsequent sections it unfolded a complete blueprint for lasting good government.

Somewhere deep down in the hearts of the American people a responsive chord was struck. As news of the report went forth, it captured public and editorial attention to a degree never before achieved by anything so drab as a report on Government reorganization.

Mind you, men have been trying to reorganize the executive branch since the days of Andrew Jackson. The first full-length report on the subject was filed during the Taft administration, when most of us were still in grade school.

But the Hoover report was news. It was big. It was different. And why did it arouse so much interest? I believe that we, as a people, have been growing uneasy about our Government. We are baffled by its complexity, frightened by its size and cost. The Hoover report offers us a chance to examine it in Town Hall terms.

A free people must have confidence in their government, after all, if they intend to stay free. And they can have confidence only in a government which they can understand and afford to support.

Now there would have been no reassurance in the diagnosis provided by the Hoover report had there been no prescription for a cure. The diagnosis, stated clinically without a trace of emotion, is one of advanced galloping bureaucracy. The facts speak for themselves.

Fact 1. We have big Government. We have willed it so. How big is it? In 20 years of depression, war, crisis, and cold war its cost has risen from $4,000,000,000 to $42,000,000,000, its total civilian employment from 600,000 to 2,100,000, to say nothing of a military force of over 1,000,000.

Fact 2. Big Government reaches deep into our pockets, takes one dollar in five of the national income. Its debt amounts to a mortgage of about $7,000 on every family in America. This is not fictional. This is our promise to pay.

Fact 3. Big Government, as we have it, is a universally acknowledged mess. No one in or out of Government would dream of defending as an organization the unholy hodgepodge of 1,812 departments, agencies, boards, and bureaus which comprise the executive branch.

Fact 4. The executive branch lays a perfectly intolerable burden on the Executive. In no well-run business, university, labor union, or other enterprise would more than a handful of executives report directly to the presiding officer. But in Government, 65 heads of agencies, some of them bigger than General Motors, report directly to the President. If he were to give but 1 hour a week to each one, he would have no time left for matters of broad policy and affairs of state.

Fact 5. In operation, the executive branch ignores the simplest principles of good management. Any private business or household would go broke overnight if run on Government lines. There is lack of executive authority and responsibility everywhere. Thousands of people are hired by personnel people they have never seen, to work under frustrating conditions for people they have never seen. All this takes place in a haze of pointless red-tape paperwork. Budgeting is a series of mathematical mysteries which usually tell what things the money will buy but rarely what purpose they will serve. Accounting sometimes lags years behind expenditures and is neither assembled in terms of complete costs nor reveals results in terms of performance.

These are a few, a very few, of the basic findings of the Hoover Commission and its task forces. You will note that in reciting them I have made little attempt at interpretation nor have I referred to the remedies.

And now, what remedies are prescribed and what savings can be made? In essence, the the report recommends just what you would expect—the application of the simple principles of good management. But these are spelled out in detail, department by department, and function by function. Suffice it to say that the Commission's recommendations, taken together, make a glorious amount of simple common sense.

As to potential savings, the Commission itself refrained from making an estimate, so great are the variables when projected very far into the future. Mr. Hoover has personally expressed belief that at least $3,000,000,000 a year could be saved without damage to essential services. This is based on some of the estimates of the task forces and I feel sure that it errs on the conservative side. An estimate of $4,000,000,000 might be closer to the truth, if reorganization is vigorously prosecuted.

Moreover, the biggest savings are the ones we cannot estimate. Suppose we simply succeed in stopping the constantly-climbing curve of Government cost? You can't put a price tag on the saving because you can't tell how much more might have been spent.

Suppose we create the conditions of opportunity and reward, under which good Government workers get a better chance to do a job, instead of just hold a job? You can't begin to guess the cash results. But you know that the answer must be stated in billions.

At any rate, $4,000,000,000 is 10 percent of the tax bill. When do we start saving that? The answer isn't wholly encouraging and it comes in two parts:

1. Reorganization will take time, thought, work, and determination. It calls for extensive legislation. To be sure, much can be accomplished by administrative orders—but only if Congress gives the President the authority he asks in the pending Reorganization Act of 1949. Even that would be only a beginning. Large bodies of law surround every major activity of Government. A score of major bills must be passed, after hearings and debate, before real reforms can be accomplished in the armed services, the Post Office, the State Department, and so forth.

2. Reorganization faces many obstacles—mechanical, procedural, and human—and of these the greatest is human. Resistance to change is not a monopoly of government. It is natural to defend what you are doing. This results, however, in what might be called the "Yes—But" psychology of government. "Yes," says this department head or that agency chief, "I believe heartily in reorganization. * * * But reorganize the other fellow—not me." This, in turn, results in pressures on Congress for exemptions here and exceptions there in reorganization laws. These are what Mr. Hoover has termed the little "grasshopper bites" which have doomed one reorganization plan after another.

Now the Hoover Commission will cease officially to exist on June 12. Obviously reorganization will face hard going after that, unless it is given continuous public encouragement and support.

Hence today we have the Citizens Committee for Reorganization of the Executive Branch of the Government, of which I have the honor, one I feel more deeply than I can say, to be chairman.

The Committee is, of course, nonpartisan and seeks no profit. It is a temporary organization and its aims are primarily educational. Perhaps we are naive but we believe that the most direct means to effective action is through an informed public.

President Truman views it this way. In a recent letter he told me of his disappointment at the reception of certain reorganization plans which he (like other Presidents before him) had proposed.

"Unless some educational program is put on by those interested in efficient government," the President warned with respect to the present plan, "we shall have the same results."

Since the President's letter was received, I am glad to say, many of America's foremost leaders in every walk of life have joined the citizens committee. I wish time permitted me to name a tenth of them. They are the national heads of organizations representing agriculture, business, the churches, education, labor, the professions, the veterans, the women's groups, and, in fact, every major force in the national community. They include many who have served with distinction in public life, among them former Vice Presidents, Cabinet Officers, Members of Senate and House, Governors of States, and many others representing both political parties.

Such unanimity is practically unprecedented. Isn't it just about the most heart-

ening thing that has happened in America in years? How shall we account for it?

First of all, I believe the need for interpretation of the Hoover Commission report in all of its true meaning is widely realized. Let me repeat that. We want to understand the Report in its true meaning.

The facts are clear enough. For example:

Do you realize it costs the Post Office 2½ cents to print and deliver a penny post card?

Is it not absurd that the paper work on 1,500,000 purchase orders each year costs more than $10 per order? And, by the way, half the purchases are for items costing less than $10.

Do you realize that thousands of tons of obsolete, useless records and documents are kept in steel cabinets on costly office floors at maintenance charges of $29 a year, when they might be stored in cardboard containers in warehouses at $2.15 a year?

Is it not ridiculous that 47 Federal agents representing 7 different agricultural field services should be devoted to the service of 1,500 farmers in a single county in Georgia?

Is it not fantastic that the Army should request budget funds for 829,000 tropical uniforms at $129 apiece—to say nothing of 910 houses for military personnel in Alaska at $58,000 apiece?

Is it not more than absurd that the Government should pay interest on its own money—which is just what happens when Government corporations invest their surplus funds in Government securities?

Is it not distressing to note that veterans' insurance death claims take four times as long to be paid as private insurance claims? Yet, the Veterans' Administration employs four times as many insurance workers per policy as do private companies.

These are a handful of governmental absurdities, little and big, selected from hundreds of examples. They are disturbing, but I think you will agree with me it is startling that two different agencies can survey construction sites for dams half a mile apart on the same river—at a cost of around $250,000 per survey—and come up with estimated costs that are $75,000,000 apart. It is fantastic that the cost of a reservoir should be estimated at $44,000,000 in 1 year and only a few years later at $132,000,000. It is appalling that only 4 percent of the $1,250,000,000 which the Government now spends for medical services should be devoted to research when medical science stands at the threshold of so many new conquests of disease; if we spent more for research we might never need the vast veterans' hospital construction program which threatens to overtax the Nation's short supply of physicians and nurses.

These, too, are random examples of the larger absurdities of government. I am sure you set the same high value that I do on executive judgment and ability. To me the highest caliber of personnel is needed to staff a government whose activities can have such vital effect on our daily lives—and on the destiny of the whole Nation. Government decisions touch every area of civilized life from animal husbandry to atomic energy. To me, therefore, it is alarming that sheer administrative chaos should so burden Government executives, from the President on down, that wise and thoughtful decisions on matters of the highest importance are difficult to make. It is a shame that Government work is so unrewarding and frustrating that good men are hard to get for posts of vital importance to the national safety, health, and welfare. It is disturbing that 45 out of the sixty-odd top agencies of the executive branch today engage in operations affecting foreign policy and that communications among them are so confused that the President and the State Department must sometimes make decisions of the gravest nature without adequate information. It is actually frightening that the armed services should be split by dissension and threatened by rule of a military clique; that the Army, Navy, and Air Force which together spend $15,000,000,000 a year—one-third of the total Federal budget—should demand twice ($30,000,000,000) as much while wasting at least $1,000,000,000 a year.

Again those are just a few of the most disturbing results of lack of organization. Consider that last one more closely. The Nation is undertaking for the first time to maintain large standing military forces in peacetime. This means a great drain on our resources, financial, material, and human. Too great a drain may render us unfit to defend ourselves against the very forces, at home and abroad, which seek our downfall. Here is what the task force on national security said about that:

"Victory by bankruptcy may be the Machiavellian aim of the Kremlin. Burdens such as we are now bearing, if substantially increased, might become intolerable. The premium upon economy, therefore, becomes higher than ever before in our history; it may be said that our national security depends on it."

Need I remind you that this task force report was signed by nearly all the foremost figures of World War II, military, industrial, and political? I believe this brings us closer to one of the true meanings of the Hoover report.

No wonder Americans are uniting, facing facts, and greeting Government reorganization as an immediate necessity to safeguard our future. We are government and government is part of us. Today we are all taxpayers, for taxes not only affect our income, they enter heavily into the cost of the things we buy and build. And it is not as taxpayers, finally—nor as businessmen, educators, farmers, or trade unionists—but as citizens, that we will die in a war or live in peace, suffer in an economic collapse or prosper in a role of constructive world leadership.

We are learning, I believe, that taxes are not derived from static wealth. They are taken from income which in turn derives from production. All the things we want and need come primarily from this source—not only Government services and military protection but schools, hospitals, universities, libraries, museums, and all the things we value.

When taxation reaches the saturation point, production falls and with it our living standards. Perhaps we are learning, too, that free peoples all through history have yielded their freedoms when bureaucracy overwhelms them economically. This is not necessarily because of any plot or plan. It rarely happens suddenly. But we can drift into slavery if we fail to swim against the tide.

It is in the light of these thoughts that I ask you to view the Hoover Commission report and to support the educational program of the Citizens' Committee. We face alternatives. One way lies orderly government, productivity, and the successful discharge of huge new world obligations incurred in behalf of peace and freedom. The other way points to the bleak fate of the wastrel.

And I ask you finally, Can we long stand before the world as a symbol of democracy and successful self-government if we cannot properly manage our own affairs?

That is the challenge. We meet in the twilight of the Hoover Commission's official existence. A great and precious document has been given into our hands, not for respectful safekeeping, not for future reference, not for the academic adulation of scholars yet unborn, but for action—now.

If this document dies in the dusty pigeonholes of Washington, the America we know may well die with it. And its passing will then be recorded by gleeful totalitarians dipping deep into the ink which has recorded the downfall of more than one big, rich, foolish nation.

We as a people have been free because we have been willing to think. Let us think now, and think well. Let us think how best to build for the future. Let us think how best to govern ourselves.

I invite you, therefore, to a vast, national, continuing town meeting in the New England tradition. I invite you to hard, unsparing thought and study. I invite you, moreover, to a good, rousing fight. I invite you to a struggle against indifference. I invite you to a modern revolution against entrenched complacency. I invite you to an all-fired, tough, determined battle against waste and mismanagement wherever they occur.

In this battle there will be "summer patriots and sunshine soldiers." There will be defeatists to remind us that past efforts at Government reorganization have met with scant success. The "yes-buts" will have their day. But over them all there will finally arise a chorus of "ayes" announcing a national determination to have and keep a pattern of lasting good government.

Victor Hugo once said: "The only thing greater than armies is an idea whose time has come." We face now an opportunity, which may well be our last, to revitalize our heritage.

We are in this to win. With your help and that—first of thousands, then of millions—of good citizens in every walk of life throughout America, we will win

Newspapers—And Government

EXTENSION OF REMARKS

OF

HON. JOHN KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. KEE. Mr. Speaker, the question of readjusting second-class postal rates is agitating the press. I notice that the newspapers of my State are concerned for fear that excessive rates will result in losses and even suspension of publication. The fact that the press performs a valuable public service in informing the people on matters of government is urged as a reason for keeping newspaper-mail rates moderate. A thoughtful editorial on this line appears in the Williamson Daily News, of my State, from the pen of Editor Earl L. Sampson. Under the permission granted me to extend my remarks I include this editorial, as follows:

NEWSPAPERS—AND GOVERNMENT

A famous American once made this rather striking statement: "Were it left to me to decide whether we should have a government without newspapers, or newspapers without a government, I should not hesitate a moment to prefer the latter." That was the voice of democracy speaking; in fact, that at one time, was the voice of the Democratic Party. For the man who spoke these words was Thomas Jefferson, called the founder of the Democratic Party in principle.

The newspaper is more than just sheets of paper upon which words are printed; the newspaper is an emblem of freedom—a daily exponent of the amendment to the Constitution which so many quote so glibly: "Congress shall make no law * * * abridging the freedom of speech or of the press."

By and large, the newspapers of America are not propaganda sheets. There may be a few organs dedicated to the proposition of furthering their own selfish interests, but these are few. The vast majority of newspapers of this country are concerned with the well-being of their communities, their States and their Nation, regardless of self-interests, or of politics. So, with newspapers such a vital part of the life of the American citizen, we are concerned with the proposal of the Postmaster General in asking for increases in postal rates which could conceivably imperil the publishing and distribution of many newspapers now reaching subscribers regularly.

Newspapers do not ask subsidy—do not want subsidy; but, if and when increased postal rates go into effect, the cost of the newspaper must necessarily go up, else many small papers may be forced to cease publication. Therefore, it stands to reason that perhaps only the larger papers will be able to exist, thereby concentrating the power of the press in fewer, more powerful hands, and depriving the rural and small-town readers of their daily, and, or weekly paper. Such a move would defeat the very purpose of the Post Office Department in its attempt to overcome its operating deficit by hiking mail rates on newspapers. It would be much better to consider the newspaper for what it really is: one of the key pillars in the temple of democracy—an integral and potent part of Government, although all risk and venture is private and it is paving its own way.

We suggest that instead of raising rates, a thorough study be made into the existing cost of administration and operation of the Department, and our closing thought is to refer the reader to the opening paragraph of this comment.

President Truman Misleads the Public

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. REED of New York. Mr. Speaker, under a unanimous consent heretofore granted I am inserting an article by David Lawrence which appeared in the Washington Star, May 16, 1949, as follows:

MISLEADING OF PUBLIC BY PRESIDENT OVER DEBT REDUCTION SEEN—USE OF IDLE BALANCES STORED FOR WAR USE HELD CAUSE OF CUTS

(By David Lawrence)

President Truman is still the politician in the White House—he considers it proper to mislead the public on certain facts in order to make a political boast.

Thus, Mr. Truman told his press conference that he had retired more debt than any other President in the history of the United States. He said he had retired about $26,000,000,000, which is more than the total national debt after World War I.

But the facts are that when the war ended, the balances which had been developed by a war loan drive that proved unnecessary were almost immediately paid back to the borrowers. This amounted to $20,000,000,000. In the book issued last month by the Committee on Debt Policy—a group of eminent economists—the following explanation is given about debt retirement to date:

"From the peak of $279,000,000,000 reached in February 1946, the total debt by April 1948 had been reduced to $252,000,000,000, or a decrease of $27,000,000,000 over a period of 26 months. The debt then remained almost the same for the rest of 1948.

REDUCED TWENTY BILLION IN '46

"Of this debt reduction, $20,000,000,000 occurred in 1946 and represented largely the use of excess Treasury balances built up by the victory loan in late 1945.

"Contrasted with 1946, the debt retirement in 1947 and the early part of 1948, amounting to $7,000,000,000, was financed by an excess of receipts over expenditures in the Federal budget."

The Republican Congress was in charge of the purse strings in 1947 and 1948.

The President gave his listeners the impression that he had done something which no other President was able to accomplish. Actually, however, the use of idle balances stored up for war purposes was not an excess of receipts over expenditures in the usual sense. So it is amazing to find Mr. Truman claiming credit for the removal of these balances as a political achievement.

The President might have gone further and claimed credit for having raised the money when, in truth, patriotic citizens of both political parties participated in the victory-loan drive.

QUESTIONED ON DEFICIT

In the same press conference at which Mr. Truman boasted of his achievements in reducing the debt, he was asked why he supposed that "those people who were worried about a deficit 10 years ago are the least worried about it now." He answered that he didn't have any idea but it would be an interesting psychological study.

Now the facts are that the people who worried about deficit financing 10 years ago are still worried about it today. All the Democratic leaders of Congress who have expressed themselves, including Senator GEORGE, of Georgia, and Representative DOUGHTON, of North Carolina, have said that, of all the alternatives available, deficit financing would be the worst.

Businessmen generally feel the same way. What was misinterpreted in the President's presence was the attitude of most business people toward increased taxes. The question which should have been asked was why those people who were against deficit financing 10 years ago and are against it now are opposed to an increase in taxes.

The simple answer is that there is a better alternative available—and that's reduction of expenses, but this, of course, is unpalatable to a spending administration which has requested from Congress the highest Federal budget in all peacetime history. It has also asked for authorization of projects that could conceivably mean even bigger budgets annually hereafter. If expenses are reduced, there will be no deficit to finance, so the question could be academic.

Election Mandates

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include this editorial from the Wisconsin State Journal of Madison, Wis.:

LABOR FACTS, LEST WE FORGET

Roscoe Drummond, the distinguished and competent Washington correspondent for the Christian Science Monitor, has an unusual knack for putting his finger on oft-forgotten facts at a time when those facts should not be hidden by the dust of battle.

In the light of the battle in the House of Representatives over disposition of the Nation's basic labor law, these comments by Mr. Drummond are very much to the point:

"It should not be overlooked," writes Correspondent Drummond, "that a Congress was elected as well as a President, and that in many instances the Congressmen were elected by majorities as large or larger than Mr. Truman's.

"And it should not be overlooked that a majority of the present Members of the House of Representatives voted in favor of the Taft-Hartley Act in the Eightieth Congress and were reelected last November either because of their voting record or despite it.

"A third factor in appraising this election-mandate business is that while President Truman was always very clear in his opposition to the Taft-Hartley law, he was always pretty vague as to what he proposed to put in its place."

Mr. Drummond states the case quite well, and at the right time.

Booms and Busts—Inflation by Legislation—the Farmers and Miners Have Been Selected as the Sacrificial Goats in the Present Price Decline

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. SANBORN. Mr. Speaker, booms and busts are not the fault of free enterprise or American capitalism, as the Communists, fellow travelers, One-Worlders, and pseudo "Liberals" would have you believe, but are the direct result of unsound monetary and fiscal policies of government.

Not by accident, but by design—by the enactment of "must" legislation sent to the Congress in 1945—were prices skyrocketing and strikes generated in 1946.

The Gold Reserve Act of 1934—Public Law 87—depreciated the dollar 41 percent and give us, in effect, a 59-cent dollar.

Public Law 84, enacted in 1945, brought about a 37½-percent depreciation in the already depreciated dollar, giving us, in effect, a 37-cent dollar, thereby causing commodity prices to advance 60 percent. It was the enactment of this law which started the vicious cycle of rising prices and the resultant demand for higher wages.

Public Law 84 of 1945 is probably the most vicious piece of legislation ever placed on our statute books because it not only reduced monetary reserves from 40 to 25 percent but because it left the door wide open for further reduction of reserves, even below the danger point of 21 percent, which precipitated the 1929 depression.

Probably the greatest danger to our economy lies in the fact that the price of our gold was not advanced to $56 per ounce to compensate for this dollar depreciation, for, by permitting foreign na-

tions to buy our gold at $35 per ounce when, based on the value of the dollar, it should be $56 per ounce, foreign currencies are overvalued 60 percent, which means we are subsidizing imports 60 percent and discounting exports 37½ percent.

DOUBLE-TALK AND MARXIST JARGON

Pseudo-economists of the administration have hailed the recent decline in farm prices and in other raw materials as a healthy sign of stabilization when just exactly the reverse is true; for so long as the value of the dollar stays down where it is, any reduction in the prices of raw materials comes out of the pockets of the farmers and miners.

That the value of the dollar is down, even lower than the 37 percent referred to above, is evidenced by its position in foreign exchange. On page A-2718 of the May 5, 1949, issue of the CONGRESSIONAL RECORD, I quoted the Wall Street Journal of September 16, 1948, to prove that our present dollar is worth only one-third of our pre-1934 dollar. In this quote you will note that on that date an American $20 gold piece would buy 26,200 francs, or 1,310 francs to the dollar; whereas our 1948 dollar would buy only 440 francs. In other words, our pre-1934 dollar, which was redeemable in gold, would buy three times as many francs as our present dollar, which is not redeemable.

Lest you are tempted to think this was an isolated occurrence, I am inserting an article from the Wall Street Journal of May 7, 1949—just a few days ago—which shows that the same ratio of approximately 3 to 1 still exists between our dollar, which was redeemable in gold, and our present irredeemable dollar—the only difference being that our dollar will buy less francs than it would seven short months ago.

[From the Wall Street Journal of May 7, 1949]

NEW FOREIGN CURRENCY, GOLD RUSH IN PARIS SENDS PRICES OF COINS, BARS, AND PAPER MONEYS UP SHARPLY

PARIS.—Another rush for gold and foreign currencies got under way yesterday.

It carried the price of bars, coins, and foreign paper moneys in the black market to the highest levels since the end of March.

The 2.2 pound gold bar jumped to 607,000 francs despite Government intervention in the market to arrest the upward surge.

On Thursday the price was 571,000 francs, while at mid-April it had been as low as 542,000 francs.

The American $20 gold piece brought 20,520 francs, compared with Thursday's price of 19,400 and a figure 2 weeks ago of 18,300 francs.

BLACK MARKET DOLLAR

In the black market the American paper dollar brought 372 francs, up 22 from Thursday and 30 francs from mid-April.

The "free" franc rate on the Government-controlled market on the Bourse remained unchanged at 328.8 to the dollar.

The British pound at 1,100 francs was up 20 francs, and 40 francs higher compared with a couple of weeks ago.

At the end of March the 2.2 pound gold bar brought 605,000 francs; the $20 gold piece 20,700 francs; the paper dollar 375 francs and the British pound 1,125 francs.

Precipitating the new demand for gold and foreign currencies has been a fresh wave of social unrest coupled with an unfavorable budget outlook.

BIG DEFICIT SEEN

A deficit of at least a hundred billion francs is forecast for 1949, unless energetic Government action can cut expenditures and restore the equilibrium of the nationalized railroads and gas industry. The railroad and gas industries are expected to show a 50,000,000,000 franc loss.

The sudden reversal in the value of the franc in terms of gold and foreign currencies contrasts with a movement earlier this year which had carried it steadily forward to higher values in terms of gold and foreign currencies.

This reflected a steady drop in agricultural prices and growing supply of goods for public consumption.

It cut the gold and dollar terms for the franc from more than 800,000 francs for the gold bar in mid-January to the April low of around 540,000. In the same period, the paper dollar dropped in terms of the franc from 507 to 342.

With our present dollar worth only one-third as much as our pre-1934 dollar, this means that the present price of $2 per bushel for wheat is equivalent to only 66⅔ cents 15 years ago. The farmers and miners should thoughtfully ponder these facts.

And labor, which was tricked into supporting New Deal monetary and fiscal policies with promises of increased wages and social gains, should carefully appraise the situation. For example, just how much better off are the Ford employees today than they were 30 years ago when Henry Ford gave them a minimum wage of $5 per day?

INCOME OF ALL AMERICANS AFFECTED BY THE INCOME FROM AGRICULTURE AND MINING

This dangerous situation is not only the concern of the farmer and the miner, it is the concern of all the American people because agriculture and mining form the arch which supports our entire domestic economy. Agriculture's income, including lumber, is always one-seventh of our national income; and every dollar loss to agriculture means a reduction of $7 in our national income. That follows just as surely as night follows day.

Under normal conditions, the income from our mines, including oil and coal, is always one-half of agriculture's income and one-fourteenth of the national income; but because of unsound governmental policies, which favor foreign mineral production over domestic production, our percentage of mining income is considerably below normal.

My bill, H. R. 2573, would add a minimum of $2,000,000,000 to mining income, thereby adding $28,000,000,000 to our national income. In the process, thousands of men would be employed at good wages in newly created productive jobs; and new markets for farm products, machinery, and other supplies would be created. Rather than costing the American people anything, it would reduce the cost of production of such essentials in our economy as lead, copper, and zinc, thereby benefiting the mine operator, the manufacturer, and the ultimate consumer.

PIE IN THE SKY BY-AND-BY

But then I presume we should not worry, for Mr. Brannan has submitted a plan whereby all of us—farmers and city dwellers alike—will have pie in the sky by-and-by. We are to have high prices for farm products and low food prices for city dwellers. It is all so very simple. All we will have to do is tax all people to subsidize the producers of food—a mere bagatelle of some $8,000,000,000.

Where are you going to get the money, gentlemen? Probably from the same source as other New Deal spending, whereby 63 percent of the people's savings, pensions, and life insurance have been filched from them. I am surprised that the 75,000,000 people who carry life insurance to protect themselves and their families have accepted this situation so docilely.

If the farmers and laborers have confidence in Mr. Brannan's scheme, they are gullible, indeed, for when the United States goes into that economic tailspin toward which we are heading, and which will be 10 times as disastrous as that of 1929, because we have 10 times as far to fall, who is going to pay the taxes with which to pay the subsidies, the unemployment insurance, the other forms of social security? The Government can give the people nothing that it does not first take away from them in taxes.

FOLLY OF FREE TRADE—HOW TO AVERT DISASTER

There is a real way to prevent disaster. That is by adopting a sound monetary system and restoring the protective tariff. Under the destructive policy of free trade, American capital is financing industries in other countries where the products of low-priced labor can flood the American market. But American labor is not so fortunate. They will have to sit idly by in the shadow of empty smokestacks. However, American investors in foreign factories are not nearly so smart as they think they are. They cannot have their cake and eat it, too; for while they temporarily reap huge profits and evade the payment of United States taxes, they will eventually destroy the American market by causing widespread unemployment in the United States; and when the American people realize what is being done to their economy, they will demand that tariffs be restored; and many of the foreign factories, built with American dollars to flood our market with slave-labor goods, will be abandoned to become monuments to greed and folly.

THE AMERICAN MARKET IS THE BEST MARKET IN THE WORLD

With only 6 percent of the world's population and 6 percent of the world's land area, we produce and consume more goods than 1,000,000,000 people residing in Russia and the Orient. Why? Because of our system of government; our free competitive enterprise; our freedom of opportunity for the individual; and the fact that we had sense enough—until recently—to protect our market, our labor, and our industry from the competition of slave labor throughout the world.

It was this system which created our pool of purchasing power—a people's capitalism, if you please—which financed our business and industry, and made mass production possible, because mass

production is possible only where the people have the means for mass consumption.

Why should we not protect this market? We took it from no one. We created it ourselves. The other 94 percent of the world's people have 94 percent of the world's land area in which to create sound economies of their own.

If the people of other lands persist in following strange isms and ideologies which, wherever tried, have succeeded only in slowing up production and increasing the misery of their people, should the American people be penalized for the folly of others?

Yet we have among us those who would have us follow the same destructive isms and ideologies. Whether they are impractical do-gooders, political opportunists, or traitorous conspirators—I leave to the judgment of the American people.

OVEREMPHASIS ON FOREIGN TRADE

The value of foreign trade is greatly overemphasized. While a certain amount of foreign trade is beneficial and desirable, foreign trade secured at the expense of destroying our own market, wrecking our domestic economy, and lowering the standard of living of our own people, certainly is not beneficial to us or other people.

The United States is the last hope of the world, but unless we keep ourselves economically strong, we can save neither others nor ourselves.

The following quote from John McBride's book, Money Makes the Mare Go, carries some interesting comments on foreign trade:

FOREIGN TRADE, OTHER THAN NATURAL TRADE, IS A DELUSION AND A SNARE

The United States always has had a certain amount of foreign trade and probably always will have—trade best described as natural trade. We have imported the things we either (1) do not produce, (2) produce only in inadequate quantities, of (3) can produce only at prohibitive costs. Among such imports are raw rubber, tin, bauxite, coffee, tea, and silk. We export such products as we have in surplus and other countries have in short supply; and products in which we excel—like modern machinery and heavy equipment—which do not compete with producers in the countries to which they are exported, but help those countries to develop their natural resources, create new wealth, and raise the standard of living of their people.

If we import commodities that compete with our own producers, we lessen employment at home and reduce the national income. If we export commodities, like consumer goods, that are in direct competition with producers in the country to which they are exported, we further tend to pauperize the peoples of those countries.

The United States already does 45 percent of the world's business, most of it right here at home among our own people. If we attempt to expand our foreign trade to the extent of taking a portion of the 55 percent now done by all other nations combined, we will make it more difficult for other countries to exist and develop a sound economy of their own. The more of our own products we can consume, the higher will be the standard of living of our own people.

Some idea of the immensity of our domestic commerce can be glimpsed by comparing the tonnage carried on the Great Lakes with our ocean commerce and the tonnage passing through the Panama Canal. Approximately 65 percent of our tonnage is carried on railroads, 12 percent in pipe lines, 7 percent on highway trucks, 3 percent on rivers, and 10 percent on the Great Lakes. Yet more tonnage passes through the Soo locks between Lake Superior and Lake Huron than passes through the Panama Canal; and a considerable portion of the latter is between our east and west coasts. The total traffic on the Great Lakes exceeds all our ocean commerce. Through the Soo locks passes 85 percent of the iron ore mined in the United States, plus much coal and grain.

THE REAL BUSINESS OF THE UNITED STATES IS CONDUCTED HERE AT HOME

The real business of the United States is within our own borders, and the more we concentrate on and develop it, the higher will be our standard of living and the greater our national wealth. The far hill may look greener, but the greenest pastures of the world are right here at home. England's industry was built on foreign trade and commerce, but many of the countries with which she traded have developed industries of their own and their markets are now closed to her. The same thing could happen to us if we put too much reliance on foreign trade.

Profits on foreign trade average only about 5 percent, and chiefly benefit the exporter or importer. When we export commodities that can be used advantageously by our own people, we are injuring the many for the benefit of the few. For example, if we export the material for a $10,000 home, the exporter makes a profit of $500 or less, while our national wealth and income are proportionately reduced because our country loses the asset of a $10,000 home and labor loses the wages which would have been paid to build the home. Why should we attempt to export more goods when we have many people here in the United States who need and can use such goods? Are there many among our people who would not like a better home, a better car, more and better clothes, and the many other things we are capable of producing?

It has been fully demonstrated in the past, that under a sound domestic economy, the United States has been able to maintain a higher standard of living for all of our people than exists anywhere else. There is no reason why this standard of living should not be steadily improved, but it can be maintained and improved only by increasing production; and repudiating a regimented economy, managed currency, and free trade; and returning to a sound domestic economy.

United States Marine Corps

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. RIEHLMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

FAYETTEVILLE, N. Y.

HON. R. WALTER RIEHLMAN,
House of Representatives,
Congress of the United States,
Washington, D. C.

DEAR CONGRESSMAN RIEHLMAN: The petty bickering, snide remarks, and childish jealousies existing between the Joint Chiefs of Staff of our armed services since the birth of the so-called Unification Act have left me cold and nauseated.

I am a major in the United States Marine Corps Reserve. This commission, which I now hold, is one of the prize possessions of my life to date. I, therefore, feel exceedingly alarmed and disturbed when I note the attempts of the Army, Air Force, and even the Navy, to reduce us to the status of Navy policemen or get rid of us entirely. A typical remark on this subject was made last year by Brig. Gen. Frank Armstrong of the Air Force. He said, "As for the marines, you know what the marines are. They are a small, fouled-up Army talking Navy lingo. We are going to put those marines in the Regular Army and make efficient soldiers out of them." A remark of this kind, particularly from a general officer, should have been reason enough for a general court martial.

Let us briefly look at the record of the Marine Corps during World War II. Ninety-four percent of the corps served outside of the continental limits. (Army and Air Force 70 percent.) The total Marine strength during the past war was 599,693, of which 15,130 were killed in action, 3,392 died of wounds received in action, and 901 were missing and presumed dead. The accomplishments of this relatively small outfit is beyond belief starting with Guadalcanal and ending with Okinawa. In spite of hell and high water the war in the Pacific against the Japanese Empire was won by this small band known as the Marine Corps. We fought and won 14 major engagements against 14 different and strongly fortified enemy-held islands. In the Marianas (Saipan-Tinian-Guam) our casualties were 25,500, of which 4,678 were killed. These losses seem small when compared to 56,000 of the enemy who met their death in this campaign for the Marianas.

Aside from these major battles waged by the Marine Corps numerous lesser campaigns were fought concurrently in paving the road for the Army and General MacArthur to make so glorious an entrance into Tokyo. With the exception of the Marshalls (Kwajalien-Eniwetok) and the Marianas (Saipan-Tinian-Guam) the initial landings of these major offensives were made by Marines alone. In the case of the Marshalls and Marianas our forces were aided by Army units. At Saipan the Twenty-seventh Army Division (New York National Guard) was destined to take its part along with the Second and Fourth Marine Divisions. However, this Army division eventually had to be withdrawn from battle, and many of its officers, including Maj. Gen. Ralph Smith, divisional commander, relieved of duty and replaced. You undoubtedly are familiar with this disgraceful affair, so I will not go into it further. The Seventy-seventh Army Division at Guam, with Marine leadership, was a credit to itself and our country.

The Marine Corps has always been an amphibious force. We are specialists in this field the same as brain or heart surgeons are specialists in their field. Amphibious warfare is a definite and exacting science developed and prosecuted by the Marines in its present form for the past 25 years. The grand master of this present form of warfare is Gen. Holland M. Smith, USMC, who was directly responsible not only for the training of seven of the twenty-eight Army amphibious divisions, but who personally supervised the training and subsequently attended the landings of Army troops in Alaska when the Japs were driven from this area. And yet we are "a small fouled-up Army talking Navy lingo."

As a taxpayer I naturally am interested where and how my money is being spent. With the brief history of the most recent successes of the Marine Corps just cited above I wish further to bring to your attention the fact that the cost of maintaining a marine is $4,000 per year, while it costs the Government $7,000 for a soldier. To summarize, therefore, our country cannot only boast of a successful and fearless fighting corps, they can also boast of an efficient and economical corps.

How quickly the American people forget what has been done for them by so few is best expressed by a remark made by the former

Secretary of the Navy James Forrestal as he watched the raising of the Stars and Stripes on Mount Suribachi (Iwo Jima) from the bridge of the U. S. S. *Eldorado:* "Holland (Gen. Holland M. Smith, USMC), the raising of that flag on Suribachi means a Marine Corps for the next 500 years." And yet less than 4 years later an all-out effort is again being made to junk this glorious corps by individuals less glamorous or heroic not only in the public eye but in their own hearts.

As our representative in Congress, Mr. RIEHLMAN, I sincerely hope you will do everything within your power to put an end to this disgraceful affair, and once and for all guarantee the rightful and useful position of the Marine Corps for which it has so nobly fought during the past 174 years of its being.

With kindest personal regards, I remain,

Sincerely yours,

CHARLES S. ESTABROOK, Jr.

Report of Housing Committee of the Archdiocese of Boston

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report:

REPORT OF HOUSING COMMITTEE OF THE ARCHDIOCESE OF BOSTON

The housing committee of the archdiocese of Boston, composed of a score or more diocesan priests designated to study community housing needs by His Excellency, Archbishop Richard J. Cushing, D. D., held its initial meeting on October 13, 1948. During the course of the succeeding 2 months the committee met weekly to consider special phases of the problem with the advice and enlightenment offered by housing experts. It respectfully submits herewith some conclusions gathered from these meetings and studies, with a sketch of the philosophy and needs of our current housing situation to aid in the public appreciation of what is involved in this huge problem. It hopes that this outline will be accepted as a preliminary survey, with practical recommendations, to which later observations will be added from time to time.

PREAMBLE—FUNDAMENTALS ON THE HOUSING SITUATION

As shepherds of souls, these priests were conscious of the fact that our housing conditions constitute a social problem whose evils the church must not only expose but in whose remedying the church must give assistance. A decent home in which a growing family can live within its means, in comfort, security, and without being overcrowded is certainly a prime necessity for a stable, wholesome, and happy society.

The committee, consistent with the principles of our God-fearing democracy, assumes that private enterprise has the primary obligation in providing decent housing for all our citizens. However, the committee was composed of realists who recognize that private enterprise, alone and unaided, is not and will not in the immediate future be in a position to solve the entire housing problem, and that the Government therefore will serve the interests of social justice if it supplements sufficiently the efforts of private groups.

This traditional American tenant—which summons the Government to intervene in economic and social life only to the extent that the Nation is faced with problems which individuals and private associations are unable to cope with on their own initiative—harmonizes with persistently reiterated papal announcements.

In the encyclical on Christian marriage, given to the world by Pope Pius XI on New Year's Eve 1939, His Holiness declared:

"If for this purpose (the removal or decrease of material obstacles in the way of family life) private resources do not suffice, it is the duty of the public authority to supply for the insufficient forces of individual effort, particularly in a matter which is of such importance to the commonweal, touching as it does the maintenance of the family and married people. If families, particularly those in which there are many children, have not suitable dwellings * * * if the necessaries of life cannot be purchased except at exorbitant prices * * * it is patent to all to what an extent married people may lose heart, and how home life and the observance of God's commands are rendered difficult for them; indeed it is obvious how great a peril can arise to the public security and to the welfare and very life of a civil society itself when such men are reduced to that condition of desperation that having nothing which they fear to lose, they are emboldened to hope for chance advantage from the upheaval of the state and of established order."

Pope Pius XII in his Christmas message of 1942 observed that:

"He who would have the star of peace shine out and stand over society * * * should strive to secure for every family a dwelling where a materially and morally healthy family life may be seen in all its vigor and worth."

The present housing crisis demands the unselfish, full contribution of private enterprise and the adequate, continuing, supplementary collaboration and contribution of governmental agencies.

In attacking the pressing housing problem great care must be shown for such considerations as city redevelopment, including slum clearance, and the reduction of population density; the matter of suburban housing and the provision of commodious quarters for families blessed with more than three children.

Indeed all programs designed to provide decent housing for the American people must be considered primarily in terms of housing for families with children, especially for low-income groups which private enterprise has never adequately reached.

I. MIDDLE-INCOME GROUP HOUSING

In a division of the needs of those affected we will consider first the so-called middle-income group, which is a very large one. The acute conditions that bear so drastically on many within the low-income group do not prevail in this upper bracket. That is because these middle-income people are often from families that can afford to house married sons and daughters and even a few of the third-generation children. Yet, this doubling up of families frequently makes for friction and marital strain because of the particular differences that commonly arise from such close living. The younger couples want to get out by themselves to lead their own lives in privacy and independence. To this, they have a right. On the other hand, many parents recognizing the natural ambition of grown-up sons and daughters do not want to force postponement of marriage for the latter and agree, as a result of the housing shortage, to allow the newlyweds to start family life under the paternal roof. When little ones are born the grandparents are subjected to a new upset in their program of life at a time of ordinary tranquillity.

For this middle-income group, sound authorities generally agree that home building should be done by private capital. Unfortunately, a wholly inadequate program has been developed, or rather just happened, for the meeting of this need. Only 900,000 homes for investment were built in this country in 1948. This is 600,000 short of the estimated annual need of 1,500,000 for that year and the three following years. Much of this construction is beyond the reach of the so-called middle-income group.

In spite of governmental incentives by way of national and local legislation stimulating certain financial groups to aid in this grave social problem, very little has been done by banks, insurance companies, and limited-profit organizations. Only one insurance company has made such an investment in this State. With this sole exception of 800 units in West Roxbury, both insurance companies and banks have failed to share leadership in the movement to solve the housing difficulties of these years in Massachusetts.

There is, however, hope held out by the executive committee of the United States Savings and Loan League meeting in Chicago on December 15, 1948. The committee issued a statement as follows: "It is recommended that savings institutions give precedence to loans on new construction priced under $10,000 and to channel 50 percent of the 1949 mortgage funds into this low-priced construction." The committee also urged the associations and member banks to give moral and financial leadership to rehabilitate slums in their communities. If our banking fraternity follows out these recommendations, we should expect a great improvement in providing for the growing number of families affected.

Government assistance to private capital for this middle-income group is provided in limited measure now. An expansion of this help in the way of lower taxes and fees, reduced rates on public utilities provided by Government such as water supply and street construction, and other like means could undoubtedly be worked out on a basis of financial safety to the investing capital group to provide greater inducement for building homes.

At the same time it must be recognized that the cost of materials and of labor weighs heavily on the purchase price of these new homes for the middle-income group. The current market for both is at an all-time high. Efforts should be made on the part of all concerned in the production of housing to effect all possible economies as a necessary contribution to the solution of this vexing problem of housing families.

There are evidences of such wholesome collaboration. Organized labor has representatives on many housing boards. That the American Federation of Labor and the Congress of Industrial Organizations have built some cooperative housing projects in such places as New York and Ohio and are exploring the problem on all levels offers much hope for labor leading the way in an effort to compromise with industry on the matter of reduced costs of home construction.

The structural quality of the building is a most important consideration. So many frail dwellings have been erected that grave injustice can be done home purchasers by offering for sale homes that will prove unsound in a short time. Another unfortunate feature is that such investing families find that unexpected expenditures for major repairs come at a time when medical bills for growing families are at the highest. This matter of giving lasting value for money paid for homes by these young families is a concern for all the community.

As a transition to the consideration of the low-income-group housing a typical situation throughout the cities and towns of the archdiocese may be found in the figures for public housing in Boston. Due to lack of Government underwriting of bonds for housing prior to April and June 1948, the total

number of public-housing units erected and occupied since the end of the war, 1945, is only 1,582. Of these only 817 are of permanent construction. Against this meager postwar home-units building there stands a soundly estimated emergency need of 6,000. The $200,000,000 housing credit bill passed by the Massachusetts Legislature in April and June of 1948 relieved a crucia' tension. Because of it we are encouraged to look forward to completion soon of the major project of 972 units in south Boston and 72 in the South End, for a total of 1,044 homes. Likewise our Boston housing authority is working on plans for 3,186 other definite units already proposed or in the stage of actual planning, under the 1948 act. There still remains a very sizable gap to be filled in public housing needs for Boston, and the same is true of every city in the archdiocese.

This legislation of 1948 is, however, restricted to housing for World War veterans. With priority consideration for this magnificent group of our citizens being heartily commended by our committee, we do seriously suggest that there is now arrived urgent need of providing for suffering families of the nonveteran citizens whose little children should be accorded their start in life under decent shelter.

II. LOW-INCOME GROUP HOUSING

The committee further emphasizes the urgent need of assistance to those in the low-income group. Members of the low-income group may be designated as families which by reason of their earning capacity are unable to secure proper housing facilities. The committee is strongly of the opinion that the Government must meet this need through subsidization. Private home builders, as well as Government agents, admit this necessity.

A thorough study of the housing need has not been made in recent years. The only real attempt in the past was made in 1940, when a housing census was carried on simultaneously with the population census.

There is no definite single yardstick for measuring housing demand. There is always a large potential housing demand on the part of slum dwellers. Admitting the lack of much factual information, the committee estimates something of the extent of the need for housing from the number of substandard units found during the housing census of 1940.[1]

In 1940 there were 1,221,252 dwelling units in Massachusetts. Of the total number reported, 262,538 were considered substandard homes. Substandard homes were defined in the same document as in need of "repair and plumbing equipment * * * dwelling units * * * classified as 'needing major repairs,' when repairs were needed on such parts of the structure as floors, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence."[2] The average for Massachusetts, of those reporting, was 23 percent, almost one-quarter, as substandard. Comparative figures seem to point out that there is less need for housing in smaller towns than in large cities.

The actual need for housing at the present time may be indicated in part by giving as accurate a report as possible of the number of veterans seeking homes who have filed applications with the local housing authorities. There is, of course, a large number of nonveterans for whose aggravated and unrelieved situation no report is available.

Compiled from applications submitted from many cities and towns of Massachusetts, we find applications for houses received from 32,035 veterans. Of this number, 29,666 were applications from veterans receiving less than $3,000 yearly.

An official of the Boston Housing Authority has submitted the following data: From VJ-day, August 15, 1945, to November 1, 1948, 21,200 applications were received, including 16,000 from veterans. Of these applicants, 3,000 were accommodated in new houses built under the chapter 372 program and in vacancies occurring in Federal projects. Applications were being submitted at the rate of 150 per week and it seems the demand would have been greater, but many did not file because of the futility of the situation. Authorities finally stopped taking applications because of the current hopelessness of the work. In this report no division of applicants by income was made.

The housing authority of another large city in this archdiocese has on hand 2,511 applications including those of veterans. Of these applicants, 1,718 received an income of approximately $2,500 or less.

This is but a sampling which demonstrates urgent need of an immediate solution for the housing problem in general, and in particular for those of the low-income group, who, it is admitted, must receive aid from some governmental program.

III. SLUM CLEARANCE AND PREVENTION

The slum areas of the cities and towns within the archidocese of Boston are a thoughtless and serious mistake. That this mistake is a responsibility of the past does not exempt the present citizens from the terrible effects of overcrowding the land. One of the most malignant defects in our social system is the tolerance of the American city slums.

Slum areas are easily recognized by their congestion, loss of responsibility of ownership, decaying houses, obsolete and substandard living conditions, disease, crime, delinquency, and civic corruption. These evils considered only from the economic standpoint of the amount every responsible citizen must pay to maintain them should be a sufficient incentive to arouse all to positive action.

The continued existence of these slums and the inability or unwillingness of private citizens or groups or city and town governments to do anything effective are evident. The emergency is so great and the need of absolute and decisive action is so pressing that this committee calls upon the Federal Government through its Public Housing Agency to take immediate action. This is particularly true of Boston and other old cities in our archdiocese in which many residences are still in use that were erected long before most of our western and midwestern cities were founded.

The committee recommends that the Federal Government take steps to clear city slums and to provide homes for those who live in them now, because this is required by the public welfare. In doing this the population must spread out so that the land will not be overcrowded again. Town and city governments of the archdiocese of Boston must maintain proper and efficient town and city planning boards. Moreover, Federal low-cost housing and slum-clearance projects, now interrupted because the increased building cost has placed them outside the law, should be reinstated by new law and should be started as soon as possible. There are now almost 50 such projects in the Nation.

The committee insists that the problem of slum clearance is the responsibility of every citizen. The present overcrowding of our land is a challenge to all religious, social and economic thinking and activity. Our families, our communities, our businesses all suffer from the evil of the slums. No city or town anywhere is rich enough to afford a slum area.

CONCLUSION

It is a matter of considerable significance that the report and recommendations of this committee are presented during the month dedicated to the Holy Family. This is at once indicative of the high place that religion and the family have taken in these deliberations and the persuasion that the altar and the home are fundamental to the health of society. It is true that this report is the work of priests, but more particularly parish priests whose constant interest lies and must lie not merely with the exclusively spiritual state of their people, but with every factor which affects the soul of men. It is with this in mind that the whole question of housing has been considered and while not at all unmindful of the extraordinary efforts, under private and public auspices, which have already been brought to this problem, we feel that much greater endeavor is required for the present crisis. Consequently we recommend:

1. That in all housing programs primary consideration be given to the matter of homes for families with children so that adequate provision be made for the security and comfort of the whole family, and especially for the large family which up till now has been almost completely neglected. One and two bedroom units have proved totally inadequate for the most needy families.

2. That home owners make no restrictions on tenants which are prejudical to the family with several children.

3. That adequate housing for low-income groups be provided by Government subsidy.

4. That every possible economy be effected to reduce the cost of material and labor and to utilize new methods of construction so as to bring the cost of building and purchasing homes within the reach of more of the middle-income group.

5. That whenever possible single or duplex homes be provided for family housing rather than the more confining units of the larger projects.

6. That slum clearance receive immediate attention from Federal authorities and carefully planned low-cost housing be provided for those now dwelling in slum areas.

7. That insurance companies, limited profit organizations and banks assume a position of leadership in housing by utilizing Government aids and incentives already available and by encouraging individual builders to this same end.

8. That further Government incentives be provided for private-home building through such methods as reduced property taxes and public utility charges.

9. That legislation by State and Federal Governments be enacted as speedily as possible to provide for the above-mentioned needs and that all housing provisions be administered impartially as well as with justice.

Housing Committee of the Archdiocese of Boston: Very Rev. Daniel J. Donovan, P. P., Chairman; Rt. Rev. Augustine F. Hickey, P. P., V. G.; Rt. Rev. Thomas F. Markham, P. A.; Rt. Rev. Francis A. Burke, P. P.; Rt. Rev. Frederic J. Allchin, P. P.; Rt. Rev. Patrick J. Lydon, P. P.; Rt. Rev. Patrick J. Waters, P. P.; Rev. James H. Doyle; Rev. Ladislaus A. Sikora, P. P.; Rev. Francis A. Virmaukis, P. P.; Rev. James H. O'Connell, P. P.; Rev. Cornelius J. Donovan, P. P.; Rev. Oscar R. O'Gorman, P. P.; Rev. James A. Donoghue, P. P.; Rev. John J. Joyce, P. P.; Rev. William J. Daly, P. P.; Rev. Arthur O. Mercier, P. P.; Rev. Joseph A. Robinson, P. P.; Rev. Albert A. Jacobbe, P. P.; Rev. William B. Foley; Rev. Guido L. Pallotta, P. P.; Rev. Daniel T. McColgan; Rev. Francis J. Lally, Secretary.

The Eighty-first Congress Can Halt the Administration's Socialist Program

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

THE EIGHTY-FIRST CONGRESS CAN HALT THE ADMINISTRATION'S SOCIALIST PROGRAM

In his speech at Massachusetts Institute of Technology, Winston Churchill said that America's possession of the atomic bomb is all that has kept Soviet Russia from overrunning Europe and bombing London.

Our State Department knows that there has been another deterrent to aggressive warfare by Russia and a deciding one. That deterrent is the superior industrial strength of the United States. But once Russia approaches our industrial strength, then watch out. For Stalin or no Stalin, there will be trouble. Therefore, the simple table below is worth every American's careful reading. It shows in percentages what Russia did with her national income in 1948 and what we did with ours:

	U. S. S. R.	The United States
	Percent	*Percent*
Civilian use	60	79
New capital equipment and public works	21	12
Foreign aid		2
Defense	13	5
Building of inventories and war stock piling	6	2

These figures for Russia come from The (London) Economist, Britain's influential economic jour. al.

These figures are estimates based on information from beind the iron curtain, and so cannot be checked directly. But they fit with what is known of Russian development.

The table shows that Russia is straining every resource to build up its industrial strength. When Russia's effort is measured in dollars, and compared to ours, the figures show:

Where we spent $20,000,000,000 to $21,000,000,000 for new industrial plants and equipment last year, the Russians spent $12,000,000,000 to $14,000,000,000.

But while we used about $9,000,000,000 of this to replace old equipment, the Russians spent no more than $2,000,000,000 for replacing old equipment. The Russians had much less worn-out and obsolete equipment to replace. They could concentrate their efforts on expanding their industries and buying new equipment.

So—we used only $11,000,000,000 to $12,000,000,000 to expand our industries.

And the Russians used almost as much to expand theirs—$10,000,000,000 to $12,000,000,000.

Russia is gaining industrial strength as fast as we are—and may soon be gaining faster. The more she gains and the faster she gains on us, the greater is the danger of war.

American industry is pushing modernization and expansion hard. It is doing an heroic job. McGraw-Hill's recent survey shows that industry already has in hand plans to build plants and buy equipment in the next 5 years adding up to $55,000,000,000. Industry plans that investment—and much more—if it can get the money.

On those plans of industry depend our national security.

If these plans of ours are cut back, the Russians will be years closer to their goal of industrial equality—the strength that they need to wage aggressive war successfully.

But more and more our industry's plans are being menaced by socialist policies in Washington. The President continues to urge a further increase in the tax on corporate profits, even though Federal taxes alone now take 38 cents of every dollar of profit. He wants $3,000,000,000 more in taxes on corporate profits now, plus added personal taxes.

Last year corporations spent almost two-thirds of their profits—about $13,000,000,000—for new plant and equipment. This year corporation profits will be lower than last year's $21,000,000,000, perhaps by 20 percent. Subtract a fifth or more from last year's profits. Then adopt the President's proposal and take $3,000,000,000 more in corporate taxes and you raise havoc with planned expenditures for new plant and equipment.

Approval by Congress of the President's tax program would cut industry's program of plant and equipment development by a third or more. That means a major blow to our prosperity as well as our national security. For as capital investment goes, so goes general prosperity.

Further serious damage would be done by congressional approval of the President's industry-control bill. The so-called Stability Act of 1949 (the Spence bill) would severely check industrial progress. That bill would put the Federal Government in the business of providing the added industrial capacity which the tax program would prevent private industry from doing for itself. It would be hard to conceive a better and surer way to dry up private investment in new plant and equipment. For every dollar of Government investment will scare away many times more dollars of private investment.

People will not want to risk their money in businesses competing with the United States Treasury. At the same time it will attack private investment in another way. It means that Government would spend your income for you instead of allowing you to spend or invest for yourself. That is the high and quick road to socialism.

American industry needs right now great courage and incentives if it is to carry out its tremendous building program. It needs also a release from the program of a socialist administration in Washington with its systematic discouragement of enterprise and risk taking.

Above all, industry needs assurance by the actions of the Eighty-first Congress itself that there is a future in this country for a system of dynamic capitalism, functioning in a free society. By acting now to strengthen the American people's faith in their industrial system, by providing needed incentives for management and investors, by protecting industry's capacity to buy new equipment, the Eighty-first Congress can sustain American industrial progress and keep us united and strong.

But if we kill freedom of industrial planning and action by unneeded taxes and Government controls, we put ourselves, and our friends all over the world, in dire peril.

Nothing would please the Communists more.

President, McGraw-Hill Publishing Co., Inc.

Compromising With Communists in China Opposed on Principle of National Integrity

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication from the Washington Evening Star of May 12, 1949:

COMPROMISING WITH COMMUNISTS IN CHINA OPPOSED ON PRINCIPLE OF NATIONAL INTEGRITY

To the EDITOR OF THE STAR:

Owen Lattimore, an exadviser to Generalissimo Chiang Kai-shek, is preaching the gospel of defeatism and conciliation in our struggle with communism in China. Claiming that no government exists to which we can extend aid, he advocates a policy of reconciliation with the Communists and even an implementation of President Truman's point 4 techniques of extending know-how aid to Communist China's industries, as well as to the industries of neighboring Asiatic countries to strengthen them against Communist infiltration. He points out that the situation in the Far East differs from that in Europe, where ECA is proving successful in combating "boring from within."

Mr. Lattimore's advice seems the logical concomitant of the advice which Alger Hiss gave President Roosevelt at Yalta. There the argument effectively was used that John Hay's open door of equal opportunity for all in China had long since been closed by events themselves; that Russian help in defeating Japan was absolutely essential; and that the only practical way to obtain such help was to yield to Russian demands for control of Port Arthur and Dairen, cession of Saghalien and the Kuriles and occupation of Korea north of the fifty-eighth degree of latitude.

President Roosevelt, it now turns out, was swayed by the same arguments which the "fellow travelers" have used effectively in every country. "You better go along with communism; it is going to succeed anyway and you better get on the bandwagon."

Similar arguments have been used at all crises in our national history. George Washington was so advised in the dark days of Valley Forge. "The jig is up," he was told. "You better surrender and let the Tories take over." Abraham Lincoln was told the same thing when he secretly met the vice president of the Confederacy at Willoughby's Point the day before the evacuation of Norfolk. "Let us end this struggle, now," he was told. "All we ask is to keep our slaves." And Woodrow Wilson met the tempter in the form of the German ambassador in 1914 who urged him to submit to unrestricted submarine warfare as the price of peace with Germany.

Our great men in history all have been measured by their moments of decision. When Theodore Roosevelt delivered the ultimatum to Germany in the Venezuela dispute and later sent the fleet around the world, he struck mighty blows for peace. Franklin D. Roosevelt, sick and ailing at Yalta, and surrounded by sycophants of subversion, had not the strength to stand firm for our traditional China policy, "the Open Door." For the sake of help we did not need against Japan, he forced Chiang

Kai-shek to sign a treaty with Moscow that gave Moscow all it wanted. The success of communism in China is the logical result of this weakness and this treachery, just as surely as the success of the American Revolution, the victory of the Union, and the safety of the Western Hemisphere, were the results of the innate strength of Washington, Lincoln, Theodore Roosevelt, and Woodrow Wilson.

Franklin D. Roosevelt listened to Alger Hiss and probably later regretted it bitterly. It is hoped that Harry S. Truman will not listen to Owen Lattimore and those he speaks for. We already have waited too long for the dust to settle in China.

REALIST.

Reckless Public Spending Incites Taxpayers' Revolt

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily News of May 14, 1949:

RECKLESS PUBLIC SPENDING INCITES TAXPAYERS' REVOLT

The era of the profligate tax spenders is nearing its end.

On every side, from each section of the country, the long-suffering taxpayer, overburdened with back-breaking levies, assessments, deductions, and fees, is beginning to rebel.

To be sure, he is responsible in some degree for his present plight. He has voted for the tax spenders in national elections; he has endorsed the President's plans for enlargement of the welfare state; he favors bigger pensions on the principle that his own future is being insured.

In local and State affairs the taxpayer with a social conscience has advocated more pay for school teachers and greater aid to institutions attempting to rehabilitate delinquent juveniles and the mentally sick.

He believes in a strong Military Establishment as the price of his own security; he approves of aid to Europe because he has been convinced that we cannot maintain our own prosperity with the rest of the world in economic disorder.

Lured by the siren voices of the Fair Deal's soothsayers, he has, until quite recently, been persuaded that his country possesses such a vast reservoir of wealth that all of these expenditures are possible without making any serious inroads upon his individual solvency or mode of living.

But now, as soft spots are appearing in the national economic pattern, as he sees unemployment rising and the profits of all but a few of our major industries gradually declining, the truth is finally beginning to dawn upon him as he feels the economic pinch.

In every hamlet, village, town, and city the taxpayer is questioning the manner in which his money is being spent. True enough, he has in the past demanded the additional services which he now finds are inflating his tax bill out of all proportion to his income.

Everyone wants better police and fire protection, wider streets, grade-crossing elimination, adequate garbage collection, and public parks. Yet these improvements are seldom considered on the basis of what the community can afford, but are carried out because of the public's increasing clamor for better service.

Now that the bloom is off our war-inflated prosperity, every family is confronted with its own budgetary problems, and the price of government, as reflected in the tax bill, is undergoing very careful scrutiny indeed.

It is needless to remind anyone of his vote for public improvements and social reform because it is human nature to forget the past and gripe about the future.

The griping is now rapidly reaching the proportions of a national clamor against extravagance. It is a healthy manifestation of the people's will to curb wasteful and unnecessary expenditures both at home and in Washington, lest we find ourselves hopelessly insolvent within a few years.

GRASS-ROOTS REVOLT NEEDED FOR RESULTS

The question is, What can be done about it?

As I see it, the problem has to be attacked on both a local and a national level. Since public opinion is usually months ahead of congressional thinking, a grass-roots revolt against waste is the best way to convince our Senators and Representatives that the spending party is over.

For the last 16 years it has been unfashionable to talk economy. Men like Senator HARRY F. BYRD, of Virginia, have been pilloried as reactionaries because they fought the loose fiscal policies of our National Government. Demagogs who promised to spend fantastic sums for social progress had little difficulty in being elected. It was probably the only time in American history when it was unpopular to preach economy.

The country simply went on an emotional binge without thought of the day after. Now we have the headaches that always follow.

What can be done about it? Well, a start has been made in Illinois where the newly elected Governor, Adlai E. Stevenson, is under fire because of disclosures that his budget provided for the expenditure of $1,504,000 for new automobiles for State officials.

Governor Stevenson frankly admits that he has been embarrassed by newspaper stories revealing this overlooked item in his budget and promises to make a full investigation of all the facts.

The Governor, it seems, did not analyze his own budget with sufficient care before submitting it to the legislature, even though he was extremely critical of his predecessor's incompetence.

Revelation of Governor Stevenson's laxity is the best reason why the spotlight should be constantly turned upon the acts of all public officials, no matter how fully they may be trusted.

WISECRACK INDICATES PRESIDENT'S ATTITUDE

In the national field, ex-President Herbert Hoover has shown how at least $3,000,000,000 can be saved by consolidating and streamlining Washington bureaucracy.

Yet, the President who gives lip service to the Hoover reports, quipped the other day that there are "too many BYRDS in Congress."

He was referring to Senator BYRD, of Virginia, who has been trying for years to give effect to many of the recommendations now contained in the Hoover studies.

To quote Washington correspondent Jay Hayden, "BYRD's arch offense, in the eyes of his fellow Democrats, is that he had stood up against vote-buying with taxpayers' money."

BYRD rightly sees that if the budget cannot be balanced now, it may never be balanced again. He would eliminate or postpone all unessential activities, reduce the Federal pay roll by cutting appropriations and slash at least $4,000,000,000 from next year's contemplated expenditures.

Unless drastic action is taken, BYRD predicts the national debt of $252,000,000,000 will be increased by deficits of $9,000,000,000 to $14,000,000,000 in 1951, without including the additional cost of a 70-group air force, adoption of the Brannan farm plan, enactment of national health insurance, or the building of new valley authorities.

And that means bankruptcy.

SENATOR DOUGLAS JOINS PARADE FOR ECONOMY

As an indication of how thinking is changing with regard to our free spending policies of the past, even Senator PAUL DOUGLAS, of Illinois, a sincere liberal, has called for a curb on "waste of money and personnel."

"To be a liberal," said DOUGLAS, "one does not have to be a wastrel. We must in fact be thrifty if we are to be really humane."

It is to DOUGLAS' credit that he sees the situation so clearly.

Senator WALTER GEORGE, chairman of the Senate Finance Committee, recently told a newsman: "If the national income is shrinking because business is shrinking, it would be nonsense to clap more taxes on a falling economy. Our only hope is to cut expenditures."

It is also significant that President Truman's economic advisers are now suggesting that some tax burdens be lightened and that the administration scale down its request for $4,000,000,000 in new levies.

This is the first time that all three members of the Council of Economic Advisers have been in substantial agreement on the Government's fiscal problems.

Only President Truman, it appears, is proceeding blithely with his recommended expenditures as though nothing had changed since election day.

Only Truman and a few of his professional messiahs in Congress still believe there is no limit to the country's resources.

Only Truman, and the vote-buying demagogues who place politics above patriotism, refuse to recognize, or are unable to comprehend the Nation's financial plight.

The protests against extravagance in government are gaining momentum throughout the country. You can give effective help and make your voice be heard by asking your Senators, Representatives, and other public officials one simple question:

Why are you wasting my money?

JOHN S. KNIGHT.

The Finances of the Nation

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. JENKINS. Mr. Speaker, in the issue of the New York Times of Sunday, May 15, there appears an article by Mr. Forrest, the financial editor of that great paper, which is as follows:

STOCK TRADING DORMANT AS LABOR AND TAX LEGISLATION DRAGS—OUTLOOK REMAINS UNCERTAIN

(By John G. Forrest)

Financial markets remained in a stalemate last week as Federal legislation pertaining to labor laws and taxes lagged and business uncertainties continued. Mixed price trends

were the rule on the New York Stock Exchange, where trading was at a slow pace.

There was little news that might be construed as helpful in alleviating the strain on the national economy. The inaction of Congress on issues of importance to business, and the adamant attitude of the administration on its program for higher taxes and credit controls were a source of disappointment to the financial community.

Coming at a time when urgent action is needed to arrest the deflationary movement, which is all too evident to many people outside of Washington, it was not surprising that a detached attitude on the part of investors prevailed. Indicative of the apathy was the action of the stock exchange's governors in refusing to extend daily trading hours, which they felt would not result in more business.

Slight encouragement was gleaned from trade statistics during the week, which showed a further cut in prices of nonferrous metals and another drop in electric power production for the fourteenth consecutive week. It is now a contra-seasonal decline, however, and for the last 2 weeks reflects increasing curtailment of heavy industry throughout the Middle West. If it were not for increased demands for pumping water in California, which has received no rain since the first week of March, the decline in power production would have been sharper.

Uncertainty over the labor outlook, particularly in the steel and automobile industries, is becoming more acute. The industrial picture pivots around the steel situation—which affects so many other industries—where backlogs are being eaten into as operations at 96.2 percent of capacity established a new low mark for 1949. Meanwhile, the automobile industry, handicapped by the Ford, Chrysler, and Bendix labor disputes, is finding that used cars are backing up and leaders are less sanguine about demand for the latter half of the year.

There were the usual optimistic views of Government officials, but at the same time there were the usual conflicting opinions of Congressmen as to what should be done regarding vital legislation. A refreshing note was struck by James K. Vardaman, a member of the Federal Reserve Board, who said that too many Federal officials talk too much and listen too little. "In many cases," he said, "those who talk so much and would have our Government control everything and everybody are listening to the sound of their own voices rather than to the voice of the great people, as they would have you believe."

Although the question of higher taxes has not met with a very favorable response in Congress, President Truman is still for his original request of a $4,000,000,000 increase in levies. The contention made for higher taxes seems to be that because of declining incomes Federal tax revenues are likely to drop $1,000,000,000 in the coming fiscal year and a larger budget deficit than expected is in prospect. But it is questionable whether revenues will be increased by higher taxes. They are more likely to accelerate the decline in business and incomes, thus reducing Government receipts even further.

Meanwhile, consumer income, as distinguished from that of corporations, dropped $2,000,000,000 in March to an annual rate of $214,300,000,000—the third successive month of decline. It may come as a surprise to those who feared the worst that in the first quarter of 1949, publicly reported cash dividend payments as compiled by the Department of Commerce, totaled $1,441,700,000, an increase of 7 percent over the period in 1948.

On the New York Stock Exchange, the indecisive state of trading continued. Prices on Monday sagged on a turn-over of 610,000 shares, the smallest for a full session since March 3. On the following day, modest pressure against prices was renewed, making 5 days of successive decline. A somewhat firmer tone developed later in the period. On the week, however, prices were little changed despite the firmer tone.

Mr. Speaker, also in the same issue of the New York Times is an article giving the views of the best tax authorities in the country on the present tax situation and the budget estimates:

TWO AND NINE-TENTHS BILLION DEFICIT FEARED BY EXPERTS—CONGRESS STAFF SEES BUSINESS DIP CUTTING UNITED STATES RECEIPTS UNDER TRUMAN ESTIMATE

WASHINGTON, May 14.—Prospects of a continued decline in the country's economy that would reduce Federal revenues $2,000,000,000 below President Truman's January budget estimate for the next fiscal year were reported today by Congress' professional staff of fiscal experts.

If the calculations are reliable, as they have been in the past, this means Congress must raise its budget-cutting sights by that amount to avoid a deficit without increasing taxes. There is little hope for economies of such magnitude.

The new revenue estimates were presented to a closed meeting of the Joint Committee on Internal Revenue Taxation by its staff chief, Colin F. Stam. The joint body is composed of senior members of the House Ways and Means and the Senate Finance Committees, which have jurisdiction over taxes.

The staff report was made public afterward by Representative ROBERT L. DOUGHTON, Democrat, of North Carolina, chairman of both the Joint Committee and the Ways and Means Committee.

"The figures speak for themselves," was all that either he or Senator WALTER F. GEORGE, Democrat, of Georgia, Finance Committee chairman, would say for publication when the meeting ended.

Later Mr. DOUGHTON said his position was well known, that "when it looks like we are going to spend more money than we've got, economy is in order and important."

Neither would say what effect the staff estimates would have on President Truman's request for a $4,000,000,000 tax increase. Both have said in the past, however, that higher taxes would be preferable to deficit financing.

The budgetary prospect for the fiscal year beginning next July 1, according to Mr. Stam's report, is as follows:

Expenditures	$41, 858, 000, 000
Receipts	[1] 38, 900, 000, 000
Deficit	[1] 2, 900, 000, 000

[1] Rounded figures only were presented by Mr. Stam.

The expenditure estimate, taken from the President's January budget, did not allow for the cost of the proposed western European arms program and other prospective expenses, unanticipated in January, such as additional veterans' benefits and increased agricultural price-support payments. If they were included, the deficit figure might stand at $4,000,000,000 or more.

Mr. Stam's estimates compare with the following in President Truman's January budget:

Expenditures	$41, 858, 000, 000
Receipts	40, 985, 000, 000
Deficit	873, 000, 000

For the current fiscal year, in round figures, the Joint Committee staff's new estimates compare with the President's January estimates as follows:

	Staff	Budget
Expenditures	$40, 200, 000, 000	$40, 200, 000, 000
Receipts	39, 300, 000, 000	39, 600, 000, 000
Deficit	900, 000, 000	600, 000, 000

The staff pointed out, however, that Economic Cooperation Administration expenditures for European recovery in May and June would have to exceed those in the same period of last year by $1,600,000,000 to reach the budget estimate.

"Should this not occur," the report stated, "the deficit (for the current fiscal year) would be smaller than $900,000,000 and might disappear altogether."

Explaining why the staff's revenue estimates for both years are so much lower than those made by the President in January, the report said "the primary reason" was that they were based on a lower level of business activity.

The staff assumed a personal income level of $212,000,000,000 in the calendar year 1949 and an annual rate of $198,000,000,000 in the first 6 months of 1950. The present rate is $214,300,000,000. Thus the staff foresees an accelerated deflationary trend, running into 1950.

The President's budget estimates of revenues were based on annual personal income rate of $215,000,000,000 over the entire 18-month period.

The staff also assumed that corporate profits would drop about 11 percent—to about $29,000,000,000—in the 1949 calendar year. In 1948 they were $32,200,000,000, according to preliminary Commerce Department figures.

"The lower level of business activity," the report stated, "was assumed by the staff only after consultation with a number of outstanding economic analysts, both in private business and in the Government."

Without saying whether he would put the question of increasing taxes to his committee, Mr. DOUGHTON remarked that it would be "very regrettable to have to return to deficit financing in peacetime, especially when we owe $250,000,000,000 and the business outlook is reasonably good."

Lo, the Poor Farmer

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. O'HARA of Minnesota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Uno A. Nelson which appeared in the Fairmont Daily Sentinel, of Fairmont, Minn., on May 10, 1949:

LO, THE POOR FARMER

The Federal Government has never been a bright and shining example of efficiency whenever it has taken over private industry, and has admitted defeat in most instances. But it is a stubborn organization and refuses to say "Uncle." It has had a toe hold on agriculture for a good many years, but now wants to get into the front line of the chorus. Few want to see the Federal ownership of railroads, and when it started meddling with medicine the doctors began howling like banshees. But with agriculture it seems to be different. There has been little serious public opposition to the Government's giving the farmer a helping hand and paying him money he didn't earn. One hears little talk about socialized farming as Federal influence and control become more and more pronounced in the field of agriculture. But if the farmer wants to enjoy some measure of independence in the operation of his business, he'd best be on the alert, as the screw is being turned

tighter and tighter with each new proposal to help the farmer.

The latest scheme of the Department of Agriculture contains a few basic changes in policy, but will result ultimately in more rigorous Government control of farm products. It offers a minimum income guaranty to producers by paying subsidies, representing the difference between market prices and the income-support standard. Under the proposal price supports would be continued only on basic storable commodities while other crops would sell at unsupported market levels. There would be no Government purchases of such commodities as potatoes and eggs, which would be allowed to seek their own market levels. Some persons feel there's so much politics connected with the farm situation that some kind of subsidy is inevitable, and that the proposal of direct cash payments to producers is better than the present program of Government buying to support market prices.

The cost of such a program would be tremendous as this plan would attempt to guarantee a certain minimum income to producers of all farm crops, and a relatively high income at that. Farming would cease to be an individual enterprise which has to pay its own way. It would be a Government enterprise, and no doubt operated at a loss. The farmer would actually become a Government employee.

The Agricultural Department's newest proposal would include the strictest controls of farming operations, much more so than at present. The farmer, to enjoy the benefits of the program, would have to agree to acreage limitations, marketing quotas, and reasonable conservation practice requirements. Thus a part of his income is to be spent as the Government dictates. According to an editorial in the Produce Packer, the most significant of all features of the program is the discrimination against large producers, as the Government will not give its support to farms above a certain specified size. It is a symptom of bureaucratic desire to control the size and nature of farming operations. If the program at the outset is to be used to penalize larger farming operations, what further social experiments may come later?

The public shudders at the thought of socialized medicine, but how strange it concerns itself so little over the same fate for agriculture. It may be smart politics to offer alms with one hand while grabbing the reins with the other, and the immediate results may seem pleasing to the farmer. But once he has lost control over his seeding, planting, marketing, and acreage, it will be an entirely different story.

If the farmer wants to remain somewhat independent, he'd better shy away from too much Government help, as he'll soon discover that he can't have too much financial assistance from the Government without surrendering some of the bossing.

The Princess Pays a Visit

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. MICHENER. Mr. Speaker, a constituent has forwarded to me an editorial carried in the Jackson (Mich.) Citizen Patriot with the suggestion that the same be included in the Appendix of the CONGRESSIONAL RECORD; therefore, pursuant to the consent given by the House, I include the editorial, which is as follows:

THE PRINCESS PAYS A VISIT

The visit which Princess Margaret of British royalty paid Pope Pius XII at the Vatican while touring Italy is attracting general notice and comment. Her father, King of the British Commonwealth, has among his many titles "Defender of the Faith"—the faith of the Church of England, of which he is the official head, and not the faith of the Roman Catholic church.

Britain's royal family broke its bonds with the Church of Rome back in the years following 1529 when Parliament confirmed Henry VIII's separation over family matters, and there has been no common meeting ground between the two since that time.

While the British are great respecters of custom, it must be recognized that the call Princess Margaret paid to the Vatican was not sightseeing by an ordinary tourist. The decision to make such a visit was a weighty matter of state, with the conclusion reached by the cabinet after due consideration of custom, precedent and all the implications involved.

But even after the friendly visit between the favorite and popular princess and the head of a great church, there is to be no move toward a reunion of the two churches. In matters of faith they will continue widely separated.

The British Labor Government is cognizant of the common ground on which the British Commonwealth of Nations and the Church of Rome now find themselves in their relations with Moscow and the forces massing behind the iron curtain. But there are still the differences between the Vatican and Westminster.

However, the Pope and the British King have a common faith in the dignity of the individual and the processes of democracy, which are under threat by the attempt to spread communism through world revolution. After all the Church of England and the Church of Rome, in spite of their centuries-old differences and long separation, worship the same Master and stand for His principles of life. The visit of the princess was not only a gesture of good will and understanding, but it was a notice to the men in the Kremlin that all Christian nations join in mutual support of their rights against the common threat.

United States Soldiers' Home

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Tony Siminoff:

A SHORT STORY OF THE UNITED STATES SOLDIERS' HOME

(By Tony Siminoff)

Our story may well be called The Trials and Tribulations of the Enlisted Personnel in Our Regular Establishment, better known to the people as the Army of the United States.

Their lives are filled with adventure, romance and patriotism. Who are these men? They are ordinary American citizens who have chosen the military career in preference to all others. Most of these men enlist in the Army at an early age and after one or two reenlistments would not exchange the life of a soldier for any other. An added incentive is the prospect of looking forward to the day when they can complete 30 years with its ensuing retired pay.

The public, as well as members of both Houses of Congress, should know something of the background of the United States Soldiers' Home where many of our old soldiers are spending their time and a few of the things they have done in their Army careers.

In most cases Regular Army soldiers are kept on the frontier, whatever is left of it. Since 1898, when we acquired the Hawaiian Islands and the Philippine Islands, as well as the outpost of the whole of Alaska, it was necessary for each Regular Army soldier to put in a tour of duty in Hawaii, the Philippine Islands, or in some cases, individuals or entire groups returning from the Philippines would be ordered to Alaska, which is the opposite extreme in climate; that is, from the tropics to the arctic. In spite of these hardships our men have liked their job and have taken it very seriously, more so because it was a chosen profession.

In time of war it is naturally the Regular Establishment to which the entire Nation looks for defense. It is the career man who drills the recruits, takes them to the battlefront, and fights with them. When the smoke of battle has disappeared the duration-of-war soldier returns home to be feted with parades, receptions, and other things, which is altogether fitting and proper. Anyone who faces the brunt of war deserves recognition from the public. But what becomes of the career man? The Regular Army enlisted soldier? He forms the army of occupation. When it is time for him to come home he does not receive the honors as the fanfare and glory of the returning hero is by then forgotten. He goes back to his frontier post to serve out his 30 years. When he retires he receives retired pay according to the rank he holds at the date of separation, from which retired pay he has to pay income tax. In most cases retirement comes to him in the twilight of his life, in some cases in the evening of his life.

Due to the various climates in which he has lived and worked and because of the sudden changes in climate, almost always the retired Regular Army soldier has to have medical attention. When he applies to the Veterans' Administration, he is informed that he cannot be admitted to any of the facilities or hospitals, but must make his application to the United States Soldiers' Home at Washington, D. C. That is not altogether out of line. An actual case that can be seen in the files of the War Department is that of Patrick F. Noonan. He enlisted in the Army of the United States in 1887 and saw active service on the frontier in the Indian campaigns. In 1898 we served together as members of K Company, Eighteenth United States Infantry, where he served as sergeant and I as a private. When his time was up, he went back to the United States, reenlisted in the First Infantry, and was sent back to the Philippines, where he transferred to the Ordnance Corps, being a plumber by trade. He remained there until the termination of his enlistment. In fact, he took advantage of the "double time" of that period. In the days between 1898 and 1912 every enlisted man was given 2 years for each year served in foreign service—this was known as double time. When finally separated from the service as sergeant, Patrick Noonan came back to El Paso, Tex., where he married and raised a family. In 1937 he looked me up in Los Angeles, and we became very friendly. In November of 1938 he became desperately ill. On applying to the veterans' facility at Los Angeles, his family was told that the application would have to be made to the United States Soldiers' Home at Washington.

To begin our story as to the creation of the United States Soldiers' Home at Washington, D. C., it is not generally known to the public, nor to the Houses of Congress, that not a penny of taxation collected by our Government is being used to maintain this home for our old soldiers. The home was established by an act of Congress passed August 3, 1851. The original purchase of the home site was from funds collected by Gen. Winfield Scott from the Mexican Government, a sum of approximately $100,000. This amount was levied by General Scott at the conclusion of the Mexican War, for destruction of property of soldiers during the Mexican War. The act above referred to so read that General Scott was authorized to spend that amount for the procurement of land and buildings to make an asylum for old Regular Army soldiers. The land, with such improvements as were made, was purchased from Corcoran and Riggs, both familiar names in Washington. An assessment was made at that time on each soldier's pay. This has been changed on numerous occasions, even going as high as 25 cents a month. At the time of its establishment it was 25 cents every other month, or 12½ cents a month. It is now 10 cents a month, plus all fines, fees, and forfeitures from summary courts.

Additional land was purchased later so that the home now has approximately 503 acres. There are insufficient buildings to house the number who are now applying for admission to the home. The latest figures of the barrack's capacity is 1,560. Three hundred and thirty-six old soldiers are waiting for admission and more will follow.

Ample funds for the expansion are on deposit at the United States Treasury. No appropriation of taxpayers' moneys is required. All that is needed is that Congress, the trustees of these funds, release them for additional construction of such facilities as are needed and improvement of existing facilities.

The most recent construction of barracks at the United States Soldiers' Home took place in 1911, nearly 40 years ago. The latest and most recent improvement is the hospital which is now old and obsolete, took place in 1920, almost 30 years ago. The hospital buildings should be increased to a capacity of 500 beds (its capacity is now only 300). Additional barracks should be provided to increase barrack's capacity to at least 1,800.

Additional quarters should be provided for doctors who are detailed for duty at the hospital from the Medical Corps. Additional structures, improvement of roads and sewers, electric lights in buildings and grounds, increase in operating personnel, rehabilitation of existing structures, some of which were completed in 1874, are all urgently needed. There are sufficient funds in the Treasury to cover all expenditures in any improvements and new buildings without any assessments from any other source.

At the close of the Civil War, the War With Spain, and even at the close of World War I, we lived in a land of make believe—that there would be no more wars. The first thing we did after each of these wars was to scrap our military, both Army and Navy. When war again came along we not only had to replenish all of this but in most cases it became too expensive. The cause of most regret was the suffering from the lack of adequate officer personnel to command the ever-expanding Army and Navy that are required in modern wars. Let us hope we shall not repeat the same error. Today our Army is nearly three-fourths of a million, and added thereto are three very important component parts that did not exist in the past, viz, the mechanized army, used for mobile purposes; paratroopers, and the Air Force, all of which add up to the following facts: Casualties in time of peace are bound to increase greatly, therefore these buildings and hospital facilities must be cared for immediately. If this is not done, we may find ourselves in the position whereby the defenders of Old Glory in time of peace will have to stay on waiting lists indefinitely for admittance to the United States Soldiers' Home. This would, indeed, bring disgrace on the Regular Establishment and certainly is no inducement to our young men with the possibility of such a fate awaiting them at the end of 30 years' service. At a time when our services are recruiting enlistments with every possible inducement to make the Army their career, including highly specialized training as technicians, it becomes even more important to expand the facilities of the United States Soldiers' Home. As it now stands, even special training in technical fields does not appear too great an advantage since such training can be obtained in schools and colleges, but what is not offered in schools and colleges is the refuge of a home after a certain age. Therefore these improvements and expansions must be done immediately as an added inducement to enlistment in the Regular Army.

It is well to point out that although there are a number of veterans' organizations with units scattered throughout the land, this issue has never been taken up by them. The only veterans' organization which has not only endorsed the idea but is wholeheartedly crusading for it is the Regular Veterans Association, 1115 Fifteenth Street NW., Washington, D. C., which has in its folds not only career men but veterans of three wars during the past 50 years, and they know how essential it is to have this done, particularly when it does not call for one penny of the taxpayer's money. It will help at this time to keep our Regular Army Establishment satisfied.

Preservation of Our Natural Resources

EXTENSION OF REMARKS

OF

HON. EDWARD deGRAFFENRIED

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. DEGRAFFENRIED. Mr. Speaker, with reference to H. R. 2296, under consideration by the House of Representatives today, providing for appropriations for the development and maintenance of adequate forest resources, and with reference to other conservation bills now pending in Congress, the strength of a nation lies in its possession of natural resources. This fact is so generally accepted today that it would be almost impossible to find anyone who would question its truth. Our own Nation has achieved her position of world leadership because of her good fortune in having within her far-flung boundaries unmeasured quantities of every form of natural wealth. Our often-praised American skill and industry, without such resources, would not have been sufficient to enable us to achieve our present position.

Natural resources may be divided into four categories: metals, fuels, nonmetallic minerals, and—most important of all—land, both agricultural and forest. Everything we produce is dependent upon one or more of these natural resources.

America has been so generously endowed, with so much of so many different kinds of natural resources, that we have come to regard them as being inexhaustible.

We have gouged great holes in the earth and plucked with a careless hand the booty and riches therefrom. The iron, the coal, the oil, the lead, the zinc, the natural gas have been seized and utilized. Their utilization made us the greatest industrialized nation the world has ever seen, and the highest standard of living in the world is our proud boast.

We have chopped our wonderful forests down, we have plowed and cultivated our land, and grazed our ranges. So we have eaten better, we have been housed better, and we have been clothed better than any other peoples on the earth. What matter if the land has become exhausted? We moved on to other, maybe even better land. When the trees were all cut down in one area we just moved on a little farther. There always were more trees, more open range.

This is the story of our growth from the 13 little colonies hugging the Atlantic shores to the continent-straddling colossus of a century later.

We have been a happy people, with only a few little setbacks. Maybe a flood here and there, maybe it did take us a little longer to find more metals when our mine was exhausted, but no matter—there was plenty more.

But of recent years the question has begun to arise—is there plenty more? A few serious-minded souls began to wonder about this. They looked around them and saw that we had chopped down so much of our wonderful forests that instead of covering half the country, there are only a pitiful few thousand square miles of virgin forest left. They saw that we had used our land wantonly, overgrazed our ranges, and were exhausting many of our minerals.

We did not pay much attention to them, they were nice enough folks but maybe a little "off" on this one subject.

Lucky for us they not only realized these facts that we as a Nation largely ignored, but did something about it. They were the nucleus of that group of people we are happy to refer to now as "conservationists." Perhaps now we as a Nation will become conservationists, too, since we are beginning to see clearly what our situation really is.

It is to the early efforts of those few voices crying in the wilderness that we owe the existence of such respected Government agencies as the Forestry Service, the Bureau of Reclamation, the Army engineers' civil activities, the Soil Conservation Service and, in most instances, their counterparts in the several States.

Today we face the need for making a decision as to our future policy concerning the proper use of our natural resources, but first we must have the facts.

The Forestry Service and the American Forestry Association tell us that approximately 22 percent of the timber stand of the Nation is "old forest." It is from this old or original forest that the best timber is secured. Throughout our history, from the log cabins of colonial days to the present, wood has been one of the most useful of raw materials. Think of the number of things you see

and use every day which are made of wood. Most towns and portions of all of our great cities have been built of wood, and even today much construction is of wood, in spite of the increased use of many other types of building material.

Now, however, we find that three-fourths of our forests are gone. There is just barely enough left to see us through a transition period to the time when we will be completely dependent upon second growth, that is if we conserve and use wisely what we have left and if we replace the more valuable species.

During the years when timber was cut as needed no thought was given to replacement. Great areas were cut over to the ground and logging was often followed by fire. Natural reproduction followed in many instances, but recurring fires and destruction of seed trees devastated much formerly excellent forest land. The result was that, the Nation's forest resources progressively deteriorated, virtually without check until the turn of the century. In spite of all efforts since then only a portion of the forests of the country have been provided with adequate protection and systematic management.

No country has ever been known to be completely self-sufficient in mineral resources. America, however, has been richly endowed with some of the richest deposits in the world. It has been estimated that the United States and Great Britain before the war owned three-fourths of the mineral resources of the world. However, as we saw during the war, there are serious gaps between what we have and what we need of several very important minerals. Great as our own resources were, with the tremendously expanded production of the war period when we became the arsenal for democracy, we now find the United States' reserves of some important minerals have been depleted, and normal development of new resources has lagged seriously behind.

We live in a complicated, machine-run world and we have had a great deal to do with its creation. Our great wealth of mineral resources has been the keystone upon which our high standards are based. Our highly industrialized society depends on the fuels, coal, oil and gas; iron ores; iron-alloy metals, such as chromium, manganese, molybdenum, nickel, tungsten and vanadium; the nonferrous metals such as copper, lead, tin, zinc, and aluminum; metallurgical and chemical minerals; fertilizers; ceramics; abrasives; and the precious metals, gold and silver. As you can see, they are many in number, but we have been fortunate in possessing most of them—within our own borders.

First, consider the fuels. So far as coal is concerned, the experts tell us we have nothing to worry about, at least for a while. There is enough to last for nearly 200 years at the rate we are using it. Then there are petroleum and its cousin, natural gas. Here we are not so lucky. We all know how important petroleum is as the source of gasoline, Diesel fuels, heating oils and many, many other things. Without oil our cars would not run and much of our machinery would stop. The amount left in the earth in the United States has been estimated many times by many people, but there still seems to be some confusion about its extent. But they all point to one thing, we are running out of oil. At the present rate of consumption, now even greater than during the war, we will have no more left in 17 to 20 years. While we have only 6 percent of the world's population, we use nearly two-thirds of all the oil that is produced. When those reserves we know we have are used up, there will be no more. Petroleum cannot be replaced. No one knows exactly how petroleum came into being, but the best scientists tell us that Mother Nature stopped producing it many thousands of years ago.

Other experts tell us we have natural gas reserves of some 160,000,000,000,000 cubic feet. Even in these days when billions are mentioned casually, trillions seems like a tremendous amount. But, at the rate we are using natural gas, it will last at the most 60 years. In years gone by this important resource was so little regarded that it was allowed to escape into the air—gone forever, and even now there are instances where waste has been estimated at 75 percent. Gas also is an exhaustible resource.

In the case of both petroleum and natural gas—new discoveries, on which we have depended, have been fewer and harder to come by. Some of you here today can remember the great excitement of new oil discoveries you read about. But few new sources have been found during the war or since then. Men are drilling as much as 2 miles down, and even under the sea, in frantic search for more. We are fighting a losing battle.

The Department of the Interior through its Bureau of Mines tells us that within our lifetime, in less than one generation, we will have exhausted entirely our reserves of the better aluminum ores, chromium, copper, lead, mercury, silver, vanadium, and zinc. All of these metals are vital to our modern industry. Of the 39 commercially important metals we are told that America will be totally lacking in 21 within a generation. There have been no really big discoveries in minerals in 20 years.

The remaining great resources for our consideration is land. A century ago no one would have thought of questioning whether we had an endless supply of land. Consequently, we were careless, with little thought of tomorrow; we plowed and furrowed and exhausted our land. And what is the result? The Soil Conservation Service tells us that in the past 150 years we have allowed something like half of our farm land to be damaged by erosion. Millions of acres of cropland have been ruined for further immediate use; approximately a hundred million acres of cropland alone, not counting a tremendous acreage of damaged range land. Other millions of acres have been damaged in varying degree. Nearly a third of our topsoil has been allowed to wash or blow away, while we carelessly or thoughtlessly pursued a policy of plowing up, wearing out, and moving on. We can no longer do that. We have at last caught up with the frontier. And in the closest possible relationship to this fact is another realization. With our increasing population in future years there will be many million more mouths to feed.

Why have I told you all of this? To show you that from being a Nation blessed with seemingly inexhaustible resources we have come face to face with a decision which is all-important. Shall we become a declining Nation, with ever dwindling resources until, having lost our strength, we become like Babylon of old, a lost civilization? Or, rather, shall we continue to be a vigorous, growing Nation? Can there be any doubt about our answer? Any true American would say we must continue ever more strong, more prosperous. We must continue to raise our standard of living. Now that we know our problem, let us set about solving it, as only Americans can do.

The solution, in one word, is "conservation." And who is to be responsible for conservation? Everyone. Government can do its share, but individuals must all do their part. For example, the Federal Government can make an inventory of our minerals, finding out exactly what we do have. There are vast areas of the United States which have never been mapped or surveyed, much less prospected. A truly scientific search might uncover new deposits. But the real, the most effective course to take, is that of conservation.

Conservation begins as soon as a mineral deposit is discovered. The most efficient of productive methods should be used. This applies particularly to oil and gas. New means of utilizing lower grade ores can be developed, thus postponing the early exhaustion of the better grade ores. We should import and stock pile certain indispensible ores such as copper, lead and zinc, as well as tin. These are some of the ways in which Government can help.

Our forests can be managed in such a way as to provide us with needed timber almost in perpetuity. Selective cutting, replacement and careful conservation of our remaining virgin forests will see us through. Government can help us in this. The Forest Services of the Federal and State governments are ever ready to give us a helping hand and show us how to conserve our forests.

But in the last analysis our land resources are our most important resources. By land, I simply mean the soil—the base for everything we do. Food comes from the land, our leather, wool, wood, vegetable fibers and oils and other raw materials for industry all come from the soil. Wars have been fought over food, civilizations have fallen for lack of it. We have only to look at the great barren wastelands and deserts of the old world to see what happens when the land is exhausted. We cannot let that happen to America.

The Chief of the Soil Conservation Service of the United States Department of Agriculture tells us that all over the world the productive land resources are shrinking. On the average there are only two acres of productive land per

person to produce all of the food and other products on which life depends. Some nations have less than 1 acre per person. The inevitable result is that many people in the world, even in normal times, will not have enough food.

Even in America, one of the most recently settled parts of the world, when the first comprehensive survey was made about 1930, a hundred million acres of formerly good cropland had been ruined by erosion. Another 100,000,000 had been seriously damaged and other millions of acres of pasture, range, and woodland were damaged to some extent. Already half of the land of the country had been damaged and the estimated annual cost was nearly $4,000,000,000. Yet as late as 1930 little or nothing had been done about it.

Why was this man-made destruction largely ignored? There are a number of reasons, and the Soil Conservation Service tells us that the following are probably the main ones.

There always seemed to be more land available—in fact, it appeared to be limitless and inexhaustible. Our land was settled from ocean to ocean before our people began to have any doubts on that score, and few realized it even then.

Furthermore, our leaders seldom gave it thought. They had been trained in fields other than agriculture and they had little knowledge or understanding of the land. Until recently, with a few notable exceptions, they had neither the training nor the incentive to understand what was happening.

Much of the land was in the hands of inexperienced, untrained people. Even in the United States the farm has rarely produced a surplus capital. The farmer has been preoccupied with the business of garnering a living from the land, and few farmers have had the personal resources or training to undertake research or seek technological improvements. They have had to depend on outside help for improvements in machinery, materials, and methods. Too often the farmer has not even thought of including in his calculations any cost for depreciation of his basic plant—his farm land.

Even our agricultural scientists failed to recognize fully the important and complex nature of land as a resource. They looked on it as a fixed quantity and disregarded such vital elements as all its component parts of soil, slope, climate, susceptibility to depreciation by erosion and other causes.

The bitter truth, in summary, is that we did not prevent a major catastrophe from happening. The result is that now we must diagnose and cure a seriously infectious malady which has stricken our land—a malady known as erosion. Just how serious is this condition?

When our country finally woke up, in the early 1930's, it was found that in all the United States there were only four hundred and fifty to four hundred and sixty million acres of really good cropland left. About 100,000,000 acres of this needed clearing, drainage, irrigation, or other improvements to bring it into productive use. All but 100,000,000 acres of this good land was subject to erosion. Even today, despite all that has and is being done, we are still losing a minimum of a half million acres of farmland each year, while a much greater acreage is being damaged to some extent. A survey as recently as 1945 has shown that 90 percent of our farmland still needs complete soil- and water-conservation treatment.

In 1929 there was authorized by the Congress of the United States a technical estimate of the national problem of land damage by erosion. Suggestions were to be made as to the first steps needed to get under way a Nation-wide program of soil and water conservation. In the 1930's, when results of the estimate were made public, we had a better conception of the facts, and we knew how fast and under what conditions erosion took place. We were ready to undertake an effective program of soil-erosion control and prevention, and in 1933 the Soil Erosion Service was established in the Department of the Interior. It was early recognized that speed, cooperation with farmers that would win their active support, and effective work were the three essentials of success.

The act of 1935 establishing the Soil Conservation Service directed it to conduct surveys and research on soil erosion; to find ways to prevent and control erosion, and to help farmers plan, apply, and maintain effective soil and water conservation programs. It also provided that the Service should conduct demonstration projects. There is not time to review the great achievements of this Service.

In 1937 Congress provided for financial aid to the farmer to help finance soil-conservation work and the Agricultural Adjustment Administration was designated to carry this part of the conservation program to the farmer. The name of this agency was later changed to the Production and Marketing Administration.

Great strides have been made in the last several years for the development, maintenance, and preservation of our natural resources, and the passage today of the bill presently under consideration, and our careful attention to other conservation bills now pending in Congress, will be steps in the right direction. Let us work together in the common cause of preserving our great and strong country. Let us show the world that we at least appreciate the bounty of nature sufficiently to guard it by working together in the American way.

No Ivory Tower Here

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks the appendix of the RECORD, I include an editorial appearing on May 11, 1949, in the Seattle Post-Intelligencer which calls attention to the high caliber of men on the faculty of the University of Washington.

NO IVORY TOWER HERE

There is a tendency in certain quarters to adopt a rather patronizing air toward institutions of higher learning.

The feeling is that university professors are disposed to hold themselves aloof from mundane affairs and to devote their attention to the abstract and the recondite.

Everyone in Seattle should be aware, however, that such an impression is completely false as far as the University of Washington is concerned.

The most recent demonstration of the manner in which the University of Washington is taking an important part in practical matters of national and international scope is supplied by Prof. Vernon McKenzie of the school of journalism.

At the close of the present quarter Professor McKenzie will go to the American zone in Germany as an Army adviser to work for the establishment and maintenance of a free and responsible press by the German people.

This is a matter of the utmost importance to world security, and Professor McKenzie's selection for the difficult assignment is as much a tribute to the university as it is to him.

His is by no means an isolated case. He is, in fact, only one of many members of the faculty whose assistance has been sought in solving problems of the most vital significance to the country and the world.

At the head of the list, of course, comes President Raymond B. Allen whose off-campus responsibilities are too many to enumerate.

To mention only two, Dr. Allen was a member of the Eberstadt committee of the Hoover Commission on the Reorganization of the Executive Branch of Government, which was entrusted with the task of recommending improvements in our national security organization, and he serves on the Armed Forces Medical Advisory Committee, which is seeking to increase the efficiency of medical service for the Army, Navy, and Air Force.

Then there is the work of Dr. Nathanael H. Engle, director of the university's bureau of business research. In addition to having had charge of the greater Seattle housing survey and similar enterprises in Yakima, Kent, and other cities of the State, which have established a precedent for the rest of the country, he is constantly being consulted on business matters affecting the entire Nation. He is a member of both the Department of Commerce Small Business Advisory Committee and the United States Senate Advisory Committee on trade policies.

Another notable figure is Dr. William F. Thompson, director of the fisheries research institute. He goes to Alaska every year to study problems of fish conservation and propagation which have a very direct bearing on practically everyone's household budget. The fisheries industry thinks so highly of his work that it has contributed hundreds of thousand of dollars to permit him to continue his research.

In the same field, Dr. Wilbert M. Chapman, director of the school of fisheries, is on a 1-year leave of absence, having been loaned to the Secretary of State for the purpose of supplying expert advice on world fisheries problems.

Dr. Lauren R. Donaldson, director of the applied fisheries laboratory, is doing a job for the Atomic Energy Commission which may have results that are almost beyond conjecture. Under him, the university has become the coordinating center for all practically applied research on the effects of radio activity on marine life.

Of much more immediate benefit are the efforts of Prof. F. Burt Farquharson, director of the engineering experiment station, who is constantly at work on practical industrial problems of the Pacific Northwest.

Of a similar character is the practical research of direct benefit to the area which is done at the college of forestry.

There is also the method of extracting alcohol from wood pulp, which was worked out by the chemical engineering department and which is returning actual dividends to the region.

It would be possible to go on citing examples almost indefinitely.

But surely these are sufficient to show that the University of Washington faculty is not cloistered in an ivory tower.

Passenger Transportation Tax

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. BARTLETT. Mr. Speaker, I offer here a letter written to the chairman of the Ways and Means Committee by Admiral F. A. Zeusler, executive assistant to the president of the Alaska Steamship Co., illustrating forcibly the situation which results when the United States Government demands a 15-percent passenger transportation tax when there is no such tax exacted by the Canadian Government in a competitive service:

ALASKA STEAMSHIP CO.,
Seattle, Wash., May 10, 1949.

Hon. ROBERT L. DOUGHTON,
Chairman, House Ways and Means Committee,
House Office Building,
Washington, D. C.

DEAR SIR: At the present time the United States steamship companies in the Alaska trade are faced with a very serious situation that cannot be adjusted without specific action of your committee.

Although shipping laws prohibit foreign lines from transporting passengers or freight between United States ports or between ports in the United States and its territories, including Alaska, Canadian lines have for years given the American operators very strong passenger competition in the Alaska trade. This has been possible because their Alaskan voyages originate and terminate in Vancouver, B. C., while a local service is used between Seattle and Vancouver. There is therefore no violation of our coasting laws. Consequently, no objection has been raised to this competition.

During the wartime period, in an effort to reduce unessential travel to a minimum, a 15-percent tax was placed on passenger transportation and at the same time a 3-percent tax on freight transportation (subch. A of ch. 30 of the Internal Revenue Code). The Canadian Government assessed identical taxes which kept the competitive relationship stable.

Now, however, this balance has been completely overturned, Canada has repealed the 15-percent tax on transportation of passengers as well as the 3-percent tax on freight while our taxes run on. From the point-of-view of the American operator, this gives the Canadian lines a very serious competitive and unfair advantage. Prior to this tax repeal, because of the subsidization of their lines, the Canadians were able to offer fares somewhat below ours. A comparison of the Canadian Pacific Steamship Co. fares with our own for the same class of accommodations without including the tax on a trip, Seattle, Wash., to Juneau, Alaska, shows a $62.25 fare on their vessels against a $68 fare on ours.

This differential was a definite advantage, but didn't present too serious a threat. But now that we must continue to add the tax while they do not, our fare for the sample trip is $78.20 against $62.25. This represents greater than a 25-percent differential and unless some relief is provided we may expect to lose our passenger business over competitive routes to the Canadian lines.

In addition to American steamship companies, American railroads, bus lines, and air lines are seriously affected by the Canadian tax repeal. This is outlined in enclosed copies of recent editorials which appeared in the Seattle Post-Intelligencer and the Marine Digest.

Because of the seriousness of this situation, three measures have already been presented to the House of Representatives, i. e., H. R. 205, H. R. 1895, and H. R. 1228, each of which has been referred to your committee for action. Passage of any one of these measures would effect the necessary relief by repealing the transportation taxes. In order to meet the present pressing need for adjustment of a situation wholly unfair to American transportation companies, we urge your early, favorable action on this legislation.

Respectfully yours,
F. A. ZEUSLER,
Executive Assistant to the President.

Expanding Three "R's"

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Sunday Post, Boston, Mass., May 15, 1949:

SCHOOLS HOLD KEY TO FUTURE—EDUCATORS FIND CONSTANT NEED TO IMPROVE SYSTEM—MANY SOFT SPOTS IN NATIONAL SET-UP

(By Thomas F. Downey)

Americans can be justly proud of the greatest educational system in the world which this Nation boasts, but leaders in the ever-broadening scholastic field warn there is urgent need for improvement and expansion.

Just as new ideas, methods and instruments are developed in the fast pace of the modern world, the faithful three R's have to be further expanded to prepare today's children to cope with the increasingly complex problems of the future.

Education from the first grade up must prepare young Americans for the tomorrow of their lives and not merely the present era. The day when schools had to keep abreast of the times is passe for they must push forward into the future.

In the far-reaching and probing annual report of the National Education Association of the United States, Executive Secretary Willard E. Givens, of Washington, points out, "Human nature often resists change. It is most likely to do so in the institutions which are vital to success and happiness.

"IMPORTANT YEARS

"The criticisms leveled at the school are a recognition of education as one of the most important experiences of life. Those who find fault with the school should try also to understand it.

"Increased understanding of how children learn has brought marked improvement to the teaching of school studies. Instruction has advanced most in those subjects often referred to as the fundamentals—reading, writing, and arithmetic. To these we might add spelling and oral expression. All of them are essential tools in acquiring knowledge and passing it on to others.

"BETTER TAUGHT

"A Nation-wide survey reveals that 6 out of 10 adults hold the opinion that children today are better taught in reading than they themselves were. Positive evidence of the effectiveness of teaching reading is abundant. Last year the American people purchased 52,285,000 newspapers daily."

The era when children were told not to bother their little heads with world matters and controversial issues is blending with the dust of the horse-and-buggy days.

TAKE AWAY SHIELDS

Differences of opinion have always existed, and will continue to exist, even among people who are sincerely trying to understand and cooperate with each other. Thus today educators feel it is unrealistic to shield children from important and controversial issues.

"Intelligent youth cannot be expected to preserve a vacuous indifference toward conflicting issues," Executive Secretary Givens stressed.

"These should be discussed by our youth with those who are deeply concerned with their welfare and for the welfare of the American people. In the social studies such issues are selected and studied with consideration for the maturity of the students, who in turn acquire knowledge and skills that will be helpful to them in arriving at their own decision throughout life."

NEED GOOD TEACHERS

It was pointed out that the modern shifting of emphasis and the use of new methods and materials of instruction call for highly skilled, competent teachers of keen judgment who are loyal to the ideals of our democracy and the American way of life. New schools, modern equipment, advanced methods and more teachers are greatly needed to educate properly the youth of today.

Community leaders are needed today who are sensitive to the needs of youth. Cooperation by the school, home, and community builds the foundation of good citizenship and produces useful and healthy lives happily adjusted to the society which expects more of the American of today and tomorrow.

HEALTH PROGRAMS

Physical education and health programs are becoming an increasingly important part of American school schedules, but in many schools there is still a need for more expansion in this necessary phase of modern education.

World War II brought out the startling revelation that city-bred youth were healthier and stronger than those from rural sections. When young America began pouring into induction and draft centers it was discovered that physical education and health programs enjoyed by city youngsters gave them a good health edge on farm boys who did not benefit by such programs.

Dr. Belmont Farley, a member of the executive board of the National Education Association, pointed out that the schools have made important contributions to the longevity and good health of the American people.

EXTEND LIFE SPAN

"The life span has nearly doubled in one generation," he said. "In 1879, the expectation of life at birth was approximately 34 years. In 1946 it was 67. The death rate dropped from 17.2 persons per 1,000 of the

population in the United States in 1900 to 10 in 1948. The young people of today will enjoy better health and live longer than any generation before them."

"Much credit for this achievement goes to the medical profession and to the many auxiliary services that care for the sick. Credit goes also to a high standard of living which makes possible sufficient food, adequate clothing, comfortable housing, cleanliness, and the increased hours of leisure which permit opportunities for wholesome outdoor exercise and relaxation."

SCHOOL AIDS HEALTH

"The school, however, has played a significant part in the advancement in physical welfare. The school begins in the early years to lay the basis for good habits of sleep, eating, and exercise. It builds appreciation for the science of medicine. It turns the ignorant from superstition and quackery. It establishes the ideal of periodic physical examination."

Dr. Farley stressed that the school makes a contribution to health that can be made by no other institution. It deals with human being at a period of life when normal physical development takes place with great rapidity.

HEALTH CHECKED

In childhood many physical weaknesses are still remediable. Prevention is still a choice over cure. The health and physical education services of the school are daily and systematic over a long period of time. Health records follow the children through school years.

There is dire need for the improvement and expansion of health and physical education services in hundreds of school systems where they are now poorly developed, Dr. Farley asserted.

"Less than one-fourth of American school children have the benefit of satisfactory services," he said. "They are notably absent or of purely academic character in many rural schools where community services of this kind are also entirely lacking or below standard.

MENTAL ILLS

"The American people are not bringing to bear the full effect of scientific knowledge and effort upon what has been described as the Nation's number one health problem, that of mental health.

"It is estimated that one out of every 20 children in our schools today is destined to spend some time in a mental hospital. The cure of mental ills must be left largely to the specialist. Prevention depends upon diagnosis of early symptoms, in which the teacher can help.

"The growth of mental health as a positive, robust quality takes place in association with intellectual and emotional development—a function of the school.

"PROVIDE PROGRAM

"An important step toward improving the welfare of all of our children is the provision of a mental-health program. Mental hygiene should be introduced more generally in our school studies and the principles of mental health should be recognized in the organization and administration of the school program. Mental-health specialists should be available to those who need treatment.

"The school is childhood's highway to health. It has already contributed much to physical welfare and longer life. It can contribute more. The schools should become the strong ally of the attacks now being made against the disease enemies of mankind."

LEADERS OF FUTURE

Leading educators warn Americans not to be complacent about the modern American school system. They point out that for every modern building there are hundreds which are ancient, inadequate, and behind the times.

While taxpayers may grumble about school expenses, they must realize that part of the responsibility of citizenship is to prepare the children of today to become the leaders of the Nation tomorrow. In the keen international competition America, through its schools, must continue its forward march.

The schools must be kept ahead of the times to safeguard the future of the Nation.

Anniversary of George Washington's Inaugural

EXTENSION OF REMARKS
OF
HON. JAMES J. MURPHY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. MURPHY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following from the ceremonies commemorating the anniversary of George Washington's inaugural sponsored by the New York Chapter, Sons of the American Revolution, subtreasury steps, New York City, April 29, 1949:

Mr. GARDNER OSBORN. George Washington is our country's finest examples of distinguished public service—he could never say "No" when his country called him from the peace of his Mount Vernon home.

Therefore, each year the New York Chapter of the Sons of the American Revolution will pay tribute to that rare trait by the public presentation of a medal especially designed to symbolize public service.

This medal, to be presented today to Mr. George McAneny, bears the likeness of Chauncey M. Depew, the founder of our society in the State of New York. Depew, a name to conjure with; Depew, the modern symbol of public service.

We have invited the Honorable James Farley to recall for us a bit of the greatness of Chauncey Depew. Mr. Farley is a member of the board of directors of the New York Central System, which Mr. Chauncey Depew served for many, many years as president and then as chairman of the board, until his death.

We are indeed privileged to welcome to this inaugural observance a great American, best known to us all as Jim Farley.

Mr. JAMES FARLEY. On this commemorative occasion, when we seek to capture again the spirit of those noble days of Washington and the other great colonial leaders, we are perforce impressed with the great debt we owe to the past. We are reminded, too, of the continuing lessons which we may learn by pausing now and then to glance backward while carrying on our steady march to the fore in every field of activity.

With this thought in mind, I would speak today of an inspiring figure from the recent past, the founder of the Empire State Society of the Sons of the American Revolution, Chauncey M. Depew. The memory of Chauncey Depew is still fresh in the minds of most of us here present today, and the unique message of his distinguished life of service is one it behooves us frequently to recall to mind.

It is no severe accusation of our contemporaries to say that there exists today no counterpart of Chauncey M. Depew. To expect men of such rare qualities, in such a happy combination, to appear frequently among us would be asking too much of our already overtaxed good fortune. I suggest, however, that we can with profit seek out and cultivate those attributes which won for this great man his deserved place in our social, political, and commercial history.

Let us remember that Chauncey M. Depew was, first among all things, a man of faith. By his own repeated affirmation, he was a man who trusted in God, who knew how to place trust in others, and who knew how to be true to the trust that others placed in him. Throughout every aspect of his long and full life, he kept faith with the simple, basic creed which for him summed up the entire relationship of man with God and with his fellow men.

Let us remember also that Chauncey M. Depew was a man of balance. If there is any one answer to the question of how a man could concentrate so much and such varied activity into a single lifetime, I submit that the answer lay in his remarkable ability to see things in their true perspective and to weigh them according to a clearly established scale of values. From a study of his life, it would appear that to him nothing was unimportant. By the same token, he allowed no consideration, however pressing, to loom beyond its true proportions. He had the unfailing judgment of a specialist in a wide variety of fields, but never did he make the specialist's common error of total submersion in one line of thought to the exclusion of all others.

If we may select one other mark from the long list of those which distinguished this eminent American, we may well ponder his uncommon gift of human sympathy. For a man who moved continually among what we might call the elect of his time, he commanded a remarkable grasp of the viewpoints of all walks of life. His surpassing refinement, growing out of a firm conviction of man's worth and dignity, won him a position in the public esteem untarnished by any trace of bitterness or malice. In carrying out his avowed purpose of making as many friends as possible, he displayed a singular incapacity for earning the enmity of any one. His stated view that the essence of friendship is "reciprocal attachment and contribution" represents a philosophy of human relations that the world would do well to heed.

Paying tribute to the memory of Chauncey M. Depew, while I consider it a great honor, is not an easy thing to do. From a character so rich, from a life so replete with accomplishment, it seems almost impertinent to select points which at best must appear random observations. And, when one considers the matchless eloquence which crowned his other gifts, the futility of speaking mere words in his honor is the more overwhelming. Therefore, it is not in any further honor that we can here confer upon him, but rather in the enduring regard with which his memory is already invested, that we hail him today as founder of the Society here gathered, and as an outstanding member of the society that is America.

This New York chapter of the Sons of the American Revolution are honoring themselves when they present this medal named after Chauncey M. Depew to one of New York's most distinguished citizens who for upward of 50 years or more of his life in this city, gave freely of his time and of his efforts to advance the best interests of the people of the city of New York, and I know of no man of my acquaintance who has earned, and justly so, the respect of his fellow citizens to any greater degree than has the recipient of the reward here today.

May I congratulate you, George, and also the society, and express the wish that you will continue to enjoy many, many years of health and happiness to enable you to continue to do for the city of New York what you have been doing for so many, many years.

Stamp Proposed to Honor Lawyers

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. KLEIN. Mr. Speaker, the preponderance of lawyers in the Congress leads me to bring to the attention of the House a proposal I have just made, in the form of a bill introduced today, for the issuance of a special stamp honoring lawyers for their contribution to the American way of life.

Mr. Speaker, lawyers fill an essential role in a government founded on the rule of law. Laws are made by fallible men, and disputes must and will arise as to what the men who made the laws meant. Lawyers, more than members of any other profession, have expounded and developed the meaning of democratic government in classic issues. Lawyers, like other men, are sometimes constrained to argue against their own convictions; and more than one great corporation lawyer has eased his conscience by handling important cases without charge, standing for what he conceives to be the right, and directly opposing the principles which his wealthy clients pay him to uphold with equal skill.

A press release describing the proposed lawyer stamp, and referring to the legal survey now under way, will make clearer the occasion for this proposal; I include the press release as a part of my remarks.

[From the office of United States Representative ARTHUR G. KLEIN, of New York]

A stamp honoring the American lawyer will be proposed in the House of Representatives this coming week by introduction of a bill by United States Representative ARTHUR G. KLEIN, Democrat, of New York, himself the head of a widely known law firm, Congressman KLEIN has announced from his Washington office.

By the terms of the bill, the stamp would be issued in conjunction with the research reports of the Legal Survey of the American Bar Association and would commemorate the work of the legal profession in the preservation of liberty, justice, and democracy.

Congressman KLEIN said that he would propose to the Committee on Post Office and Civil Service and to the Postmaster General that the lawyer stamp contain the photographs of four outstanding American jurists whose likenesses have yet to appear on United States postage. These are former Chief Justice Charles E. Hughes and former Associate Justices Oliver Wendell Holmes, Jr., Louis Brandeis, and Benjamin N. Cardozo. The background would show the United States Supreme Court building.

The only Supreme Court Justices whose pictures have thus far appeared on postage stamps are former Chief Justices John Marshall, William Howard Taft, and Harlan F. Stone.

First day sale of the new lawyer stamp would be at Chicago, Ill., headquarters of the American Bar Association.

The Legal Survey which is now being conducted by the ABA will show the role played by the lawyer as an advocate and counsellor, the part he plays as a public servant, and the tasks he performs in the selection of judges and the modification of the rules of law in order to facilitate the cause of justice.

In 1937, Congressman KLEIN pointed out, a 3-cent brown-violet stamp was issued in similar tribute to the doctors of America and the work of the American Medical Association, reproducing the painting, The Doctor, by Sir Luke Fildes.

Marine Corps Demonstration at Quantico

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. VAN ZANDT. Mr. Speaker, in company with many of my colleagues in the Congress, it was my pleasure to attend a combat demonstration presented by the Marine Corps schools at Quantico, Va., on May 9. I am happy to report that the marines in Quantico are efficiently pursuing their congressionally assigned mission of developing new methods and techniques of amphibious warfare in a most commendable manner. While their existence as a corps is again the subject of much discussion, I venture the prediction that in the future, as in the past, their efforts will be saluted with enthusiastic approval by the citizens of this country.

It is no secret that the atomic bomb has introduced a new and deadly threat to the success of landing amphibious forces across a defended beach. To circumvent and perhaps overcome this threat, the Marine Corps has been experimenting with helicopter-borne invasion, landing amphibious troops over and behind enemy lines. These experiments are not being just talked about; they are being carried out in fact. My colleagues and I were dramatically shown how helicopters carried by aircraft carriers within flight range, but outside range of gunfire, of a hostile beach were able, even at their present stage of development, to take off, fly, and land a sizable body of infantry troops behind enemy lines. Again, in a matter of minutes, they were able to return with ammunition, water, food, and even with weapons as large as a 75-millimeter pack howitzer. All these developments we saw executed by the marines.

I believe the development of the use of helicopters in amphibious operations is the most revolutionary concept in battle method to emerge since the end of the war. The full impact of its complete development will be of a magnitude that few conceive today. The limit to which this helicopter concept can be developed is, however, also dependent on operating income and to this requirement I commend the attention of my colleagues. Our marines have again taken the lead in devising new concepts of war. I hope the Marine Corps will be provided with sufficient funds to fully develop this new theory of amphibious warfare.

At Quantico we saw examples of effective integration of air and ground effort. Marine infantry, aviation, tankmen, and artillery worked in the closest possible cooperation. The demonstration of close support of ground troops by marine air units produced the most amazing bombing accuracy I have ever seen. Twenty-foot-square targets were repeatedly pin-pointed. One cannot see such perfection of close air support of ground troops without being a little bewildered by recent reports of efforts to eliminate marine aviation.

The spirit of teamwork that prevailed in all marine units in Quantico is the kind of spirit I hope will one day be installed in all our armed forces.

California's Colorado River Story

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. SHEPPARD. Mr. Speaker and Members of the House of Representatives, as chairman of the California congressional delegation, I feel completely justified in presenting the following.

The Members of the entire California delegation have definitely indicated to this Congress their attitude pertaining to this Congress permitting the enactment of House Joint Resolution 3 which authorizes the settlement of the water controversy presently prevailing between the States of Arizona and California.

For a period in excess of 20 years there have been many conferences and attempts to settle the Colorado River compact problem. Those conferences and attempts have all failed. Today we in California are confronted with a tremendous increase in our population and a tremendous increase in requirements for water. It is impossible for us to take an inventory of our ability to provide water without first knowing our definite participation under the Colorado River compact; hence every member of the California delegation has filed a counterpart of House Joint Resolution 3. We feel we are not asking the Congress to bestow upon us any special privilege or any special appropriation, but we are merely requesting the Congress to give us the right to have this controversy adjudicated by the highest court of our land. This Court was instituted for purposes of this character. Our Federal Government is a component part of this controversy, and the right of adjudication, if justice is to prevail, should flow through the channels requested in House Joint Resolution 3. The Congress functions as a legislative body and not that of the judiciary. We of California have no way of knowing what the decision of the Supreme Court may be, but whatever it is, we will abide by it and then be able to adjust ourselves to the economic necessity of the future by developing such water projects as are necessary through sources that are then available.

I can see no legitimate objection to a request of this character emanating from any source which wishes to deal with

economic facts instead of political aspirations.

The following story as written by Mr. Evan T. Hewes, president, board of directors, Imperial irrigation district, tells the story of the Colorado River in a very interesting manner. I call specific attention to the subject matter under the title of "Obstructions."

CALIFORNIA'S COLORADO RIVER STORY

(By Evan T. Hewes, president of the board of directors, Imperial irrigation district)

Shortly after California was admitted to statehood, the use of Colorado River water became important to its development. The limited supply of water in the southern half of the State caused all of southern California to turn toward the Colorado River for a future water supply. Water filings on the river under State law, and the use of Colorado River water, increased until the river became an issue of national importance in the early 1900's.

SANTA FE COMPACT

California's increased use of water caused concern upstream on the Colorado where development was slower, and resulted in the agreement of 1922 known as the Santa Fe compact, which apportioned part of the estimated yield of the Colorado River system between the two geographical areas of the river basin commonly referred to as the upper basin, composed of the States of Colorado, New Mexico, Utah, and Wyoming, and the lower basin composed of Arizona, Nevada, and California. The 1922 agreement did not divide the water between the States, but did lay the foundation for the development of the river.

Subsequent Federal and State statutes opened the way for, and the Boulder Canyon Project Act authorized the construction of, Hoover Dam and the All-American Canal project. The Boulder Canyon Project Act recognized the existing rights for the use of water, and authorized the Secretary of the Interior to enter into contracts with agencies representing a great part of the population and farmable area of southern California, to develop power and store and deliver water, provided these agencies guaranteed repayment to the United States of all moneys advanced by the United States for the construction of Hoover Dam, and the All-American Canal project. In addition, these southern California agencies constructed works for the use of water and power that required an investment of over $400,000,000.

Depending on the sanctity of the contracts with the United States for the delivery of this water and power to southern California communities, cities have been built, industries have moved across the Nation, and thousands of acres of farm land have been developed.

OBSTRUCTIONS

To obstruct this development of the Colorado River, Ariz., resorted to the Supreme Court on four occasions, once the Arizona State Militia was called out, and continuous political battle has been waged by Arizona. Although that State benefits by millions of dollars of power rights, and all the water that can be used on self-supporting projects, Arizona has not contributed 1 cent to repay the United States for any money spent on the development of the main stream of the Colorado River.

Arizona tried to prevent, and now tries to destroy, the development of southern California. In the political arena today Arizona is (1) seeking authorization by the United States Congress of a project to irrigate 75,000 acres of land at a cost of not less than $738,000,000 to be financed by the taxpayers of the Nation as a whole, and which would cause water dedicated for use in California to be taken away from California and used in Arizona, and (2) opposing enactment of a bill by the United States Congress which would permit the controversy between the two States over their rights to the use of Colorado River water to be submitted to the Supreme Court.

FUTURE PLANS CLOUDED

The situation causes a cloud to hang over the plans for the future development of the entire southern half of the State of California, and has strained relations between the two States to such an extent that the tension is felt throughout the United States.

Under our form of government, the controversy can be settled only by one of two ways—agreement or litigation. Over a period of 25 years all efforts to settle the issue by agreement have failed; therefore in the interest of the entire Nation let us hope that the Congress will enact the legislation to make possible settlement in the only remaining way, the way that has been traditionally respected and honored since the beginning of our Government—that is, by decision of the United States Supreme Court.

United Mine Workers of America Oppose the St. Lawrence Seaway Project

---

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. VAN ZANDT. Mr. Speaker, recently Mr. Thomas Kennedy, secretary-treasurer of the United Mine Workers of America, reemphasized the opposition of his organization to the St. Lawrence seaway project. In doing so, Mr. Kennedy developed the following point which should not be lost sight of in considering the St. Lawrence seaway project.

Mr. Kennedy said in a recent issue of the United Mine Workers Journal:

If Russia is successful in its coal-producing plans, then we can expect it will eventually export coal to Canada and the United States, and the seaway is right down the Russian alley. If it were built, we could look for a repetition of export coal from Russia-Poland, subsidized in order to compete for American markets and for trade-balance purposes.

Mr. Kennedy also said:

Advocates of the seaway have argued that it would be a source of employment.

But Mr. Kennedy pointed out it would at best offer only temporary jobs to construction labor, mostly Canadian. On the other hand he said it would create unemployment among coal miners, railroad men, and other workers whose jobs would be undermined by imports via the seaway and this unemployment would be permanent.

Mr. Kennedy's statement which follows, definitely proves the St. Lawrence seaway project is destructive of jobs for coal miners, railroaders, and others:

KENNEDY REITERATES UMWA OBJECTIONS TO SEAWAY AS UNECONOMIC, UNNECESSARY

Opposition of the UMWA to the St. Lawrence seaway project, that uneconomic scheme that bobs up again year after year despite repeated defeats, was reiterated by Secretary-Treasurer Thomas Kennedy in a communication to a Senate Foreign Affairs Subcommittee which is considering a bill to approve the 1941 Canadian-United States agreement to build the seaway from the Great Lakes to the Atlantic.

Observing that the UMWA had consistently opposed the project as being without sound economic justification and a menace to the coal, railroad, and other industries, as well as being destructive of many important east-coast ports, Kennedy said:

"We opposed it in 1934 when it was rejected as being unnecessary for either power or commerce. We opposed it in 1941 when it was dressed up in the cloak of patriotism, as being necessary for national defense and the winning of the war. We opposed it in 1946 when similar reasons were advanced in favor of the project. However, the record shows that we not only built up our own national defense but also furnished our allies with necessary supplies. We won the war without the seaway project."

Summarizing the mine workers' objections to the project, Kennedy said there is no good reason from either the standpoint of power or commerce to justify the project. It would work a hardship on coal-producing areas, especially Pennsylvania's anthracite region, by offering a low-cost transportation service for coal exports from Russia, which now controls Polish and some former German coal mines.

"If Russia is successful in its coal-producing plans," Kennedy explained, "we can expect it will eventually export coal to Canada and the United States, and the seaway is right down the Russian alley. If it were built, we could look for a repetition of export coal from Russia-Poland, subsidized in order to compete for American markets and for trade-balance purposes."

WOULD CREATE MINE UNEMPLOYMENT

Advocates of the seaway have argued that it would be a source of employment, but Kennedy pointed out it would at best offer only temporary jobs to construction labor, mostly Canadian. On the other hand, it would create unemployment among coal miners, railroad men, and other workers whose jobs would be undermined by imports via the seaway, and this unemployment would be permanent.

Kennedy declared that an economy-minded Congress could hardly justify the expenditure of the millions the project would cost when it refuses funds for veterans' housing, increased social-security benefits, and other measures to assist in development of the internal economy of the Nation. If the United States has Government money to spare, Kennedy added, let it go to underpaid teachers and to the building of schools. These are lifetime projects of value all year round, while the seaway would be closed, due to ice, 5 months each year.

Even though the seaway might offer some advantage to certain Midwest and upper New York State communities, it cannot be classified as a project for the general welfare of all the people of all the States, though the funds to build it will come from all the States. He concluded by asking that the "rule of reason" apply and Congress again defeat the project.

Witnesses from eastern and southern port cities also attacked the project, with Mayor De Lesseps S. Morrison, of New Orleans, especially indignant that Congress should cut military funds and then consider throwing millions into a project on foreign soil. Morrison said if Congress had funds for expensive navigation and power projects, they should go into maintenance of United States ports and harbors in this time of international uncertainty.

Walter P. Hedden, of the New York Port Authority, centered his fire on claims by advocates that the seaway would eventually pay for itself. He said it will fail by 75

percent of being self-liquidating and that no toll charges could change the grim prospect that it will be an economic millstone about the necks of United States taxpayers.

Southworth Lancaster, spokesman for the port of Boston, joined in complaints that it would divert traffic from Boston, New York, New Orleans, Baltimore, and other eastern ports. It was also brought out that New York's all-water route from the Great Lakes to the east coast is 80 percent completed and would cost half as much to finish as the seaway on the St. Lawrence.

First Deficiency Appropriation Bill, 1949

EXTENSION OF REMARKS
OF

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. ALBERT. Mr. Speaker, the inclusion in this bill of an appropriation to pay the Choctaw and Chickasaw Indians for their segregated coal and asphalt lands is the culmination of a long history of negotiations between these original Americans and the Government of the United States. This appropriation simply provides the funds to consummate a sale already agreed upon both by the tribes involved and by the Government and approved by the Congress (Public, No. 754, 80th Cong.).

This is not a bonus. It is not a relief measure. It is a sale based upon a good and valuable consideration at a price agreed upon between the Government and the Choctaw and Chickasaw Tribes. These tribes own in fee simple the mineral deposits in question. The Choctaws received their title by virtue of a patent issued by the United States on March 23, 1842, under the name of John Tyler, as President of the United States, and Daniel Webster, as Secretary of State. The patent provides as follows:

THE UNITED STATES OF AMERICA

To All to Whom These Presents Shall Come, Greeting:

Whereas by the second article of the treaty, began and held at Dancing Rabbit Creek, on the 15th day of September, in the year of our Lord 1830 (as ratified by the Senate of the United States on the 24th of February 1831), by the commissioners on the part of the United States, and Mingoes, chiefs, captains, and warriors of the Choctaw Nation, on the part of said nation, it is provided that "The United States, under a grant specially to be made by the President of the United States, shall cause to be conveyed to the Choctaw Nation" a tract of country west of the Mississippi River, in fee simple, to them and their descendants, to inure to them while they shall exist as a nation and live on it: Beginning near Fort Smith, where the Arkansas boundary crosses the Arkansas River, running thence to the source of the Canadian fork, if in the limits of the United States, or to those limits; thence due south to Red River, and down Red River to the west boundary of the Territory of Arkansas; thence north along that line to the beginning. The boundary of the same to be agreeably to the treaty made and concluded at Washington City in the year 1825.

Now know ye, That the United States of America, in consideration of the premises, and in execution of the agreement and stipulation in the aforesaid treaty, have given and granted, and by these presents do give and grant, unto the said Choctaw Nation, the aforesaid "tract of country west of the Mississippi," to have and to hold the same, with all the rights, privileges, immunities, and appurtenances of whatsoever nature thereunto belonging, as intended "to be conveyed" by the aforesaid article, "in fee simple to them and their descendants, to inure to them, while they shall exist as a nation and live on it," liable to no transfer or alienation except to the United States, or with their consent.

In testimony whereof, I, John Tyler, President of the United States of America, have caused these letters to be made patent, and seal of the General Land Office to be hereunto affixed. Given under my hand at the city of Washington, the 23d day of March, in the year of our Lord 1842, and in the independence of the United States the sixty-sixth.

JOHN TYLER.

By the President.

DANIEL WEBSTER,
Secretary of State.

The Chickasaws got title under the treaty of 1837 (11 Stat. 573), which reads in pertinent part as follows:

ARTICLE 1. It is agreed by the Choctaws that the Chickasaws shall have the privilege of forming a district within the limits of their country, to be held on the same terms that the Choctaws now hold it, except the right of disposing of it (which is held in common with the Choctaws and Chickasaws), to be called the Chickasaw district of the Choctaw nation; * * *; and the Chickasaw people to be entitled to all rights and privileges of Choctaws * * *.

ART. 2. (Description by metes and bounds of the Chickasaw district).

ART. 3. The Chickasaws agree to pay the Choctaws, as a consideration for these rights and privileges, the sum of $530,000.

In an effort to explain the significance of this measure, I ask your indulgence while I reiterate briefly the history of the various laws, treaties, negotiations, and agreements involving the Government of the United States and the Indian peoples involved.

When the Spanish explorers discovered the Western Hemisphere, they found the Chickasaws and Choctaws living in what now constitutes a portion of the States of Mississippi, Alabama, and Tennessee. They had been living there with their families, running their own affairs for at least 1,000 years. When those Territories later became States of the Union and as their populations began to increase, it became increasingly difficult for the Indian Tribes to carry on with their tribal customs and under their tribal governments. The result was that the Government of the United States virtually forced them to agree to the treaty of removal of 1830 (7 Stat. 333) under the terms of which they were to move to the Indian Nation and to settle a portion of the land now embraced within the State of Oklahoma.

To give you an idea of the circumstances under which they moved, I would like to read the preamble of this treaty:

Whereas the General Assembly of the State of Mississippi has extended the laws of said State to persons and property within the chartered limits of the same, and the President of the United States has said that he cannot protect the Choctaw people from the operation of the laws; now therefore that the Choctaws may live under their own laws in peace with the United States and the State of Mississippi they have determined to sell their lands east of the Mississippi and have accordingly agreed to the following articles of treaty.

When the Choctaws agreed to this treaty, they were given this understanding in explicit terms; that the Government of the United States agreed and obligated itself that, if they would move west to lands which they accepted in exchange for their homes east of the Mississippi, it, the Government of the United States, would secure to these people the government and jurisdiction of all the persons and property that may be within their limits, so that no territory or State would ever have the right to pass laws for the government of the Choctaw people or their descendants, and that no part of their new lands would ever be embraced in any territory or State.

With faith in that obligation of the United States, these original Americans left their traditional homes and built new homes and new churches and new schools in the West. Thereafter they conducted their own affairs as a sovereign nation until the Atoka agreement was ratified in 1898. After more than a half century in their new homes, they again felt the impact of the encroachment of the white man. What had happened in the East was beginning now to take place in the West. White settlers clamored first for territorial status and then for statehood. The result was that, notwithstanding the solemn agreement of our Government that no part of the Indian nation should ever be in any territory or any State, the Congress of the United States, in response to new demands for statehood, directed the President to appoint a commission to negotiate with the Indian tribes to extinguish their national or tribal status so far as was necessary for the creation of another State in the American Union (27 Stat. 645).

This legislation was followed by the Atoka agreement which provided, among other things, as follows:

And all coal and asphalt in or under the lands allotted and reserved from allotment shall be reserved for the sole use of the members of the Choctaw and Chickasaw Tribes exclusive of freedmen (30 Stat. 495).

From that day on the mineral interests, which are the subject of this appropriation, have been known as the segregated coal and asphalt lands of the Choctaw and Chickasaw Tribes.

The Atoka agreement was followed by a supplemental agreement, ratified by act of Congress on July 1, 1902 (32 Stat. 641). This agreement provided, among other things, that within 3 years these segregated lands should be sold at public auction for cash. Sales were to be made in tracts not exceeding one section but no limitation was placed on the number of sections that could be sold to any one purchaser. Now, what did the Government do about this undertaking with the Choctaws and Chickasaws?

By the act of April 21, 1904 (33 Stat. 189) the Congress inserted a limitation into the law under which not more than

960 acres could be sold to any one person, and a further limitation that all leased lands should be withheld from sale until the further direction of the Congress. The effect of these provisions was virtually to withdraw these lands from every possible favorable market. But that is not all. By act of Congress, approved April 1906 (34 Stat. 137), all coal lands, whether leased or unleased, shall be reserved from sale until all existing leases had expired. The effect of this, of course, was to abrogate the act of Congress under which the supplemental agreement had been ratified.

What was the effect of all this? First of all this meant, of course, that the Choctaws and Chickasaws could not sell their tribal property. Why had there ever been a decision to sell their common holdings? The answer is simple. These new citizens of the United States, whose nation had been extinguished by agreement, were all given individual allotments of land. They were now operating under a new government. They needed cash to improve their lands and to get their start as full-fledged American citizens. They had, therefore, reserved their coal and asphalt lands from individual allotments, intending to sell them and to divide the proceeds so that their members would have the necessary cash to begin operating their individual holdings.

From that day until 1944 the situation remained unchanged. In that year the Stigler Act was passed (Public Law 369, 78th Cong.). This law directed the Secretary of Interior to negotiate with the Choctaw-Chickasaw Nations, looking toward the sale of these lands to the Government, and bringing to a conclusion, after all these years, a matter that had hung fire for such a long period of time. Many of those, of course, who expected to receive a share of the proceeds of this sale, which was to have been made in the early part of the century, have passed on. I hope the remaining few will not suffer similar and further disappointments.

Pursuant to the Stigler Act, negotiations were had between the Secretary of the Interior and the tribal officials, as a result of which the tribes agreed to sell and the Government agreed to buy these lands for $8,500,000. That agreement was ratified by an overwhelming majority of the living enrolled members of both tribes. It was later ratified by act of Congress, approved June 24, 1948 (Public Law 754, 80th Cong.) The matter is now here for an appropriation to carry out the purposes of these various acts and negotiations. This is the last step in a long history of negotiations between the Government of the United States and the Choctaw and Chickasaw Indians. This is our opportunity to enable these tribes to wind up their affairs more than 40 years after our Government first promised them it would be done. The agreement has been made with these people. It has been ratified by the Congress. If we fail to follow through with this appropriation, what do you think these original Americans will have the right to think of the Government to which they now proudly pay their full and unswerving allegiance?

Franco Spain Is Still a Fascist State

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. KLEIN. Mr. Speaker, I am greatly disturbed, as I believe most Americans are, by the powerful propaganda wave rolling over this country in favor of restoring Franco Spain to a position of trust and confidence in the global family of nations.

I shall have more to say on this in the future.

At the moment I wish to draw attention of the House to two significant comments which reached my office in the same mail.

One is a beautifully prepared magazine, consisting of 40 lithographed pages, plus cover, called, and I am quoting from the front cover, "The International Review of the International Telephone and Telegraph Corporation."

The printer's imprimatur on the inside cover shows that this expensive, even luxurious, publication, was printed by Kennerly Press, Inc., New York; but the magazine was delivered in a plain white envelope postmarked Washington; postage was paid by an undated meter stamp carrying the number 112530, and my name was affixed by a stencil addressing machine.

DELIVERED IN MAY, BUT DATED JANUARY

It is a fair inference that this number belongs to a commercial mailing house here.

In other words, this luxury publication was shipped to Washington and then mailed here by a business service.

I go through all this to give you the background of the significant points, which are: (1) 17 pages of this publication are devoted to a eulogistic article about Spain, which makes the bloody rebellion of Franco against the liberal and constituted Republican government of Spain in 1937 sound like a holy crusade, and makes abject apology for Franco's invocation of foreign aid from Mussolini and Hitler; (2) although this magazine was delivered to my office Saturday morning, May 14, it is dated January 1949, volume 5, No. 1.

The other comment, delivered in the same mail, is a biting editorial from the New York Post of Friday, May 13, giving an incisive review of Franco's active alliance with the Axis Powers, which I am including in my remarks.

IS MAILER REGISTERED AS FOREIGN AGENT?

Now, Mr. Speaker, I want to know who paid for the copies of the International Review which came to Members of Congress, and who paid for the mailing, and whether that person is properly registered as an agent of a foreign government with the Department of Justice.

I find myself in full agreement with the Secretary of State, the Honorable Dean Acheson, in his position on Franco Spain. My only regret is that his delicate position as head of a department dependent on congressional appropriations for efficient operation forces him to soften his statements.

We must not be dragged into friendly association with such a regime as General Franco's.

There follows the text of the editorial referred to and I am prepared to turn over to the Attorney General the copy of the International Review I have described.

[From the New York Post Home News of May 13, 1949]

A CASE OF MISTAKEN IDENTITY

Ten years ago Francisco Franco was a distinguished member of Adolf Hitler's ring. There was nothing furtive about his role. In Berlin the heavy thinkers of the Fascist International agreed that Franco was a little less talented and adroit than A. Hitler, but he was nevertheless an esteemed character in the mob. He took orders. He never tried to get out of the racket. He didn't talk back. He practiced what Hitler preached.

When the gang was finally smashed after 6 years of war, the least promising partner in International Murder Inc. ironically emerged as the only significant survivor. Of course he owed a vast debt to his accomplices; for reasons of military convenience they had let him occupy a safe seat during the shooting. But he had run all their errands. He had tried, sir, to promote the new Fascist world. When his associates were dead he didn't quit. He stuck to the Fascist system. It was the only one he could understand.

Yet now, as in a nightmare of mistaken identity, General Franco is being boomed for admission to all democratic societies. It seems that he is really a scholar and a gentleman who momentarily fell in with evil companions.

Francisco Marino, chairman of the Banco Hispano Americano, is throwing intimate luncheons for groups of Senators in an effort to persuade them that a loan to Franco is the world's best hope.

And at Lake Success the climax of the first phase of the campaign to lift General Franco's face is at hand. Technically the issue before the General Assembly is a resolution to return ambassadors to Madrid and end the ostracism voted in 1946.

The real issue is whether Franco is to be given a new place in the western sun.

The real issue, as Secretary Acheson stated it, is whether the United Nations will bow politely to the regime that remains the most dramatic symbol of fallen fascism.

We believe the United States should have proclaimed a vigorous no when the resolution was first proposed in committee. Instead we abstained. Our moral position would have been infinitely stronger and our voice clearer if we had fought the move. But our absention at least helped to deprive Franco of an affirmative diplomatic triumph.

Now, as the decisive vote nears in the Assembly, there are ominous reports that the American position is shaky and ambiguous, that some members of our delegation are quietly lobbying for the resolution and that small countries which look to us for guidance are slipping into the pro-Franco camp.

In the world-wide battle for the minds and hearts of men a Franco victory at Lake Success will mean a major defeat for the democratic faith. Throughout western Europe it will be cited as new proof that democracy has embraced fascist allies. It will embitter millions who hate all totalitarianism. In the perverse logic of history, it will aid the Communist drive on every front.

The question is not whether we shall send an ambassador to a villa in Madrid. It is whether we will betray the conscience of mankind.

Reorganization of Government Agencies

EXTENSION OF REMARKS
OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, May 17 (legislative day of Monday, April 11), 1949

Mr. O'CONOR. Mr. President, it was my privilege yesterday to speak briefly on the floor of the Senate in favor of H. R. 2361, the Reorganization Act of 1949.

It is my conviction that the critical state of our economy, in view of the huge expenditures to which we are committed both at home and abroad, and the complete dependence of many Nations of the world upon us for financial assistance, require a redesigning of the departmental structure of our Government.

In support of the many arguments that suggest themselves in this connection, a masterly article by the very competent Comptroller General of the United States, Mr. Lindsay C. Warren, appears in the May issue of the American Magazine.

Mr. Warren's article poses the question: "Will the wasters win again?" and goes on to say that "we have reached a crisis in Government. If Congress and the President are now unable to put through an effective reorganization, they and the taxpayers might as well surrender. If the bureaucrats win again, as they have before, we are through."

Mr. Warren's article is so authoritative in its treatment of this vastly important subject that I believe it deserves the attention of all who are interested in effective, economic Government. I therefore ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILL THE WASTERS WIN AGAIN?

(By Lindsay C. Warren, Comptroller General of the United States)

The President of the United States, the Congress, and the taxpayers once more are engaged in the bitter battle of bureaucracy, a war that has been waged for years. Arrayed among the opposition are the pressure groups, the local interests, the special classes, who have come to demand as a right a continuance of payments, benefits, betterments, exemptions, priorities, preferences, and special services, ultimately a charge upon the taxpayer. In the forefront, and deeply entrenched, are the heads of some of the 1,800 Government bureaus, divisions, agencies, and authorities, who are fighting fiercely to protect their jobs, their departments, their red tape, their functions, and their right to spend in their own way the taxpayers' money. In 20 years Government divisions and units have increased from some 300 or 400 to as high as 1,816 (depending on who counts them). The Federal pay roll now numbers more than 2,000,000 civilian employees.

As Comptroller General of the United States, and head of its General Accounting Office, I am concerned at the amount of waste, extravagance, and duplication which shows up in many quarters, and most especially at the tenacity with which the bureaus continue their jobs and their spending after there is no longer any need for them.

An outstanding exception is the Home Owners' Loan Corporation, which, born in the throes of depression, saved the mortgaged homes of thousands of our citizens. Of late, HOLC has been liquidating and doing a remarkable job of cutting down its force as rapidly as could be, with the result that the Treasury has every prospect of getting back every dollar which ever went in that project. But a vast number of Federal bureaus should be the object of a vigorous, uncompromising, but scientific and discriminating application of the bush-ax treatment, which I have urged for many years. That there will be snarls from those whose powers are curbed, and louder ones from those whose benefits, payments, and services are discontinued, will be music to the ears of the taxpayers at large.

Government reorganization is a major topic today because of the exhaustive report of the Commission headed by former President Herbert C. Hoover, and the action by Congress to put into the hands of President Truman the authority to streamline the Government. Mr. Hoover estimates that the adoption of his Commission's recommendations would save several billion dollars a year. He has said the 65 bureaus and agencies reporting directly to the President ought to be cut to one-third of that number.

Now, this and similiar estimates of extraordinary savings from reorganization must be taken with a grain of salt, for reorganizing is more than the reshuffling of agencies. It is also the abolition of the useless and outmoded function, and it should bring to light those far too many cases existing where the function itself must be continued but where the staff "working" on the job is far too great to do what may be needed. Everybody knows that some Government agencies are overmanned and, like sin, everybody is against it. But putting the finger on the particular spot is a task for experts.

In general, what Mr. Hoover is now saying has been said before. President Roosevelt, in 1937, called our Government set-up "a higgledy-piggledy patchwork."

Congress after Congress, President after President, almost from the birth of our Nation, have added to the crazy quilt of bureaus. Once established, they are loath to die. Instead, every year the heads of these bureaus go before Congress and swear they need more money than they had in the previous year. If Congress should set up a temporary bureau for an investigation to learn whether the three blind mice really ran, and how far, the bureau would come back the next year with a glowing report as to how the bureau's mouse survey helped prevent war, or reduced the national debt, or increased farm income, and would ask that the bureau be made permanent and the appropriation increased. If lobbyists managed to put up a convincing fight, the bureau might win.

Bureaucracy was increased and strengthened tremendously during the war by catch-as-catch-can laws and emergency agencies that were necessary in the days when fast action was more important than economy and efficiency. The end of the fighting brought an end to too few of these agencies.

Thus has been built a monstrous Frankenstein that in many instances has become stronger than Congress, which created and nourished it. At times it snaps its fingers in the face of Congress and openly defies it to reorganize, consolidate, or abolish agencies. The foremen are dictating to the Board of Directors; the tail is wagging the dog.

In some departments are bureaus that have been so set up by Congress that they are able legally to defy the Cabinet officer who is supposed to be in supreme command. These bureaus go direct to Congress over the head of the top officer. Too often have we seen the brave efforts of the President and the Budget Director, in trying to balance the budget, go for nothing when the bureau heads and the pressure groups they serve clamor for more appropriations, appealing to Congress against the recommendation of Cabinet officers.

We have reached a crisis in government. If Congress and the President are now unable to put through an honest, widespread, and effective reorganization, they and the taxpayers might as well surrender unconditionally. If the bureaucrats win again, as they have before, we might as well concede that we are through. We shall be forced to confess that governmental affairs cannot be conducted on a businesslike basis, that we cannot set up clean-cut operational systems, eliminate red tape, or promptly discharge department heads who put their own interests above those of the taxpayers. It will be proved that shocking Government extravagance is as much a part of democracy, and as indestructible, as the Supreme Court.

As the head of the General Accounting Office—which has the biggest auditing job in the world—I am responsible only to Congress, not to the executive branch, and it is my duty to see that the money Congress appropriates is spent, as the law puts it, "for the purposes for which appropriated and no other." I was appointed Comptroller General in 1940 for a 15-year term, after serving nearly 8 terms in Congress as a Representative from North Carolina. Reorganization has been a major interest of mine for years; I worked particularly closely with President Roosevelt in his efforts to get authority to let him streamline Government operations.

I have no voice in the policy-making job of the Congress of deciding what Government services should be established, and of course I should not have. In a representative government that is the job of the people's elected spokesmen. But I have seen—in 1932, in 1939, and in 1945—the passage of reorganization bills that were aimed to bring efficiency to the unsegregated, sprawling groups of Government functions and functionaries—to make only one or two grow where dozens grew before. I have helped write those bills, I have joined with others in an effort to make them work. So far as they have gone, the job done under those acts have been noteworthy, but they have not gone far enough. Consolidation has been stressed. Abolition ought to be stressed as well.

I plead for a change in the administrators' point of view toward the money Congress gives them to spend. Too many bureau heads actually believe that appropriations belong to them and they must spend every cent, even though it may take superhuman planning to be extravagant enough to get rid of it all. Sometimes the state of the agencies' bookkeeping prevents Congress from learning the financial facts of life and matching appropriations with the agencies' real needs.

When Congress set up the Federal Savings and Loan Insurance Corporation it called upon the Home Owners' Loan Corporation to provide capital for it, but since this meant, in effect, adding to the over-all public debt an interest burden, the law required FSLIC to reimburse Home Owners' Loan Corporation its outlay for interest by payment of dividends out of net earnings. That interest cost amounted to $25,000,000 by last June, but the Federal Savings and Loan Insurance Corporation ignored the law, even though it had total earnings of $90,000,000. It is true that such payment would be made from one of Uncle Sam's pockets to another, but FSLIC is still holding $25,000,000 that should be handed over to the Treasury. Instead of being used to

make FSLIC look more prosperous, it should be applied as a reduction of the public debt.

The Federal Prison Industries, Inc., we found, piled up nearly $12,000,000 that the corporation didn't need. As a result of our recommendations the agency gave it back to the Treasury. Our office discovered that the Panama Railroad, a Government corporation, had $10,000,000 to spare. That agency, instead of giving the Treasury larger dividends, had invested this money in United States Government bonds. Thus the Treasury, and the taxpayers, were paying interest upon money that belonged to the people. That device may be good management—from the standpoint of the agency alone—but it is pretty fancy bookkeeping. Thus the Production Credit Corporation (an offshoot of the Farm Credit Administration) had, through 1946, piled up $33,000,000 from the income on excess Government capital, which they invested in various types of interest-bearing Government bonds, and this income was used to pay expenses, make up losses, and establish a neat surplus.

That bookkeeping fantasy is not only perfectly legal but is common in Government corporations, which operate with capital furnished by Congress instead of upon annual appropriations. The corporations put their excess dollars into Government bonds, and thus collect interest that sometimes is enough to pay their operating cost. The vice, of course, lies in the obscurity—when Congress appropriates the money it is for interest on the public debt (an obvious "must"), not for operations of its corporate agencies.

In reorganization, the big job, of course, will be to reduce duplication, to abolish and consolidate. Ten years ago I pointed out such facts as that 28 agencies were engaged in welfare matters and 75 were buying transportation from railroads and ship lines. I note from a recent story that the Hoover Commission reports that 28 are still dealing in welfare matters, and 75 spending more than a billion dollars a year, are still buying transportation. One of my cynical associates contends that anyway it shows progress, because the number has not increased. In welfare and transportation, at least, we have held the line.

Our purchases of transportation were so badly handled during the war that the Department of Justice is now attempting to get a total refund of about $2,000,000,000 which is said to have been overpaid to the carriers. Although we cannot set up one bureau to buy all transportation, coordination would reduce the annual cost by millions of dollars.

In 1946, Senator HARRY F. BYRD listed 951 Government agencies operating within 358 departments and independent establishments and concerned with 24 fields of activity There were 27 handling labor relations, 37 concerned with public health, 24 were making maps, and 93 were concerned with Government lending. Some of these have been reduced or merged, but generally the picture remains the same. As Senator BYRD discovered, if a bureau is abolished, the employees and usually the functions turn up in another department under another name. In postwar reorganizations, 793 employees went into the State Department from the Office of Strategic Services, and 3,718 from the Office of Inter-American Affairs, the Office of War Information, and the Foreign Economic Administration.

Even if reorganization didn't reduce Government appropriations a dollar, it would give us tremendous returns in increased efficiency. And it would save money and time for all who do business in Washington—including Government employees, who often are bewildered, themselves, when they try to discover what bureau is handling what.

I have before me a sheet of paper—almost half as large as a bed sheet—that lists the Federal executive departments and agencies. The average citizen who comes to Washington to sell goods, or check a veteran's problem, to borrow money, or to do anything else, goes cross-eyed and dizzy when he examines this list and attempts to find which agency is supposed to handle his problem. No wonder hundreds of men and women in Washington find good profit in guiding citizens to the right bureau. Without a guide a citizen may spend weeks before he finds the department he wants. Because the agencies so overlap, even when he gets to a destination, the department, itself, may not be sure whether he is in the right office.

Experienced as we are in the General Accounting Office, often we must search the 722-page Government Manual for half an hour and make a dozen calls before we find what bureau handles a certain function.

A citizen who comes to Washington to find out something about public lands discovers that his problem might be handled by any 1 or more of 10 bureaus in several departments. In the Department of the Interior, the right office might be the Bureau of Land Management (which includes the General Land Office and the Grazing Service), the Office of Land Utilization, the Bureau of Indian Affairs, the National Park Service, the Fish and Wildlife Service, the Bureau of Reclamation, or the Geological Survey. If he doesn't find the right bureau there, he can go over to Agriculture and try the Forest Service, Soil Conservation Service, and the Farmers Home Administration. If he is still at sea he may find other bureaus concerned with the administration of public lands.

Suppose the citizen comes to study the Government system for retirement of workers. You'd expect that the United States Government would have one retirement system, so that no group of workers would have more advantageous retirement pay than others and that the details would be all in one office. But really to cover the subject he will have to examine at least 10 different plans that are in force, covering the civil service generally, the Army, the Navy, the Coast Guard, the Alaska Railroad, the Lighthouse Service, the Naval Academy Staff, the Tennessee Valley Authority, the Coast and Geodetic Survey, and the Public Health Service. Why? Because each of those offices has a special system, with its own rules, authorities, and funds, and so forth.

In the General Accounting Office our audits frequently turn up a mighty careless attitude toward the taxpayers' money. Some agencies are well organized and perform efficiently, and my criticisms by no means apply to all of them. But the prevailing attitude in many agencies—that they should have the right to handle their funds as they choose, that close supervision is to be resented, and that no changes can be made—often inspires too much carelessness and indifference right down to the bottom drawers in the bureaus. Streamlining, I believe, would help sharpen the wits of all the employees, give them new respect for economy, and cause them to be on the alert to save those hundreds and thousands of dollars that add up to millions.

In 1948, our auditors clamped down upon erroneous and illegal payments by various Government agencies that totaled $106,798,213. Every cent of that was collected for the Government from persons and corporations that had been overpaid. In the last 8 years, and up until January 1, 1949, we collected and put back into the Treasury over $608,000,000 which, largely through carelessness and indifference, had been paid out wrongfully.

One auditor found that a contractor had been paid the startling sum of $135,300 more than the contract called for, but most of the mass of erroneous and illegal payments are comparatively small. We are not directed to make a special waste and extravagance survey, and hundreds of these payments don't show up in the regular audits. The actual waste may be twice as much.

I choose items at random from a foot-high pile of reports on my desk: Failure of a Chicago agency to collect rent for Government property used by a contractor for a cafeteria—$6,019; commission paid to a dealer for a canceled sale—$1,347; one division paid a bill twice—$20,250, and the same division did the same stunt again for $1,078; carelessness of a Government inspector who accepted what was supposed to be a 25-ton crane but later was found to be an 11-ton crane—$6,534; paid for tires that were smaller than the kind billed—$2,160; neglect to collect on land-purchase program—$15,264; failure to deduct cost of transportation included in contract price—$1,110.

The waste in salaries because of overemployment in Government is insignificant compared to the waste caused by the actions of those employees. What it totals in dollars must be simply incalculable. We, of course, are postauditors, which means that when we find them, the deeds are done and cannot be undone. We can collect back illegal payment or erroneous disbursements, but we can do nothing about waste and extravagance except report it to everyone concerned and hope it will not happen again.

For instance, again selecting at random, in Alaska the War Department paid $2,619 for the rental, for 5 months, of two tractors that cost, when new, $500 each. The owners collected $1,619 more than the cost of the tractors, and still owned them.

The American Legation in Canberra, Australia, sent to the State Department a straight cable message that cost $1,022. A night letter, which would have served the purpose, would have cost only $373. Another similar report involves excess expense of $10,000. The office of the Veterans' Administration in San Juan, P. R., in 1 month sent 341 cablegrams, at a cost of $1,480. The messages could as well have gone air mail special delivery at a cost of $71.61.

A station wagon, damaged in an accident, was sold by the Government for $105.90. The purchaser at once resold it for $510 to a man who sold it for $675. The third man spent $400 on it for repairs, and sold it for $1,200 to a man who, in a few days, sold it for $1,350. One of our most startling discoveries was the approval of an excessive payment of $203,000 in commissions on the purchase of parts. The agreement to pay the commission was in the contract. Proper negotiation would never have allowed it to be in there.

In nearly every Government office, employees and visitor constantly note the extravagant use of long-distance telephone calls. Public business appears to be a terrific emergency that cannot be attended to by mail. Since telephone calls, unlike telegrams, are unrecorded, usually one must take the employee's word that terrible things would have happened if he had used the mail instead of spending $46.30 for a long talk with somebody in San Francisco. One excuse for so many long-distance calls is that it takes days to get an answer by mail.

So widespread and so flagrant are the examples of waste and incompetence in Washington that picking up examples is child's play. The Hoover Commission, Senator BYRD's Committee on Reduction of Nonessential Federal Expenditures, the House and Senate Committees on Expenditures, the investigating staffs of the Appropriations Committees, our General Accounting Office, and others, list them by the hundreds and total the waste in millions.

Mr. Hoover's investigators found that the total value of stock piles held by agencies is $27,000,000,000. Some agencies have enough of some items to last 50 years. Reckless buying, of course, should be curbed.

Federal departments spend millions of dollars a year for printing and publications. Tons upon tons are finally sold as waste paper, while other quantities are stored at the expense of the Government. There are millions of obsolete forms which should be sold as waste but are still occupying valuable storage space.

The War Assets Administration offered for sale in 1945, 1946, and 1947, a Government-owned building in Baltimore, after first clearing with the Public Buildings Administration. During those years, other Government agencies paid out about $1,000,000 for rental of less desirable space in the same area. The building was finally sold to a private person at a time when the Government Printing Office was paying over $200,000 annually for equivalent, but less desirable, storage space in Baltimore.

Bureau heads are too often inclined to shrug off such examples as these by stating they are only rare exceptions and are far outweighed by the incalculable value of their work to the Nation. Bureau heads are tempted to become empire builders.

Though motivated by an honest belief in the importance of their work, back of it all, with some, is a desire for more power. Agency heads persist in believing that the more money they spend, the more employees on the pay roll, the more important they are. Rarely does one hear an agency saying, "The Government can't afford this."

What Thomas Jefferson said in 1802 (he had his troubles with bureaucrats, too) is a good thought for today: "Let us deserve well of our country by making her interests the end of all our plans and not our own pomp, patronage, and irresponsibility."

Reorganization efforts under the acts of 1939 and 1945 were hamstrung, in great part, because certain agencies were strong enough to get themselves exempted.

In 1945, full exemptions from any reorganization were granted by Congress to the Interstate Commerce Commission, the Federal Trade Commission, Securities and Exchange Commission, National Mediation Board, National Railroad Adjustment Board, and the Railroad Retirement Board. The civil functions of the Corps of Engineers of the United States Army—work on rivers and harbors, dams, flood control, irrigation, reclamation, etc.—were exempted. Certain restrictions were put upon the reorganization of the Federal Communications Commission, Federal Deposit Insurance Corporation, the United States Tariff Commission, and the Veterans' Administration. Those exempted agencies, today, employ 253,000 persons and spend billions of dollars a year.

Already, powerful forces have attempted to obtain special treatment for the National Military Establishment, the Interstate Commerce Commission, the Securities and Exchange Commission, the Federal Reserve Board, and Federal Trade Commission. Now, a great many Government agencies are doing first-rate jobs and should not be harassed. I do not pretend to judge the merits of any particular case, but I am sure of one thing—once the President is restricted by even one exemption, to that extent the plan will fail.

When James F. Byrnes was a United States Senator, speaking for the reorganization bill that became a law in 1939, he said, "I have yet to talk with reference to reorganization to one man in the Government service who did not make this answer: 'Of course, it should be done.' And then, when he joins the great old order of 'butters,' he says, 'But do not touch my department.'"

When President Roosevelt came into office in 1933 he found a reorganization act that had been passed under the Hoover administration which gave him unrestricted power. He even could have abolished his Cabinet. While he consolidated a few bureaus, dozens of new ones were created. President Truman wants to accomplish a genuine reorganization, and he can do it if Congress gives him a chance, and the lobbyists, and the pressure groups, and the bureaucrats are thwarted. Congress has not given up its veto power over the President's actions. The current bill provides that: Each reorganization plan of the President must lie before Congress 60 days, and it will not go into effect if the two Houses of Congress join in a resolution turning it down.

Congressmen have favorite departments; pressure groups who are gaining favors support the bureaucrats who give them these favors. Lobbyists for certain functions and agencies inspire floods of letters to Representatives and Senators, and the letters, backed up by pleaders at hearings, violently protest any changes. Every bureau has backers to testify that it is absolutely essential, that it is operating efficiently and economically. Once one bureau is exempted, that will be the crack in the dam. "You exempted, such-and-such," the plea will be, "why shouldn't you exempt us?"

If the taxpayers rally to back up the President and Congress, we shall have, this time, a genuine reorganization, the mishmash of Government can be cleaned up, the bushaxes and the meat cleavers can begin to swing. If we don't do it this time, we're through.

Responsible American Citizens—Their Job in National Politics

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Tuesday, May 17 (legislative day of Monday, April 11), 1949

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Responsible American Citizens—Their Job in National Politics," delivered by me before the Fourth National Conference on Citizenship in New York City on May 16, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

RESPONSIBLE AMERICAN CITIZENS—THEIR JOB IN NATIONAL POLITICS

The cross currents of our national life and of world affairs are such that there was never a more urgent need than now for American citizens to assume a responsible role in national politics.

Too often laymen take too lightly not only their responsibilities as citizens but also their job in national politics.

Whether we admit it or not the trend of events on the national political front shapes the course of our future welfare.

We have come to associate government with politics, and vice versa.

I am not speaking of politics in the narrow sense, but rather in the broad sense of government, involving the enactment and administration of laws.

It is a fact, nevertheless, that governmental policies are projected, tested, and weighed in the political arena. It is in the political arena that the spotlight is turned on the stand taken by parties and by candidates. It is in the political arena that citizens endorse or reject the policies espoused by parties and candidates.

As our Nation increases in population there is the danger that control of government may become further and further removed from the people. This danger takes on added significance when we realize that big government, by comparison with previous standards, is here to stay. Our Government is one of the largest enterprises on earth. The complexity of our domestic problems and our increased responsibility in international problems have given rise to greater centralization of government than we have heretofore experienced in this country.

The problem now is to keep Government from getting so big, so unwieldy, and so powerful that it will get out of hand. The best way to prevent this from happening, or from letting it topple of its own weight, is to streamline it and operate it efficiently. We must either mold Government and shape it so that it will serve the people or the time will come when the people will be serving the Government. So long as we have government somebody will be running it.

It is up to the citizens of the Nation to decide whether they want to take more responsibility in politics and have a say in how things are run, or whether they want to give centralization a free and unfettered hand. If the citizens make the latter choice, they can blame nobody but themselves for what happens.

I do not mean to disparage or belittle those whom some choose to call bureaucrats because I think nearly all Federal servants are honest, hard-working citizens truly seeking to improve their Government and their country. Let us keep them that way. Let's not tempt them by giving them too free a hand or too much power. Let us make them even more responsible and more responsive to the will of the people.

In considering this question of good citizenship, we should bear in mind that there is a vast difference between being just an American citizen and in being a responsible citizen. The responsibility that goes with citizenship in this country is what distinguishes democracy from totalitarianism. In the latter ideology, responsibility is usurped by the state and is not reserved to the citizen.

In the United States, we cherish the philosophy that the Government is responsible to the citizen instead of the citizen being responsible to the Government. This philosophy is inherent in our Declaration of Independence which held that "Governments are instituted among men, deriving their just powers from the consent of the governed." At the time that these words were written the rights of the citizen were little respected in the world. It was not popular or safe to even talk about the rights of the individual. To work for the founding of a government based upon the protection of such rights required the courage of deep conviction and fearless disregard for personal welfare.

Fortunately, our forefathers had the courage to found a Nation that was conceived in the spirit of freedom and nurtured by the ideal of democracy, where the rights of the individual still reign supreme.

Lincoln, in his Gettysburg Address, expressed the same philosophy when he said: "We here highly resolve that these dead shall not have died in vain—that this Nation under God shall have a new birth of freedom—and that government of the people, by the people, and for the people shall not perish from the earth."

The liberty and freedom which have been our proud heritage—and which have been kept alive by Jefferson, Lincoln, and the other towering figures of our history—are still the bulwark of our democracy. This is an inheritance that we must preserve and perpetuate, and never take for granted.

We must never get into the rut of accepting the privileges of being an American citizen without sharing the responsibility of that citizenship. The fact that we have grown into a Nation of great influence, with one of the highest standards of living the world has ever known, does not mean that the responsibility of the individual has diminished in any way. The individual is still the cornerstone of our way of life. To be a good citizen enlarges and enhances the scope of the individual. Being just a half-hearted citizen not only retards the development and growth of the individual but it also serves as a brake on the progress of the Nation.

The problem of fulfilling one's responsibility in the field of national politics is admittedly a challenging one and one that is not easy. It does not mean just dropping a ballot in the box every 2 or 4 years and then shifting the entire responsibility to those who receive the highest number of votes. It means almost daily study of the issues by each citizen so that conflicting viewpoints can be weighed, and public opinion formed, which will bring about proper decisions.

In order for public opinion to be intelligently formed, the people must have access to information upon which an intelligent opinion can be formed. Government itself must be made to assume its share of the responsibility for seeing to it that the citizens are frankly confided in and consulted with in the operation of the Government.

There have been many cases when our own Government has exceeded the bounds of security caution in withholding information from the people. How can the citizens of this country arrive at proper conclusions, no matter how much they try, if they cannot get the basic facts of a situation—or if the facts are one-sided or biased? The difficulty of obtaining basic information often arises in connection with foreign-policy issues, but is by no means confined to this field. Concealing expenditures, misinterpreting laws, using funds appropriated for other purposes for the spread of propaganda are other evils of government which grow progressively worse unless corrected by a generally aroused citizenry.

An aroused public opinion is the most potent influence in our democracy. That opinion, when marshaled, is the majority voice of the American people. An indifferent public permits the unscrupulous executive, political or pressure group to attain selfish objectives.

If democracy is to be strong, and meet the challenge of other forms of government, it must have an alert, intelligent, and unselfish citizenry. It is incumbent upon the citizens of a democracy to be well enough informed to see the proper relationship between the welfare of the individual and the welfare of the Nation.

I am fully cognizant of the citizen's responsibility to his community and to his State. It is entirely proper for him to fulfill that obligation. But that does not free him from his responsibility as a citizen of the United States.

Our Federal tax laws, our Federal courts are examples of our legal identity as citizens of the United States. Our obligations in the national political field, while not legally imposed, are equally binding if we discharge our duties as good citizens.

The reason the political decisions we make are so important is that these decisions influence and permeate our whole national life. We cannot segregate the political from the economic phases of democracy. A democracy cannot remain strong if the economic structure of the Nation is weak. Neither can the social problems of the Nation be partitioned off from the economic and political problems. Each must mesh with the other in the gears of democracy.

We know from our experience in the depression years of the thirties what it means to have people denied the opportunity of being useful citizens because of lack of employment, training, health, or morale. It is incumbent upon us as good citizens not to permit a repetition of that sad experience.

In world history if we ferret out the root of political upheaval, it is traceable in most cases to economic or social maladjustment. So the scope of the citizen's responsibility is broad. The challenge for him to keep informed, and to do something about what he knows and believes, is ever-present.

It is a sad spectacle to see a citizen, who might wield constructive political influence in the Nation, sit back and wait for his fellows to do the job. The first and foremost way to demonstrate that we are responsible citizens is to go to the polls and vote. We have never exercised anywhere near our voting potential in this country. In the last national election, the President of the United States was elected by only about one-fourth of the people who could have qualified as voters. By their failure to vote nearly 45,000,000 Americans have forfeited any full moral right to criticize the present administration of our Government.

Discussion of the topics of the day with our neighbors is another earmark of good citizenship. I am thankful for the privilege of growing up in the atmosphere of the New England town meeting. That is a tradition that Americans everywhere can well afford to emulate.

Group action, through affiliation with some worth-while organization, is almost a necessity in this day of bigness. The voice of the individual may be a voice crying in the wilderness unless it is backed by the force of numbers. I should like to sound this warning note, however. Careless citizens and careless groups can be used for bad purposes. The forces of evil do not dare to organize as such. They cannot afford to be open and above board. Their strategy is to bore from within, and thereby to use respectable fronts for less respectable purposes.

It is extremely important that good citizens and desirable groups be on guard against letting themselves be used to provide a cloak of respectability for schemers and plotters.

If you cannot take an active interest in the organization to which you belong you had better keep out of it.

I would also warn groups against the endorsement of resolutions without having accurate knowledge as to the content and real purpose of the petition. Sometimes chambers of commerce, and even State legislatures, endorse resolutions they do not know the full meaning of. In this day of organized groups, and a flourishing business in the lobbying field, it is difficult even for a Member of Congress to separate the wheat from the chaff. There are so many pressures and so many viewpoints.

No one can tell how many groups are formed for the purpose of giving lucrative jobs to enterprising and sometimes unscrupulous men. These men frequently organize and solicit funds on a commission basis, establish lucrative incomes for themselves, and make sure that the purpose for which the organization is ostensibly set up is never quite achieved. Very busy businessmen are sometimes the most susceptible victims in this field of questionable group operations.

The problem of the legislator is to weigh the different viewpoints, in the light of the national welfare, and then decide how to vote. I may say that it is a soul-searching experience in deciding how to vote on vital and controversial issues.

Of course, if the legislator is too often at variance with his constituents in his stand on these issues, his exit from the political scene is a very likely consequence.

One of the most important problems confronting the responsible citizen is to be able to draw the line between vested local, and perhaps personal, interests and the national welfare. This problem is particularly noticeable in connection with matters involving money. There is a tendency for each group or each class of petitioner to want all it can get, apparently with little or no thought that somebody has to pay for it. The theory seems to be that everybody is getting, so let's insist on our turn at the grab bag—the grab bag in this case being the Federal Treasury. This is a dangerous trend. We should realize that, in the long run, we get only what we pay for.

If we, for very long, get more than we pay for that means deficit financing and increased national debt. We cannot build a lasting nation on the sands of paternalism. To help maintain a solvent and responsible National Government is a cardinal requirement of good citizenship. In all that we do, in all that we strive for in our role as good citizens, let us not sacrifice liberty and freedom on the altar of expediency or selfishness. Let us remember that liberty and freedom are not only to be talked about but also to be lived.

The seeds of good government are always rooted in the fertile ground of responsible citizenship. We are not just citizens of a State or political subdivision; we are citizens of the United States. National politics is the medium through which American citizens can work in building a stronger, happier, and better nation. It is through this medium that we can meet the challenge of assuring "one Nation indivisible, with liberty and justice for all."

There is no other nation on earth where the individual has as many privileges and as much responsibility as has the American citizen. To realize and appreciate this is the first step toward becoming a responsible citizen. From this realization will come the inspiration and the impelling desire to keep America, as a Nation, strong politically, economically, and morally.

That is our job in national politics.

A Tribute to Norway

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 17 (legislative day of Monday, April 11), 1949

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a tribute to Norway, paid by me on this day, May 17, 1949, the anniversary of Norwegian independence.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

A TRIBUTE TO NORWAY

I am happy to convey my warmest greetings to His Excellency, King Haakon, and to all the people of Norway on their celebration of Independence Day. Last Friday

night it was my pleasure to participate in a Sons of Norway May 17 festival here in Washington. The American people have always felt the deepest bonds of friendship with the heroic Viking land from which so many of their fine citizens are descended. As allies during the Second World War, we came to know more than ever before the valor of Norwegian fighting men and women, and of the Norwegian population. Now in peace, we have learned to an ever greater extent the courage and fortitude of the Norwegian people in working out their economic reconstruction so largely by their own belt-tightening efforts. Moreover, during these troubled times, we have been thrilled by the brave spirit of Norway in boldly entering into the North Atlantic Pact along with her sister country, Denmark.

In paying tribute to Norway, our thoughts naturally, too, turn to the other Scandinavian lands whose fierce love of freedom and individual liberty have always been an inspiration to all peoples. During the Second World War, Sweden, of course, rendered invaluable assistance to the Allied cause, and her fraternal bonds with enslaved Norway were never severed. Moreover, we recognize the situation in which this indomitable land has found itself, practically in the mouth of the Russian bear, yet holding on determinedly to its independence and to the traditional freedoms of its citizens.

So, across the seas we congratulate the good people of Norway and their great monarch, and we wish for them a greater prosperity, a more lasting peace than ever before known.

Norway today symbolizes the industry, the energy, the national pride, and the cooperative spirit which are so desperately needed during these chaotic times.

Long live King Haakon, and long thrive the Norwegian people.

Can Farmers Afford Irrigation Under the Pick-Sloan Plan?

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 17 (legislative day of Monday, April 11), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Can Farmers Afford Irrigation Under the Pick-Sloan Plan?" from the Bismarck (N. Dak.) Leader of May 13, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CAN FARMERS AFFORD IRRIGATION UNDER THE PICK-SLOAN PLAN?

North Dakotans are becoming agreed on one thing concerning the current Pick-Sloan plan for development of the Missouri Valley Basin—that is that it is not a plan at all but a conglomeration of projects that usually conflict with each other.

Even at this late date with construction well along on the giant Garrison Dam there is no agreement as to what priority farmers in North Dakota will have on the water stored therein. Will it be used for navigation or for irrigation? No one knows how much power will be generated or what rate will be charged for it.

The charges that will be loaded on prospective users of water for irrigation can only be guessed at. It is just about certain that even when estimates are available the costs will run much higher than planned. The amount of land that will be irrigated is a matter of guess work and may not run as high as the present projects anticipate. How many farmers will accept irrigation is an unknown quantity. When they became aware of the terrific costs involved many of them will prefer to take a chance on dry-land operations.

One of the first irrigation projects that will get under way in North Dakota is the Heart River project near Mandan. Landowners there have been unable to find out how much the proposed project is going to cost them. The only thing they have found out is that the contract proposed by the Bureau of Reclamation stacks all the cards in favor of the Secretary of the Interior and his agents. The landowner has little to say about what happens in the proposed irrigation district.

The Hoover report on the Pick-Sloan plan reports that similar projects in Kansas involve a repayment cost of $263 per acre. It has been estimated that in Nebraska the costs may run as high as $500 per acre. The costs on the Heart River project may well equal or exceed the totals on the Nebraska project. Any farmer knows that no farm, even if irrigated, can carry such a terrific overhead. Power contributions and flood-control assessments on the Heart project will be very small so the landowners will have to carry the major portion of the construction costs of this development. And then there is some doubt as to whether sufficient water will be available in dry years when the need is greatest.

Farmers who have been sold on the good points on irrigation, the crops that can be raised and the practical certainty of a good yield had better look the deal over pretty carefully before they sign any contracts for the construction of irrigation works on their property. The costs may be so high that the farmer will never have a chance to break even on the deal. Will the Heart River project go down in history as another Pick-Sloan plan blunder? From all appearances it will unless the landowners in that area get water on their acreage at a lower cost than the present estimates. A Missouri Valley Administration could accomplish that by charging the costs over the entire project and letting irrigation carry only its proportionate share of the construction expense instead of the major portion of the cost.

Editorial Comment Regarding Hon. Harry Flood Byrd, of Virginia

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Tuesday, May 17 (legislative day of Monday, April 11), 1949

Mr. BRICKER. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD, several editorials, some from my State, dealing with the recent rather unfortunate experience of the President of the United States in reflecting upon one of the most distinguished Senators of the United States Senate. One of these editorials is from the Cleveland Plain Dealer, and is entitled "Foot in Mouth Disease." There is not a newspaper in Ohio but what has editorialized unfavorably to the position of the President and commending the distinguished Senator from Virginia in this matter. I have a few editorials which I have picked at random. One is from the Pittsburgh Post-Gazette, entitled "BYRD Out of Hand." Another one from the Scripps-Howard newspapers, which are published in my State also, but this particular one is from a Pittsburgh newspaper. It is entitled "More Byrds Needed." Another article is from the Knoxville News-Sentinel, entitled "More Byrds Needed." I have another one from the Nashville Banner entitled "Distinction for BYRD," and another from the Standard-Times, of New Bedford, Mass., entitled "Not Enough Byrds."

I ask unanimous consent that these editorials, dealing with our distinguished colleague from Virginia, may be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Cleveland Plain Dealer of May 11, 1949]

"FOOT-IN-MOUTH" DISEASE

Ordinarily the spectacle of a Democratic President openly declaring political warfare against a Democratic Senator would be merely amusing, at least to Republicans, or at most would be dismissed as a personal feud between two rival politicians.

But the issues and implications inherent in President Truman's remark that "there are too many Byrds—B-y-r-d-s—in the Congress," meaning Senator HARRY F. BYRD, of Virginia, are of such a nature that they are bound to have wide repercussions during the remainder of the President's term of office.

For BYRD is not an ordinary run-of-the-mine politician. As chairman of the Joint Committee on Reduction of Nonessential Federal Expenditures, BYRD has become a symbol of economy in Washington. And as one of the most influential Members of Congress from below the Mason and Dixon's line, he is a respected spokesman of the Southern Democrats.

Thus, whether he planned it that way or had other motives, President Truman has put himself in the position of opposing the leading advocate of economy in the Federal Government, and he has stirred up a new controversy with the southern bloc which may keep Congress in a turmoil as long as Truman is President.

As might have been expected, the southerners have rallied to BYRD's support, claiming the President's remark was a gratuitous insult to the entire South.

The incident also dramatized the issue of economy versus extravagant and reckless spending of the taxpayers' money. For years BYRD has been urging the Government to discontinue unnecessary expenditures, and his committee has kept a running total on the number of employees on the Federal pay rolls, which it publishes from time to time. President Truman has never shown any disposition to reduce Federal expenditures, but, on the contrary, has advocated Federal spending on a scale so lavish as to make the late Harry Hopkins look like a piker.

One reason the President believes there are too many Byrds in Congress may be found in the fact that the Virginia Senator cast the deciding vote which blocked the appointment of Truman's pal, Mon Wallgren, as Chairman of the National Resources Security Board. BYRD declared he voted against con-

firmation because he did not believe Wallgren was qualified to hold such a responsible position.

President Truman seems to have an unerring instinct for saying things that will get him in trouble with Congress, especially with Members of his own party. A short time ago he announced that Congressmen who didn't vote as he wanted them to on the repeal of the Taft-Hartley Act would be denied Federal patronage, while those who followed his wishes would be rewarded. This statement aroused considerable animosity in Congress and is believed to have cost the administration many votes.

Last Saturday the President appeared to have repudiated the policy of White House dictation over legislation. At the luncheon at which Senator VANDENBERG and Speaker RAYBURN were the recipients of the Collier's congressional awards for distinguished service to the Nation in 1948, Truman said that Members of Congress should do what they think is the right thing to do, even though others, including their constituents or the President himself, might disagree with them.

But 48 hours later the Presidential blast against Senator BYRD came from the White House, although BYRD is certainly an outstanding example of a Member of Congress who does what he thinks is the right thing to do, regardless of what anyone else thinks about it.

This newspaper cannot agree with the President that there are too many Byrds in the Congress. On the contrary there are too few. But on the basis of the record to date, a good argument could be made for the proposition that there are too many Trumans—T-r-u-m-a-n-s—in the White House.

[From the Pittsburgh Post-Gazette]

BYRD OUT OF HAND

President Truman has undertaken a labor that would shame Hercules if he is serious about trying to dislodge HARRY F. BYRD from the Senate. Senator BYRD has sat in the upper Chamber continuously since 1933, and he now enjoys unquestioned control of the Democratic Party in Virginia. As for purging him, the Chief Executive might better follow the songwriter's hint and try lighting a penny candle with a star.

Fact is, the President has indeed lighted a candle with his offhand remark about there being "too many Byrds in the Congress." But in this case it's a Roman candle, which should add to the sound and fury of the fireworks which Congress has showered on Mr. Truman of late.

Senator BYRD is highly respected in the Senate, especially by his colleagues from the South. Many of them may well take the President's challenge to the Virginian as personal affront—which, coming on top of the White House's ill-advised threat to deny patronage to recalcitrant Democrats, could mean more trouble for the administration's program.

Quite aside from Mr. Truman's own troubles within his party, we must heartily disagree when he says that there are "too many Byrds in Congress." For our part, we would there were more men in Washington these days like Senator BYRD, who sees that economy and a sound fiscal program are vital to the future of this Government and this society. Any number of lawmakers will talk about holding down Government spending and about paying off the public debt, but Senator BYRD is one of a very few of them who will try consistently to vote in accord with these laudable objects.

A Senator BYRD preaching economy on the floor of Congress is worth two Senators preaching it at a banquet back home. Which, of course, is precisely why Mr. Truman, who has promised all things to all men, would like to bag him.

[From the New York World-Telegram of May 10, 1949]

MORE BYRDS NEEDED

Officers of the American Veterans Committee, who called on President Truman yesterday, said he told them there were too many men in Congress like Senator HARRY F. BYRD, of Virginia.

Mr. Truman, according to the AVC officers, admonished them to go back home and see to the election of Members of Congress who think in terms of national rather than local interests, of large plans instead of small plans.

Senator BYRD, in a speech the other day, said that the national interest urgently required a large plan for Government economy.

He predicted that, in the present fiscal year ending June 30, the Government would spend $800,000,000 more than it takes in.

He estimated that present Government activities, plus new activities proposed by Mr. Truman, would increase Government spending from $40,300,000,000 this fiscal year to $44,300,000,000 next fiscal year and to $47,400,000,000 in the fiscal year after that.

He said that boosting Government revenue enough to cover such spending would require a large tax increase—but that a large tax increase, imposed at a time when business is already receding, might turn a minor decline into a major depression.

He asserted that the higher individual and corporate income taxes for which Mr. Truman has asked, plus Federal excise taxes, plus higher pay-roll taxes for expanded and new social-security programs advocated by Mr. Truman, would mean a take for the Government of $49,300,000,000 next fiscal year.

It would mean, he argued, the Federal, State, and local governments taking nearly 30 percent of the total national income—even if the national income stays as high as it is—and imposing a heavier burden than the economic machine can carry safely.

Deficit spending, Senator BYRD said, would be even more surely ruinous. For, he said, if the Federal budget cannot be balanced in this period of prosperity and peace, there is grave doubt that it ever can be balanced again and that the Government's credit and our system of Government can be saved from destruction.

Mr. Truman, it seems, did not admire Senator BYRD's speech. He probably was more favorably impressed by the remarks of Senator J. C. O'MAHONEY, of Wyoming, who has just warned of dire peril if the Government starts trimming its spending too deeply or firing too many employees.

So it's likely that a chorus soon will be shouting that O'MAHONEY, the liberal and progressive, is the true prophet, and that nobody should listen to BYRD, the conservative and reactionary.

But what Congress really needs just now is more men like BYRD, of Virginia—more men who react against danger of national insolvency and dare to advocate conserving the Government's credit.

[From the Knoxville News-Sentinel]

MORE BYRDS NEEDED

Officers of the American Veterans' Committee, who called on President Truman yesterday, said he told them there were too many men in Congress like Senator HARRY F. BYRD, of Virginia.

Mr. Truman, according to the AVC officers, admonished them to "go back home and see to the election of Members of Congress who think in terms of national rather than local interests, of large plans instead of small plans."

Senator BYRD, in a speech the other day, said that the national interest urgently required a large plan for Government economy.

He predicted that, in the present fiscal year, ending next June 30, the Government would spend $800,000,000 more than it takes in.

He estimated that present Government activities, plus new activities proposed by Mr. Truman, would increase Government spending from $40,300,000,000 this fiscal year to $44,300,000,000 next fiscal year and to $47,400,000,000 in the fiscal year after that.

He said that boosting Government revenue enough to cover such spending would require a large tax increase—but that a large tax increase, imposed at a time when business is already receding, might turn a minor decline in a major depression.

He asserted that the higher individual and corporate income taxes for which Mr. Truman has asked, plus Federal excise taxes, plus higher pay-roll taxes for expanded and new social-security programs advocated by Mr. Truman, would mean a take for the Government of $49,300,000,000 next fiscal year.

It would mean, he argued, the Federal, State, and local governments taking nearly 30 percent of the total national income—even if the national income stays as high as it is—and imposing a heavier burden than the economic machine can carry safely.

Deficit spending, Senator BYRD said, would be even more surely ruinous. For, he said, if the Federal budget cannot be balanced in this period of prosperity and peace, there is grave doubt that it ever can be balanced again and that the Government's credit and our system of government can be saved from destruction.

The only safe way to balance the budget, he contended, is to retrench—to eliminate or postpone all new activities not absolutely essential, to reduce the Federal pay roll, to trim appropriations, to cut $4,000,000,000 from proposed spending for next fiscal year. That, he said, was the imperative duty of Congress.

Mr. Truman, it seems, did not admire Senator BYRD's speech. He probably was more favorably impressed by the remarks of Senator J. C. O'MAHONEY, of Wyoming, who has just warned of dire peril "if the Government starts trimming its spending too deeply or firing too many employees."

So it's likely that a chorus soon will be shouting that O'MAHONEY, the liberal and progressive, is the true prophet, and that nobody should listen to BYRD, the conservative and reactionary.

But what Congress really needs just now is more men like BYRD of Virginia—more men who react against danger of national insolvency and dare to advocate conserving the Government's credit.

[From the Nashville (Tenn.) Banner of May 11, 1949]

DISTINCTION FOR BYRD

Senator HARRY BYRD, stanch Democrat of Virginia, should welcome the distinction of being singled out by Mr. Truman as the target of a personal tirade. It is for him a personal vindication as the exponent of policies with which Mr. Truman is in violent political disagreement; incidentally, the same policies, in general, on which Congress stands arrayed against the White House. Actually, it is the stand of Congress—as representative of the whole people—against the assault of pressure groups, and the inroads of a squanderbund which hopes to perpetuate the New Deal's policy of spending, spending, taxing, taxing, and electing and electing.

Senator BYRD has no apology for that, any more than other southern Democrats have any apology for resisting and defeating thus far the Truman force bill encroachments. Mr. Truman declares there are "too many Byrds in Congress." He has also declared in

substance that there are too many southern, or Jeffersonian, Democrats. Like Jake Kroll, high priest of the political cult known as the CIO-PAC, he regards these as "not good Democrats." He has threatened to purge them.

Perhaps now the CIO-PAC will concentrate on Virginia in its Operation Dixie. It shares Mr. Truman's dislike of Senator BYRD. No more than Mr. Truman does it like his preference for constituents as the will to be consulted, his drive for economy to terminate the plunge toward national bankruptcy, his belief in basic Democratic policies, his opposition to the force bill, his decision that Mon C. Wallgren was not the man to head the National Security Resources Board.

There is every evidence, on the other hand, that the vast majority of the American public stands with BYRD on these issues—and that in that stand he honestly and honorably represents that majority.

Senator BYRD has met this challenge with characteristic courage and frankness. "If the President means he intends to purge me from the Senate because I will not accept his dictation in matters of legislation, then I'll be on hand when the purging starts."

[From the New Bedford (Mass.) Standard-Times]

NOT ENOUGH "BYRDS"

President Truman's reported censure of Senator BYRD's demand for a reduction in Government spending was so badly timed as to place the President in an embarrassing position. On the day he said there were too many Byrds in Congress—men who are "unable to see things in terms of the national interest"—his own Council of Economic Advisers was revealed as having recommended adoption of a fiscal policy almost identical with that proposed by the Senator from Virginia.

Through its Chairman, Edwin G. Nourse, the Council warned against the danger of "red ink" financing. Senator BYRD, who called it deficit financing, sounded the same warning. Mr. BYRD voiced opposition to increased taxes as recommended by the President. So did Mr. Truman's economic experts, who said wartime taxes that basically affect business should be reduced. They proposed that the date of the increase in social-security pay-roll taxes be postponed from June to next January. This levy, they said, would take a bite out of pay checks and increase business costs.

In the existing economic situation the Council expressed the view that large-scale spending on public works was not warranted, because such outlays would make it harder to reach the goal of lower Government costs. As for the $4,000,000,000 increase in taxes, the attitude was that such a boost might wipe out private capital needed for industrial expansion, or cause business to retrench so severely that the present healthy disinflation might turn into a serious recession.

Senator BYRD's demand for reduced spending, reduced taxes, and no deficit spending evidently got under Mr. Truman's skin. It seems to have intensified the irritation previously caused by Mr. BYRD's vote in a Senate committee to table the nomination of Mon C. Wallgren for the chairmanship of the National Security Resources Board. Yet what Mr. BYRD recommended as sound financial policy is so completely in line with the report of the Council of Economic Advisers as to leave the President out on a limb. Instead of there being "too many Byrds" in Congress, it appears there are not enough of this species.

Europe Relieved by Opposition to Franco Spain

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 17 (legislative day of Monday, April 11), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "U. S. Stand on Spain Calms Moderates," written by C. L. Sulzberger, and published in the New York Times of May 15, 1949.

There being no objection, the article was ordered to be printed in the RECORD as follows:

UNITED STATES STAND ON SPAIN CALMS MODERATES—FRENCH THIRD FORCE RELIEVED BY RECENT FIRM STATEMENT OF SECRETARY ACHESON

(By C. L. Sulzberger)

PARIS, May 14.—Considerable relief is felt by circles of the politically moderate Third Force over Secretary of State Dean Acheson's declaration on Spain in which he publicly insisted upon the liberalization of the Franco regime and the restoration of civil rights.

During the last weeks there has been increasing anxiety about the possibility that the United States for what it seemed to think were valid strategical reasons, had been gradually abandoning its opposition to the Spanish Government.

It is well known that certain military leaders in western union countries as well as in the United States have argued that Spain must gradually be worked into a position of cooperation with North Atlantic Pact members. Furthermore, Nedjmeddin Sadak, the Turkish Foreign Minister, is understood to have urged the inclusion of Spain in a Mediterranean pact that Turkey and Greece have been unsuccessfully promoting.

Basing their views upon fundamental political assumptions, Third Force leaders not only in France but in other Western European lands have been extremely worred about what seemed to have been a shift in United States policy on Spain.

They held the view that were Generalissimo Francisco Franco at last to be accepted as a friend of the democracies it would tend to confirm Soviet propaganda allegations and would weaken the political philosophy position of the West, which insists it is against all forms of dictatorship.

In fact officials of the Force Ouvriere, non-Communist union group, and of Catholic trade unionists in France privately advised the United States Embassy that should Spain be accepted on an equal basis with the democracies, they feared it might crumble the structure of popular support for the Marshall plan and the North Atlantic Pact—especially that vital segment of support by the non-Communist left.

These fears were enhanced when the State Department permitted the Chase National Bank to grant a private loan to Spain. When Secretary Acheson followed this up by stating that Washington had no political objections to loans to Spain and that Madrid had applied for aid to the Government's Export-Import Bank, confusion grew.

While Mr. Acheson stated that Spain was not a good risk economically, this was hardly news, and the declaration that political objections no longer existed appeared to indicate a fundamental shift in United States policy.

Spanish economy, as is well known in Europe, is at rock bottom. The famous Basque Bank of Urquijo estimated last year that Spain required $777,000,000 in loans to get on her feet.

Whether Mr. Acheson's press conference statement on Wednesday will allay fears in Europe about basic changes in Washington's Spanish policy remains to be seen. There is still considerable skepticism.

Doubts remain as to the true line of United States policy because of the basic fact despite Mr. Acheson's two statements that the United States had definitely removed its political embargo on loans to Spain.

The Chase National Bank lent $25,000,000 against gold deposits in London 6 weeks ago. Now Andres Moreno of the Urquijo Bank, representing both his organization and the Spanish Government in Washington, is seeking $300,000,000 from the Export-Import Bank.

It is dubious whether he will completely succeed. Nevertheless State Department policy has clearly changed despite Mr. Acheson's latest statement. The green light was given to the Chase Bank for its small loan to test United States public reaction, which does not appear to have been violent.

Many Europeans, who realize what a tenuous political balance still prevails in the coalescing Western bloc, are nervous, however, lest the State Department fail to take into sufficient account the public opinion of these countries.

Although their anti-Communist majority seems to be growing, they have not lost their distaste for the Spanish system, which Mr. Achesor himself described as Fascist.

Evidence of Uncontrolled Budget

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 17 (legislative day of Monday, April 11), 1949

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Evidence of Uncontrolled Budget," written by Raymond Moley and published in the Lincoln (Nebr.) Journal of May 10, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EVIDENCE OF UNCONTROLLED BUDGET

(By Raymond Moley)

The proposal to cut the costs of all Federal bureaus, departments and activities by a horizontal 5 percent, now meeting favor among conservative Democrats as well as Republicans has several advantages. It is simple, it is reassuring to the country, and it is fairly equitable to all services concerned. It puts the burden on each agency to apply the cut. And anyone familiar with the padding of budget requests by bureaucrats knows that such a cut will not result in the public's loss of any essential service.

Moreover, under conditions as they are now in Congress, with unfinished business piled up everywhere and no major legislation yet enacted, and with a real impasse between the President and the GOP-Dixiecrat coali-

tion, this over-all cut is about all that can be done.

Since several immense proposals, such as arms for western Europe, which involve billions may be added to the President's earlier budget, the total cost of our Federal Government in the year beginning in July may run close to $50,000,000,000. The 5 percent cut, therefore, would save nearly $2,500,000,000 and cover five-eighths of Truman's proposed tax increase.

The taxpayer, who has attained the mood in which he is thankful for very small favors indeed, should realize that such a small horizontal cut is a clear confession by Congress that it has failed utterly in achieving any really constructive budget action. It has failed to live up to its own rule, adopted in 1946, to produce a legislative budget by May 1.

The simple and appalling fact is that the Federal Government is completely out of financial control. The thing is so big and so complex that methods of control established when we were spending one-tenth of present amounts are not adequate for the task. We are all like passengers in a bus which is rolling down a steep hill with brakes built long ago for a vehicle one-tenth its size.

The Hoover Commission pointed out in a remarkable report that the present Budget Bureau, which has grown enormously in personnel, is not organized to provide the President with real control over expenditures.

Heart and Cancer Research

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 17 (legislative day of Monday, April 11), 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an advertisement entitled "Senators, Please Think This Over!" sponsored by the National Heart Committee and published in the Washington Post and the Washington Times-Herald of May 16, 1949.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

SENATORS, PLEASE THINK THIS OVER

While you are voting tens of billions of dollars for other important needs—please vote the few millions of dollars necessary to help prevent over half the United States population from dying prematurely.

This advertisement is being paid for by American taxpayers, who are as anxious as you are to hold down our national budget.

At the same time the expenditure of a comparatively few millions of dollars for adequate appropriations for the National Heart Institute and the National Cancer Institute can held prevent millions of premature American deaths. These dollars are necessary for research, construction of research facilities, and training of research workers.

Nearly 64,000,000 Americans now alive will die too young of heart diseases—and over 19,000,000 Americans now alive will die of cancer, unless new treatments and cures are found. Approximately half of all heart and cancer deaths occur in people under 65 years of age. In addition to the tragedy and heartbreak of this—the economic loss is incalculable.

We who help to supply the money for our $41,000,000,000 national budget—including over $5,000,000,000 for European aid—urge you to sustain the amendments passed by the Senate on April 27, 1949, for heart and for cancer research.

The amount of money involved for both the heart and cancer amendments is approximately $32,000,000.

Leading heart and cancer doctors have testified before the Appropriations Committee that this is a minimum amount required. Much more has been requested by outstanding medical institutions, and could be used effectively.

The lives of over half of our population are at stake.

We are for economy, just as you are, but we urge that this amount of money—which is substantially less than one-tenth of 1 percent of our total national budget—be applied to these vital life-saving projects.

Senators, please think this over.

Millions may live longer—if you vote in favor of the heart and cancer amendments to the Labor-Federal Security Administration appropriations bill.

First Anniversary of Establishment of Israel

EXTENSION OF REMARKS
OF
HON. MILLARD E. TYDINGS
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Tuesday, May 17 (legislative day of Monday, April 11), 1949

Mr. TYDINGS. Mr. President, last Sunday evening, in the Fifth Regiment Armory, Baltimore, the distinguished junior Senator from Maryland [Mr. O'CONOR] delivered one of the principal addresses at the exercises commemorating the first anniversary of the establishment of the State of Israel. The interest manifested by the people of Baltimore in the affair, and the splendid reception accorded the Senator upon his address, evoked city-wide comment.

I ask unanimous consent that the distinguished Senator's address be published in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is an honor, indeed, to have been asked to speak to you on such a historic occasion as this. In grappling with our personal problems of everyday life we are apt to overlook the fact that great events of far-reaching significance sometimes take place before our eyes. One of these events, which will have its world repercussions throughout all the years to come, we are memorializing here tonight—the completion of the first year of the resurrected Jewish state. And, as if that were not enough to justify a rousing celebration, the fact that this lusty infant state has been received officially into the United Nations renders joy complete for every friend of Israel, and every lover of freedom.

Truly, the past 12 months have been months of gratifying achievement for the people of Israel. They also have been months of heartfelt satisfaction to many millions of persons throughout the world who had watched the launching of this new Jewish homeland a year ago with foreboding. What desperate odds they faced, those warriors and leaders of Israel, with the whole Arab world ranged solidly against them, with British troops stationed among them to prevent armed preparations for the onslaught they knew would be launched against them; and with an arms embargo against them while their enemies were free to procure arms without limit.

To add to their troubles, there were thousands of newly arrived immigrants to house and feed, there were problems of internal organization, and all the while their vital port cities were being bombed and their settlements attacked. Stout hearts were needed, and stout hearts there were, a plenty—young men, older men, veterans of bitter fighting in all the theaters of World War II and lads of high-school age—young women, too, supplementing the all too meager ranks of the military, or toiling in the fields to produce the vital crops needed to sustain the fighting forces, the workers, and the new arrivals.

The history of our own land records the long years of travail, of suffering, and of effort, during and following the Revolutionary War, that were required before the Thirteen Original Colonies could honestly claim to be a nation in fact as well as in name. Israel had to encompass all this within the space of a single year. And well may you take pride in the fact that Israel did it magnificently, including the holding of its first general election, and drafting of its constitution, a model of the most advanced thinking in this field, in which the basic principles of our own great American Constitution are well reflected.

Conceive, if you can, what a task it was for the citizens of this newly formed state to carry to successful conclusion a bitter war against great odds, to set up a workable and smoothly functioning government, and to receive and assimilate at the same time more than 100,000 new citizens, many of them utterly destitute, and so ravaged by their sufferings in the carnal houses of Nazi savagery, as to be complete liabilities, for whom rehabilitation facilities were necessary.

Indeed, you have every right to rejoice tonight, for it was your backing and support, multiplied many times over in similar communities of our great land, which made it possible for the men and women of Israel to carry their momentous venture to its present happy situation. It was through the aid you furnished that this first-born child of the United Nations was able to survive the agonies of birth, and of prodigious growth. With the impetus thus given, and with a continuation of the loyal support evidenced here tonight and at the many other gatherings of this kind it has been my privilege to attend in the past, we may be sure this thriving homeland of world Jewry will justify increasingly the hopes of its founders, and the confidence of its well-wishers in America and in every land where freedom flourishes.

The outstanding leaders of Israel have been so intelligent as to realize that the country was on trial, so to speak, before the bar of world opinion. This was so for several reasons. First, it owes its very existence to the United Nations, and so its fortunes and those of the UN are inseparably allied. For it was the action of the World Organization in 1947, approving the partition of Palestine, which made possible the establishment of the state of Israel. Likewise, it was through the good offices of the United Nations that, following Israel's victories in the field, the currently existing armistices were arranged. And again it was the United Nations which placed the seal of official approval on Israel only this past Wednesday, by voting to admit her as a full-fledged member of the great world group.

All these supporting actions of the UN were carried through, as you well know, against violent opposition. The Arab States, were so bitterly opposed to partition that they tried, desperately, by force of arms, to wipe this new nation of Israel from the face of the earth. And that this opposition still exists was demonstrated vividly following last Wednesday's favorable vote, when the Arab representatives walked out of the UN session in protest.

What does that signify? Simply this—that Israel must set an example of national rectitude, of progress and of internal and international fair-dealing, or its antagonistic neighbors will be ready to proclaim its failings to the entire world. Israel, perhaps more than any other nation that ever came into being, must develop to be a great instrument for good, must seek in unusual measure to bring human liberties and enlightened concepts of social welfare to its own citizens of Hebrew origin, as well as to the members of other races dwelling within its borders.

That this will be the constant and passionately held purpose of the new state, of all its officials, and of its entire population, we can predict with utmost confidence. The same desire for truth and justice which characterized the Jewish prophets of old will, we know, be the paramount characteristic of this new state.

But just as there is this great responsibility resting upon Israel so is there a corresponding opportunity for its progressive people to demonstrate in dramatic fashion the social and political benefits it has to bestow upon this critical area of which it is the core.

The Middle East, with whose fortunes Israel now is bound so intimately, presents a particularly unattractive picture. Its social, economic and hygienic standards are pathetically low. Its political framework is outmoded. Its conceptions of liberty and self-government are so perverted as to be almost nonexistent.

More than anything else, that part of the world, in its own interests, must take advantage, under Israel's tutelage and leadership, of the vast opportunities which freedom and modern economic methods can bring in their wake. The cause of freedom, the cause of justice, the cause of decency toward one's fellow human beings, all are undergoing a difficult struggle all over the world against the forces of greed and selfishness. But in the Middle East the situation in these respects is particularly acute.

Not only the people of Israel, many of whom have had all their old concepts of justice and morality battered by tragic treatment at Nazi hands; but the people of the neighboring countries, and indeed the world at large, are in need of such an example of national nobility as Israel, with its basic moral virtues, and under the inspiration of its recent accomplishments, can supply.

And we may be sure that her leaders, her people, are aware of their opportunity. They know that what they do will affect the standing of their fellow Jews throughout the world. More than that, it will add to the prestige of the UN among these nations who are so critically watching, and judging, Israel's progress. They know that if Israel is to achieve, and maintain, the high standards of culture, of social welfare and of health that her people so fervently desire, she must help also to raise and maintain comparable standards among her neighbors in this poverty-stricken, disease-ridden sector of the world.

America heartily salutes the State of Israel on the occasion of this first anniversary of its founding. As one free nation to another, we say: "God speed you." May its problems that now loom so grave, be but a challenge to the initiative of its people, and may they be resolved with all the courage and determination that has signaled this first great year of Israel's development and growth.

May this new democratic state forever cherish the ideals of freedom and justice that are the basis of its national creed. And hand in hand with our own great country and with all those nations where freedom rules, may it go forward in peace and prosperity to help establish and maintain that universal peace and international good will that is the fervent hope and final goal of free men everywhere.

The Worker Pays

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 25, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, many working people think that, if the Federal Government inaugurates a program, it will not cost them anything; that the cost will be borne by the so-called rich, by the employer.

As a matter of fact, the consumer always pays the cost of a Federal project—he pays it whether he buys a loaf of bread, a pair of shoes, a package of cigarettes, or a bottle of whisky.

While many people think that Truman's health program, so-called, will not cost them anything, will be a benefit received without payment, some of the editorials of the smaller weeklies are telling the folks the truth.

Such an editorial comes from the Allegan Gazette, published at Allegan, Mich.:

TRUMAN'S HEALTH PROGRAM

In his successful effort to win the Presidency Truman, among other things, promised the people free medical care. Now his health program has been submitted to Congress. No one, not even its sponsors, can with any degree of accuracy, estimate its cost to the taxpayers of this country. It has been conservatively estimated that its initial annual cost will amount to $6,000,000,000. It will be financially supported by a 3-percent pay-roll tax.

Briefly, the bill is designed to tax everybody to provide free medical aid to every person in the United States and to subsidize the medical profession, and, like the rest of Truman's program, is socialistic in nature.

The medical profession has, from the beginning, fought the bill, as they have no desire to be subsidized—realizing that in the end they would lose much of their independence of action, and would be subjected to governmental controls and red tape.

Truman seems to think that through the medium of taxation he can force the individual worker and private industry to support and finance his program to socialize this country. Social security, old age pensions, unemployment compensation, farm subsidies, and now medical aid are all to be included in one form or another in the cost of producing consumers goods to be paid for by the public.

In this country today, anyone with any kind of initiative can enjoy conveniences and luxuries to a greater extent than at any time before or in any other country. Most of us own automobiles, radios, bathtubs, electric stoves, hot water heaters and all the rest of the pharaphernalia that makes life easy. Most of us earn enough to buy food to keep us healthy and to afford a modest vacation.

This condition was brought about through private industry producing consumer goods at as cheap a price as possible and at the same time paying as high wages as possible. The purpose was to produce a buyers market through employment and high wages and cheap goods produced by mass production.

Truman, who doesn't really know what a pay roll is, has invented a scheme that operates in reverse. His purpose is to lower the workers wage by a pay-roll tax and to increase the cost of consumers goods by a tax on the employer. The result will be to force out of business the smaller industries, to aggravate strife between the unions and industry, to increase unemployment and the cost of living and eventually to destroy private industry.

Already to a large extent the worker has been deprived of a substantial part of his pay. Already industry has been required to increase the cost of its product to take care of Government taxes. Already business in our bankruptcy courts is on the increase. Truman and the rest of his social advisers is a bigger menace to the welfare of this country than all of the Soviet Union. We trust that Congress will retain its common sense.

L. W. H.

Program for Government Economy

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 17 (legislative day of Monday, April 11), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me entitled "Program for Government Economy."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PROGRAM FOR GOVERNMENT ECONOMY

There has been a good deal of talk in the Senate about the Federal budget. On several occasions attempts have been made to exact a 5-percent appropriation cut. Attempts were made in the instance of the appropriation bill for the Department of Labor and Federal Security Agency, and also in reference to the Department of the Treasury, Post Office, and the Export-Import Bank. It should be noted that the economy efforts were made on the floor of the Senate despite the fact that the Senate Appropriations Committee, which is a bipartisan committee, had held extensive hearings on each and every item of the budget for the departments which the Senate considered. Possibly no two agencies more directly affect the life of the American citizens than the Federal Security Agency and the Department of Labor. Both political parties in their conventions complained about the drastic reduction of the Department of Labor in both its personnel and its functions. Both parties pledged that this Department would be strengthened—as it well should be.

The Post Office Department is obligated under the law passed by Congress to perform essential services. It is already operating at a deficit, and to reduce its appropriations at this time would be closing our eyes to reality and jeopardizing the services of the Post Office. Some of the Members of Congress that are now calling for a 5-percent cut in Post Office appropriations are the same Members who only a year ago voted to increase salaries of postal employees.

The Treasury Department appropriation includes such essential services as the Bureau of Internal Revenue and the Reconstruction Finance Corporation. I know of no two agencies in Government that are more vital to the well-being of the Nation's financial and economic structure.

It would be well to take a look at the budget; or better, let us say at the budget dollar. Out of every budget dollar collected 34 cents is directed to national defense; 16 cents to our international programs of rehabilitation and relief; 13 cents for veterans' benefits and veterans' care; 13 cents for interest on the public debt, which is primarily a war debt; 6 cents of every budget dollar goes for social welfare, health, and security; 18 cents of the budget tax dollar is required for the general administrative expenses of Government, including such Departments as Treasury, Labor, Interior, Commerce, Federal Works Agency, Interstate Commerce Commission, Federal Trade Commission, Securities Exchange Commission, and others. It should be noted that in this 18 cents of the budget dollar all of our programs for agriculture, soil conservation, land reclamation, flood control, REA, and public works are included.

Possibly a regrouping of these figures will be helpful. Seventy-six cents out of every budget dollar is dedicated to national defense, European recovery, veterans' benefits and hospitalization and interest on the public debt. Only 24 cents of the budget dollar remains for the essential public services required by the people.

To be sure, all of us want economy in government, but it is strange to me that the political play for economy begins on the 6 cents of the budget dollar in social welfare, health and security. The question might be well asked whether or not the real economy that is needed, which will provide relief to the taxpayers and permit balancing of the budget, ought not to come in the bigger items, such as national defense, which takes 34 cents of the budget dollar.

Lest there be any misunderstanding of my remarks, may I point out that the Hoover Commission has categorically stated that a minimum of $1,000,000,000 can be saved in the national defense establishment without in any way jeopardizing the defense of this Nation. The more optimistic members of the Hoover Commission insisted that a minimum of $3,000,000,000 could be cut upon the national defense budget without in any manner weakening or jeopardizing the security or defense of the Nation.

Possibly the answer to our economy drive is in constructive and intelligent application of the basic recommendations for governmental reorganization and economy as suggested by the Hoover Commission in its exhaustive reports. This, however, will require congressional action. It will mean reshuffling Government agencies and eliminating some. It will require direct unification of the armed services. It will necessitate modern budgeting, accounting and purchasing practices on the part of the Government. It will mean civilian control of the armed services with careful scrutiny of the budget requests of the admirals and the generals. It is my opinion that here will be the test of the courage in the Congress and the direct test of economy.

I am happy to report that the Senate Committee on Expenditures in the Executive Departments, of which I am a member, has been diligently working on the Hoover Commission recommendations. The general bill for reorganization of executive departments has been approved by that committee. This bill is now up for debate in the Senate. It was considered to be essential to any sound reorganization or economy program. I am supporting the bill. In fact, I had some part in the drafting of the measure.

The second proposal of the Hoover Commission called for a general revision and reorganization of the management functions of Government. By management we mean such things as budgets, accounting, purchasing, inventories, disposal of surplus properties and control over Government stocks and materials. The Hoover Commission placed great emphasis upon these functions of Government and insisted that they should be coordinated under one department to be known as the General Service Agency, headed by a single administrator directly responsible to the President. Today these functions that I have mentioned are scattered all over the Government. Department after department acts as if it were a separate government unto itself. There is no uniformity of purchasing. There is a glaring lack of sound inventory practices and there is definitely improper budgeting by the several agencies of Government.

I am happy to report that I have worked diligently day after day as a member of the committee entrusted with the preparation of this important legislation. This bill is known as S. 1809, a bill to simplify the procurement, utilization, and disposal of Government property, and to reorganize certain agencies of the Government. There is no doubt but what the enactment of this bill will save millions of dollars in Government expenditures through the creation of responsible and efficient administrative management of these vital services of Government.

The Senate Committee on Expenditures in the Executive Departments will continue its work in writing into law the basic recommendations of the Hoover Commission. I repeat—here is the practical manner and the constructive means of promoting efficient administration and sound economy. Over-all budget cuts that are taken without study and without due consideration to essential services are at best haphazard measures. Waste in Government and inefficiency in administration can only be eliminated by proper reorganization of the executive departments. Those who are proposing budget cuts would be performing a real public service if they spent their enthusiasm and their effort upon improving and reorganizing the basic structure of Government. These reports and this reorganization have been given careful study by a tremendous force of investigators who represent the trained talent of public administration in this Nation. The Hoover Commission, bipartisan in its make-up and representative of all walks of all areas of American economic and political life, is to be commended for its intelligent approach to the problems of Government administration. That Commission visualizes economy not merely in budget cuts but rather in the efficient use of the taxpayers' money for the services which are required of Government by the people.

California's Governor Warren Recommends Public Development of Electric Power

---

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1949

Mr. DOYLE. Mr. Speaker, in the Los Angeles Daily News of Wednesday, May 11, 1949, the distinguished Governor of my native State of California is quoted as to some of his remarks before the First Far Western Conference of the American Public Power Association, recently held in Los Angeles. I recommend that you read the same, for it draws lines which will aid in the delineation of the thinking of the American people on this important subject:

WARREN URGES MORE PUBLIC POWER, SO AS TO MAKE JOBS

Gov. Earl Warren yesterday recommended public development of electric power to promote expansion of basic industry through which jobs can be provided for California's half million unemployed workers.

The Governor, speaking at the Ambassador Hotel before the first far western conference of the American Public Power Association, said:

"California now has 528,000 unemployed, or 14 percent of the State total of employables, which is about twice the national percentage.

"This proportion may increase to our great detriment unless we can have more basic industry to develop our national resources.

"And the foundation for this industry is power. We have insufficient power now to attract new industry, and at times even to serve the present customers."

New power, the Governor said, must be produced from water, and by public agencies.

California's only other power source is oil, Warren said. He said estimated oil reserves in the State will last only for 20 years. But within the next 2 years, the private utility that serves northern California (Pacific Gas & Electric Co.) will be producing more power from oil than from water, he said.

Warren said that most of the upstream sites suitable for power development by private companies already are in use.

"On the other hand," he went on, "most of our power potential is inseparably connected with water conservation for all purposes: irrigation, flood control, navigation, salinity control, municipal purposes, recreation, and conservation of wild life. It must be developed in projects that serve all these purposes."

The Governor said no private utility has the means, the jurisdiction, nor the urge to do such a job.

"No private interest could integrate these functions," Warren said. "Only public agencies, acting in cooperation where jurisdictional lines are transcended, can do such a job," he told the conference.

Following the Governor, Northcut Ely, general counsel for the association, spoke on the proposed central Arizona reclamation and power project.

He warned that Californians would have to pay for most of the project through contracts for the power output, although $400,000,000 of the $738,000,000 project would be spent on irrigation in Arizona.

Irrigators, he said, are unable to pay the capital costs of construction, so the project will be paid from a 60 percent sales tax on the power. Arizonians can use one-third of the power. California will have to take the rest.

"This is particularly obnoxious because California public power users are thus blandly expected to pay for an Arizona aqueduct which will take water already claimed by California, and on which California works, already built, are dependent," he said.

The delegates were welcomed by Mayor Fletcher Bowron, who spoke pridefully of the city's publicly owned water and power utility, describing it as the world's greatest municipally owned enterprise. It has been responsible, he said, for the growth and development of the city.

The association's president, Maj. Thomas H. Allen, Memphis, Tenn., complimented the work of E. F. Scattergood of the Los Angles department of water and power for his pioneer work in the formation of the National Municipal Utilities Association.

Another speaker was L. J. Richardson, president of the Washington Public Utility Commissioners Association. Public power developments on the Skagit and Columbia Rivers in his State, Richardson said, made possible the Northwest's great industrial growth.

Keen Johnson, Louisville, Ky., spoke of the superiority of aluminum cable for electric power transmission, saying it had the advantages over copper of being lighter, cheaper, and capable of taking greater stress.

Secretary of Defense Johnson Emphasizes the Importance of Small Business in the National Defense Program

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. PATMAN. Mr. Speaker, in an address before the annual meeting of the chamber of commerce, at the Statler Hotel, Washington, D. C., on May 5, 1949, Secretary of Defense Louis Johnson spoke of the importance of small business in the national defense program. Since the volume of the procurement of the National Military Establishment will continue to be of such magnitude as to have a marked effect on the American economy, it is very reassuring to hear the comment from Secretary Johnson that small business will receive consideration in that procurement. Here are some excerpts from his remarks which will be of interest to the Members and to the friends of small business:

SMALL BUSINESS—OUR BASIC SAFEGUARD AGAINST THE DANGERS OF STATISM

Those of us who are engaged in the business of national defense realize that a sound program of preparedness calls for the utilization of our entire productive business system—big business and little business.

We have big business. We need big business. We can thank our lucky stars that we had mills and plants big enough to handle the big war production jobs of basic metals, and to mass produce and assemble such large items as tanks, and trucks, and ships, and planes.

We have small business too, and they too played a vital role in the victory. For them we can thank the wisdom of our forefathers whose political economic system made possible the establishment and healthy growth of hundreds of thousands of these smaller units, the so-called small business of America.

These hundreds of thousands of small businesses, scattered throughout our land, together with our millions of independent farmers, are the essence of our democracy—they are our basic safeguard against the dangers of statism. It is high time that those few power-seeking and merger-mad corporation officials in our midst realize that the enemies of our economic system are gambling on a hope that American big business, by concentrating more and more economic power in fewer and fewer business enterprises, will finally drive us into some form of the corporate state which can readily be seized by a small group of ruthless men to spell the death knell of freedom.

The National Military Establishment appreciates the value of small business to our whole economy and to production of military items particularly and is bending every effort to have it share in its defense program. Let me tell you what we are doing to get orders for small business.

But first, what is small business?

The Military Establishment accepts the definition in the Selective Service Act of 1948, which says a business is small if it does not occupy a dominant position in the trade or industry of which it is a part, if the number of its employees does not exceed 500, and if it is independently owned and operated.

Under this definition 99 percent of the 4,000,000 American business enterprises of all kinds would be classified as small. Since we in the National Military Establishment are interested primarily in production, let us take a look at the industrial business population.

DISPERSED INDUSTRY—A NECESSITY IN ATOMIC WAR

There are approximately 320,000 manufacturing plants in the United States. Again, approximately 99 percent of them are small. The workers in these small businesses comprise 65 percent of all manufacturing employment. They produce 62 percent of the total industrial output.

You will find these small plants in many industries and widely dispersed all over the country. More and more of them are moving to the outskirts of large metropolitan areas or to towns which were formerly only shopping centers in agricultural regions. Their very dispersion offers a special incentive in an atomic age for giving procurement orders to small business.

None of us wish war, but we must prepare for all contingencies. And if war does come and it proves to be an atomic war, we must assume the big industrial centers of our country will be among the first targets. The main burden of producing war material will then fall on the smaller plants which are scattered in the smaller cities and towns. It is therefore good procurement planning for peace or war to give orders to small business now. In this way we will be developing our potential national assets, strengthen ourselves defensively and alleviate the evils of the huge overcrowded industrial city—and award more annd more contracts to the backbone of our free enterprise system, the small-business man.

The National Military Establishment is interested in small business because it wants to know that the productive capacity of all plants, including the small, is available. It is interested because it feels that small business is one of the institutions we Americans believe in and want. We must not forget that practically every American business in existence today once started as a small business.

SALESMANSHIP—NOT INFLUENCE, NEEDED

The National Military Establishment is proud of its record with small business. We are not saying that our procurement equals, exceeds, or falls short of being a fair proportion which is the goal we are seeking. That term has never been defined. We can say, however, that it is substantial.

As I have been talking about the billions being spent for national defense, some of you undoubtedly have been thinking, "Why am I not getting some of that business?"

The fault is not with us. The Army, the Navy, and the Air Force want more companies to do business with us. They tell them so—the Navy in its pamphlet, Selling the Navy; the Army in its booklet, Purchased Items and Purchasing Locations; the Air Force in its Guide for Selling to the United States Air Force; and the Munitions Board in its guide on Military Government.

Getting business from national defense is a selling job. Far be it from me to give this group of past masters of salesmanship a lecture on the art and science of selling. You know far better than I that its main points are knowing what the customers want, how and where they buy, and then showing how your product fills their needs, when and where they exist.

The salesman who performs these functions, be he owner, employee, or bona fide sales agent of a manufacturer, is always welcome because he renders a valuable service to the National Military Establishment.

But there are others who prostitute the profession of salesmanship who seek to convince the small-business man that only by buying through them can he get orders from the Government. To the small-business man I must emphatically say, "That is not so. There is no need for special brokers, for 15-percenters, for 10-percenters, for even 5-percenters. There is no need for anyone to intervene between small business and the Government to procure Government contracts."

And to those who claim to sell influence at the right spots I say, "We will drive you out of the National Military Establishment." And let those who engage in questionable brokerage activities heed this warning.

Let me repeat: There is no need to have any broker between small business and the Government to procure Government contracts.

The Army, Navy, and Air Force with the cooperation of the Munitions Board, are intensifying their efforts to make certain that every manufacturer knows how to do business with the National Military Establishment, what is being bought, and what offices do the buying.

Our coordinated procurement program is designed to expedite selling. Of course, the objective is increased efficiency in military procurement, but when the responsibility for buying total military needs in certain items is placed in either the Army, Navy, or Air Force, the results should be good. Right now the Munitions Board is studying the efficacy of this program. Many businesses have indicated that they like our coordinated procurement operation; but one purpose of the Munitions Board survey is to determine its acceptability to small business.

Eighty percent of all procurement is now coordinated through the Munitions Board.

We are planning for an all-out effort to assure the national interest—if war is ever forced upon us. Knowing the nature of our potential enemies, anything short of an all-out effort would be criminal; it would be suicidal.

And the greater the all-out effort; the more important small business becomes.

FLEXIBILITY OF SMALL BUSINESS PAYS OFF

There is a special role for small business which I particularly want to stress. These small businesses are often the firms that can produce the last 10 percent which may spell the difference between victory and defeat.

Say we need 100 items. Our regular sources can produce 90. Ten more are needed for successful operations. We cannot wait for our major suppliers to expand or reorganize their production lines. We have to get the goods and get them quickly.

Here is where the flexibility and organizational simplicity of small business pays off. Frequently, these small-business men can get production on the needed 10 percent while a big company is tooling up.

Out-of-pocket expenditures may be higher for that fraction. In time of war we might have to pay more. But in many cases costs might be less. In any event, in terms of the benefits obtained it would be cheap.

I have heard rumors that small business believes that the National Military Establishment is confining its industrial mobilization planning to a few large companies. These are unwarranted. Let me give you the facts.

The Munitions Board and the three Departments have an industrial capacity allocation program. They are developing specific and realistic production schedules for a substantial number of manufacturing facilities. At present 22,000 have been cataloged, 17,500 of these are small business.

Small-business men may need special help when we call on them for all-out war production. They will encounter technical, managerial, engineering, research, and financial problems which never occur in their normal peacetime operations. How far any outsider, even the Government, can or should go in helping them is a serious question. We are developing plans to review this entire area. You can be sure that in this inquiry we will seek the advice of industry and finance, and particularly that of small business.

In emphasizing our policies to make the maximum use of small business I want to point out that we are not unaware that additional burdens may be put on the three Departments to place orders, supervise, inspect, and store. That is a burden I think we all will recognize as warranted and which the Departments will gladly accept in the case of maintaining free enterprise and in order to keep our economy in diversified shape against any possible emergency.

Republican Paper Admits Frequently Critical of President Truman, but Compliments Him Also on Reorganization Emphasis

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1949

Mr. DOYLE. Mr. Speaker, the following editorial, appearing in the Long Beach Press-Telegram, Long Beach, Calif., Wednesday, May 11, 1949, is deserving of the utmost consideration by all Americans. I hope that every colleague in the Congress will read it:

FOR REORGANIZATION

This newspaper frequently is critical of President Truman, but credit is due him for his message to Congress this week urging quick passage of a bill giving him power to reorganize the executive agencies of the Government. One such bill already has passed the House. A slightly different version still is pending in the Senate.

As Mr. Truman pointed out, the proposed legislation requires that any reorganization plan he submits must, before becoming effective, lie before Congress for 60 days without disapproval. Hence, there will be no reorganization this year unless Congress acts quickly.

Members of Congress may reply that if Mr. Truman had been less belligerent in his dealings with that body, the present legislative stalemate would not exist. Nevertheless, his latest request is legitimate. The only controversy over the reorganization bill concerns details. As passed by the House, the bill exempts certain agencies. The Senate version would exempt none. While the Senate proposal is preferable, it would be better to pass the House measure than none at all.

Mr. Truman also acquits himself well in recognizing the Hoover Commission's recommendations as a "landmark in the field of government organization." The real test of his attitude toward the Commission, however, will come when the President and his staff draft specific reorganization orders. If they follow the Commission's suggestions, large savings can be effected with an improvement in efficiency. Congress should give the President an immediate opportunity to show what his intentions are.

The last sentence of the editorial, however, reading: "Congress should give the President an immediate opportunity to show what his intentions are" leads me to just briefly make the observation that I increasingly feel it is not constructive of our American way of life when the opposition political party, or its leaders, or papers who support the opposition party theory of government, always have to end their compliments to the President of the United States with a reservation as to his actions being in good faith or his intentions being what he says they are.

The records will show that President Truman not only considered it an honor but a privilege to name former President of the United States, Herbert Hoover, as Chairman of this strategic Commission on the Reorganization of the Executive Agencies of the United States Government. Furthermore, the records speak out clearly that President Truman has on many occasions complimented the Hoover Commission for the work it has done. The other day he sent a special message to the United States Congress commending the achievements of the Hoover Commission.

The studies under Mr. Hoover's direction have cost the taxpayers hundreds of thousands of dollars. It certainly is not constructive of the democratic processes of the American way of life for the leading political opponents to always throw into the thinking of the American people doubts as to the good faith or sincerity of the declared intentions of the leaders of our public affairs. Why not wait until there is clear evidence to substantiate and prove a point instead of, in advance, throwing the fear of insincerity and poor faith or lack of good faith into the thinking of the people. For, Mr. Speaker, if the Democratic Party leadership of our Nation habitually throws an emphatic element of doubt of good faith or appraises the action of Republican leadership as always in bad faith or lack of good faith, then that sort of action is weakening and is not constructive. And, in like manner, if the Republican leadership or if the Republican newspapers habitually disseminate into the thinking of Americans a feeling of mistrust or of lack of good faith or of lack of sincerity toward the President of the United States—no matter which party he may be elected from—then in whom are the just ordinary, plain Americans to have faith and have confidence of the sincerity of their intentions.

I do not add these comments or remarks in any thought of criticism of this splendid editorial, but I add them in the hope that they will be constructive toward the thinking of those who may read both the splendid editorial and my humble remarks.

Citizenry Should Give Dignity to Career of Public Service

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1949

Mr. DOYLE. Mr. Speaker, the heading at this column is reproduced from the heading of one of the most constructive and inspiring editorials, in my judgment, I have ever read. It appears in the Long Beach Press-Telegram for Tuesday, May 10, 1949, as follows:

CITIZENRY SHOULD GIVE DIGNITY TO CAREER OF PUBLIC SERVICE

The working of a democracy presupposes an intelligent electorate to make it function successfully.

When he was President, Woodrow Wilson said that democracy proceeds on the assumption of extraordinary qualities in the ordinary citizen. To this President Coolidge added that the business of democracy is to choose good leaders and then have the good sense to trust that leadership.

The reason why some of our representatives in public office do a bad job is that the public generally is too careless, too indifferent as voters to send the best men to Congress or to put them in other public places. Carelessness in voting or failure to vote is not the whole trouble. It is sometimes difficult to get good men in office because of blind, unreasonable and unjust criticism of those who are willing to step out in front and risk their reputation by becoming candidates.

Many a good man who would do a fine job in making democratic government function fears the various lines of attack and abuse to which he may be subjected.

The history of nations proves that the people get the kind of leaders they deserve. For instance, it was the custom to put the German people in a pathetic light and refer to them as the victims of Hitler. The German people, however, created Hitler, nourished him and allowed him to grow from a

small beginning. It was largely because of their discouragement and cynicism brought on by the 1918 defeat and the terms of the Versailles treaty. But they, the people, were responsible for the cancerous growth of Hitler.

An intelligent electorate is the explanation for a democracy which works well. So far, that intelligence has not proved high enough in the United States, especially in the years since World War I. If it were higher, more young men and young women would be encouraged to enter public life, to run for office, to make public service a career.

It is the fashion with many to discourage the young from political activity. The common advice runs: "Politics is dirty. Keep out of it; you will never make any money. It is not a good career." As a matter of fact, there is no finer career than one in public service. Congress has wisely adjusted the remuneration for many of the administrative positions, bringing salaries more nearly in line with those paid for similar responsibility in private business. Even so, part of the reward remains a sense of making the most progressive and enlightened form of government prove itself capable of meeting the people's needs. This feeling should be frankly encouraged rather than deterred by the smear dogma that it is impossible to hold public office and retain one's honesty and self-respect.

That is the way a really intelligent electorate should think, and the result is a democracy which provides the greatest good for the greatest number. It sometimes appears that little enough thought is given to the need of a better educated American citizenry which can be held to a greater responsibility for maintaining our democratic institutions at home.

If our democracy is to survive it is time for millions of Americans to begin thinking along this line. The public schools and colleges can be a vast aid in this effort but the influence of the individual adult citizen is of first importance.

I hope that the above editorial will be read and reread by millions of the young people of America who are thinking in terms of choosing a career. I hope, too, that it will be read and reread by the cynical and by the chiselers and by those who charge men and women in high public office as being as "dirty as they are."

May I remember when I was a boy in high school at Long Beach, Calif., that my own father used to say to me frequently that folks who always appraised a man or woman in public office as being dishonest or crooked were only appraising their own habits and their own mental attitudes. I also remember he used to tell me that, if men and women in public office were anywhere near as crooked and dishonest as many members of the public tried to buy or get them to be, that they certainly would be habitually dishonest and deceitful.

It has already come to pass that many sound, patriotic men and women hesitate—yes, refuse—to be candidates for public office because they fear they will be appraised in public office as seeking only selfish gain; or as accepting bribes; or as doing "dirty politics"; and so forth. Likewise, I am aware that many sound, patriotic men and women refuse to stand for election to public office because their neighbors, who have previously respected them and held them in high esteem or have been close personal friends would thereafter probably feel that they, in accepting public office, had degraded themselves or had lowered their ideals of personal conduct.

Mr. Speaker, men in high public places are but the product of the people who put them there. They are but the product of the local level or standards of "politics." I think of politics as the science of government and regard it as high a calling under God as man can have. The sort of political seed which the people at the local level plant is what later ripens into the crop of harvested politics. City councils, State legislatures, the Congress of the United States are but the creation of the political participation—or lack of political participation—by the folks at the grass roots.

What our Nation is to be, it is now becoming. What the youth of America is to be, the adulthood of America is now becoming. The present generation of adults cannot escape making its own destiny and largely the destiny of the youth of America by describing politics as "dirty." They cannot strengthen the sinews of the American way of life by declaring to American youth that the science of government is not "a good career." It is true that men and women who enter public service with the highest of motives and who live up to those highest of motives "never make any money." But money is the least of the needs of livelihood in the highest sense of the word. Men voluntarily offer to die for their country. Women flocked to register as nurses or Red Cross workers during the last war in order to save life or aid the sick and needy. And, Mr. Speaker, the time is present and now when our American democracy needs a shot in the arm by way of regeneration of our attitudes toward public servants. That shot in the arm can best come by the dedication of men and women of habitual honesty and integrity and with patriotic motives and with a spirit of humility and decision to serve mankind recognizing and choosing the science of government—"politics," if you please—as their choice of careers.

Report of United Mine Workers of America Welfare and Retirement Fund, Showing Beneficiaries and Disbursements to May 1, 1949

EXTENSION OF REMARKS

OF

HON. JAMES S. GOLDEN

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1949

Mr. GOLDEN. Mr. Speaker, under leave to extend my remarks, I insert in the Appendix of the CONGRESSIONAL RECORD a complete and detailed report of the United Mine Workers of America welfare and retirement fund, which shows all beneficiaries and all disbursements to May 1, 1949.

This report shows clearly the need for Federal legislation to give Federal mine inspectors the power to withdraw workingmen from the mines when they find conditions to be dangerous and thereby prevent many accidents.

REPORT OF THE UNITED MINE WORKERS OF AMERICA WELFARE AND RETIREMENT FUND, SHOWING BENEFICIARIES AND DISBURSEMENTS TO MAY 1, 1949

This is a report that cannot be considered fairly without background. Disbursements are not related merely to the 1946–49 period, but have to do with a great backlog of human misery built up by human neglect over a full 50 years. In 1945, when John L. Lewis first made the creation of the fund a major issue, he cited these figures: From 1910 to 1945, inclusive, 68,842 coal miners were killed outright, an average of 1,912 fatalities a year, and the dead men left approximately 211,468 widows and orphans; 2,061 miners were permanently and partially disabled annually. Every year throughout the period, 65,000 men were so injured that each lost an average of 40 days. From 1930–45 alone over 1,000,000 men were injured in the mines.

Although deductions from pay rolls were supposed to provide miners with modern medical and surgical care and hospitalization, conditions constituted a national disgrace; the company doctors' system prevailed; medical care was far below professional standards, and hospitals were not only grossly inadequate but in some instances as far as 160 miles from the mines. Workmen's compensation laws, elective in 13 coal mining States and Alaska, permitted operators to escape liability.

Due to lack of pensions, men of 65, 70, and even 80 were still toiling underground. At least 50,000 miners, incapacitated by broken backs, amputations or other major injuries, rotted in dreary homes, denied the treatment necessary to rehabilitation. In many communities the gloom of the picture was deepened by tumble-down cabins, polluted water and disease-breeding latrines.

The United Mine Workers of America has assumed the position over the years that the cost of caring for the human equity in the coal industry is inherently as valid as the cost of replacement of mining machinery or the cost of paying taxes, or the cost of paying interest indebtedness, or any other factor incident to the production of a ton of coal for consumers' bins.

On May 29, 1946, the Krug-Lewis agreement, approved personally by the President, recognized the justice of a welfare and retirement fund, and established a royalty of 5 cents a ton for its support.

Provision was also made for a "comprehensive survey and study of the hospital and medical facilities, medical treatment, sanitary and housing conditions in the coal mining areas" to be conducted by the United States Navy Medical Corps. The report of Admiral Joel T. Boone, rendered March 17, 1947, sustained the charges of the UMWA.

Even with the Government's contractual obligation, it was not until after the Centralia disaster in March 1947 when the killing of 111 miners shocked the Nation, that the fund began to function. Pensions were still denied, but disability and death benefits began to trickle out.

Government control ended June 30, 1947, and on July 1 a new contract with the operators raised the royalty from 5 to 10 cents a ton. Nevertheless, a fresh series of suits prevented the disbursement of the 1947 fund for any purpose. The funds remained frozen by continuing suits even after an agreement to pay pensions had been reached April 12, 1948.

As a result of the Goldsborough decision, June 28, 1948, the funds finally became available and a new national bituminous coal wage agreement was signed on July 1. Not only was the welfare and retirement fund

confirmed and continued, but the royalty was raised to 20 cents a ton.

Such, in brief, is the background of the welfare and retirement fund.

BENEFITS AND DISBURSEMENTS CUMULATIVE TO MAY 1, 1949

The fund now aids beneficiaries through four services: Death benefits; disability and widows' assistance grants; pensions; and medical, health, and hospital care.

All applications must be filed through and certified by local union officers, further attested by the district officers, and are then subjected to careful examination and review by the fund office.

Death benefits

The sum of $1,000 is paid to wives or dependents of UMWA members deceased subsequent to May 21, 1946.

Number of death benefits paid	12,500
Children and other dependents included in death benefit gratuities	18,008
Total number of beneficiaries of death benefits	30,508
Total disbursements	$12,320,524

Disability and widows' assistance grants

Disability benefits, granted to members deprived of their earning power by injury or illness, provide a maximum of $60 per month for the disabled miner, $20 for his wife, and $10 for each dependent child.

The maximum amount for widows is $60 a month with $10 for each dependent child.

From all maximum allowable amounts in both disability and widows' assistance grants, deductions are made of money received from social security, old-age and survivors' insurance, workmen's compensation, and any regular income.

Disability and widows' assistance grants have totaled 106,937. Including the wives and children for which provision was made in these grants, a total of 266,722 beneficiaries have been aided by these payments amounting to $67,976,452. The duration of all grants ranges from 1 to 12 months and payments average $576 for the total amount of the grant.

Disabled miners' applications must have certification by a physician stating the nature of the applicant's disability and a prognosis of its duration. The grant is made to correspond with a period of disability, but even if the disability is permanent, the grant cannot exceed 12 months.

An extension application, with a new medical certification as to disability must be filed at the end of the year before further assistance can be given.

During the first year of its operation the fund began to make inroads into the huge backlog of miners and widows whose needs had been neglected for over 50 years. Over 73 percent of the miners receiving disability benefits were suffering from illness or injuries of many years. The workmen's compensation awards for almost three-fourths of these men had run out and these disabled miners, crippled by the industry, had been living on charity.

Both disability and widows' assistance grants are subject to constant revision or cancellation. If a temporarily disabled miner is able to return to work before the expiration of his grant it is canceled. If a widow remarries, her grant is canceled. If there is any change in the income status of either a disabled member or a widow receiving a grant, or in the number of their dependents, the grant is revised accordingly. Numerous grants have also been terminated as a result of the death of the applicant.

Thus, out of the 266,722 beneficiaries who have had assistance under disability and widows' grants, more than 72,000 are no longer receiving aid due to the grants being discontinued. Many of these have been physically or vocationally rehabilitated so that they can once again earn their own living either in the industry or another occupation.

Pensions

Retirement benefits for aged miners, first set forth in the Krug-Lewis agreement of May 29, 1946, did not become a reality until September 9, 1948, when President Lewis presented the first pension check, although on April 12, 1948, the trustees had adopted the Bridges' resolution providing $100 a month pensions for UMWA members who had served 20 years in the industry, who had retired subsequent to May 29, 1946, and who had reached 62 years of age. (Amended to 60 years on April 7, 1949.)

The Goldsborough decision of June 22, 1948, ended obstructive litigation but there was a further delay occasioned by the necessity of formulating rules, regulations, application forms, and instructions to local and district union officers, through whom all applications must be sent to the fund.

Pensions granted	19,188
Wives included in pension grants	14,866
Total number of beneficiaries of pensions	34,054
Total pension payments	$23,754,637

Included in the first pension checks, as provided in the Bridges' resolution, are payments retroactive to the date of the applicant's retirement. Thus a liability running back to May 29, 1946, is being met. These past due amounts constitute 86 percent of the first pension-check payments made up to May 1, 1949.

Seven months of pension experience proves conclusively that miners do not hasten to retire when they reach the eligible age. Analyses show that the average years of service are 36, while great numbers have been in the mines for 50 years.

The average age of applicants is 66.1 and 16 percent of them were over 70 at retirement. Only 10.6 percent retired at 62; 10.8 percent at 63.

Only 27 percent of the total retirements have been since October 1, 1948, when the program became fully activated. All other applicants had retired prior to that date.

Also of the 27 percent who applied for and received pensions after October 1, 50 percent had been receiving disability grants. Nor did the reduction of the eligibility age from 62 to 60 result in accelerated applications. Only five applications were received from men 60 years of age during the 4 weeks following the adoption of the resolution, and six from miners 61 years old.

Medical, health, and hospital service

The most recent service of the fund is its medical, health, and hospital care program, which ultimately will provide a prepaid form of hospital and medical care for UMWA members and their families. Only as this far-reaching service is developed and extended can the present shocking backlog of neglected illnesses and injuries with their incapacitating and costly consequences to miners and their families be reduced.

When the fund first started, it found over 400 miners who were paralyzed from the waist down as a result of accidents in the mines that had literally broken them in two and severed their spinal cords. Many of these men had lain in hill cabins or in small mining camps without medical care for more than 25 years. When first seen by the fund's doctors, these men were almost unrecognizable as human beings. Their needs were so urgent that they had right-of-way over all other considerations.

There were instances where men were twisted into an S shape so that stretchers could not be used and they had to be carried on their beds by neighbors down several miles of mountain trail to the nearest highway. The following two cases, however, may be regarded as absolutely typical:

Charles Everett, Wheeling, W. Va., age 44, had back and legs crushed in mine accident January 17, 1928. Bilateral amputation and permanent spinal injury. Inert for 28 years without control over bowels and bladder.

Grover Bailey, Sipsey, Ala., age 31, with wife and two children, had his back broken by falling rock January 15, 1942. Complete paralysis from hips down. Fracture of left hip and shortening of right leg. Compression sores developed into deep ulcers. A wheel-chair existence in his home, attended only by his family, until hospitalization by the fund in 1948.

Because of the extremely limited facilities for caring for this type of patient, it took all the efforts of the limited staff of the fund, at that time, a full year to get these men provided for. Many had to be sent as far as California to be treated. Three hundred and eighty have now been hospitalized and almost half of these hopeless and neglected men are beginning to walk again. Because they had been neglected for so long their care has been very costly.

Not until late in the fall of 1948, following the appointment of Dr. Warren F. Draper as executive medical officer of the fund, was the organization and staffing of this service possible. By the first of the year 10 area medical offices covering the 26 bituminous coal-mining States, had been established and Dr. Draper had secured the services of outstanding physicians to be in charge of them. The area medical administrators working under Dr. Draper, are responsible for working out with hospitals and physicians and surgeons in their areas, arrangements for the hospital and medical care for UMWA members under conditions guaranteeing high standards of care at as reasonable cost as such quality could be furnished under any system to be devised.

Dr. Draper and his associates have been successful in obtaining remarkable cooperation from the leading members of the medical profession and from national, State, and local medical associations.

In its initial stages, the medical, health, and hospital service has necessarily been limited to providing this care only for members receiving disability grants and pensions and for their dependents.

Through the area medical offices, 12,504 of the members receiving disability grants or pensions and their dependents have now received urgent or specialized hospital and medical attention. The total spent for medical care is $2,788,526.

One illustration out of hundreds showing the constructive and cost eliminating results to come from an adequate medical and hospital care program is furnished by this quote from an eminent surgeon who recently performed a long-needed operation on a beneficiary of the fund:

"I felt happy about this patient, because he had been drawing welfare checks for 14 months on account of these easily remedial defects, and I presume he has already returned to work."

Some idea of the enormous economic saving that the fund hopes to bring about is given by a study of compensable mine injuries in 22 States. After allowance for all compensation payments, the average annual wage loss is $44,322,922. The toll of untreated illnesses would undoubtedly exceed this figure.

Summary of total benefits

In order to keep down its length, many important items have been omitted from this report, but the sweep and vital necessity of the fund may be measured by these figures: Total beneficiaries to May 1, 1949, 344,168; total expenditures for death benefits, disability, and widows' assistance grants, pensions,

medical, health, and hospital care, $106,840,-139.

Of the money collected from coal royalties, 98 percent is available for benefits. This record for low cost in the administration of any fund has been made possible by the work and time contributed by local union officers and district officials.

Aside from the humanitarian, many other values have been created by the fund. By reason of benefits, the family of a killed or disabled miner has had a status change from that of a community liability into a community asset. Widows, orphans, and dependents, lifted above beggary, are now self-respecting citizens with purchasing power.

Another value has to do with the manpower of the mining industry. It used to be that the son of a miner followed his father's calling as a matter of course, but that has not been the case for years. As a result, the average age of coal miners today is now above 41. The reforms made possible by the fund are inducing younger men to go down into the pits.

Why the Navy Wants Big Aircraft Carriers

EXTENSION OF REMARKS

OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1949

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following interview with Fleet Adm. W. F. Halsey (retired) appearing in the United States News and World Report of May 20, 1949:

WHY THE NAVY WANTS BIG AIRCRAFT CARRIERS

(An interview with Fleet Adm. W. F. Halsey (retired))

(EDITOR'S NOTE.—Because the recent cancellation of the contract for the supercarrier has stirred up so much interest in the Navy's future, the editors of United States News and World Report invited Fleet Admiral Halsey to come to our conference rooms and discuss the problem from the viewpoint of a combat commander who actually operated carriers over a wide expanse in the last war.

(The admiral, who commanded Task Force 58 in the Pacific, discusses the significance of carrier action and points out that the war in Europe might easily have been prolonged if the Japanese carriers had not been defeated by the U. S. Navy in the Battle of Midway. He outlines also the Navy's experience against shore-based planes of the enemy and makes a plea for the widest possible use of airplanes by all armed services. The views expressed are the personal opinions of Admiral Halsey and are not to be construed as the views of the Navy Department.)

Question. Inasmuch, Admiral Halsey, as you have commanded the most powerful task force of aircraft carriers that any navy has ever had, what is your opinion about the future of the aircraft carrier as a weapon of war?

Answer. I think it has a tremendous future. The carrier has proved its offensive value even when attacked by a vast number of shore-based planes. It is by no means a very vulnerable, easily sunk, or easily destroyed weapon of war. The figures and records prove it. Of all the carriers in all the navies in the world, no single carrier was lost solely through the attack of shore-based air. Those that were lost were victims of other carriers or submarines. We never lost a big, fast carrier at all after we developed our task-force system of protection, and we operated against land-based planes of the enemy, including their suicide planes.

Also, there were some 25,000 Japanese planes destroyed during that war, and of this number 15,000 were destroyed by our Navy and marine aviation, chiefly by carrier planes. That's a rather conclusive figure.

Question. In discussing the future of the carrier, aren't we really discussing the future of the Navy as you see it today?

Answer. Very definitely so. The carrier is the most essential weapon of today's and tomorrow's Navy. Any likely antagonists will have forces of sufficient size to prey on our commerce, to pose a threat, and to be a continual nuisance.

Question. Wasn't the function of the British Navy, irrespective of whether it had a likely antagonist, for many, many years, the preservation of peace?

Answer. That's right. And in my idea it is a very distinct function of the Navy, and, in a lesser degree, a function of all armed forces. The Navy is free to go to all parts of the world and cover a great expanse of the globe, and our ships can move in any direction, any place they want to, and make demonstrations of force when necessary. In peacetime they are essentially a police force.

OBJECT: TO WIN WAR, NOT GLORY

Question. Should the weapons of war be provided on the basis of a fixed concept and restricted use?

Answer. The concept of what each weapon can or cannot do theoretically is very ridiculous. The only thing I can think of that is more ridiculous is the fact that you have a weapon and, through legislative or other act, you cannot use that weapon because it might interfere with the glory of some other person who has a similar weapon. I think the object in war is to strike with as many weapons as possible as often and as fast as possible. I think that is the surest and best way to terminate a war. I would go further than that, and say I do not think any weapon should be in any way restricted, whether it belongs to the Army, Navy, or the Air Force, or is used only for a special purpose. In other words, they should be used where they are most needed.

Question. Should an over-all amount be decided on and then certain sums allocated to each service, or do you think that each weapon should be examined by all services or a single authority in relation to its particular expense?

Answer. We should decide first on an over-all sum that we can afford and then let each service allocate its weapons according to its needs. That, I believe, is the best way.

Question. Are the lessons of the last war being disregarded now in the discussions of future wars?

Answer. When I read of attempts to shove the carrier into the background I think that we have not only failed to read the lessons of the last war but have failed to profit by the mistakes of other nations.

I have particular reference to the fact that the British took their air force away from the navy and merged it into the Royal Air Force and at the beginning of this last war the British Navy was all but ruined. The British carriers which finally joined us out in the Pacific late in the war were about two-thirds as effective as ours. Their pilots were splendid—fighting fools. But they did not have the planes that our pilots had, nor could their carriers embark as many.

Question. Would the course of the war have been materially affected if Great Britain had had carrier task forces like ours?

Answer. I can't see how it could have helped but be materially affected. I don't see how the German Navy could ever have done anything if the British had had carrier task forces. I don't see how, for instance, those two battle cruisers could have gotten out of Brest and back to Germany.

MIGHT OF CARRIER TASK FORCE

Question. Could the Germans have invaded or kept Norway if British carrier task forces had been as large and effective as ours?

Answer. No, I don't believe they could have begun to do it.

Question. Do you think that any other kind of weapon, any other type of navy, could have swept across the Pacific as far as Japan, as many thousands of miles as that, without the carrier task forces?

Answer. It would have been impossible. I don't think anybody who was present would argue that the task forces could have gotten where they did if it hadn't been for the carrier.

LIMITATIONS OF ISLAND BASES

Question. The argument is sometimes made that land-based planes could have accomplished it if we had bases strung along on smaller islands in the Pacific. Could the land-based planes have defended such bases?

Answer. No, I don't believe they could have. In the early days our own land-based planes were unable to stop the Japanese in the South Pacific. The Japanese Fleet made forays against us continually which the land-based planes were not able to stop and it wasn't until we built up our surface fleet, centered around carriers, that we got control of the sea and the air.

Question. What do you think might have been the course of the war if the Japanese carrier planes had sunk our carriers with their carrier task force off Pearl Harbor in 1941, or if they had won the Battle of Midway?

Answer. I don't see what could have stopped the Japs from going right on to the west coast, bombing out cities and taking Alaska.

Question. Then, if our carriers had been put out of commission, the Japs would have swept the Pacific?

Answer. Yes. We would have been compelled to shift a good deal of our defense facilities and our war effort to the Pacific Coast and thereby would have been able to render less aid to Europe.

If the war had been prolonged 1 year more and the Germans had developed their V-rockets and their Schnorkel submarines, as they were giving promise of doing, the early loss of our carriers in the Pacific might have affected the whole course of the war. If the west coast was being attacked, I doubt if we would have sent as many troops over to Europe. If the Germans had developed and were using carriers, it would have been practically impossible to have gotten troops to Europe. It might have blocked our supply lane to Russia through the Persian Gulf and might have given Stalingrad to the Germans.

We can put any enemy on the defensive in the same way today and sweep any ocean if we have adequate carrier forces to augment the Air Force and spread the enemy's defenses.

Question. But what about land-based air forces?

Answer. I think the best way to visualize that is to look at our original attacks on the Philippines. We went in there fully knowing that the Japs had a pretty strong air force. We stayed in there for 3 days, attacking, and the sinkings of ships and the destruction of Japanese planes were practically unbelievable.

Question. Done by Navy air?

Answer. All of it.

Question. At that time, didn't we have a base near enough from which land-based air of our own could have operated?

Answer. We had a base in New Guinea from which B-17's and B-24's could attack as far as Mindanao. However, their bombing was mostly high-level bombing, anyway. Our bombing was dive or pinpoint bombing.

And in a study of global warfare you will see that our carriers have many more areas from which to attack than do land-based planes, which are restricted to the bases you hold.

Question. That brings us to intercontinental bombing. The public has been told that it is possible to defend the United States from the territory of the United States, and perform all the necessary functions of offense with long-range bombers of the new types that we have developed. What is the practical aspect of this, as you see it?

Answer. Well, area-bombing destruction as we saw it in the last war depended, of course, on where the bombs landed. In a great many cases the bombs landed where there was nothing of value to destroy. You could not destroy any airfield by bombing. You could not destroy troops on the ground—you could burn up a lot of stuff, but the people went underground very easily. And the figures I have seen—from the studies in both Europe and Asia—of the results of area bombing indicate that they were very far from accomplishing their mission of destroying the enemy's ability to produce munitions.

Question. Would you say that the long-range bomber, because it flies so high, is unable to do pinpoint bombing?

Answer. I would say that most distinctly, because we saw that time and time again.

NAVAL PLANES' AID TO TROOPS

Question. Does the Navy have any instances in which its air arm performed the service of tactical air with ground troops in the Pacific?

Answer. The Navy did nothing else but this in every island we landed on. Our carrier planes, and shore-based planes when a field was available, preceded the troops, covered them while they landed, covered them while they advanced, and were used for pin-point bombing and strafing. This was very difficult in the jungle in particular, because it was very hard to see where our front lines were established. But despite that, with Navy, Marine, and Army air, in the Solomon Islands we supported a vast movement of our troops. As I remember it, we used to come within 150 and 200 yards of our front lines. On the completion of the Solomons campaign, practically all landings were covered by carrier-based planes only.

Question. They were used to locate enemy artillery?

Answer. Yes; and we would put rockets in their defensive caves, and so on.

LESSONS OF PACIFIC LANDINGS

Question. Therefore, if you have carriers that can carry adequate airplanes for use in tactical warfare in supporting ground actions, you have an entirely different use from what is generally conceived as the purpose of the carrier?

Answer. I don't think that any man who has had anything to do with the landing of troops or support of troops after they had landed in the Pacific would dream of going into a landing unless he had the support of carrier-based air.

Question. Isn't it also true that high-level strategic bombing by itself couldn't capture bases?

Answer. It would be perfectly ridiculous to say it could. I don't believe even the most ardent advocates of strategic bombing believe for one second that they can capture any bases.

Question. Do you believe that because one service has the mission of strategic bombing, another service should be prohibited from using the same type of weapon from a carrier in tactical air operations?

Answer. I think the stupidest thing that was ever done in this country, or one of the stupidest, was when we tried to restrict the use of planes between the Army and the Navy. I'm talking about the rule whereby the Army flew land-based planes and were not supposed to fly over the ocean, and the Navy flew seaplanes and were not to fly over the land. It didn't work—it never can work.

Question. Now, this order to which you refer and which restricted the use of land-based planes to land areas and planes from the Navy to flying over large bodies of water, it originated, did it not, in the days before we had any such institution as the Joint Chiefs of Staff? Wasn't it one of the early concepts of the joint operations that Army and Navy worked out together?

Answer. Yes, but I know there was a lot of criticism in both the Army and the Navy. The majority of people in the Navy thought the restriction was completely unworkable and would be fatal in time of combat.

Question. The Navy at the time, in other words, wanted the Army planes to be able to fly over the ocean?

Answer. I won't say that, because the people who negotiated that paper in 1935 must have come to some compromise. I was not in on the negotiation. But I know that the general service opinion was that it was not a workable thing and should not have been so written.

Question. Wasn't this order rescinded when war broke out?

Answer. Yes, or else it was just disregarded. Of course, the Army Air Force had a great deal of trouble at first in learning to fly over water because it had had no experience with it.

What happened was that, when in actual contact with the enemy, we had to come to a common-sense solution and make use of everything we had. I don't think there was any formal abdication of the agreement, but my forces in the South Pacific had just so many planes and so many people, and some were Army, some Navy, some marines, some New Zealanders, etc. They were all pooled, and every weapon was used in the fight.

Question. In reference to tactical air support of ground troops, did the absence of an adequate airfield on Okinawa mean that we could not operate any tactical support for the ground troops except from the decks of carriers?

Answer. We certainly could not. That is one of the reasons why the fleet suffered so greatly up there. They didn't have the airfields to take care of the pursuit or fighter planes and defend the island against the Japanese air attacks.

Question. What would you say about the future of strategic bombing in a big land area? Would you assume that such a country would have its factories nicely concentrated for the benefit of strategic bombers, or would it disperse those factories and its stock pile of bombs?

Answer. It seems to me there is no question about it that everybody, except possibly our own country, would disperse factories and production plants. I suppose if we were to get bombed in this country, we would do it too. It's my understanding also that the German production was not slowed down appreciably from the effects of strategic bombing until after the Allies had complete control of the air.

Question. Was that accomplished by strategic bombing?

Answer. It was not. It was accomplished by pursuit planes.

Question. And pursuit planes have shorter range. No intercontinental pursuit planes have been developed yet, have they?

Answer. No.

PURSUIT RANGE AS LIMIT

Question. So that the range, as you get it, of the pursuit plane is the range of operation as we will see it in the next war?

Answer. Yes. They say these bombers fly so high no fighter plane can get after them, but I saw a couple of planes the other day which can climb to 40,000 feet in a short time interval. Those were planes flown from carriers.

Question. In your opinion, then, there is no question about the fact that planes from a carrier, on detecting by radar the approach of hostile planes, could get up 40,000 feet in a few minutes—in time, for example, to intercept the B–36?

Answer. That's right. I am amazed that anyone should make the statement that there is such a thing as invulnerable high-flying strategic bombing today in view of everybody's knowledge about the power of pursuit planes.

Question. Can you suggest any method whereby the services will be able to retain their right to decide how to fight with their own weapons, provided there is enough money available for each of the services?

Answer. I think that is about the hardest thing to decide. Each service has its own specialized equipment that it needs, and no other service can possibly be in a position to dictate what the others should use and what they shouldn't use, and the same is true about their specialized research.

When you have a mission, you shouldn't be denied the tools to execute your mission. If the Air Force has the job of delivering the A-bomb, they've got to have the tools to do it. But, if the Navy has the job of controlling the sea, we've got to have the equipment to resist any threat to that control. Whether it be bulldozers, or carriers, or whatever, we've got to have the weapons to resist any challenge to our control of the sea, and I think that is basic. The same is true of the Army; if the Army finds they need tactical air under the command of the ground commander, they should have it.

Question. In other words, just the fact that it's an airplane doesn't make it exclusive property of any of the services?

Answer. It has nothing to do with it at all. But I do think planes should be pooled centrally and allocated to this place and that place in a specific command area.

Question. What about the size of carriers?

Answer. The question of whether you should have a carrier 100 feet longer than a previous carrier is something that ought to be decided by the Navy itself, because it's the same as the question of whether the Army shall have a tank larger than the present tank—provided you have the money.

Question. Do you think the whole concept of unification falls apart if two services are going to decide what the third service shall have?

Answer. Yes. You've then got the inexpert making a decision. Now we could line up, 2 to 1, against the B–36. Or we could put the Army's tank program out of business. And they can put our programs out of business. Yet the people who are inherently best qualified to say what is needed in the war are outvoted. If each service is charged with a certain mission but is restricted as to weapons by the order of the two other services, your operation will hardly be effective.

WEAKNESS OF A GENERAL STAFF

Question. What would you say about the suggestion that has been made that we have a General Staff—abolish the Joint Chiefs and have a General Staff which will not be part of any service but which will be taken from members of the different services and will operate as an over-all high command, functioning at all times in making decisions for the three armed services?

Answer. You would then have what Germany had and what Japan had.

I don't think anybody can become a master of the thinking of all three services. To build a General Staff which has authority but has no responsibility for what happens through their decisions, would be disastrous. One thing which is being badly overlooked is that the military service is a peculiarly personal service. You must have a strong competive spirit or you don't have a fighting man. You see the fierce, fanatic spirit

of the Marine Corps. You can't buy that—it's a great national asset and to abolish it would be a stupid thing—you would be throwing away a sharp and tempered weapon.

On that same point, I am always a bit amused and at the same time worried when I hear something said about the Army-Navy game being abolished. I don't think there is anything that is better for the spirit of the Army and the Navy than that football game. I think it does more to build up the spirit of both services than any other one thing that happens. I played on the football team and I hate to see the Army win today, but some of my best friends are among the men who rubbed my nose in the mud of Franklin Field.

Question. Isn't the problem really whether you are going to abolish specialization?

Answer. Yes. Suppose you did it in industry. Suppose we stopped giving E awards for the finest factory production in the war. We give decorations to individuals to bring out the spirit of competition. If the incentive to excel is dropped you don't have specialization. Also, you can't throw away all your weapons of the past. In the landing in Normandy, supposing we didn't have those old-fashioned battleships on the Normandy coast with their 14-mile-range guns to protect the inland invasion, what would have been the cost in lives on the Normandy Beach without those guns? It would have been terrific.

Question. What is the basic question, then, as you see it?

Answer. The basic question at this time is really the needs of the Navy, and this is definitely something that is being challenged at the time. It's being challenged on the ground that Russia doesn't have as yet a significant Navy and it's being challenged on the ground of a fixed concept.

I've heard people of high military attainment say that we should stop everything now except the support of our strategic air bases. They think we will be stock piled and all the rest of the commerce of the world could stop. There couldn't be a more suicidal idea. With respect to submarines, what they don't realize is that submarine warfare is so global in character that we had to centralize the anti-submarine command in Washington the last time. Submarines don't respect anybody's command boundaries. Also, we are not adequately stock piled, and we will never be.

The whole history of strategic stock piling indicates that the best minds in modern industry were not able to forecast what the demands for strategic materials were going to be or what strategic materials you could find substitutes for. But in war there will always be changes in industrial demands, and this means changes in the demands for basic materials. We've got to keep our supply lines open to all parts of the world where raw materials may be. That's why we need the most powerful Navy that we can afford.

Also, the Pacific situation is rapidly changing from what it was on VJ-day, when we dominated the Pacific and there was no opposition. The sweep of communism along the Asiatic coast and down into Indochina is going to have its effect on the Philippines, on Indonesia, in the Netherlands East Indies, and all through the Pacific, and we may find ourselves again in the position where hostile forces are going to be occupying Pacific areas.

I feel there is going to have to be a reorientation in our military thinking to take real cognizance of the Pacific. The Communists have within striking distance the development of a very powerful body politic throughout Asia today, and that situation has been radically changed from what it was when we walked off the field in 1945.

As long as we have big ocean areas to protect we need submarines and carriers and the supporting ships of a well-integrated naval organization.

Less Than Nothing at All

EXTENSION OF REMARKS
OF
HON. CHARLES H. ELSTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the following editorial which appeared in the Cincinnati Times-Star of May 10, 1949.

LESS THAN NOTHING AT ALL

A rather common notion, which became current under Franklin D. Roosevelt, is that the Federal Government is a sort of almoner, the States of the Union its worshipful beneficiaries. Federal aid for State roads, for education, for unemployment, for old-age pensions, for hospitals, medical treatment and so on—either as actualities or as present projects, these terms are all familiar, too familiar.

Fact is that among a considerable group of States, in which Ohio is well toward the front, it is just the other way around. New York, of course, is the outstanding example. As Thomas S. Holden sets forth in The Great Illusion, a new study of Federal aid, every $100 in Federal aid received by the Empire State in 1948 cost it $243. That $100 was not a gift, but in effect a partial, an inadequate restitution. As to Ohio, a reasonable guess is that whenever it pays in $100 to promote the various forms of Federal aid, it gets back possibly $58.

Under the Constitution, Ohio has the right to lay every tax now laid by the Federal Government—save one on imports. Income taxes, corporation taxes, excise taxes, real-estate taxes, sales taxes, inheritance taxes, estate taxes, industrial compensation taxes, old-age taxes, unemployment taxes—these are all within its powers, and some of them in its body of law. Except military defense, Ohio could, at a great savings to itself, do everything within its own borders for itself which the Nation now does for it—if the Nation took its hands off State revenues.

What doesn't come back to Ohio stays in Washington, part of it to build up the bureaucracies there. The rest goes forth again to help out a group of less fortunate States, and that use we do not deplore. What we do deplore is the notion that Ohio owes a lot to the Federal Government and the policies based thereon. It owes less than nothing at all.

Mr. J. Edgar Hoover—A Great American

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an editorial from the Boston Daily Record of May 13, 1949:

A GREAT AMERICAN

It was most appropriate that the twenty-fifth anniversary of Mr. J. Edgar Hoover's induction as Director of the Federal Bureau of Investigation occurred on May 10.

For this was in the midst of the Nation-wide observation of "I Am An American" Week, and Mr. Hoover's quarter of a century of service to his country constitutes one of the great American achievements of all time, and he himself is respected and honored by all of his countrymen as a great American.

Under his direction, the Federal Bureau of Investigation has developed into the most powerful agency for the prevention of crime in all human experience.

It has made the evil enterprises of organized crime, once rampant in the country and threatening total extinction of the resources of the country, hazardous and futile on an increasing scale.

It has given the country hope and assurance that the ultimate eradication of these vicious enterprises, so destructive of the moral and spiritual resources of the country as well as its wealth, may be achieved.

No better expression of the meaning and purpose of "I Am An American" Week could be offered than by the tender of the good wishes and the gratitude of the people of the United States to J. Edgar Hoover on this silver anniversary of his great career in the service of his country.

North Atlantic Pact

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following from the Boston Daily Record, Boston, Mass., of Wednesday, May 11, 1949:

A STRANGE OMISSION

A new and unexplained and very strange aspects of the North Atlantic Pact, which pledges American aid in the defense of other nations and their colonial possessions and which now awaits ratification in the United States Senate, has been brought to national attention by Senators WATKINS, of Utah, and DONNELL, of Missouri.

In the course of testimony concerning the pact by Robert A. Lovett, former Under Secretary of State, before the Senate Foreign Relations Committee, the two alert Senators elicited the startling acknowledgment that no provision is made for assistance to the United States by the other nations in certain very vital circumstances.

While there seems to be no exception to the obligation accepted by the United States to assist any other signatory to the pact, in the event of attack upon the United States or its possessions in the Pacific none of the other signatories would be under any obligation to assist the United States.

Since war with Russia is the only conflict likely to involve the United States in the foreseeable future, and since a Russian attack upon the United States would almost certainly be launched in the Pacific, the evidence seems to be that the United States would have to fight such a war entirely alone, although the American Government is undertaking through the Atlantic Pact to underwrite the wars of other nations in almost any conceivable circumstances.

As the proposed Atlantic alliance is now written, Senator WATKINS asserts, it seems to be "based on the assumption that attack can come only from Russia into Europe."

Actually, the shortest and quickest and most effective way for Russia to launch an attack against the United States is across the Pacific.

And it is a matter of record that Russia has already installed vast military works in Siberia for this purpose, and is intensively developing her aviation and submarine installations along the entire Pacific seaboard under her control.

In amazing contrast, the American military establishments in Alaska are even less formidable than those at Pearl Harbor when the Japanese struck across the Pacific.

Accordingly, it is with good reason that Senator WATKINS injects the following facts into the Senate ratification debate:

"It is highly conceivable that during the life of the treaty an attack could come from Asia across the Pacific.

"Under the treaty this country would be left alone to defend Hawaii, Guam, the Philippines, and our troops in Japan.

"Practically all of our defenses would be directed toward Europe."

It is a strange omission, indeed, if the Atlantic Pact upon which America is being asked to rely for international assistance in the event of war with Russia takes no account of Russian aggression in the Pacific.

Senators WATKINS and DONNELL are to be commended for disclosing this phase of the most vital matter, and for their determination to seek clarification of the matter prior to ratification.

It is not a sufficient answer to their questions that inclusion of Hawaii and the major part of the Pacific basin within the range of protective provisions of the Atlantic Pact will require new negotiations.

If past negotiations were conducted without sufficient regard for American interests, there is hardly such haste for ratification that there is no time to repair the weak spot in our security system which might ultimately be tragic, if not disastrous.

Too much of what America does at such enormous cost in behalf of world assistance and rehabilitation is done in such haste that vital American interests are neglected.

It would be a grave mistake for the United States Senate to ratify the Atlantic Pact in that hasty manner.

The "Upper" Branch

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1949

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of today.

THE "UPPER" BRANCH

An ancient wheeze has it that the Senate is called the upper branch of Congress because it is always upping appropriations.

Some Senators—mostly Republicans and a handful of Democrats such as BYRD, of Virginia and DOUGLAS, of Illinois—are agitated now about the urgent need for Government economy. And well they may be.

Congressional tax experts have just estimated that, at present tax rates and on the basis of President Truman's spending proposals, a $3,000,000,000 Federal deficit is probable in the fiscal year beginning July 1. They think declining business activity will reduce Federal revenue.

Many authorities warn that higher tax rates could cause a sharper business decline. Latest is the Committee for Economic Development, public-spirited organization of businessmen. It advocates cuts in expenditures to avoid a deficit.

But the Senate, as usual, is upping.

The House has passed nine big regular appropriation bills. So far the Senate has passed only one of them—the bill providing funds for the Treasury and Post Office Departments. Mr. Truman asked $3,173,000,000; the House voted $3,072,818,000; the Senate boosted it to $3,113,000,000, then defeated a move to cut the total 5 percent.

For the Labor Department and the Federal Security Agency, Mr. Truman asked $2,235,000,000; the House made it $2,212,000,000; the Senate hiked that to $2,410,000,000, then sent the bill back to committee for a 5 percent cut of reducible items, which would save only about $15,500,000. And majority Democrats now are trying to cancel the order for even that.

The Senate Appropriations Committee has finished work on two more of the nine bills. For the Agriculture Department, Mr. Truman asked $727,000,000; the House voted $943,118,000; the Senate committee raised it to $965,000,000. For Army Civil Functions (flood-control work, etc.). Mr. Truman asked $768,000,000; the House voted only $593,300,000; the Senate committee increased that to $751,500,000.

A tenth major appropriation—the first deficiency bill for the current fiscal year—got final approval in Congress yesterday. The House had voted $471,000,000; the Senate jacked it up to $524,000,000.

A few Senate Democrats are talking of waiting until all appropriations for next fiscal year are passed, then trying to slash two billion or three billion from their total. That, however, is a most doubtful prospect.

And yesterday, Republican and Democratic Senators passed the Government-reorganization bill after amending it to make a veto by either House or Senate enough to kill any plan, submitted by the President. If that amendment stands, it will greatly lessen and may end hope for really important savings through adoption of the Hoover Commission's recommendations.

Address of Stanislaw Mikolajczyk

EXTENSION OF REMARKS
OF
HON. JAMES V. BUCKLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday May 17, 1949

Mr. BUCKLEY of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following speech of Stanislaw Mikolajczyk, president of the International Peasant Union, president of the Polish Peasant Party and former Prime Minister of Poland, delivered at the meeting sponsored by the Georgetown University Polish Club, held in Washington on May 9, 1949:

Mr. Chairman, ladies and gentlemen, a few days ago at Carnegie Hall in New York City there took place a rally sponsored by the American organization Common Cause. At that meeting the representatives of 350,000,000 people who have succeeded in escaping liquidation by the Communists, resolved to coordinate their efforts in the common fight for freedom until final victory over communism is secured.

The list of the European peoples suffering under the yoke of Communist oppression is tragically long. At Carnegie Hall speeches were made by the representatives of the Albanian, Bulgarian, Croatian, Czech, Estonian, Hungarian, Latvian, Lithuanian, Polish, Rumanian, Serbian, and Slovak nations as well as by representatives of the Russian, Beylorussian and Ukrainian nations.

The resolution adopted at this meeting states that the oppressive tyranny of communism is contrary to religion and to the most fundamental rights and freedoms of man. It goes on to say that aggressive world communism extends its dictatorial powers ever further into Europe and Asia, and plainly divides the world between the nations which still preserve their freedom and independence and those who live in subjugation under the organized minority of world communism, so that the greatest military victory in world history has been transformed into an outright political defeat for the forces of freedom.

I mention this because, if I am to speak today on the subject of the problem of Poland and the peace of the world, it is worth recalling the facts which brought about the present state of affairs—a state of affairs that not only Poland finds herself a victim of Soviet aggression but so many other countries—in spite of the fact that in none of these the Communists are in the majority—find themselves under their bloody rule, and that the world divided into democratic and Communist parts is certainly not enjoying peace.

This regrettable state of affairs did not come about by accident; it resulted from a strict application of the plans of the Kremlin aimed at Communist domination of the world. These plans, elaborated long before and during the war, are being carried out today. The peace of the world depends upon the ability of the free nations to oppose and fight these plans effectively.

When in 1939 the Polish nation was fighting Hitler, the Red army stabbed it in the back, and the Ribbentrop-Molotov pact cut the living body of Poland into Soviet and German spheres. Speaking about Poland in this connection, Molotov told the world with satisfaction that "nothing is left of that monstrous bastard created by the Versailles Treaty." It was the view of the Kremlin then that Hitler should be encouraged to drench in blood and destroy also western and southern Europe in order to facilitate the establishment of Communist dictatorship on their ruins.

Before Tehran the possibility of another Stalin-Hitler pact was used as blackmail to obtain in Europe further expansion of the Soviet sphere of influence to the west. Thus at Tehran, supposedly applying pressure for the opening of a second front, Stalin gained a de facto recognition of his imperialistic designs on Europe and Asia.

It is worth recalling also that before Hitler's attack on Russia, the Communists represented the war in Europe as such of the Germans against capitalism and British imperialistic aggression. The French Communists organized sabotage aimed at weakening the resistance of France, while American Communists argued the neutrality of the United States, opposing war production and the supplying of weapons to the democracies needed in the fight against Hitler. I myself, visiting the United States in 1941, was attacked by the Communists for alleged attempts on my part that American neutrality be brought to an end. In this respect the Communists went so far as to demand my deportation from the United States.

According to the Communists, nazism and fascism became pernicious and the war against them began only after Hitler's attack on the Soviet Union. In fact they became impatient in their demands for a second front which then appeared to them being necessary.

At Tehran Stalin obtained, among others, the following concessions:

1. The consent of the Western Powers to the incorporation into the Soviet Union of 48 percent of prewar Polish territories, that is to say, the line of division of Poland under the Ribbentrop-Molotov Pact was accepted insofar as the Soviet Union was concerned.

2. The consent of the Western Powers as to a Soviet sphere of interest extending over a considerable part of Europe, including the Balkan states, central European states, the whole of Poland and a part of Germany reaching to the Elbe River.

3. In spite of Soviet neutrality toward Japan, at Tehran Stalin gained also a sphere of interest in Asia: political and economic concessions which enabled him to seize Manchuria and a half of Korea as well as to make preparations for the invasion of the whole of China.

In my book—The Rape of Poland: The Pattern of Soviet Aggression—already published in the United States and in the process of publication in several other countries, I describe in detail how the conquest of Poland was prepared politically by the Kremlin during the war, and how after the war the actual occupation of Poland took place—the Red Army, the NKVD and the bloody terror of Communist agents committing the rape of Poland.

This is not the time nor the place to tell the whole story, therefore I shall call your attention only to few facts which will remind you of the fate of Poland at a time when we are preoccupied with the problem of world peace.

Poland was first in the fight against the German aggressor, and was justly called the inspiration of the world by President Roosevelt. As a faithful ally, Poland obtained the promises of the Great Powers that she will be free, independent and strong, yet she is under the yoke of another aggressor, subjugated by another fascism, this time a red one, symbolized not by a swastika, but by a red star and a hammer and sickle.

The new totalitarian oppressor continues the work of destruction initiated by the Germans. The Germans tried to destroy the whole Polish nation physically; the new oppressor tries to destroy also its soul and to bring about such a state of serfdom as is the fate of all nations subjected to the Communist dictatorship. Poland is the largest nation of those being ground down to fragments behind the iron curtain and is made to subserve Soviet aggression in the west.

The Polish people are known as resolute and romantic people who can endure a great deal if the prospect of liberty remains on the horizon. They believe in the principles of Christianity—the opposite to Communist doctrine and practices. The Poles, in spite of Communist terror, violence, and assassinations, have proved their political and democratic maturity.

In 1939—a most tragic year for my country when Hitler attacked us—Soviet troops, assisting the Hitlerite armies, occupied almost half of Poland, and the two governments, in accord with the terms of the Ribbentrop-Molotov Pact, settled the question of the western frontiers of Russia. On this territory, thus taken and incorporated into Russia, things started happening which went counter to divine and human laws. About one million and a half Poles were deported into Soviet Russia and made inmates of slave labor camps. Under horrible conditions, devised to exterminate the elements hostile to the Soviet system, hundreds of thousands of people perished.

On the other hand, in the part of my country occupied by the Germans, the Polish people was being exterminated by mass murder in the concentration camps, and by plunder, hunger, and forced labor, in the ghettos. The Polish underground movement had at that time to blow up the Soviet trains loaded with oil and grain speeding through Poland toward Germany to help Hitler.

Nevertheless, when Germany attacked her former ally, Poland put aside all her grievances and General Sikorski's government stretched the hand of friendship. In July 1941 animated by the will to fight the Hitlerite foe, we concluded a pact with the Soviet Union. This accord and the fight in common against the Germans lasted until the crisis in the war against Russia passed and Socist leaders perceived the distant prospect of a victorious march to the west. Then, using the well-known Katyn case as a pretext and aiming to cover the killing of about 15,000 Polish prisoners of war, the Soviet Government broke diplomatic relations with Poland. And so it came to pass that we Poles, who had lost 6,000,000 people in the war against the Germans, were now accused of helping them, of disrupting the unity of the Allies and were called Fascists.

I regret having to say that at that time public opinion of the West not only admired the bravery of the Russian soldiers but also, under the influence of aggressive propaganda, through radio and press, believed that the changes occurring in Russia were transforming her into a democracy. In my letter to President Roosevelt, I gave warning of the dangers of such an attitude:

"I fully share the admiration inspired by the heroism of Soviet soldiers fighting in the defense of their country against the German invader.

"I am afraid, however, that public opinion may be bitterly disappointed should it discover that the widely publicized social changes and the alleged democratization of the Soviet Union are in fact but a combination of old Russian imperialism with Communist totalitarianism which has not abandoned its former ambition for world rule.

"Therefore it appears to me wrong to lead public opinion to believe that democracy exists where in reality it does not and cannot exist for a long time, as this is fraught with the danger of causing deep disillusionment and even unhappiness in nations who may be subjected to a rule which, while recognizing the freedom of the state, denied that of the individual.

"It may also create disillusionment in business circles which expect freedom of trade relations in the future. The deepest disappointment, however, will be that of the working classes now rightly impressed by the fighting valor of the Soviet people, but misled to believe that labor's greatest aspirations and democratic ideals have been achieved in the Soviet Union."

The Polish people, in spite of the grim prospects for the future and consciousness as to Soviet intentions in relation to Poland, gave no Quislings. The Polish soldier, airman and seaman, true to his western allies, fought on their side to the last moment while the Polish underground state, thanks to its excellent organization and heroic efforts, resisted Hitler's occupation forces until the bitter end.

The sabotage and the fighting of the insurgents against the retreating German armies had to cease as soon as the Red Army came in contact with the Polish forces. The home army and the peasant batallions were decorated for their heroism. But this was as far as Soviet collaboration went. The next day the Polish fighters were disarmed, isolated, and deported to Russia.

When the Warsaw uprising began the Soviet armies halted on the other side of the Vistula; for a long time Stalin refused to grant to the American Air Force, which could have supplied the fighters of Warsaw with ammunition, the right to land on Polish soil behond the Soviet front. After 63 days of unequal fighting, Warsaw, that stronghold of Polish freedom and heroism, being without food and water, surrendered.

For several months the Germans were blowing up the houses which had escaped destruction while the Soviet armies remained inactive on the other side of the river. When the Germans had finished their work of destruction the Soviets entered Warsaw and installed a Communist regime known as the committee of national liberation.

Then came the Yalta Conference. The big three confirmed the Teheran agreement to surrender to the Soviet Union 48 percent of the prewar territories of Poland, reaffirming the condition of a free, independent, and strong Poland. It was decided that the three ambassadors were to assist in the creation of a provisional government of national unity, and that by means of democratic procedures the Polish people were to elect the members of the government in free and unfettered elections.

Moscow acted in contravention of these decisions. It had 16 of the leaders of the Polish underground state arrested. Under an explicit promise of safe conduct, they were invited for consultations with the Soviet authorities: a Soviet general swore on his honor that they will not be molested and that even they will be allowed to consult with the Polish Government in London.

The arrest of these leaders was kept secret for a long time. After the Assembly of the United Nations at San Francisco had ended, on the very day of opening the negotiations for the formation of the Provisional Government of National Unity, they were put on trial in Moscow.

Nevertheless, we considered that, in spite of the greatest sacrifices imposed on Poland, we should try to fight for what is most important and most valuable for man and country—independence.

We went back to Poland, entertaining no illusions that our position would be easy—on the contrary, I was fully aware that the Soviet Government was unscrupulous and that it would ruthlessly aim at securing the victory for the Soviet Union. We know that the term "compromise", so well known to all and without which international relations would be impossible, in the Soviet vocabulary means only a respite before a new attack.

For 2½ years we fought at the head of the Polish Peasant Party. We stretched our hand in friendship, we showed good will, we arranged for the emergence and disbanding of the underground army, we gave assurances of loyalty and friendship. In return, we demanded for the Polish nation only the right to run its own affairs according to its unfettered will.

The referendum held on June 30, 1946, showed that only about 16 percent of the voters followed the instructions of the Communist bloc while some 84 percent acted in accordance with recommendations of the Polish Peasant Party. To conceal this the Soviet dominated regime falsified the results.

After the referendum, in preparation for the coming elections, the Polish Communists and Socialists went to Moscow for confidential political discussions and it was there that the decisions concerning the elections in Poland were made.

We were invited to join the Communist elector bloc, being told that in case of refusal we would be liquidated. We realized that Moscow was behind all this. It was made unmistakably clear that the existence of opposition in Poland would no longer be tolerated. On the other hand, we realized that in a free election the Communists would not get even 5 percent of the votes cast. Consequently, there was no hope at all of honest elections.

The overwhelming majority of the nation had confidence in the Polish Peasant Party. We were, as somebody remarked, the conscience of the nation. We were the only hope of the people, the source of moral inspiration and the sole independent organization in the legitimate fight of our people for the rule of law, the freedom of the individual, and his right to independence of

thought. We were looked upon as the only chance of salvation from chaos and ruthless shedding of Polish blood in fratricidal strife.

Having survived the German occupation, the Polish nation—nearly one year and a half after the cessation of hostilities—desired to express its will in a free election. We refused to join in the electoral bloc of the Communists.

I shall not attempt to describe to you in detail the conditions prevailing in Poland during the electoral period. In its general outlines, the world has a picture of the way the elections were "cooked up," mainly from the honest and objective reports of the foreign correspondents who visited Poland at the time. During the electoral period over 100,000 members of the Polish Peasant Party were arrested. Among them were all of the active members of the provincial executive committees and some members of the national executive committee as well as of the central council of the party. Out of a total of 52 electoral districts, the lists of candidates of the Polish Peasant Party were invalidated in 11 districts.

The secrecy of the vote was frequently violated by pressure being brought to bear on the voters to cast their votes openly or to vote in groups under supervision. Meetings of the Polish Peasant Party and campaigning were made impossible by the authorities.

By order of the chief of the general staff, the Russian General Xorczyc, special military detachments were entrusted with the task of fighting the Polish Peasant Party wherever possible.

Here, I must state most emphatically that in spite of the terror exercised against them, the Polish people stood firm and would not be intimidated. The genuine results of the elections which came into our possession prove that the Polish Peasant Party received 85 percent of the total number of votes cast, but the official announcement asserts as 11 percent of the seats in the Parliament.

Whatever the end of the election farce, I have to stress that the Polish nation showed great political maturity and sincere attachment to democratic ideals.

The Polish citizen wanted to express his will legally through the polling box and not by means of revolvers and assaults on fellow nationals. Workers and officials were threatened to be dismissed, traders to lose their workshops, and at the same time asked just only to declare their readiness to vote publicly and to march in groups to the polling stations. These ordinary people accustomed to German terror and to use of revolvers, were ready to take all these hardships for only the right to cast their vote according to their conscience and their political creed. Members of the party were visited by police gangs, which arrested them or their wives—often their sons or daughters—and deprived them of their workshops, their farms, threatened them with prison or deportation to Siberia. They knew that witnesses would always be found to accuse them, that they might be sentenced to death or imprisonment for many years, that all their property might be confiscated. They were well aware that their families might be left without a home and without means of living. And all this could be avoided simply by leaving the party and declaring to condemn everything they believed and were proud of. But most of these ordinary people rejected these suggestions and remained faithful to their ideals.

I am proud to belong to a nation which during the war knew how to die for freedom and in peace knows how to fight legally under terrible conditions for the freedom of man, for his creed, for true democracy.

At the end of 1947 political terror made any independent political activity in the country impossible. We came into possession of reliable information that the decision was to hand some of us to the military tribunals on the day of the reopening of parliament, information that these tribunals had been instructed to pass death sentences. There was no choice but to flee the country.

Nobody can accuse the Poles and their leaders of prefering to live a comfortable life abroad and from there defend the rights of Poland. If we failed—we failed because of the brutal methods of the Communist dictatorship.

Today everyone can see and feel how in Poland the vises of the Communist dictatorship tighten, how every day it is more difficult to live and to breathe freely because of the quickening tempo of the sovietization of the country and the exploitation of the Polish economy for the purposes of the Soviet economic system and the military preparedness of the Red Army.

What does this quickening tempo of the sovietization mean? I shall mention here briefly only a few of the methods used: The liquidation of the independent Polish Peasant Party, the so-called fusion of the Socialists and Communists, the liquidation of all independent newspapers which appeared until recently in spite of the censorship and the want of the necessary quantity of newsprint, the liquidation of all the remnants of the independent cooperative movement, the quickened tempo of the liquidation of the remnants of private enterprise, the introduction of the Soviet slave labor system for the workers, the beginning of the collectivization of agriculture, the increased number of arrests and the compiling on Kremlin orders of lists of people of up to 1,200,000 who are to be done away with in the event of a crisis, the placing at the head of the regime and the army well-known and experienced international Communist agents, the speeding up of the Communist indoctrination of the youth and, instead of the hitherto disguised struggle with the church, an open fight against it.

I think it is our duty to warn the free peoples in the west—those who still do not believe or still do not want to see the Communist danger for the whole world. It is absolutely necessary to experience and to see what is happening under the Communist regime because actually it is more terrible than one can describe. It is difficult to understand and imagine it from a distance. It is difficult to see even for a stranger visiting in Poland. The first impression of a stranger would be a spring in full bloom—the sun shining, people working, when questioned they either avoid an answer or reply that everything is all right. In the Communist press there is plenty of statistical data about the success of production plans, enthusiastic testimonial letters signed by people, public squares are filled with manifestating crowds, books and newspapers shout about the emancipation of man, about the happiness of the worker and peasant, about the right of free enterprise, about religions, about the equality of all people, and about the longing for peace. Only the exploiters, black-marketeers, profiteers, rich peasants, and saboteurs are being condemned.

It is proclaimed that the Communist government is a government of the workers. But ask the worker what he thinks about it. His right to life depends upon his work and the results of his work are imposed from above. The state provides work and gives him right to have his home.

His wages depend upon a fixed minimum of work done. When recently the Polish miners in Silesia were unable to reach the prescribed norms of production, their wives were ordered to come and collect their wages. They were told that if the wages were insufficient the fault was with their husbands. A strike is considered as sabotage against the state because the latter owns the industry. The trade-unions are ruled by the Communists and their duty is to assist management rather than assist the worker in gaining a living wage, because a government of the workers is incapable of doing injustice to anyone.

If the worker does not submit, he will be left without employment, without living quarters, even without a starvation wage, he is not accepted for employment elsewhere, he will have to die on the street from starvation or be obedient to the Communists, attend their manifestations and applaud enthusiastically suppressing his bitter tears.

The peasant, if he has not already been deprived of his land—and some times he is deprived of it in the course of 10 minutes—has the duty to pay his taxes in produce and these are often higher than the total yield of his land. If there is anything left it is preempted at fixed prices which are but fractions of the market prices. In addition, he has to pay a sum to the savings fund which is at the disposal of the Communists. When the peasant is doing well, he is condemned as a rich kulak, village exploiter, and therefore must be liquidated because Lenin teaches that an independent peasantry threatens the Communist system with the revival of capitalism. That is why the peasants must be liquidated, must be forced into the system of kolkhoses and reduced to the status of serfs to the state.

When a small-business man opens a private shop he receives his merchandise from the public store at fixed prices and fixed margin of profit. These stores sell better merchandise at better prices and with a higher margin of profit to the state-owned shops.

If one were able to pay the tax fixed arbitrarily one would have to face a special commission which has the unlimited authority to confiscate all of your merchandise and send the owner to a forced-labor camp without trial. A craftsman has to wait until he is allotted raw materials and he has to deliver his products to the cooperative where the Communists will pay for it whatever price they choose.

A high school student has to live in town, and the Communists decide whether he can obtain lodgings and at the examination he has to show his political maturity and confess whether he loves the "liberator of mankind," Stalin.

A citizen looks for consolation in God, is a believing Christian, and he is forced to attend manifestations against his pastor or bishop, to accuse him falsely, that he is a traitor, that he supports the bandits from the underground, "corrupts the youth, misappropriates public funds," and that he is a saboteur of the new order.

If such a worker, peasant, craftsman, clerk, teacher, businessman, or professor has stood all this, and his spirit has not broken down after becoming a modern slave completely dependent economically, then there comes the political terror.

A man has not broken down, he has lost his temper, he has said something rash, the security police picks him up in the night and he disappears. Sometimes he disappears without trace, or his body is found floating in the river, thrown in the field or in the forest. Sometimes he stays in prison for months without trial. After that they release him and place him under the close observation of spies. Sometimes in the prison cell he is sentenced secretly for several years. Later beaten and tortured, he is starved in an overcrowded prison cell. And sometimes a secret sentence, a pistol shot in the back of his head, and only by accident a dog may dig out his corpse. It was not buried deep enough in the ground.

If it is necessary, a political trial will be staged, always before a military court, rendering sentences according to the orders of the NKVD. First of all, they will try to break him down. Then they make him appear at a public trial and accuse himself. He is

made to disgrace his good name, to accuse falsely his friends, to deny all that he has believed in throughout his life. Then he is given a sentence and will never be free again so that he cannot disclose how they did force him to accuse himself and to denounce his friends.

In this way, by means of slave labor, complete economic dependence on the state, and poisoning of the soul of the nation, 1,000,000 armed men of the Communist Party, of the security police, of the NKVD, of the so-called Polish Army led by Soviet officers in Polish uniforms, and of the Soviet Army stationed in Poland, govern 24,000,000 Poles of anti-Communist views, known for their love of freedom and of the independence of their country.

Five families are forced to live in two rooms, while at the same time, to show off, there are being built palaces, government buildings, party quarters, Communist press buildings, prisons, highways and railways from the east to the west for Soviet military purposes. In addition an unheard of splendor and luxurious living of those who govern allegedly in the name of the proletariat. The difference in the living standards between the ruling class and the rest of the people is so enormous that you cannot find a similar disparity in any capitalist society of the west.

Such are the conditions in Poland, in Rumania, in Hungary, and in Bulgaria. And in spite of the so-called Tito rebellion the same conditions exist in Yugoslavia. Conditions are similar also in Czechoslovakia, in Lithuania, in Estonia, in Latvia, and, because of the longer period of Communist government in Russia, the conditions there are even worse. The same is to be expected in China, as it would take place in any country in which the Communists succeed in seizing the power.

The lessons derived from such experience show that at this moment the lifting of the blockade of Berlin is not the issue, but that—after placing under dictatorship 350,000,000 people in Russia and the countries behind the iron curtain—the Communists aim to impose their power over 400,000,000 Chinese in order that tomorrow they could threaten India and Japan in the east and the rest of Europe in the west.

I do not say this to frighten you but to assist you to face the truth and to appraise the actual state of affairs calmly. I say this so that we entertain no illusions that the world can enjoy peace divided into halves of freemen and of slaves, that the two halves—one democratic, strong, powerful—a part of which is the United States, the strongest world power today, but the half always running the risk of diversionary action and involved in costly armaments, a nonaggressive half wanting peace at any price and alongside a second aggressive half of bloody and perverse dictatorship not counting the price of human lives and not concerned with human dignity—these two halves cannot live peacefully the one alongside the other.

There would be no lasting peace, while the world is divided into Communist and democratic parts. Communism is not only a terrible police dictatorship, it is at the same time an economic system based on purposely created wretchedness, on economic dependence of every man on continuous confiscation of the fruits of human labor, on enslavement of worker and peasant.

Communism is a system based on lies, hatred, human indignity, national treason, and continuous unscrupulous manipulations against peace in the world.

The fate of Poland and of the other countries behind the iron curtain shows that those who deprived our nations of their freedom did so merely in defense of their dictatorship and not in defense of any ideology—murdering and imprisoning their countrymen, not letting them live in peace even in poverty, that those keeping in every country their agents ready to betray their own peoples and to murder them with the hands of their own brothers, those are the ones who do not want peace. They want only to gain time for the solution of the secrets gained through espionage and in order to produce the weapons of mass murder.

Is there then any hope? I would not say there is none. The Marshall plan inspired new life and new hope in western Europe. The Atlantic Pact united the countries of western Europe for the purposes of common defense against armed aggression. The Communist wave is receding and the Communist attempts to seize the power in Italy and France have failed. These are positive achievements. I believe that the time of easy conquest of one country after another by the Communists has passed. I believe that the period of appeasement has come to an end. I think that if another appeasement came to pass and the nations behind the iron curtain were forgotten and left to their fate, besides the guilty conscience of the western democracies, it would not bring to disturbed humanity a lasting peace.

Perhaps you will still disregard what we say today, distrust us, thinking that we speak with the bitterness of political exiles and that we want to provoke a war. My answer is, we do not want war or human suffering but we speak with the voice of those who have witnessed their own nation being put into the irons of oppression and feel with it the brutal injustice of this act. We give warning with the voice of those who having experienced the misfortune of, and the injustice done to, their own people would like most sincerely only one thing: that a misfortune similar to ours be not the lot of other nations.

Therefore the systematic enlightenment of the public of the free nations of the world about communism in practice is as necessary as the expansion of alliances in order not to tempt the Kremlin to attack the still weak spots. That is why moral help aimed to sustain the spirit and hopes of those now forced to remain silent and merely listen to the Voice of America is so important. That is why a world plan coordinating all the forces of democracy is necessary in order to lead a moral crusade against the bloody terror, lies and hatred that communism represents. That is why it is important that free peoples entertain no illusions and do not get caught unawares.

The ultimate goal should be the destruction of communism everywhere, as it is a doctrine contrary to the spirit of real liberty—a doctrine which violates innate human rights and is antagonistic to the Christian teachings of love and social solidarity.

We Poles believe that finally justice, freedom, and democracy are bound to win in the whole world and so also in Poland.

We believe that the democracies will win because they have the will to win and are in position to be victorious in the whole world, assuring lasting peace and happiness to humanity.

In the meantime, guard your freedom, guard your democracy, as you guard your own life. And do not forget the freedom of other nations.

Spain

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1949

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by Secretary of State Dean Acheson at his press conference May 11, 1949, on the subject of United States relations with Spain. It is a timely explanation of the situation which I hope all Members will read with interest.

What I should like to do is to try to put this present matter, which involves a vote in the United Nations as to whether or not the 1946 resolution is to be modified, in its real setting. As you know, the resolution was passed in 1946 by the General Assembly of the United Nations, and it recommended to the member nations that they withdraw their Ambassadors from Madrid. At that time the United States did not have an Ambassador in Madrid because Mr. Norman Armour, who had been the Ambassador, had resigned and no one had been appointed to take his place. Therefore, in carrying out the spirit of the resolution no one has been since appointed to take Mr. Armour's place.

The argument revolves around the question of whether that resolution should be changed and whether the Ambassadors should be restored. Now, in the first place, I assume it is everybody's belief that a recommendation by the General Assembly of the United Nations should be followed until it is changed. I do not think there would be any argument about that. Argument might arise about whether we should attempt to change it.

Another preliminary observation: I should like to say that in and of itself this question of whether or not Ambassadors, as distinct from Chargé d'Affaires, are in Madrid is a matter of no real importance at all. This resolution was adopted by the United Nations in the belief that it would lead to certain reforms on the part of Franco which would make the relations with his government by other free governments more happy. It has not had that effect.

Now, why was the resolution passed and what are the issues which grow out of it, and what is American policy?

In the first place, let us state what the policy will be on that resolution. Our policy will be to abstain from voting upon that resolution, which is to the effect that the question shall be left to the judgment of each individual member of the United Nations. We shall not vote on that. We shall abstain.

Now this question, if it has any importance—and it obviously has, because it arouses a great deal of emotion, both in this country and in other countries—is because it is a symbol of something else. The reason the 1946 resolution was passed is rooted in history. The Franco government was one which was established with the active support, and only with the active support, of Hitler and Mussolini. The republican government in Spain received the support of the Soviet Union. There were charges at the time that the republican government was Communist. Those charges were denied. It is unimportant at this point to go into what if any substance they had. The fact of the matter was that a government was established in Spain which was patterned on the regimes in Italy and in Germany and was, and is, a Fascist government and a dictatorship.

The importance is not in throwing words around in talking about Fascists, because other people call us Fascists, too. We do not get anywhere merely by using that word. The important thing is what goes on in Spain. It is also important what the western European governments think of what goes on in Spain because, as I have said, the important matter is not whether we send an ambassador instead of a chargé d'affaires; the important thing is what can be done to bring Spain into the community of free nations in Europe in both the economic and the defense fields. When you

think about that you discover at once that the western European governments are opposed, and have publicly stated their opposition, to this collaboration with Spain in the economic and military fields.

Now why is that so? I say we get nowhere by using such words as "fascism," but if we look at the situation in Spain, we will see some perfectly simple fundamental facts which cannot be obscured. I presume that the foundation of liberty—individual liberty—is not in great phrases at all but in certain simple procedures and simple beliefs, and I should put first on the list of essentials for individual liberty the writ of habeas corpus and an independent judiciary. One of the things that all dictators do—from the time of the French Revolution and before the French Revolution down to the present time—is to take anyone that they do not like and throw him in the oubliette and there he stays until he dies or until they shoot him or until they take him out. The fundamental protection against that in free countries is the writ of habeas corpus.

Now what does that mean? That means that anybody who is detained against his will may at any time get an order from the court that he shall be produced in person before the court and that those who hold him must justify the fact that they are holding him under the provisions of law. There is nothing more fundamental in the preservation of human liberty than that ancient British tradition which is now incorporated in most of the procedures in the free world. That right does not exist in Spain.

I suppose a second fundamental right, which is useful only if you have the first, is that if you are tried—and, of course, it follows from the writ of habeas corpus that you cannot be sentenced to prison unless you are convicted of some crime—the second right is that in being convicted of a crime you are convicted not by employees of the State but by your own fellow citizens. That is the right of trial by jury. It means that no judge, even though he be independent, certainly no administrative official, can order you put in jail. The only people who can do that are 10 in some parts of the world, 12 in others—citizens just like yourself—and if they listen to the testimony and say Joe Doakes goes to jail, then he goes to jail. If they say he does not go to jail, then he does not go to jail. That is fundamental. That right does not exist in Spain.

Then there is the question of religious liberty, which is fundamental to a free exercise of the human personality. That right does not exist in Spain.

Then there is the right of association—association in political activities, association in trade-union activities, association in benevolent activities—that right does not exist in Spain.

I could go on, but what I want to draw to your attention is that these certain fundamental basic rights of the individual which make the difference between what we call free Europe and the iron-curtain countries—these rights do not exist in Spain, and the Spanish people are prevented from enjoying them by action of the Spanish Government.

It seems perfectly clear to the western European countries that you cannot have an intimate working partnership with such a regime in the economic field and in the defense field. There must be some move to liberalize that. None of them say, nor do we say, that Spain, which has never been a full-flowered democracy, must become so. But they all say that there must be some move toward that situation, because if there isn't, what is the use of having ambassadors? We have someone with a different title. It may raise the prestige of the individual a little bit, but what is the use of it all?

It is important only if it becomes a symbol, and if it becomes a symbol of the fact that after all we don't care much about these rights, then it is a bad symbol. If it ceases to be a symbol it wouldn't make any difference to anyone whether you had an ambassador or whether you didn't.

But the fundamental thing is that American policy is to try to bring Spain back into the family of western Europe. That is a family matter. You have to convince the Spaniards that they must take some steps toward that end, and you have to convince the Europeans that they have to take some steps. So that it isn't fundamentally a matter which can be brought about by American action, and, therefore, the policy of the American Government is one which I am quite sure is calculated to please neither group of extremists in the United States—either those who say that we must immediately embrace Franco, or those who say that we must cast him into the outermost darkness. But it is a policy directed toward working with the Spaniards and with the western Europeans, bringing about a situation where these fundamental liberties do exist in Spain and where the western European can bring Spain into the community.

I have spoken at some length on this subject because it is so easy to confuse form with substance.

Is the Cry of Regimentation a Cry for the Benefit of the Wolves or the Sheep?

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1949

Mr. O'SULLIVAN. Mr. Speaker, the following editorial comment in the Farmers Union Herald of St. Paul, Minn., under date of May 9, 1949, is, I think, one of the most correct, enlightening, and timely statements which I have read in many months.

It is also an almost complete answer to the recent wailing cries of certain ruthless and selfish interests and people of our country, against a part of the Fair Deal program of our great humanitarian President, Harry S. Truman. These self-styled "Save the United States from ruin and bankruptcy" lobbies and groups are masquerading about as asses under the lion's skin of conservatism, but the asses' bray and the asses' ears expose them, and brand them very definitely as master hoaxers on a lobby lark.

They do not desire to preserve the liberties of the people of the Republic, but on the contrary they want to perpetuate their own self-issued licenses to help themselves first.

The editorial I mention is as follows:

REGIMENTATION—BY WHOM?

There are some who say the new farm program suggested to Congress by Secretary Brannan would regiment the farmer. This argument comes from virtually the same people who oppose national health legislation, labor legislation, social-security laws, national housing legislation. In short, the same people who say that any sort of planning on a national scale for the welfare of the great mass of people is regimentation.

Perhaps they are right. We live in a regimented society because we are regulated by laws which govern our actions around the clock. From birth to death, we are required to conduct ourselves according to the rules laid down for us. To that extent we are regimented.

But without laws, without national planning for the public welfare, we would live in a state of anarchy. Every individual would be a law unto himself and the result obviously would be disastrous. The strong would overwhelm the weak. The devil would take the hindmost.

The farmer lives under the same laws as anyone else. But because of his isolation in the past not much attention has been paid to him so far as planning for his welfare. He has been the chief victim of drought, the first victim of economic depression. Proper health facilities have been denied him through lack of national planning. Proper schools have not come his way for the same reason. And his economic position has been one of inequality because he has been left alone to fend for himself in the midst of organized monopoly and speculation.

That is the reason farmers have built their own cooperative businesses. That is why farmers have organized—to market collectively, to purchase collectively, to furnish their own power collectively, to build health co-ops collectively, and to engage in many other activities—together.

But there must be a further step—if farmers are to achieve their fair position in the economy. There must be a national agricultural program which protects farmers against bankruptcy for producing in abundance. Such a program must take into consideration the consumer of food and fiber products of the farm. Such a program must provide for the future of the Nation by providing for conservation of our greatest national resource, the soil.

There have been attempts to do this in the past. The McNary-Haugen bill was a starter. The Agricultural Marketing Act was a step along the road. The Aiken Farm Act, passed by the last Congress was another attempt. But the New Farm Act, proposed by Secretary Brannan, is the latest and the best plan for agriculture. It corrects and brings up to date the concept of parity. It provides for flexibility but not so rigid as that in the Aiken bill which would penalize farmers with depression prices for surplus production.

If this is regimentation, perhaps we need some of it. As long as it's a farm program by and for farmers, the farmers will not be in great fear of the term.

It would be far better than the regimentation of isolation imposed on farmers in the past, by special interests with axes to grind. So, if there is any fear about regimentation let's be honest about it. The question is—Regimentation—by whom?

Cahokia's Two Hundred and Fiftieth Anniversary

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch of May 15, 1949:

CAHOKIA'S TWO HUNDRED AND FIFTIETH ANNIVERSARY

"The noble achievements of the founders of the first settlement in the Mississippi Valley are a source of pride to us, who honor the traditions of the French pioneers, just as they are to our American brothers, who have

so often fought side by side with us in the struggle for freedom. Cahokia is a valued relic of our past as it is of yours."

These words of the French Ambassador, Henri Bonnet, go far to explain why there is such a to-do over a small, almost forgotten village on Illinois highway 3, below MacArthur bridge, just beyond the edge of the St. Louis industrial area. They suggest the one way in which to think of the quiet settlement, usually disturbed only by the whir of passing automobiles or the hum of planes from the nearby airport.

Cahokia's distinction is that it is "Old Cahokia," to borrow the simple title of a new book of its narratives and early documents. It was founded the same year as Williamsburg, in tidewater Virginia. But with that common birth date, 1699, all kinship ceases. Williamsburg and its Governor's palace and formal gardens were Old World. Cahokia was built of logs cut from the wilderness. It was the New World—its spirit, its adventure, its hardship, its persistence. A series of "bad breaks" in history kept Cahokia itself from growing, but its victory came as thousands and then millions passed its way, crossed the great river and spread out over the vast reaches to the Pacific.

Not only St. Louis, whose first settlers came via Cahokia, Fort de Chartres and Kaskaskia, and the West, but all the country owes Cahokia kindly remembrance as it lights up its 250 candles. Many historians believe that the Revolutionary War was won in large part by George Rogers Clark in the Illinois country. If that is true, Cahokia's Fort Bowman was a turning point. The brave pioneers who built the village church, set up its courthouse, made friends with the Indians and put out the lines of trade along the rivers, were the founding fathers of our valley. No wonder an Ambassador comes to pay tribute as Cahokia takes on new meaning this Maytime.

National Constitution and Bylaws of the Auxiliary of AMVETS (American Veterans of World War II)

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the national constitution and bylaws of the Auxiliary of AMVETS—American Veterans of World War II—as revised and adopted at the fourth annual national convention of the Auxiliary of AMVETS, September 1–5, 1948, at Chicago, Ill.:

NATIONAL CONSTITUTION AND BYLAWS OF THE AUXILIARY OF AMVETS (AMERICAN VETERANS OF WORLD WAR II)

(As revised and adopted at the fourth annual national convention of the Auxiliary of AMVETS, September 1, 2, 3, 4, 5, 1948, Chicago, Ill.)

PREAMBLE

We, the mothers, wives, sisters, and daughters of AMVETS (American Veterans of World War II), fully realizing our responsibilities to the community, State, and Nation, associate ourselves for the following purposes: To uphold and defend the Constitution of the United States of America; to safeguard the principles of freedom, liberty, and justice for all; to promote the cause of perpetual peace and good will among nations; to maintain inviolate the freedom of our country; to preserve the fundamentals of democracy and Americanism; to perpetuate the friendship and associations of the great war of liberation; and to dedicate ourselves to the cause of mutual assistance—this by the grace of God.

ARTICLE I. NAME

The name of this organization shall be the Auxiliary of AMVETS (American Veterans of World War II).

ARTICLE II. OBJECTIVES

The aims and purposes of this organization are as follows:

1. To serve our country in peace as in war; to build and maintain the welfare of the United States of America toward lasting prosperity and peace for all of its inhabitants.

2. To encourage, in keeping with the policies of our Government, the establishment of a concrete plan to secure permanent international peace, and to assist in the maintenance of international peace.

3. To inspire in our membership a sense of responsibility and to develop leadership, for the preservation of our American democratic way of life.

4. To help unify divergent groups in the over-all interest of American democracy.

5. To train our youth to become purposeful citizens in a republic with full knowledge of the responsibilities as well as the privilege of citizenship.

6. To cooperate with all duly recognized existing veterans' organizations in the furtherance of the aims of World War II veterans.

7. To keep the public forever reminded that the veterans of World War II fought, served, and died to preserve peace, liberty and democracy for their Nation.

8. To aid in the fulfillment of the aims and purposes of the AMVETS, our parent organization.

9. To promote the welfare and fellowship of our own members and their families.

10. To expedite and assist in the rehabilitation of the veteran by sponsoring and giving support to educational opportunities; to recreational advantages, to hospitalization and personal problems, and to support the veteran in all legislation for veterans' benefits.

11. To recognize in all auxiliary activities—national, State, and local—that the organization known as AMVETS and chartered by congressional action on July 23, 1947, is the parent organization, and that all organizational divisions of the auxiliary exist solely to promote the interests of the parent body of AMVETS; therefore cannot act independently except as it favors the objectives of the parent body.

ARTICLE III. ORGANIZATION

SECTION 1. The AMVETS Auxiliary shall be organized with a national headquarters, and State and Territorial departments. Under the departments there shall be local auxiliaries—intermediate administrative local units—may be created by the national executive committee where such action is deemed advisable.

Regional territories of the auxiliary shall correspond to the regional boundaries set by the AMVETS. The United States is divided into the following six districts:

District I: Maine, Vermont, New Hampshire, New York, Rhode Island, Massachusetts, Connecticut and New Jersey.

District II: Pennsylvania, Maryland, Delaware, West Virginia, Virginia, North Carolina, Kentucky, Tennessee, and the District of Columbia.

District III: South Carolina, Georgia, Florida, Alabama, Oklahoma, Mississippi, Louisiana, and Arkansas.

District IV: Ohio, Indiana, Illinois, Missouri, Iowa, Michigan, Minnesota, and Wisconsin.

District V: Kansas, Nebraska, South Dakota, North Dakota, Wyoming, Colorado, and Montana.

District VI: Texas, New Mexico, Arizona, Utah, Nevada, Idaho, Oregon, Washington, and California.

SEC. 2. The national headquarters shall be composed of officers hereinafter described, one department representative from each department, and such other members as the national convention shall specify. It shall be the duty of the national officers to advance the cause of the AMVETS Auxiliary, carry out its aims and purposes, provide the machinery of organization, and carry out the national policies and plans of the entire organization as established by the national convention.

Departments

SECTION 1. Each State or Territorial area of the United States shall constitute a department, which shall be organized in a manner similar to the national organization. It shall be composed of officers and representatives selected by local auxiliary delegates to a department convention, which convention shall be held not less than 30 days before the annual national convention. The department shall have an executive committee and shall conduct its own convention, at which time it shall elect its officers, its delegates, and alternate to the national convention, and elect its national committeewoman and alternate.

(a) A minimum of three local auxiliaries shall be required to organize a department.

(b) A national regional vice president, or, if for any reason she cannot be present, a deputy appointed by the national president and approved by the national executive committee shall call a meeting of all local auxiliaries within the State or Territory within 60 days from the receipt of a petition for a State organization signed by not less than three local auxiliaries petitioning for the organization of a department. At such organization meeting the national regional vice president or her deputy shall open the meeting and preside until the election of officers; she shall then install the elected officers and thereupon surrender the chair to the newly elected president and her staff of officers.

(c) Departments shall have the authority to create intermediate administrative groups, such as district and county organizations, for the promotion and administering of local auxiliaries, where the department deems such action advisable.

(d) No member shall hold two elective department offices at the same time, but she may hold one elective office and one appointive chairmanship at the same time.

The term of office of chairman of departments and standing committees shall run concurrently with the term of office of the department president.

All department offices shall be held only if and while the person remains in good standing in the auxiliary of which she is a member.

The department installing officer shall be a member who has held the rank as department president, or one who has held any elective office in the national auxiliary. She shall be chosen by the retiring department president.

The Department delegate and alternate to the national convention shall not be considered department officers.

(e) It shall be the duty of the department to aid in organization and maintenance of local auxiliaries and to carry out the policies and plans delegated to it by national headquarters, and to adhere to the provisions of the national constitution.

(f) Each department auxiliary shall be subordinate to the corresponding department of AMVETS.

Local auxiliaries

SECTION 1. Local auxiliaries shall be chartered by national headquarters and administered by the department headquarters, but shall be governed locally by their own offi-

cers, chosen according to the constitution and bylaws. The policies, activities, and actions of the local auxiliaries shall never be at variance with those prescribed by the national headquarters. All local auxiliaries setting up local bylaws shall have them approved by the respective department executive committees before considering them effective and operative in their local body.

(a) Local auxiliaries may be formed on the application of not less than 10 persons eligible for membership. Application for a charter shall be approved by the department, and if there is no organized department, application shall be made direct to national headquarters. If the department approves, the application shall be forwarded to national headquarters and a charter will be issued within 90 days after approval by national headquarters.

The application for a charter shall be made in writing on a blank form provided for that purpose by national headquarters; and shall contain the name, number, and location of the proposed auxiliary, which shall be the same as the name, number, and location of the AMVETS post to which it is to be attached.

The charter application for a new auxiliary shall be approved by the AMVETS post commander and shall be presented to the department president, where a department exists, for her approval and then forwarded to the national headquarters for written approval of the national president.

All auxiliary charters shall be signed by the national president, countersigned by the national secretary, and bear the national seal.

At the organization meeting called for the purpose of making application for an auxiliary charter, temporary officers shall be elected who will carry on the work until the charter has been received. After the charter has been received these temporary officers shall continue to serve until the date of the annual auxiliary election, as provided for in the department bylaws, at which time permanent officers shall be elected. Temporary officers shall be eligible for election as permanent officers.

After its receipt, the charter shall remain open for a period of no longer than 6 months, at the end of which time the names to appear thereon shall be furnished to the national secretary.

(b) No auxiliary shall be formed where no AMVETS post exists.

(c) As of October 2, 1947, if auxiliaries exist where there are no AMVETS posts, they shall be established as branches of an auxiliary to an AMVETS post, and entitled to representation through that accredited auxiliary, so that there will be no more auxiliaries in the department than the number of AMVETS posts having auxiliaries.

All auxiliaries holding charters and not attached to an AMVETS post as an accredited auxiliary as of October 2, 1947, shall surrender their charters, so that each auxiliary shall be entitled to official representation at the national convention.

SEC. 2. Disposition of properties: In the event of the surrender, cancellation, or forfeiture of an AMVET auxiliary charter, all moneys, official records, property, and other paraphernalia shall be surrendered to the respective department auxiliary to be held in trust for a period of no longer than 3 years. Provided, however, in case such auxiliary is reinstated or recognized within the period of 3 years, such moneys, papers, etc., originally forfeited by said auxiliary shall be delivered to such reorganized or new auxiliary in connection with the charter. At the end of the said 3 years if the auxiliary remains inactivated, all properties of said defunct auxiliary shall become permanent possessions of the respective department auxiliary.

ARTICLE IV. MEMBERSHIP AND DUES

SECTION 1. Membership in a local AMVETS auxiliary is limited to the mothers, wives, sisters, and daughters, not less than 18 years of age, of regular members of AMVETS, and mothers, widows, sisters, and daughters not less than 18 years of age of deceased veterans of World War II who would have been eligible for AMVET membership.

The term "mother" shall be interpreted so as to include any female member of the family or any female guardian of such person or deceased veteran who has or is exercising the care and responsibility for the rearing of such person or deceased veteran.

No person who is a member of, or who advocates the principles of, any organization believing in, or working for, the overthrow of the United States Government by force, and no person who refuses to uphold and defend the Constitution of the United States shall be privileged to become or continue to be a member of this organization.

SEC. 2. There shall be three forms of membership.

(a) An active, regular membership.

(b) Honorary membership granted in instances where circumstances and/or qualifications merit such distinction.

The granting of honorary memberships shall be limited to persons who are not eligible for membership in the auxiliary, and all dues, national, State, and local, shall be waived.

(c) A life membership.

The national, the department, and any local auxiliary may grant one honorary membership each year.

The national auxiliary shall bestow an honorary membership at the discretion of the national executive committee.

Each division shall grant its honorary memberships independently of any other division.

(d) A life membership may be granted for the sum of $50. This amount shall be prorated according to the allocation of annual dues as provided by the constitution of national, department and local. There shall be no extra per capita tax on a life membership. The application for a life membership shall go through the regular channels. The national auxiliary headquarters shall issue all life membership cards.

SEC. 3. No person shall be a member of more than one auxiliary at any one time. No person expelled by one auxiliary shall be eligible for membership in any other auxiliary without the consent of the expelling auxiliary or the consent of the department executive committee, after hearing an appeal.

(a) Any member in good standing may transfer to any other auxiliary on presentation of a completely executed transfer card to be furnished by the respective department, her annual paid-up dues card for that year, and acceptance by the auxiliary to which she makes application.

Report of the transfer shall be made to State and national headquarters by the treasurer of the accepted auxiliary, showing the name and number of the auxiliary from which the member transfers.

(b) A member seeking a demit shall be in good standing in the local auxiliary from which she asks a demit. She shall have in her possession an annual paid-up dues card for that year showing her dues paid in full to the next December 31.

For the purpose of maintaining continuous membership the demit shall be recognized for a period of 5 years at the end of which time it shall be void.

The demit holder shall pay annual dues for not to exceed one year immediately preceding the year in which she reinstates, and the dues for the current year.

SEC. 4. Dues: (a) Dues shall be payable annually or for life.

(b) The annual membership fee for each member shall not be less than $2.50.

(c) Each local auxiliary shall remit annually to the national headquarters the sum of $1.00 for each member as national dues; each State department shall determine the amount to be paid annually per member to State headquarters for State dues; and each local auxiliary shall determine the amount to be assessed each member for local dues.

Auxiliary fees for district or other department-governing group shall be determined by the department executive committee.

Membership shall be based on the last membership report of the preceding year.

(d) Annual dues, from renewals or new members, received after October 1 of any year shall cover the next year's dues.

A member whose dues for the fiscal year have not been paid by January 1 shall be classed as delinquent. If her dues are paid on or before April 1, she shall automatically become a member in good standing. If she is still delinquent after April 1, her name shall be dropped from the auxiliary membership list. If she desires to have her membership restored within a period of 2 years, she shall pay any back dues and dues for the current year. After a membership lapse of more than 2 years she may return only as a new member.

No member shall be dropped without having been notified officially of her delinquency and the impending action.

(e) Dues shall be remitted to State and national headquarters once each month by the local auxiliary, preferably immediately after the regular monthly business meeting of the auxiliary.

(f) An auxiliary shall be considered in good standing when both national and State dues have been paid with proper report of membership and correct remittance of dues, providing there is a paid-up membership of at least 10 members.

ARTICLE V. NATIONAL CONVENTION

SECTION 1. A national convention shall be held annually at the same time and in the same city as the national convention of AMVETS.

SEC. 2. The members of the national convention shall consist of all national officers, department, and auxiliary delegates. The department shall elect its delegates and alternate at its convention held at least 30 days prior to the national convention. The department delegate to the national convention shall not be considered a department officer. The department president shall be eligible for election as delegate to the national convention. Each AMVETS auxiliary shall have a delegate and alternate elected, to attend the national convention, providing the paid-up membership is not less than 10 members.

SEC. 3. Each delegate shall be entitled to one vote. The vote of an absent delegate may be cast by her alternate. Alternates shall have all the rights and privileges of the delegates except that of voting.

SEC. 4. The department representative and her alternate to the national executive committee shall be elected at the department convention, and by such election shall also become one of the delegates to the national convention, without vote for the department. However, as a member of the national executive committee the department committee woman will have a vote at the national convention.

SEC. 5. Sixty percent of the voting delegates shall constitute a quorum to conduct business.

SEC. 6. The National AMVETS Auxiliary having furnished to each auxiliary member a copy of the National AMVETS Auxiliary Constitution as revised, from that date forward all existing State and local auxiliary constitutions shall be null and void. There shall be but one constitution and that shall be a national constitution which shall be the governing instrument.

It shall be understood that all rules and regulations governing the national body of the AMVETS Auxiliary shall apply equally to the policies and proceedings of all department and local auxiliaries.

Department and local auxiliaries shall have bylaws by which to govern their respective requirements but these shall not conflict in any way with the national constitution.

ARTICLE VI. OFFICERS

SECTION 1. The national convention shall elect a president, senior vice president, junior vice president, recording secretary, treasurer, sergeant at arms, historian, chaplain, and parliamentarian, public relations officer, and liaison officer. The corresponding secretary shall be an appointive office.

In addition to the above officers six regional vice presidents (areas to correspond with the six districts outlined by AMVETS) shall be elected at the national convention by their respective districts. This provision shall apply to national regional vice presidents only.

SEC. 2. No president, national, State, or local, shall succeed herself for reelection. All other officers may be reelected, but shall not serve for more than two consecutive terms of 1 year each.

SEC. 3. All auxiliary members in good standing for no less than 6 months shall be eligible for a national or State office, and if elected, shall hold the office only so long as she remains a member in good standing.

SEC. 4. Nominations for officers, national and department, shall be made only from the floor of the annual convention. Officers shall be nominated from the floor only at the annual auxiliary election. They shall be elected by a majority vote at the following convention session. Election shall be by ballot. Each delegate or alternate representing a delegate shall cast her own vote.

SEC. 5. On the first ballot the name of the candidate receiving the lowest number of votes shall be dropped, and so on in successive ballots until an election is made.

Whenever there is but one candidate for an office the presiding officer shall instruct the secretary to cast the elective ballot of the body for the candidate.

SEC. 6. The officers shall be installed by the retiring national commander of AMVETS, or someone delegated by him, at the last session of the convention. The new officers shall enter on the duties of their respective offices immediately after the adjournment of the meeting at which they were installed, and hold office until their successors are duly elected and installed.

SEC. 7. In the event the office of president is vacated the senior vice president shall serve as the president for the unexpired term. In the event that both president and senior vice president cannot serve, the junior vice president shall be next in line to serve. All other vacancies occurring in the elective offices of the national auxiliary shall be filled by the national executive committee in the following manner:

The national president shall notify all members of the national executive committee that the vacancy exists, and after 30 days shall send to them the names of persons presented to fill the office. Members of the executive committee shall cast a ballot vote of their choice, mailing same to the national secretary. At a time specified by the national president the ballots shall be opened by tellers appointed by her, in the presence of such national officers of either the AMVETS of the national auxiliary, as the national president shall name. The member receiving the highest number of votes shall be declared elected to the vacant office.

Having completed a term of office by having filled a vacancy shall not constitute an election. She shall therefore be eligible for election to this same office.

ARTICLE VII. DUTIES OF OFFICERS

SECTION 1. The national president shall be the executive head of the AMVETS Auxiliary and shall be responsible for the successful functioning of all the other national auxiliary officers and other members of the national executive committee. It shall be her specific duty to:

(a) Officially represent the national auxiliary at all functions where such representation is advisable.

(b) Preside at all meetings of the national executive committee and she shall preside at the annual national convention.

(c) Appoint officers, committee chairmen, and committees with the approval of a majority of the national executive committee.

However, no appointment of whatever nature shall be announced by the national president until after action has been taken by members of the national executive committee and she shall have been authorized to make the appointment. After such action by the national executive committee the national president shall invite the person approved to accept the appointment.

(d) Enforce the provisions of the national auxiliary constitution and bylaws and the decisions of the national executive committee.

(e) Approve and countersign all vouchers drawn by the recording secretary, approve and countersign all checks drawn by the treasurer, when such approval is justified.

SEC. 2. Senior Vice President: The senior vice president shall assist the national president in the performance of her duties and preside at any meeting or function in the absence of the national president. She shall also serve as chairman of the membership committee.

SEC. 3. Junior Vice President: The junior vice president shall assist the president and senior vice president in the performance of their duties and preside in their absence. She shall also serve as chairman of organization and legislation.

SEC. 4. Regional Vice Presidents: The duties of these respective vice presidents shall be to foster organization of auxiliaries in their respective areas; to serve as directors of the respective areas; and to submit a quarterly report to the national president advising her of the work being accomplished and of the needs of the respective area.

SEC. 5. Recording secretary: The recording secretary shall: (a) Keep and record the minutes of all executive committee meetings. The services of a public stenographer are advisable for all national conventions.

(b) Keep a file of the national financial record of all members.

(c) Draw and keep a record of all vouchers.

(d) Keep records and duplicates of all official national headquarters correspondence.

(e) Send out notices of all national executive committee meetings.

(f) Perform any other duties as prescribed by the national president or the national bylaws.

(g) The recording secretary shall prepare before each national convention a list showing the accredited auxiliaries attached to an active AMVET post, and in good standing with the national auxiliary; she shall also certify the list of auxiliaries entitled to a voting delegate at the national convention. The list shall be submitted to the preconvention national executive committee meeting and if approved shall be given to the convention credentials committee as their guide.

(h) Within 30 days, subsequent to the closing of the national convention she shall send to each member of the national executive committee, to each delegate, and to each auxiliary president, the minutes of the proceedings of the national convention, and within 30 days after a meeting of the national executive committee, to each department president, and to each auxiliary president the minutes of the proceedings of the said national executive committee meeting.

SEC. 6. Corresponding secretary: The corresponding secretary shall help the national president with any or all correspondence where the president desires aid, and assigns the responsibility to her.

SEC. 7. Treasurer: The treasurer shall:

(a) Receive and account for all money of the national AMVETS auxiliary.

(b) Report on the financial condition of the auxiliary monthly to the national president.

(c) On receiving properly signed vouchers, prepare and sign all checks, disbursing funds of the auxiliary and send same to the national president to be countersigned.

However, when funds allowed by the budget for any certain item, such as postage, etc., have been exhausted, the treasurer shall issue no checks for further expenditures on that item, but shall wait for action of the national executive committee.

(d) Present a complete financial report at the annual national convention; at each meeting of national executive committee, or on request within a reasonable time.

(e) She shall send to the members of the national executive committee and to each department treasurer an itemized statement of receipts and disbursements at the end of each fiscal year, and her financial balance as shown on her books at that time, as of December 31, of each year.

SEC. 8. Sergeant at arms: The sergeant at arms shall preserve order at all national meetings and at the national convention and shall prevent unauthorized persons from attending such meetings. She shall see that the room is in proper order for all executive committee meetings and at the national convention. In addition she shall perform such other duties as assigned to her by the national president.

SEC. 9. Historian: The historian shall be responsible for maintaining an accurate written history of the auxiliary and she shall present a written summary of same annually at the national convention.

SEC. 10. Parliamentarian: The duties of the parliamentarian shall be:

(a) To serve as chairman of the legal advisory committee.

(b) To advise the president and other officers on all matters of legal significance.

(c) To interpret the constitution and bylaws in regard to legal matters.

(d) To assist the national executive committee in prescribing proper disciplinary action for members and departments disregarding said provisions of the constitution and bylaws.

SEC. 11. Chaplain: The chaplain shall offer prayer at the beginning and end of all meetings and at the annual convention. She shall represent the auxiliary in all religious affairs.

SEC. 12. Public relations officer: The public relations officer shall serve as chairman of the publicity committee and as such shall keep the public informed through the press and other available channels of all national auxiliary affairs. She shall cooperate with the national AMVETS projects and with other patriotic and veterans' organizations when opportunity presents.

SEC. 13. Liaison officer: Her duties shall include cooperation with the national AMVET headquarters in all matters of mutual interest between the AMVETS and the AMVETS Auxiliary.

ARTICLE VIII. NATIONAL EXECUTIVE COMMITTEE

SECTION 1. The administrative power between national conventions shall be vested in the national executive committee, which shall be composed of the national president, all other national elective officers, and one national executive committeewoman from each State, to be elected by the respective State departments. All national presidents shall serve on the committee for 2 years following the term of their office. This ruling shall also apply to all presidents of departments and auxiliary boards. An alternate shall be elected by each department to serve in the absence of the committeewoman.

SEC. 2. The term of office of each national executive committeewoman and alternate shall be 1 year, which shall commence im-

mediately, on adjournment of the department convention at which she was elected.

SEC. 3. Members of the national executive committee shall be delegates to the national convention, each with one vote. The president shall vote only in the event there is a tie.

SEC. 4. (a) Expenses of all elected national executive committee members, with the exception of the department national committeewoman, whose expense shall be paid by the respective departments, shall be paid from the national treasury, due consideration being given the general welfare of the national auxiliary in the first instance.

(b) No money shall be advanced to any national executive committee member to attend meetings or the national convention, but action shall be taken by the members of the national executive committee present at any meeting of the committee, to determine how much, if any, funds shall be distributed among the committee members present to defray their expenses. The amount distributed shall never exceed the actual expenses incurred by any member.

(c) Stated meetings of the national executive committee shall be held immediately preceding the national convention, and within 24 hours after the adjournment of the national convention. Special meetings of the committee shall be held on reasonable notice at the call of the national president.

(d) A majority of the members of the national executive committee shall constitute a quorum to conduct business.

SEC. 5. AMVETS, national headquarters, shall be authorized to call a national executive committee meeting of the auxiliary for the purpose of handling emergency matters requiring the joint action of both AMVETS and the AMVETS auxiliary.

ARTICLE IX. FINANCE

SECTION 1 (a) All finances of the National AMVETS Auxiliary shall be under the control of the national treasurer and the finance committee.

(b) The treasurer shall make an annual report at the national convention.

(c) The treasurer shall receive and properly account for all moneys.

(d) The treasurer shall disburse funds only on presentation of a proper expenditure voucher, designated clearly to whom payment is made, itemized as to what the expenditure is for, and she must make sure that the expenditure is within the approved budget allowance.

(e) The treasurer's books shall be audited by a certified public accountant previous to the national convention and the report of the auditors shall be read to the national convention body. The certified public accountant shall be employed by the national executive committee and the expense of the audit shall be paid from the national treasury.

SEC. 2. (a) Revenue shall be derived from annual dues and other sources approved by the national executive committee.

The National AMVETS Auxiliary recognizes the sale of the AMVET flower, the white clover, as a legitimate source of income; the proceeds from which shall be used exclusively for veterans' hospital and service work, and for veterans and their families, general welfare work, and child welfare.

Regulation of annual dues shall be determined by a majority vote of the delegates at the annual national convention.

(b) The treasurer's books, together with those of the national secretary, shall be at all times open for inspection by the national executive committee.

SEC. 3. (a) An annual budget shall be submitted for approval at the first meeting of the national executive committee following the national convention. It shall be prepared by the retiring treasurer and the finance committee, who shall have received estimated budgets from the several national departments and other retiring national officers and shall have consolidated same.

The tentative budget having been submitted, after due consideration, shall receive final action at said post convention meeting. When adopted, it shall be the expenditure guide for the year. In the event that the budget is not approved, a special finance committee consisting of five members of the national executive committee shall be appointed by the new national president to prepare the budget.

(b) After adoption of the budget the national treasurer shall issue no checks above the specified amounts set forth in the budget, except with the unanimous consent of the executive committee. If a request is made for additional funds on any item, the amount needed and the reasons for making the request shall be given to the body of the national executive committee.

SEC. 4. (a) The national treasurer and national secretary shall be bonded with an indemnity company as surety in a sum double the amount of funds for which, so far as can be anticipated, they will be held accountable.

(b) The bonds of the national treasurer and the national secretary shall be held by the national president.

(c) The national auxiliary shall provide a medium for bonding, for the convenience of departments and local auxiliaries.

(d) All books and records of the national AMVETS Auxiliary shall be made available to the AMVETS, national headquarters, on request for either examination or audit.

ARTICLE X. DISCIPLINE

Section 1. Disciplinary rules relating to local auxiliaries shall be prescribed by the department.

(a) Members may be suspended or expelled by an auxiliary on a proper showing of cause. Written charges shall be based on disloyalty, neglect of duty, dishonesty, conduct unbecoming to a member of the AMVETS Auxiliary, or disregard of the provisions of the constitution and bylaws.

(b) Officers found guilty of any of the foregoing misdemeanors by a two-thirds vote of the respective executive committee shall be automatically deprived of their office, due notice of such impending action having been given the offender.

(c) Any member of an auxiliary has the right of appeal to her department executive committee, and if not satisfied, she has the right of appeal to the department convention body.

SEC. 2. If in the judgment of any AMVET department or local AMVET post the respective department auxiliary or local post auxiliary shall have ceased to comply with State requirements of the AMVET body, thereby failing to be an asset to said AMVET department or AMVET post, it shall be recognized as within the jurisdiction of the AMVET body to withdraw the auxiliary charter. This action having been ratified by the AMVET department, said AMVET department shall notify the national AMVET commander, the national AMVETS auxiliary president, and the national liaison officer of the auxiliary.

ARTICLE XI. AMENDMENTS

SECTION 1. This constitution may be amended at any national convention by a majority of the total authorized delegates present. Proposed amendments shall be submitted through the national secretary to the several departments and members of the national executive committee by mail at least 30 days prior to the opening of the next national convention. This constitution, may, however, be amended at any convention, without notice, by a unanimous vote of all registered delegates.

SEC. 2. No proposed amendment shall be submitted through the national secretary unless it shall be submitted by a department convention, department executive committee, or the national executive committee.

SEC. 3. This constitution shall automatically be amended by any action taken by a national convention of AMVETS, governing changes in the AMVETS constitution affecting the constitution of the AMVETS auxiliary.

SEC. 4. All amendments adopted at any national convention of the AMVETS auxiliary, according to the provisions of this article, shall take effect only on the approval of the AMVETS national executive committee.

SEC. 5. Except for provisions as herein stated, all amendments to the constitution of the national AMVETS auxiliary become effective and operative at the close of the convention at which they were adopted.

SEC. 6. Roberts' Rules of Order, Revised, shall be the authority which shall govern procedure of the national AMVETS auxiliary and all its subdivisions.

Postal Rates on Second-Class Mail

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1949

Mr. MULTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter written by Matthew Woll, second vice president, American Federation of Labor, to the members of the House and Senate Committees on Post Office and Civil Service in regard to bills H. R. 2945 and S. 1103. He opposes an increase in postal rates on second-class matter for the reasons set forth.

The letter follows:

MY DEAR CONGRESSMAN OR SENATOR: I am writing you, not only as a vice president of the American Federation of Labor and in its behalf, but am writing as well as president of the International Labor Press of America and as vice president of the International Photoengravers' Union and in behalf of the American Labor Press Publications and the Allied Printing Trades Unions of America.

I wish I could have appeared before your committee personally to advise you why the officers and members of the foregoing organizations are gravely concerned and most strongly opposed to section 2 of H. R. 2945 to readjust second-class postage rates. Since this is not possible, I submit the following for your consideration.

Our opposition is based on four premises, viz:

1. We do not believe the provisions of section 2 of H. R. 2945 are in the public interest.

2. They will work an undue hardship on newspapers and magazines, including labor publications and labor organizations which are important publishers of both types of publications.

3. They will result directly in unemployment of engravers, electrotypers, stereotypers, printers, binders, mailers, and other employees of publishers and printers and indirectly in unemployment of people engaged in the manufacture of paper, ink, machinery, and other supplies bought by printers and publishers.

4. They will not produce the estimated increases in second-class postage revenue, but they will result in reduced volume of second-class matter distributed through the post office and may cause unemployment in the postal establishment.

The congressional policy, which established low second-class postage rates for the wide dissemination of information, has been in effect for more than a hundred years. As

a result, citizens in every part of the country, no matter how remote, are able to keep well informed on every subject in which they are interested, at nominal cost. Indeed our whole national economy has been founded on an ever widening dissemination of knowledge of commodities and articles of commerce available to meet the wants and needs of our people.

As you know, the strength of our form of government depends largely on degree and extent of understanding by our citizens. We cannot overestimate the importance of wide dissemination of information at this time. I believe it is of greater importance today than it was when the policy of low second-class postage rates was first established. Newspapers and magazines are of interest and importance in furthering knowledge and education in every field of life.

I have read the testimony of newspaper and magazine publishers before your committee and I have studied the effect of the proposed increases on our own publications. There is no doubt that they would work an undue hardship on all publishers and probably would force many out of business.

They would hurt nonprofit labor publications more than those owned by corporations or individuals, because they would do away with present exemptions and would place all publications on the same basis. Therefore, the percent of increase would be much greater and would cause more hardship to the nonprofit organizations.

Any increases in distribution costs of labor organization publications would, of necessity, be paid by their members. This would tend to restrict dissemination of information among members. It would be harmful to the labor organizations, because they too must have an informed membership.

It is apparent from the testimony of publishers before your committee and from our own knowledge of publishing costs that these proposed increases in second-class postage rates would cause reduction in circulations and fewer pages in each copy.

This would mean less work for engravers, stereotypers, printers, pressmen, binders, and other employees of commercial printers and publishers. It would also cause a decrease in consumption of paper, ink, and other supplies. Fewer new presses and other machinery would be bought.

It does not require a fortune teller to foresee the danger of widespread unemployment in such a situation. The loss in wages and salaries and in Federal taxes would far exceed the possible gains in postal revenues.

These possible gains in postal revenues are extremely doubtful because decreases in circulation, reduction in number of pages per copy, and diversion of newspapers and magazines from the mails probably would cause a decrease rather than an increase.

Decrease in tonnage, resulting from undue increases in second-class postage rates might cause unemployment in the Postal Establishment. Some postal employees are now forced to work at outside jobs because they are not getting sufficient hours of work in their postal jobs.

Thus increases, such as are proposed in section 2 of S. 1103 would cause undue hardship to publishers; unemployment among printers and allied trades, including paper, ink, and machinery; and probably would produce less money for the Post Office.

We all know that full employment is essential to the prosperity of our country and must be maintained to produce Federal-tax revenues, sufficient to carry out the national and international programs to which we are committed.

Reports indicate that unemployment is approaching 4,000,000 and is increasing. We are entering a "buyers' market," when manufacturers in many lines, again must sell, promote, and advertise, in order to keep their plants operating at full productive capacity.

I urge you not to make a decision which may tend to deter manufacturers from intensifying their sales, promotion, and advertising efforts.

Prior to deciding on new postal rates, I believe the Congress should determine whether the postal establishment is primarily a business organization or a public service. In our judgment, it is a public service of the highest order and of utmost importance in the whole of our national life.

The postal establishment serves practically everyone, at home and in business, every working day. It provides the communication means through which business advertises, promotes, and sells its products and services. From sales, wages and salaries are paid, profits are made, and taxable income (personal and corporate) becomes available to the Government for the benefit of all the people.

It is difficult to understand why the postal establishment, with many thousands of small post offices, rural routes, subsidies to air lines and steamship companies, etc., should be expected to be self-sustaining.

As the Postmaster General has pointed out, Congress determines the extent of service to be rendered by the postal establishment and salaries to be paid. Postal laws and regulations curtail the Department's authority and place important powers in the hands of other agencies. These conditions favor operation of the postal establishment as a public service.

I believe this is the first question to be determined by Congress and I hope you will recognize that the postal establishment is primarily a public service, which should be operated as efficiently and economically as possible.

I hope you will continue the long established congressional policy of low second-class postage rates to encourage the widest possible dissemination of information.

Because of the foregoing we all are most strongly opposed to section 2 of H. R. 2945. We hope and trust you may concur in that point of view.

Very truly yours,

MATTHEW WOLL.

Progress in Supersonic Research

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Washington Evening Star of May 17, 1949:

The recent annual report of the National Advisory Committee on Aeronautics covers what is probably the most important period in its 34 years of aviation research. For it was during that eventful period that supersonic flying became a subject of intensive study and development. It was largely as a result of pioneering studies conducted by the NACA scientists that man first achieved the long-sought goal of flying faster than sound, in October of 1947.

The NACA regards supersonic flight as the greatest achievement in aviation since the first flights of the Wright brothers in 1903. For its part in piercing the so-called sound barrier, the NACA last December shared in the 1948 award of the Collier Trophy, emblematic of the outstanding contribution to aviation during the preceding year. The trophy went jointly to John Stack, NACA research scientist; Lawrence Bell, whose company designed and built the supersonic X-1 plane; and Capt. Charles E. Yeager, Air Force pilot who first flew the X-1 faster than sound.

That victory over the mysterious sound wall was followed last year by numerous supersonic flights, in some of which speeds of close to a thousand miles an hour are said to have been recorded. Such terrific speeds pose new problems for the designers, builders, and pilots of supersonic planes. The NACA is concentrating on solution of these problems at its research stations at the Langley Air Force Base in Virginia, the Navy's Moffett Field in California, and the Lewis Flight Propulsion Laboratory in Ohio. At these stations the NACA is striving to find more durable and lighter metals for jet and rocket engines, better surface materials for wings, improved air-foil designs, more efficient fuels and fuel systems and more effective safeguards for the men who are pioneering in this new field of aviation. These researches already have led to the conclusion that the planes of the future will grow more and more to look like projectiles with fins. They probably will be powered by ram-jets or rockets developed from the models now being tested in the NACA laboratories.

This important work is costly. Congress in the past has recognized this importance by granting substantial appropriations to carry on the studies. It is more important than ever that the NACA should be granted the money it needs to keep America in the forefront of supersonic progress. This will be a sound investment in security.

Power Crisis in New England

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address by Assistant Secretary of the Interior C. Girard Davidson at the tenth anniversary banquet of the Textile Workers Union of America, in Worcester, Mass., Saturday, May 14, 1949:

THE POWER OF NEW ENGLAND

I am pleased to be able to celebrate with you the tenth anniversary of the Textile Workers Union of America. You have every right to be proud of your union's accomplishments since its founding and of its fight for enactment of progressive measures in city, State, region, and Nation.

Your broad interest in the affairs of the world is in striking contrast to the attitude of the first textile factory workers in England who some 150 or 200 years ago hoped to set back the clock by stoning the first power machinery because they thought the machines would take away their jobs.

Today your interests and your union's activities range far beyond the negotiation of wage rates and working conditions. You have fought for more housing, better education, and cheaper electricity. Your able Washington representative, John Edelman, is widely respected in the Nation's Capital for his advocacy of these and other progressive causes.

While we are meeting here, the whole Nation is experiencing soft spots in the economy, with the softest of them in the so-called soft goods field, which includes New England's vital textiles industry. Almost half of the recent slump in manufacturing employment in New England has been in

textiles. Indeed, the whole of New England is suffering from what one of the region's outstanding economists, Seymour Harris, of Harvard University, has called "the decline of New England."

There is no single reason for such a decline in New England. Indeed, there is no really sound reason for it at all. This area of the country has the conditions for and the tradition of the balanced economy that other regions strive for. It is a lovely place to live; its democracy, its level of educational opportunity, its climate and natural beauty are world famous.

The factors making for decline may lie in the worship of the tradition of progressive democracy rather than the current practice of it. The reverence for the abolitionists of a hundred years ago might properly be rehabilitated in the form of a new abolition movement.

The new abolitionist would look to abolishing slums not by waiting for them to fall down but by supporting programs for building houses that people can afford to live in. He would look to the abolition of unemployment not by extending breadlines but by creating new jobs through industrial expansion. He would look to the abolition of high-cost electric power not by cutting out demand but by increasing the supply.

It is this last subject, the power problem and how it affects the decline of New England, that I should like to discuss with you tonight.

A long look at the electric power situation in New England makes one wonder how industries can afford to remain here. New England seems to be out of step. In other parts of the country, power rates have dropped consistently year after year, unquestionably stimulated by the yardstick example of federally constructed power plants. In other parts of the country, the use of electric energy per person has steadily risen, unquestionably stimulated by the lower rates. New England, however, has lagged farther and farther behind the rest of the Nation in this respect, until today it boasts the highest residential and industrial rates for electric power of any section of the country. It boasts, too, that no federally constructed power plants have been allowed within its borders.

The results of this general trend have recently become painfully apparent and the unhappy effects have been felt in the homes of many a textile worker. Not so long ago, the Congress of the United States was stimulated to inquire into the reasons for the exodus of industries from New England. Reading the statements made at the public hearings, New Englanders heard the detailed stories of what was happening to them.

At these hearings, Mr. Royal S. Little, president of Textron, Inc., told the Congressmen why textile manufacturers preferred to locate their plants in the South. If the cotton-textile industry of the South had been located in New England, Mr. Little said, it would have had to pay $27,000,000 extra each year for the electric energy to run its spindles and looms.

Mr. Little went on to show why his own company was moving South. He compared power costs in Textron plants in New England and in the South. In his Nashua, N. H., plant, he reported, the average cost of a kilowatt-hour of electricity was 12.4 mills, compared to 7.1 mills in Anderson S. C. In Manville, R. I., the cost was 17 mills, or almost three times as much as the 6 mills charged in Charlotte, N. C.

The facts brought forth by Mr. Little were no surprise to those familiar with the electric power situation.

Month after month people here in Worcester, Mass., and elsewhere in New England, have been paying high electric bills. The average householder in Worcester, using 100 kilowatt hours a month, pays an electric bill which is more than twice as large as the same man would pay if he lived in Tacoma, Wash. The Worcester man pays a half more than a citizen of Chattanooga, Tenn., or Cincinnati, Ohio, or Lincoln, Nebr., or Los Angeles, Calif., pays for the same thing.

The private utility companies will tell you that it costs more to generate electric power in New England. But they don't tell you the reason why. With a few exceptions, the utilities companies in New England are using expensive, outdated, and wasteful, methods of generating power. The utilities companies have left undeveloped most of the potentialities of New England's fine rivers which could be turning more turbines to produce power. Instead of using this inexhaustible water supply, they have been burning in their power plants oil and coal, neither of which is native to New England and so must be shipped in at considerable expense.

In New England three-quarters of the electric energy is generated in steam plants burning coal and oil. In the Pacific States, for instance, the situation is exactly reversed; three-quarters of the energy is generated in hydro plants using water power, and the electric rates are much lower.

New England today has about three and one-third million kilowatts of installed electrical generating capacity, only one-quarter of which is in water power plants. But the undeveloped water power in New England rivers—all alone and without assistance from steam plants—could be harnessed to produce the same amount of additional capacity, three and one-third million kilowatts.

New England's private utilities hate to be reminded of these 3,000,000 undeveloped kilowatts. The utilities still think scarcity is a great thing because it keeps prices high, and profits too. Even now they are saying that New England does not need any more electric power. With power-consuming industries moving away, the utilities may be right. At this rate, there won't be many left to buy power, or to hire workers, for their factories.

I would recommend to the utilities that they take a lesson from their friend Henry Ford. Ford discovered that you can make cars cheaper and that more people will buy them if you make them in large quantities. This has always been true in the electric power business too. The lower the rates, the larger the consumption; and conversely, the larger the consumption, the lower the rates. But in New England the utilities seem to prefer the Rolls Royce instead of the Ford psychology. As a result, the people who can't afford Rolls Royces—which includes most of us—are going elsewhere to buy Fords.

Statistics plainly show the relationship between high electric rates and too little use of electricity. In New England, for instance, the average residential customer uses only slightly more than 1,000 kilowatt-hours a year, whereas in the State of Tennessee he uses twice as much. In some of those areas where power is the cheapest—around Tacoma, Seattle, and Chattanooga—the average customer uses between four and five thousand kilowatt-hours annually.

New England consumers are obviously discouraged from buying all the power they might use at the right price. While generation of electricity in the rest of the country increased 6½ percent in the first quarter of 1949 compared to the same period last year, generation in New England decreased 2½ percent. New England was the only region to show a decrease, thus quickening the pace at which the rest of the country passes it by. While in the last 6 years the United States increased generation about 50 percent, New England utilities suffered power production to increase less than 30 percent. During the same period, electric generation on the Pacific coast increased 80 percent.

New England has had its opportunities to remedy this situation and distinguished New Englanders have tried to take advantage of them. But their efforts have met with continual failure because of the opposition of the private power monopoly. In 1926 all six governors asked for construction of dams which would both control floods and generate power. But even the $52,000,000 flood on the Merrimack River which followed the next year could not move the people to action. Again in 1936 the governors moved to take advantage of an offer of $24,000,000 from the Federal Government for flood control and power dams on the Merrimack and Connecticut; but the power lobby blocked acceptance. For more than 20 years, the power lobby has fought the St. Lawrence Seaway which could provide large blocks of cheap power for New England.

Other sections of the country have not missed similar opportunities. The Tennessee Valley Authority has realized practically the full power potential in its valley so that this one river basin now produces more power than is generated by the utilities in all New England. In the Pacific Northwest, two dams built by the Federal Government—Grand Coulee and Bonneville—alone will generate ultimately almost as much electricity as there is in all New England.

These advances in other regions were not made without continuous opposition from the power lobby. The TVA system and the great Northwest dams were dubbed "white elephants" by the utility spokesmen, who said the power could never be used. If it weren't for these Federal dams, however, God knows how we would have powered the aluminum plants, the airplane plants, and the atomic-energy plants which helped us to win World War II. As recently as 1946 the private utilities in the Northwest were testifying that there would be plenty of power immediately available. Since that time, however, the region has experienced a severe power shortage every winter and will continue to do so for at least 5 years to come. That shortage would have been lessened had not the utilities prevented construction of Federal dams from going forward on schedule.

Now even the utilities in the Northwest have joined other industries in the clamor for speedier work on the Federal dams which alone can relieve the shortage. In the Tennessee, chambers of commerce and industrialists hail the accomplishments of TVA and speak with pride of the economic growth of the valley since TVA started operations. Wendell Wilkie, who led the fight against TVA in its early days, later publicly praised it. Private utilities in the TVA area, such as the Georgia Power Co., have prospered since they cut their rates to match TVA's low-cost power. The Georgia Power Co. has grown faster than most utilities in recent years and has consistently won national awards for the number of electricity-using appliances it has sold to its customers.

Meantime, New England has prided itself on excluding the Federal dam builders from within its borders. High power rates have continued. Industries have fled. Unemployment is rising above the national average.

But that is only the power part of the story. Meanwhile, too, floods continue annually and semiannually to kill and destroy. Soil erosion continues to leech New England soils. Pollution of New England rivers increases, presenting a menace to health and driving off the fish and wildlife. The fine rivers of the region remain untamed, when they might become highways for commercial ships and pleasure craft.

How are these various evils related to the power problem? The answer lies in what is called multiple-purpose use of the rivers. It means controlling the rivers to prevent floods, to promote navigation and to protect fish, as well as to produce electricity. It is a modern technique we have learned since the days when New England power companies built

their scattered and unrelated single-purpose hydropower plants.

Throughout the country—except in New England—multiple-purpose development of river-control structures is widely practiced. In the TVA area the same dams which generate power also regulate the flow of the river to prevent floods and to create an all-year-round navigation channel. In the Pacific Northwest, Grand Coulee Dam will not only generate almost 2,000,000 kilowatts of power, but will also store water to irrigate almost a million acres of desert wasteland. Bonneville Dam provides a half million kilowatts of electrical energy and at the same time includes navigation locks and a fish ladder to let both the ships and the salmon pass up and down the river.

In addition to multiple-purpose design and use of river-control structures, the new technique includes coordinated development of all the resources of the watershed. Soil conservation practices are encouraged to prevent further erosion and to rehabilitate eroded farms. Forests are put on a sustained yield basis so that growth of new timber each year equals the amount cut and lost to fire and disease. Recreational areas are developed at the newly created reservoirs. Pollution is controlled and eventually eradicated.

Works of this magnitude cannot be done in connection with a single dam. They are part of a large program which covers an entire river basin at least. In New England, which is a comparatively small area, a single program might well include all its river basins, that is, the entire region. Perhaps New England too needs its valley authority or regional development administration.

By ignoring these new methods, the power companies have failed to provide New England with low-cost power generated in the cheapest fashion, and have been unable to develop economically the bountiful power sites on New England rivers.

A case in point is the recent survey of hydropower potential conducted by an engineering firm for the New England Council. The staff of the Federal Power Commission had already made a similar survey and discovered more than 3,000,000 kilowatts of undeveloped hydroelectric capacity. But the New England Council could find only 420,000 kilowatts. The different estimates represent the difference between the nineteenth and twentieth centuries.

The New England Council was thinking of isolated scattered power sites. The Federal Power Commission was looking at entire river basins as units, relating the various possible sites to each other, noting how an upstream dam by storing water could firm up the flow and thus increase the power capacity of another dam farther down river. The New England Council was thinking of separate operation of the dams by different utility companies. The Federal Power Commission was thinking of operating all dams in a river as a unit and linking their power plants into a single region-wide transmission network. The New England Council was thinking of dams for power purposes only—how much they would cost to build and how much consumers would pay for the power. But the Federal Power Commission was looking at all the benefits to be obtained from river basin development—flood control, pollution control, navigation, restoration of fish, and conservation of soil—and how much each of these benefits would contribute to paying off the cost. On the broader basis used by the Commission, a greater number of dams and other projects became economically possible.

It is surprising that these engineers and industrialists, who represent the new mechanized industrial system for which the United States is justly famous the world over, should be so hide-bound in considering the New England power situation.

Fortunately, distinguished New Englanders, again in the last 2 years, have been taking steps toward meeting the power crisis which threatens the region's decline. In his inaugural address, your Democratic Governor, Paul A. Dever, called for "development of our rivers for the production of cheap and abundant electricity * * * and enlisting the aid of the Federal Government so that we may be assured of our rightful share of all national appropriations for low-cost electricity, improved navigation, pollution elimination, flood control, and enhanced recreational opportunities."

"We have no coal mines, no oil fields, or reservoirs of natural gas," Governor Dever stated. "We do have water power—the historic basis for our great industrial centers. It should be utilized."

The new Democratic Governor of Connecticut, Chester Bowles, has written that "the possibilities of public power are beginning to be accepted even in New England. There is a great deal of talk," he says, "on how we can bring down our power costs through public developments—and I have stated clearly that I am in favor of anything that can be done."

The other New England Governors have joined in a study of the problem, and the New England delegation in Congress has met together for the same purpose.

I hope that this time these present-day patriots win the battle. The resources of the Federal Government are, as always, available to help them, if they care to call on them. The power-monopoly Tories can be defeated in their efforts to prevent New Englanders from realizing the promise of comfortable and prosperous living which this still great and still rich region offers.

International Interest Shown in Mando-Aquatennial Canoe Derby

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks in the RECORD and include an article from the Bemidji (Minn.) Pioneer of April 21, 1949, I should like to call the attention of my colleagues in the House to a forthcoming event of international interest. I refer to the tenth annual Mando-Aquatennial Canoe Derby.

Ten years ago the citizens of Minnesota living in the cities and towns along the Mississippi River between Bemidji and Minneapolis, contributed funds to provide a purse to stimulate interest in canoe racing, which prior to that time had been only an event of local interest. From this modest beginning the derby has become the world's greatest canoe racing spectacle with entries from several foreign countries in addition to the best in the United States. This year's prizes will total $13,000; $8,000 in regular prizes and $5,000 added money.

The canoe has great historical significance in the State of Minnesota. It was the principal form of transportation in many sections for nearly a century. The early pioneers and trappers used it to the exclusion of the horse. There were no roads and only a few Indian trails through the dense-forest areas. The water courses were the highways of travel and commerce.

This year, thousands will again come to the Paul Bunyan country of Minnesota to view the thrilling spectacle provided by the derby, and revel in pioneer lore concerning the exploits of the early settlers, who struggled unceasingly to open this great area to the Nation. Hundreds of great athletes from all sections of the North American Continent will participate in the world's largest and most gruelling water race—450 miles down the Mississippi River—from Bemidji to Minneapolis, and which will require 8 days to complete.

This year's derby will begin on July 15 and continue through July 22. The spectators will gather at the starting point—Bemidji, and travel each day to the control points at Lake Winnebigoshish, Grand Rapids, Jacobson, Palisade, Aitken, Brainerd, Little Falls, St. Cloud, and the finish point at Minneapolis.

Mr. Speaker, I shall now include in my remarks an article concerning this event from the Bemidji (Minn.) Pioneer of April 21, 1949:

CANOE DERBY HOLDS WIDE INTEREST IN UNITED STATES AND CANADA

According to the Mandonian, a magazine published by the Minnesota & Ontario Paper Co., interest in the forthcoming aquatennial canoe derby, from Bemidji to Minneapolis, continues to mount as the running of this year's $8,000 national sporting event draws closer to reality.

Wishing to select the top flight canoeists in all parts of the United States and Canada, and having received numerous inquiries and entries from such widely separated points as Maine, Mississippi, Washington, Manitoba, Quebec and Ontario, this year's canoe derby committee is establishing regional run-offs in various sections of both countries.

In Canada, arrangements have been made to hold a regional contest in Winnipeg to select Manitoba's best paddlers. Canoeists in the Lake of the Woods and Rainy Lake districts will qualify in contests to be held in Kenora and Fort Frances as a fitting climax to Dominion Day celebrations, and canoeists of northeastern Minnesota will vie for a spot in the aquatennial derby line-up in a contest at Ely which will be a highlight of the annual Roaring Stoney Days celebration in that city

In the United States also, teams from some western sections wishing to enter the classic will compete for places in the McKenzie River Derby, to be conducted on the McKenzie and Willamette Rivers, from Rainbow to Salem, Oreg. Other possible regional sites include one in the New England area, one on the historic Hudson River for New York canoeists, and one in Wisconsin, as well as a sectional event in the Sault Ste. Marie area. Other areas which have indicated some interest in holding preliminary contests include Toronto and Fort William, Ontario, and the Province of Quebec.

For the first time in the derby's history, Minnesota entrants will be required to qualify for places in the derby, owing to the keen international interest shown, which limits the number of places available for local canoeists. Two, and possibly three, regional races will be conducted in the various sections of the State prior to the running of the derby.

Believing that Minnesota has the world's best canoeists, Gov. Luther Youngdahl has issued a personal challenge to each governor of the 47 other States, as well as to each premier of the Canadian Provinces, to send their best contestants.

"As Governor of Minnesota," Youngdahl said in a wire to the governors and premiers, "I maintain that our Minnesota canoists are the best in the world and challenge you to pit your best against ours in this race."

Further, Governor Youngdahl has offered a horn of plenty to the governor or premier whose entry wins this year's event. This horn of plenty will consist of nationally marketed food and other products, grown or manufactured in Minnesota which, according to Governor Youngdahl, "are the best produced in the world."

Following up the State chief executive's challenge, the canoe derby committee has sent attractive aquatennial canoe derby brochures to newspapers, magazines, sporting and canoeing clubs, and canoeing enthusiasts in both countries. Over 11,000 copies of this brochure listing the prizes, a digest of the rules and regulations, the daily race course, and a series of pictures of this sporting classic have been mailed.

I Flew for Israel

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following article which appeared in Collier's for April 30, 1949. Julian Swing, a veteran of our Air Force with Jewish blood, tells why he fought for Israel, and why the Israelis, hopelessly outnumbered, won the war with the Arabs. His experiences taught him that the Palestinian Jews have been badly treated by the outside world, and he says, "The people of Israel are the most democratic in the world."

The article follows:

I FLEW FOR ISRAEL

(By Julian Swing as told to Quentin Reynolds)

The Brindisi Airport looked nice from the air, and this should have been just another routine landing. There was a long concrete strip, no cross wind, and the Norseman plane I was flying had no bad habits. I got my clearance and circled the field. Then I circled it again and Alfredo Malpine, my Italian-American copilot, looked at me strangely.

I went around a third time and then straightened out, lowered my flaps and made my final approach to land. The controls seemed heavy and the whole plane wobbled sluggishly, but I knew this wasn't the fault of the plane. The white concrete runway stretched in front of me but I wasn't seeing it.

I was seeing the quiet smile on Lennie Cohen's face and hearing Buzz Beurling chuckle as he stepped up into the cockpit. That had been only 4 hours ago at the Rome airport. There were three Canadian single-engined Norsemen on the field, and we were to fly them into Israel. I was to fly with Beurling, the leading Canadian fighter pilot during the war, but at the last minute we shifted assignments and put Lennie Cohen, the ex-RAF pilot, in with Buzz.

They had taken off for a quick check flight around the field before heading for Israel and on the landing approach the engine backfired; the flame caught the fabric of the fuselage and within 4 seconds the plane was nothing but a sheath of flame plummeting down.

The airport commander and I ran toward the inferno. Lennie and Buzz were strapped in there. Soon the flames died down and we went as close as we could and saw the two charred bodies. The airport commander turned to me and said, "Swing, your ship is ready to take off."

Dazed, I walked away toward the Norseman, climbed in and took off. It was all automatic. I looked straight ahead, changing course when Malpine, who was navigating, told me to change. Brindisi is down in the heel of Italy not far from Bari. We would refuel there and head for Israel.

They called Buzz Beurling "Screwball," but I never saw anything screwy about him. He was quiet and soft-spoken. He didn't even drink the wine they gave us with our meals in Rome. He earned that nickname when he was flying Spitfires during the war. They say there was no crazy chance he wouldn't take in the air. Lennie Cohen, the Englishman was quiet too, but he was intense and a great idealist. He believed that Israel's fight was his fight just as England's fight had been his fight.

Instead of seeing the runway as we came into Brindisi I was seeing their faces, but again instinctively I eased the stick back and we hit the concrete strip, bounced badly and then settled. I taxied to the small administration building, climbed out of the ship and went behind the building and got very sick. I leaned against the white wall and looked at my hands. They were shaking.

I leaned there trembling all over, and I knew that I could never fly again. I tried to rationalize my condition and decided I was suffering from delayed shock. The full impact of what had happened to Beurling and Cohen was hitting me now. My rationalizing didn't make it any better. Like every other pilot who had flown in the Pacific, I'd had my quota of close calls. I'd had them in the Philippines and in flights over Okinawa and Japan, but nothing had ever hit me like this.

I asked for a telephone and called the Haganah representative in Rome. To my surprise he seemed to understand.

"I can't fly," I told him a bit hysterically, "I'm through."

He said soothingly that that was all right, and told me to return to Rome and he'd have transportation for me back to Los Angeles. I flew to Rome as a passenger. I went to the Mediterraneo Hotel where Buzz and Lennie and I had stayed. For 3 days I brooded. Then one morning I woke up and my hands were no longer shaking, my head was clear, and I realized that I was all right again.

I called the Haganah man, told him I was ready for duty, and he said there would be a plane waiting for me the next morning. And from that time on I was a full-fledged member of the volunteer Israeli Air Force.

What makes a normal 33-year-old American quit his job to travel 7,000 miles to a hunk of desert, and fly all sorts of broken-down crates under all sorts of conditions? There are those who think we did it for money. Money? My salary as an Israeli pilot was $100 a month. Was it a search for excitement, an escape from the boredom of routine everyday life? Not for me it wasn't. I was perfectly happy living in Los Angeles working as a salesman, going to the movies twice a week, going bowling on Saturday night, occasionally lifting a stein of beer with the gang and in the summer rooting for the Los Angeles Angels. I wasn't bored. Why did I enlist in the Israeli Air Force?

WHY PILOTS JOINED UP

Often we'd sit in the ready room at an airport in Czechoslovakia or Yugoslavia or at our Israel base at Aqir and we'd ask one another that question. Most of us were Americans but there were British, Canadian, and South African pilots, also, in our volunteer group. Three of us had joined up together in Los Angeles: Bob Vickman, Stanley Andrews, and myself. Bob and Stanley had been AAF pilots, too, and they'd been doing all right as civilians. They didn't want any excitement either, but something within them impelled them to fight for Israel.

It was early in 1948 when I joined the volunteer group. For months I'd been reading about the fight the Jews of Palestine were making. During the war we knew what we were fighting for all right, and reading the newspapers out in L. A. I had got to thinking that the Jews were fighting for the same things that we had fought for. They wanted a democratic country of their own, the sort of country our forefathers had fought for.

The League of Nations had given them the world's blessing, but in recent years the world had turned against them, had repudiated the promises it had made. The world seemed more interested in power politics, in economic stability for well-entrenched Middle East interests, in maintaining the status quo. The world seemed more interested in oil beneath the ground than in people above the ground.

I'd been educated in the New York public schools, and then I studied engineering at Cooper Union. You get an awfully good training in democracy in New York schools. I kept reading the papers and watching the United Nations evade its responsibilities toward struggling little Israel. I got madder and madder and one day a thought occurred to me. I, too, was a Jew.

I'd never thought much about that because it didn't seem to matter one way or another in school or college or in the Fifth Air Force. I had no kinship with the Jews of Europe beyond a historical relation. Back in 1921 a million or so Americans came to the sudden realization that although they owed allegiance only to this country they had Irish blood in them, and they poured forth their money and their efforts to help Ireland become a free state.

This is no way compromised their loyalty to America. Their only ties with Ireland were historical ties, but they arose in fierce anger to support and establish the De Valera regime. Now I felt as they had felt then.

It was that simple, and 3 weeks after I'd enlisted I found myself ferrying a bomber over Arab positions.

I felt very much at home in Israel, not because I was a Jew (non-Jewish members of our group felt the same way) but because the Israeli fighters of the Palmach and the Haganah and the civilians who were fighting in their own way were so much like men I'd trained with in the Air Force and had gone overseas with. The native-born Palestinian is called a Sabre. To my surprise the ordinary Sabre looked exactly like Hitler's definition of an Aryan. He was usually blond, regular-featured, blue-eyed and tall.

Sabre is the name given to the fruit of the cactus plant. This fruit is tough outside but sweet inside, and that about sums up the native Palestinian. In battle he was tough and he could embark on overnight marches carrying a pack and his gun and be fit to fight when he ended the march, and he could endure any degree of suffering.

They are definitely our kind of people, these Palestinians. That was the verdict of every one of the 300 volunteer members of the Air Force I knew. We were also surprised to find that the majority spoke English.

The military victory won by Israel contradicted every textbook ever written by the experts. On paper they had no right to win against the strength of five sovereign Arab nations. On May 15, 1948, Palestine became Israel, and immediately the fury of the Arab attack broke. On that date Israel didn't have a single fighter plane to defend her cities from air attack; she had no antiaircraft weapons—just machine guns, Bren guns and small-caliber stuff. Every day the

Egyptian Spitfires and Dakotas came over to drop their bombs on defenseless cities, towns, and villages.

Eventually, though, we had an air force of a sort. At its very greatest strength it consisted of 3 B–17's (flown illegally from America); 25 single-engined Norsemen (flown illegally from Canada); 15 Messerschmitts (bought in Czechoslovakia); 30 Spitfires (given to Czechoslovakia by the British as a gift and sold by the Czechs to Israel); 2 Mosquitos (bought by an English film producer ostensibly to use in the making of a picture but smuggled out of England to Israel); 6 Osts (two-engined British training planes smuggled out of England); 2 C–54's (flown illegally from the United States); 10 C–46's (flown from America) and a fleet of Piper Cubs, which, so help me, were used for bombing.

That was our air force. It was this tiny group of planes that cleared the skies, gave air cover to ground troops, and in the final analysis turned the tide of history.

I returned from Israel a short time ago, and already I've been shocked at some of the ideas people have of how the Israel army managed to get arms. A great many people have the idea that Russia backed the fight made by Israel, supplying arms and planes through Czechoslovakia. Here's how that deal was worked: There was an air base at Zatec, about 60 miles from Prague, and we would fly our C-46's there, pick up a load of guns, ammo and Messerschmitts and head for Israel.

Israel had tried desperately in the world market to buy guns and planes, but following the policy of the British Foreign Office, the world had declared an arms embargo against Israel. Only Czechoslovakia and Switzerland would sell to Israel, and Switzerland didn't have much to sell. The Czechs were in a nice spot. They had a virtual monopoly of the market and could name their own price. They agreed to sell Israel 15 Messerschmitts, and crated these up and flew them to Israel in our C-46's. Czechoslovakia had acquired these Messerschmitts for practically nothing as part of Germany's war-surplus stocks left in Czechoslovakia. She sold them to Israel for $40,000 each.

Ben-Gurion was so desperate for fighter planes to protect his civilian population from bombing that he had to submit to the hold-up. These were very old, tired Messerschmitts. The guns were poorly synchronized and more than half the time they jammed.

The Egyptian air force had plenty of Spitfires and Fiats (a pretty good fighter sold to them by Italy) and dozens of C-47's given to them by the British. But the Gyppos were clumsy pilots, and even with their enormous advantage in aircraft they couldn't do any real damage to Israel.

One afternoon one of our lads was stooging along in his Spit when he saw seven Gyppo fighters (five Spits and two Fiats) below him. He dived at the formation and got one Spit, which went down in flames. Two of the Gyppo Spitfires lit right out for home, leaving four to battle it out. Our boy made another pass and hit two of them. They fell out of formation. The remaining two planes lit out for the south. Our pilot was about out of gas so he had to come back to the base.

Now no pilot, no matter how good, has any right to disperse a squadron of seven fighters. This happened time after time, and we couldn't figure it out. I suppose the answer was that the Arab pilots really didn't have anything to fight for. They were just going through the motions.

Once the B–17's and the C–46's began to arrive we were able to do a little bombing of our own. We used to laugh at the pretty blue uniforms the crews of the American ships arrived in. They were like the ordinary uniforms worn by transport pilots at home, but they had the letters LAPSA on their caps. That meant Lineas Aéreas de Panama Société Anonyme, which was a Panama air line chartered for Central American trips.

LARGER PLANES FROM THE UNITED STATES

This was a dummy company and it bought 10 C–46's in the United States. American volunteers donned the pretty, official-looking uniforms and flew the planes to Mexico City and then to Panama. They stayed in Panama, too—long enough to refuel. They then headed for Israel via Natal (Brazil), Dakar, and Catania (Sicily).

Not all of them arrived. One C–46 crashed at Mexico City because of overloading, killing its crew of four. Another B–17 stopped at the Azores, and State Department officials requested the Portuguese authorities to impound the plane and return the crew to the United States.

Israel's chief enemy was always the combination of the British Foreign Office and our State Department. The Arabs were easy enough to handle, but it was hard to understand or cope with the hatred displayed toward Israel. It was also a mystery to us why the world jumped through a hoop when our State Department cracked the whip.

If it hadn't been for the State Department, the fighting in Israel would have ended long before it did, and hundreds of lives would have been saved. Let me explain that one. Last summer Israel needed ammunition desperately. We shuttled back and forth from Czechoslovakia to Israel as fast as our planes would fly. When we'd reach the limit of our endurance we'd often collapse into bed and sleep for 24 hours.

There was one man, though, who never collapsed, an iron man, Raymond Kurtz, who had been a B–17 pilot during the war. Ray, a New York policeman before he joined the Israeli Air Force, became a legend in the Israeli Air Force. While the rest of us were dropping from exhaustion he kept right on flying. During one stretch of 10 days last September, Kurtz flew exactly 200 hours. figure that out.

And the stuff that Kurtz and the rest of us were bringing in from Czechoslovakia was the only thing that kept the Palmach and the Haganah fighting there in the Negeb. Then it came to an end.

A VISITOR FROM PRAGUE

One day we were all sitting around our shack at the Zatec airport playing bridge. Our planes were all loaded with those wooden boxes marked "glass" or "fragile," and we were waiting for a weather clearance. A pleasant sort of chap—an American—walked into the room and started to talk to us. He said his name was MacDonald and that he was from the United States Embassy in Prague.

We dropped our cards and felt sick. Obviously he'd come to investigate this airport. He knew that most of us were American citizens, and he knew what we were doing.

"I guess we've had it," I said, and MacDonald smiled almost apologetically. It seemed awfully funny to us that he was fighting on one side, and we other Americans were fighting on the opposite side. Anyhow, the next day the Czech Government got a strong request from our State Department to close up Zatec. And the Czech Government meekly obeyed.

Occasionally a plane did make a quick trip into Czechoslovakia and return with a load of supplies, but as a main artery of supply the route no longer existed, and we confined our activities to bombing Arab military positions at Gaza, Rafah, El Majdal, and Falujja.

We usually bombed at night. The Arabs for some reason or other seemed afraid to fly in the dark. The nights were usually clear, and our heavily loaded transport planes would have been sitting ducks for their Spitfires, but they never bothered us. They depended entirely on flak, and sometimes that was pretty good, because they had fine antiaircraft weapons which they had obtained from the British.

A few days after Bob Vickman had got it—he was killed when a defective Messerschmitt he was piloting crashed—my other Los Angeles pal, Stanley Andrews, was killed when flak brought down the Mosquito he was flying.

It was the Pacific all over again. You'd come back from a mission, go in the mess hall to have some coffee and look around rather surreptitiously to see who was missing. There were plenty who didn't come back, and we always hoped they had died quickly. This was after we found out what Arabs occasionally did to prisoners. Two of our men didn't return one night—we found their horribly mutilated bodies a week later.

The bombing we did was hardly in the American Air Force tradition. To begin with, we had no bomb racks. When we got over the target the pilot would yell and the bomb chuckers—that's what we called them—would roll the bombs out of the open door. We usually had to make three runs over the target.

We didn't use bomb sights or the usual aids to accurate bombing we had during the war. When our instruments went haywire we couldn't replace them. Our fleet of bombing planes would have shocked an American Air Force CO.

In addition to a few heavies, we used single-engined Norsemen and Piper Cubs. It was quite a sight to see a little Cub stagger off the runway under the weight of three bombs and a pilot, but they did it every night.

And the war was won. Israel not only had to fight the whole world on the diplomatic front and the five Arab nations on the military front; she had to fight broken-down, inferior equipment. Col. David Marcus, the West Point officer whose memory is now revered in Israel, once explained to me that there never had been a war like this.

"Before we can start a real offensive," he told me, "we have to go out and capture the weapons we need. We start off with Sten guns and ?-inch mortars, machine guns, Bren guns and some ammo. Then we are ready to make a real attack. These boys I command can do more with fewer weapons than any fighters I've ever seen. And they never know when they've had enough."

WAR WON BY MEN—NOT WEAPONS

David Marcus never knew when he had enough either. A few days after I talked to him he was killed. Marcus was right; the war was not won by weapons but by people. Everyone you met in Tel Aviv or Haifa was doing a war job. One night they put a new bomb chucker on my plane. He laughed when I recognized him, I'd seen him the week before behind the desk of a hotel on Hayarkon Street in Tel Aviv.

One day a high-ranking Haganah military commander came to our air base. I asked him the size of the Israel Army. He said, "We have an army of 750,000."

"But that's the entire population of Israel," I said, puzzled.

"That's right," he said calmly.

This was a war for survival and it was too important to be fought only by military men. Everybody old enough to walk was old enough to fight in one way or other. I was with the Israeli Air Force for 9 months, and my admiration for the people of the country grew greater and greater the longer I stayed in the country. They had the same spirit of independence that our pioneers had. They were wise, too, and were not to be fooled by smooth promises.

Russia made a big point of supporting Israel at United Nations meetings, but the Israeli people only chuckled at the transpar-

ent attempt by the Communists to show friendship for the new country.

The people of Israel are the most democratic people in the world. They know what fascism did to millions of their brothers in Europe. They know that thousands had fled communism in Russia, Poland, Czechoslovakia, and Hungary because they wanted to live the life of true democracy which they could find only in Israel. Israel is the only bulwark of democracy in the whole Middle East, and it is our kind of democracy.

The Israel Cabinet includes a Minister of Minorities, whose job is to safeguard the rights of Arabs and other minority groups in the country. As citizens they are guaranteed the same political and economic freedoms given to Jewish citizens of the country. Employers by law must pay Arab workers the same wages paid to Jewish workers. The Cabinet also includes a Minister for Religious Affairs, whose job is to see to it that no one of a minority faith is discriminated against.

Now I'm back home ready to go to work again. Friends of mine say, "You wasted 9 months of your life flying for Israel." I laugh at them. I learned an awful lot in those 9 months. I saw communism in action in Czechoslovakia and did not like what I saw. I saw democracy in its finest form working in Israel and I couldn't help being thrilled at that. I read the Israeli Declaration of Independence which made the country a sovereign nation last May, and the wording of it seemed familiar to me. Then I realized that it was closely patterned after our own Declaration of Independence.

The Communist propagandists like to rant about the decadent democracies and the virtues of the totalitarian state. They forget that Thomas Jefferson wrote the basic rules for a democratic state more than 170 years ago and the rules are still working today. They've worked pretty well for us here at home and they're working well for the newest democracy on earth. This is what I learned in Israel and it had made me a better American and a more fervent believer in democracy than ever. No; those 9 months were not wasted.

Multiple Sclerosis

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. WEICHEL. Mr. Speaker, I am today introducing a bill which I hope may be a step in helping to some day solve one of the mysteries still baffling modern medical science as it has baffled medical men since it was first identified 80 years ago by a neurologist.

The disease is one which respects no one. It is a disease which attacks the healthy. At one time so little was known about it that it was considered so fatal that little or nothing was done by scientists to investigate the cause and cure. At least 80 percent of those affected by the disease become helpless invalids within 5 years.

With an estimated quarter of a million of our people in the United States afflicted by this crippling disease termed "multiple sclerosis"—sometimes referred to as Charcot's disease—people who might otherwise have lived useful and happy lives with their loved ones are doomed to helplessness; they become helpless cripples, wasting away as this disease wrecks their bodies and yet we are powerless as we stand by and unable to cure these sufferers.

With all our great advancements in the sciences, it is my belief that we have the know-how—the brains and facilities to combat this scourge. By properly focusing the sights of medical science upon the disease to coordinate and evaluate findings and results of the research contemplated in such legislation we can some day hope to fortify our medical practitioners throughout the country with the necessary knowledge and help an estimated quarter of a million afflicted people to lead useful lives again and to prevent such occurrences in untold millions more in the future.

Smith Black

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. CANNON. Mr. Speaker, under leave granted to extend remarks, I desire to include the citation conferring the Superior Service Award on Smith Black, of Mexico, Mo., for exceptional service rendered the Farmers Home Administration and the farm families in his administrative territory.

The award was presented at an annual ceremony held yesterday at the Sylvan Theater here in Washington. Only two similar awards were made, the three representing the total number selected from the entire United States.

The citation was delivered by Secretary of Agriculture Charles F. Brannan in the presence of an audience which taxed the capacity of the stadium.

Secretary Brannan presented the parchment certificate accompanied by a silver medal, and as he affixed a service lapel button, said:

To Smith Black, for outstanding leadership and ability in assisting borrowers of the Farmers Home Administration to plan and carry out improved farming methods and business practices which have raised materially their standard of living and secured for them a more stable place in their community.

May I add, Mr. Speaker, that in my considered opinion Mr. Black has contributed more to the prosperity and well-being of the farm families in his administrative territory than all the Governors, Congressmen, and Senators and Federal judges who have served during his incumbency. There are farmers all over that territory who own their homes and farms today—or are well on the way to owning them—enjoying an American standard of living, who otherwise would still be tenants or driven from the land to congested city tenements.

And it should not be forgotten that in promoting home ownership and a productive agriculture he has helped not only the producers of the Nation's food and fibre but its consumers as well.

This annual program, at which are commended those officials from the Department of Agriculture whom the Nation desires to honor, is held each year on May 15, or the nearest working day thereto, the anniversary of the date on which President Abraham Lincoln signed the bill establishing the United States Department of Agriculture, May 15, 1862.

It is an appropriate commemoration of the day and a deserved recognition of important service rendered to American agriculture and to the Nation.

Antidefamation League Cites Truman for Civil Rights

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. MULTER. Mr. Speaker, when I observed the unfounded and unwarranted attack made upon the Antidefamation League as a Communist outfit, as it appeared in the Appendix of the RECORD on May 9, I did not understand what prompted the attack. When I stated the true facts concerning the Antidefamation League to this House on May 11 I still did not know what had motivated that statement. I think that I have since discovered the cause for it. The following article entitled "ADL Cites Truman for Civil Rights" appeared in the May 1949 issue of the National Jewish Monthly, the official publication of B'nai B'rith, which sponsors the ADL:

ADL CITES TRUMAN FOR CIVIL RIGHTS

For his "distinguished contributions toward the enrichment of America's democratic legacy," the Antidefamation League of B'nai B'rith presented President Truman with its annual "America's Democratic Legacy" medallion in a special ceremony at the White House. Last year five distinguished personalities received the award, but President Truman was the sole recipient this year, for "his program to secure full civil rights for all his countrymen."

The presentation was made by Justice Meier Steinbrink, national ADL chairman. With him in the ADL delegation were A. G. Ballenger, national vice chairman; Bernard Nath, Chicago board chairman; Max J. Schneider, another national vice chairman; Edmund Waterman, treasurer of the joint defense appeal; and Benjamin R. Epstein, national ADL director.

In presenting the medallion to the President, Judge Steinbrink said:

"Toward the enactment of the President's civil-rights program, the Anti-Defamation League, as an organization, once more pledges its wholehearted support. Beyond that, however, ADL pledges itself to a program of education that men in this great country of ours may learn to live in peace and understanding."

In accepting the award, President Truman declared:

"I am sincerely grateful to have been selected as the recipient of the America's Democratic Legacy Award. I am aware of the vigorous educational program and the practical efforts by your organization to foster an understanding of democratic rights and responsibilities. Your definition of America's democratic legacy is admirable. It

is indeed a force in the hearts and minds of the people.

"Our goal should be the protection and security that can be given all our people under a civil-rights program designated to meet the needs of our time. Such a program I have placed before the Congress. In the effort to have it translated into law, I shall look forward to the support of organizations such as yours."

Judge Steinbrink also presented to the President the first copy off the press of the ADL's annual survey of anti-Semitism, published in book form by Doubleday & Co., under the title, "How Secure These Rights?"

The same evening, a dramatization based on the book was broadcast over the CBS coast-to-coast network. Called "The Goal Is Freedom," it starred Claude Rains, and dealt with actual incidents involving intergroup relations.

Mr. Speaker, despite all name calling the work of spreading the godly teachings of brotherhood will continue.

Is Arizona Rightfully Entitled to That Much Water?—One Man's Opinion, Based on Physical Fact and Supreme Court Holdings

---

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. MURDOCK. Mr. Speaker, do I believe there is at least 1,200,000 acre-feet of firm or apportioned main stream water in the Colorado River belonging to Arizona and available to her for the central Arizona project? Yes, I am convinced there is at least that amount, which does not belong to any other State, and it is both physically and legally available to Arizona. My present bill, H. R. 934, is based on that assumption—which to my mind is a fact. Such is also the position of Arizona officials and her Representatives in Congress as a reason for their sponsoring identical bills.

Does anyone take a contrary view and deny this? Yes, the representatives of certain water agencies in southern California deny that there is any water available for this Arizona project from the main stream of the river. Furthermore, those southern California officials contend that the question of legal availability of water for the project called for in H. R. 934 is not a matter of congressional determination, but can only be determined by the Supreme Court. Therefore, they sponsored in the Eightieth Congress and again in the Eighty-first Congress different resolutions referred to committees of the House and Senate having the intent of directing a settlement of the dispute between Arizona and California in the Supreme Court of the United States.

Now, some years ago Arizona herself sought to get into the Supreme Court for a settlement, because at that time, which was prior to another kind of settlement that culminated in 1944, it did seem to Arizona officials that litigation was the only proper solution. However, under the circumstances existing then and still existing, it was impossible to get the case squarely before the Supreme Court, and the Supreme Court refused to take jurisdiction.

WHAT HAPPENED IN 1944 BEARING ON IT?

Since 1944 and the culmination above referred to, it is Arizona's contention that the Court has already settled the main part of the dispute which needs to be settled concerning the availability of water for the Arizona project, and now only the enactment of proper legislation by Congress is necessary. In 1944 Arizona through her legislature acted to bind herself through a legislative compact so that no other kind of settlement is necessary. If there be a basis of a legal controversy over the meaning of the law after Congress has authorized the project, then before any money has been spent on the project by way of construction, litigation can begin on the part of either Arizona or California. Competent lawyers say it cannot begin unless or until some such authorization act as H. R. 934 shall have been passed.

I am expressing my own opinion with the best power of reasoning that I have, based on obvious physical facts, together with unambiguous Supreme Court language, to the effect that there is at least 1,200,000 acre-feet of water in the main stream of the Colorado River for this project in Arizona. My contention is that there is more than that amount, of course, but I specify 1,200,000 acre-feet because that is the amount called for in the bill. How do I reason thus? To be valid, we must show that there is at least 1,200,000 acre-feet of firm or apportioned water in the main stream rightfully belonging to Arizona and not belonging to anyone else. Can a valid argument of that kind be made? I assert that it can.

As a basis for our thinking we must understand that the basic law of the river—including the Santa Fe compact of 1922, the Boulder-Canyon Project Act, passed by Congress in 1928, and the required California self-limitation statute passed by the California Legislature in 1929—classifies the water of the Colorado system into two classes. So far as division among basin States is concerned, most of the total flow of the river is apportioned water, and that means apportioned between the upper- and the lower-division States in perpetuity. The second class of water, so far as the division among the States is concerned, is known as surplus water. This second class is small in amount and is only the water in the river over and above the apportioned water.

But it is only a part of the apportioned water to which I now refer, that is, of the virgin flow of the Colorado River at Lee Ferry 7,500,000 acre-feet apportioned from the main stream to the upper division above Lee Ferry and 7,500,000 acre-feet apportioned from the main stream to the lower division below Lee Ferry. I am not referring in this discussion to any water classified as surplus.

It should be said that the water apportioned in article III, subsection (a) of the Santa Fe compact is not all of the water which is apportioned by the compact, but it is this particular part of the apportioned water to which I refer, containing water called for in H. R. 934. I want to show that the 1,200,000 acre-feet asked for by Arizona in H. R. 934, while not all of Arizona's main-stream quota, is to be found in III (a) water. With this understanding, let us see if this part of Arizona's share is legally and physically availab'e.

The compact provides that 7,500,000 acre-feet of apportioned water must be delivered to the lower division States at Lee Ferry. The California Self-Limitation Act restricts California's use of it to not more than 4,400,000 acre-feet of apportioned water. By simple subtraction 4,400,000 taken from 7,500,000 leaves 3,100,000 for division between Arizona and Nevada of the water deliverable at Lee Ferry by the upper basin. According to the Boulder-Canyon Project Act and Nevade's contract with the Secretary of the Interior, Nevada is entitled to 300,000 acre-feet. Subtracting the 300,000 acre-feet from the 3,100,000 acre-feet leaves Arizona's quota of this apportioned water 2,800,000 acre-feet, which is the amount indicated for Arizona by the Boulder-Canyon Project Act of Congress in 1928 and agreed to by California in its Self-Limitation Act in 1929. The Supreme Court has said that no part of this 7,500,000 acre-feet deliverable to the lower-division States at Lee Ferry can be regarded as surplus. All of that 7,500,000 acre-feet is apportioned water. True, the California opponents of Arizona try to make it appear that a portion of the 7½ million acre-feet is surplus, for if it is surplus, California would be entitled to one-half of it. However, on that the Court has spoken in clear and unmistakable language—the Court says no part of it may be considered surplus.

Thus what has been said here shows conclusively that Arizona has apportioned to her in perpetuity more than the 1,200,000 acre-feet of water which she calls for in H. R. 934. This conclusion is based upon the several facts as follows:

First, that amount of 1,200,000 acre-feet is mathematically included in the 7,500,000 acre-feet of water deliverable by the States of the upper division at Lee Ferry, no part of which, according to the Supreme Court, can be considered surplus.

Second, under the California self-limitation statute, naming a maximum of 4,400,000 acre-feet of this same apportionment, California voluntarily precludes herself from the remainder of that apportioned water. Therefore, Arizona may rightfully claim all of it as a gross amount over and above the acknowledged 300,000 acre-feet for Nevada. While there are certain small deductions from the 2,800,000 acre-feet which pure mathematics indicates for Arizona as the third State of the lower basin, it makes 2,800,000 acre-feet a gross amount for Arizona, just as the 4,400,000 is a gross amount for use in California. However, when these recognized deductions are made from the 2,800,000 acre-feet of this main stream water, there is yet more than the 1,200,000 acre-feet rightfully belonging to Arizona as called for in the bill.

This is a brief answer to an important question arising out of committee consideration of H. R. 934. I believe the answer which I have given here, in condensed form, is the answer contained in the testimony already given before the committee in more extended form. In other words, while this expresses my view, I believe it is the same view revealed in the extensive testimony of certain supporting witnesses.

Israel Is Reborn

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following article by Frank Kingdon, which appeared in the New York Post of May 13, 1949:

TO BE FRANK
(By Frank Kingdon)

Twelve months ago five Arab nations stood armed at the borders of Israel. Today Israel stands as a working member of the United Nations.

The events of the year have been like a sharply lighted moving picture unfolding the twisting ways of nations and men. Lights and shadows have been in sharp contrast. In a little country not as big as the State of New Jersey the forces that shape the world have been revealed in undisguised nakedness.

Israel itself has demonstrated a truth as old as the prophets which so-called statesmen refuse to learn. There is one force in the world stronger than any armor and impervious to any artillery. It is a people aroused to liberty and fighting for their independence.

Nations calling themselves great mobilized guns, terror, and invasion to subdue a people called little in their dictionaries of power. They have been shown that there are no great nations except such as are possessed of the spirit which makes them unconquerable. It was not by might nor by power but by an inner strength that Israel prevailed.

In striking contrast with Israel, Britain has demonstrated the tricky ways of empire, the ruthless maneuverings of those who think to manipulate the weak because they believe that some prerogative of superiority is theirs. Bevin has been a trumpeting bully behind whom the wily conjures of Whitehall have smoothly operated to stir strife in the interests of oil profits and military bases.

The people in our State Department who would consider an invitation to a Buckingham Palace garden party as the climax of their careers, the intellectual colonials of Britain and lackeys of our own oil interests, tried to shape our policy to flatter London. Their memoranda were models of hiding intentions within a sparkling robe of phrases.

In contrast to them and greatly to their discomfiture, President Truman saw the struggle of a freedom-loving people as a plain man would see it. They showered him wih documents formally drawn. They argued with subtlety against his simpler insight. He cut through their verbiage and kept his private rendezvous with liberty by recognizing Israel as a Nation.

If Britain could no longer hold our policy in thrall it still believed it could make puppets of the Arab people. But these demonstrated no more than the weakness of mercenaries. As governments they were suspicious of each other. As individuals they fought like men protecting only their own skins. Their valor was less than their vituperation.

The clashing forum of rival interests became the United Nations, showing its weakness when contest bred hesitation, revealing its strength when, regardless of expediency, it became the instrument of armistice and agreement. Israel's flag flying with the others in the United Nations courtyard is now the reminder of the imponderables by which at last, the success of the United Nations itself will be weighed.

History will long remember that a wrong of centuries was righted in our time. The conscience of the world revives since Israel is reborn.

Infantile Paralysis

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Commissioner John A. O'Donnell, United States Philippine War Damage Commission, over Station DZRH of the Manila Broadcasting Co. on Thursday, May 5, 1949:

More than a year ago it became tragically apparent that there was a scarcity of iron lungs throughout the Philippines. At that time several cases of infantile paralysis had developed and respirators were sorely needed as a last hope in the fight for the lives of the victims. One or two lungs were in the Manila area but they were not enough.

Fortunately the people of the Philippines are not often confronted with the dread disease of infantile paralysis that far too frequently leaves those whom it strikes maimed for life and far too frequently claims their lives. But it afflicts rich and poor alike. It knows no class distinction and when its victims need the mechanical respiratory aid that an iron lung provides to help their tired and wracked bodies they require them badly and must have them quickly. The child or adult who requires this device to pump oxygen into his weakened lungs cannot wait for one to be transported from Manila to Cebu or Zamboanga, or to Baguio. His urgency insists that it be near at hand.

Consequently, last year when the scarcity of these devices became appallingly obvious, the Commission determined that at least seven of them should be purchased under an award made to the Philippine Government and, in conjunction with the Department of Health, agreed that they should be distributed to hospitals in Manila and the provinces where they would be readily available to those who might require them.

The award for this vital hospital equipment was only one of many awards that have been made for the general benefit of the Filipino people under one part of the Philippine Rehabilitation Act which created the War Damage Commission. This one part authorizes the Commission to make awards totaling nearly ₱114,000,000 to the Philippine Government for the restoration of war-torn public property. The amount of money authorized is insufficient to pay for all public property damaged. It already has done much to improve conditions generally, however, and when our program in this regard is completed it will have afforded considerable additional assistance.

For example, in the rehabilitation of schools made possible by War Damage Commission awards, educational facilities will be afforded 2,000,000 students. This is particularly gratifying to the Commission, and to the people of the United States whom it represents, when we consider that so many children have been attending classes in the open air, seeking the learning that is the desire of every Filipino boy and girl. Similarly we are highly pleased to know that 2,300 hospital beds will be furnished for the sick, that necessary water facilities for irrigation and household use will be made available for nearly 6,000,000 people, and that some 15,000 or more skilled and semiskilled artisans and laborers will be given direct employment on the projects undertaken in connection with Commission awards.

Manila will have a sorely needed fire-alarm system. Transportation is the lifeblood of any nation and new locomotives soon will pull trains carrying passengers and freight on the Manila Railroad. Quarantine facilities are being restored and improved.

In every province, in every city, and in most municipalities new or rehabilitated public buildings are rising from the ruins of war and the vast majority display a sign or plaque bearing the legend, "Rehabilitation Project Aided by the People of the United States of America under the Philippine Rehabilitation Act of 1946."

The awards made for damaged public property constitute only one phase of the Philippine Rehabilitation Act which was adopted by the President and the Congress of the United States as a manifestation of good will for the people of the Philippines and to express in part our appreciation of our mutual friendship and our mutual war against aggressor nations—or mutual insistence on survival and furtherance of democratic ideals.

The public-property program, however, does not provide the major benefits of the Rehabilitation Act. These are afforded in those sections which deal with the payment of private claims for war damage.

You will recall that the Philippine Rehabilitation Act authorized the appropriation of ₱800,000,000 for the payment of private war damage claims in the Philippines and for the administrative expenses of the Commission necessary to adjudicate and pay them. I stress that these funds were authorized under the act because that basic law which created the Commission did not appropriate any money; it merely authorized its appropriation. That is normal legislative procedure in the United States Congress and each year it is necessary for the Congress to approve an appropriation for every agency's expenditure for the following fiscal year. An authorization for the expenditure of money could be on the statutes for a long time but if Congress did not approve appropriation under that authorization, not one penny, not one centavo, could be spent.

I emphasize these facts because there is considerable misinformation about them. Many people think that the money for payment of private claims, and for public claims as well, has been appropriated in its entirety whereas the Rehabilitation Act merely authorizes its appropriation.

As I mentioned previously, every agency of the United States Government receives an appropriation from the Congress each fiscal year so that it may carry out its functions. It is necessary, therefore, for every agency to send its representatives to appear before the Appropriations Committee of the House of Representatives and the Senate at least once annually, and perhaps more frequently, to substantiate the agency's budget request for the next fiscal year.

Unlike other agencies of the United States Government which have their principal offices in that Nation's Capital, the Commission has its headquarters outside the country in which it functions. For that reason it is essential that members of the Commission go to Washington one or more times each year to testify with regard to the Commission's fiscal needs and to justify its estimates of proposed expenditures.

Several weeks ago I returned to Manila after appearing before members of the House Appropriations Committee with my colleagues, Chairman Frank A. Waring and Commissioner Francisco A. Delgado. At the present time Chairman Waring is in Washington to appear before the Senate Appropriations Committee. Our purpose in testifying before those committees has been to demonstrate to their satisfaction that this Commission will need approximately ₱370,000,000 for the payment of private-property claims and Commission administrative expenses in the fiscal year which begins July 1 and ends July 1, 1950.

The ₱370,000,000 would be a part of the ₱800,000,000 authorized for private claims payments under the Rehabilitation Act. Again, to clarify misinformation, this amount would not be in addition to the original authorization as some people seem to believe.

To date, that is since the Commission was created in the early summer of 1946, a total of ₱350,000,000 has been appropriated for private claims payments and expenses incident to their payment. Incidentally, with regard to administrative expenses, they are fixed by law and not more than ₱24,000,000 may be expended by the Commission for such expenses during its entire life from 1946 to 1951.

When making its request for ₱370,000,000 for the next fiscal year, the Commission predicated its needs on the fact that it is moving at the most rapid rate in its history in the payment of private claims.

It is true that there probably will be some curtailment of the Commission's current rate of processing claims because we have been adjudicating 3,000 claims a day. Many of these claims are for less than ₱1,000 which, of course, is only normal because, of the one and a quarter million claims filed, about 1,000,000 were for less than ₱1,000. At the present time we have processed well over half of the claims of ₱1,000 or less, whereas larger claims, for obvious reasons, have not been adjudicated in comparable ratio. The daily peso volume of ₱1,000,000 per day will continue until the Commission nears the end of its task which probably will be in September 1950, so that all of the agency's affairs can be concluded by the legal dead line of April 30, 1951.

In our appearances before the House Appropriations Committee this year, as on previous occasions, we were given the utmost consideration by the membership. As you are aware, the United States has been faced with the almost impossible task of providing financial assistance and daily sustenance for millions of people in war-ravaged areas throughout the world and the burden has fallen on the United States Congress to appropriate these funds in the most fair and just manner. I do want to stress the fact that the Members of the Senate and House of Representatives with whom I came in contact are keenly aware of the sufferings endured by the Philippine people during the war years and are most sympathetic to the budget requests we have made to aid in the economic rehabilitation of this young republic. You know, I am sure, of the great interest of the President of the United States in your welfare. President Truman has repeatedly expressed his admiration for the Filipino people and has voiced the fervent hope that Philippine economic conditions, aided in part by American financial assistance, will be improved so that this country can continue to stand as a bulwark of democracy in the Orient.

The President and the Congress, I can assure you, are alert to the encroachments of communism in the Far East. Like you, they do not want it to engulf the Philippines. Because of this and because of their feeling of admiration and friendship, I am convinced that the Commission will receive their full cooperation in obtaining its authorized appropriations rapidly and in time to relieve some of your economic plights.

It has been stated repeatedly, and I agree, that the ₱800,000,000 authorized for private claim payments will be insufficient to meet all losses. The 30 percent payments that the Commission now makes on claims approved in excess of ₱1,000 amounts to only about 15 percent of the actual loss sustained by the claimant because present-day costs are three to four times as great as in prewar days. It may be possible for the Commission to increase the 30 percent payment slightly but the final settlement will fall far short of the 75 percent payment contemplated by the act. And it is also true that even if the Commission were able to pay the full 75 percent of the amount of the claims approved in excess of ₱1,000, the claimant would receive only about 37½ percent of his present-day replacement cost because of present-day prices.

We are well aware that payment of the full amount contemplated by the act is sorely needed by those businesses, industries, and agricultural enterprises which contribute most to the Philippine economy. We know that 80 percent of the ₱800,000,000 is being disbursed to claimants whose claims were approved for ₱1,000 or less. But we also know that it is impossible to increase the present percentage payment materially with the ₱800,000,000 authorized for appropriation.

There has been some discussion regarding the possibility that the authorization would be increased. It is not my prerogative to speak for the President or the Congress of the United States in this matter. The taxpayers of the United States are carrying a heavy burden as their country seeks to extend aid to foreign lands. Whether they will be asked to assume additional responsibilities, I cannot say. And I assure you that war-damage payments are derived from taxes imposed on the American taxpayer and not from Japanese reparations as some people erroneously believe. Consequently, it is my conviction that the people of the Philippines should exert every effort to attract private capital here for the development of those commercial enterprises which would enhance their opportunities for economic stability based on private industry, trade, and commerce.

Much has been said of the failure of American capital to make extensive investments in the Philippines. Many of the reasons for the reluctance on the part of American investors are readily apparent. Capital will come only when it can be assured of equal treatment, equality of enterprise, and above all—full assurance of adequate safeguards for peace and order.

In this connection, labor and capital should go forward together hand in hand, with a mutual understanding of each other's problems. Manifestly, since the anticipated foreign capital has not been forthcoming, sacrifices will have to be made since it will be up to the present industries, through expansion, to make material dents in the already large surplus market of labor. Industrial strife should be held to a minimum. Needless to say, business is so steeped in endeavoring to finance its rehabilitation to a point approximating prewar production that it appears to me to be in a very poor position to meet round after round of wage increases or the constant obstruction of labor disputes.

While seeking to attract additional private capital from foreign lands, every possible means should be utilized to put the money that is currently available in the Philippines to work. It is obvious that existing basic industries and agricultural enterprises should be developed as rapidly as practicable to bolster this Nation's economic position. Putting off until tomorrow what can be done today reaps no benefits for man or business.

In this regard I would like to point out that many claimants waited until the last few weeks of the 1-year filing period to submit their claims. Many of them are now vociferous in their insistence that the Commission should promptly adjudicate their requests for compensation although they were warned throughout the entire filing period that claims, insofar as practicable, would be processed on a first-come first-served basis. Furthermore the Commission has encountered claimants who are reluctant to forward to it with reasonable promptness the papers and documents requested by its officers and staff members so that they might expedite settlement of their claims.

The Commission is well aware that many records were lost and that there is difficulty in proving the existence of property claimed in numerous instances. Consequently it has been accepting much less evidence than ordinarily would be required in a court of law or court of claims. It has endeavored from the outset to match the good faith of each and every claimant. Nevertheless, if claimants unnecessarily hinder the machinery by which it operates they must bear the consequences. Unless they cooperate by expeditiously forwarding any and all papers, documents, and other data of probative value as requested, settlement necessarily must be made on the basis of what is before the Commission. The detrimental effect on claimants of such settlements should be obvious to all.

At the present time we have processed nearly two-thirds of the 1,250,000 claims presented. We have channeled into the Philippine economy more than ₱300,000,000 of the ₱800,000,000 authorized for private claim payments. Of the amount expended, nearly ₱30,000,000 has been paid to claimants whose claims were for more than ₱50,000 and a considerable portion of this money was disbursed to basic industries which contribute to employment and other phases of the economic structures here. The small claimants, that is those whose claims were for ₱1,000 or less, have received more than ₱180,000,000. Big business and tao are receiving equal consideration before this Commission and will receive it as long as the agency continues its functions.

We have endeavored to protect all legitimate claimants against the unfair and unscrupulous practices of the few and I would be remiss in my duties if I did not take this opportunity to sound a warning to prospective claimants under the War Claims Act of 1948. As was pointed out in an editorial recently published in a morning paper, certain unscrupulous persons are allegedly representing that this law covers persons other than American citizens. Nothing could be further from the truth.

In this connection, please be advised that the War Claims Act of 1948 was passed by the American Eightieth Congress. This act sets up a War Claims Commission, consisting of three members to be appointed by the President. At the present time, there is pending before the present session of the Congress appropriation requests for this agency of the Government. However, the President as yet has not, I repeat has not, appointed the members of this Commission. As soon as these members are appointed, I am certain, one of the first things they will do is to prescribe rules and regulations including a time for the filing of claims as the law provides. In the interim, do not be

fooled. Wait until you get the authoritative word from the Commission itself.

The President of the United States and the Congress have been assured repeatedly that we would conclude our task by April 30, 1951. Those promises will be kept. And when the Commission's work is finished and its funds for private and public claims have been disbursed, it is our fervent hope that we will have aided the people of the Philippines in the rebuilding of their country so that they may continue on their path toward their rightful prominence among democratic, free, nations of this world.

Defense of Western Provinces of China

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am including the following article by Constantine Brown which appeared in the Washington Star on Monday evening, May 16, 1949.

The State Department's policy of waiting until the dust has settled in China is in fact a do-nothing policy. It is a policy which dangerously jeopardizes American national security. I hope that the State Department will soon abandon its defeatist attitude and will submit to the Congress an affirmative practical program for action. To do nothing is to help the Communists. If the Communists win the hot war in China we may well lose the cold war in Europe. If we lose the cold war we shall have war.

The question is not, Can we afford to aid China? It is, Can we afford not to?

The article follows:

CHINA NATIONALISTS SEEN ABLE TO DEFEND FIVE WESTERN PROVINCES WITH UNITED STATES AID

(By Constantine Brown)

If the State Department were willing, a Chinese Nationalist resistance area could be maintained even today against the Communist forces which are sweeping from the Yangtze River toward the borders of Indochina, Burma, and Malaya.

Unfortunately, however, for reasons clear only to the high priests of our diplomacy, there is not the slightest indication that anything toward that end will be done, although the National Security Council, Congress, and our top-ranking strategists, deeply concerned over the strides of Russia's puppets in the Far East, favor such an ente prise.

We have won half a city through the lifting of the Berlin blockade but are losing a whole continent in Asia.

A documented study of what could still be done in China has been worked out with great care. The provinces of Ningshia, Kansu, Tsinghai, Szechwan, and Yunnan, representing a territory about half the size of the United States, are still under the control of strong non-Communist leaders. This area offers an ideal defensive position, which could stand against any Communist attack if it were provided with assistance by the United States.

COST UNDER $100,000,000

A careful examination has brought the estimate that less than $100,000,000 would be needed to bolster the present military forces and the economy of that area over a period of 2 years.

The Japanese made desperate efforts for several years to penetrate and conquer the five provinces where Chiang Kai-shek found refuge with his government during the darkest period of the Japanese occupation. Although the Tokyo warlords put 27 divisions, equipped with modern war material and a sizable number of planes into the battle to exterminate the rump Chinese Government, the area's natural defenses—a desert as large as Texas and impassable gorges on the upper Yangtze—made their efforts fruitless.

In his reports on the allied victory in the Far East, General MacArthur pointed out emphatically that if it had not been for the Nationalist armies, fighting from this natural fortress, the Japanese could have had at their disposal, at the most critical time of the campaign against Australia, divisions which were being employed against Chiang. The results could have been pretty serious for the Australians and the Allies who were fighting with them.

INDOCHINA SUPPLY ROUTE

Our military men admit that neither Canton nor other portions of Southern China can be held successfully by the demoralized Nationalist troops, which the Communists have kept on the run for months. But the troops in the five western provinces have not taken an active part in the recent Nationalist disaster. They have been guarding those provinces behind the screen of their impassable desert and gorges.

The sending of some military equipment—artillery, light arms and ammunition—together with fertilizer and seed for next year's crops could make that area an almost impregnable bastion, according to those who have made a thorough study of the situation.

The cost over a period of 2 years would represent less than 2 weeks' expenditures under the European Recovery Program. The goods sent to China can be transported by rail from Indochina. In the event that Russia's Chinese stooges reach the confines of that French possession and succeed in interrupting the supply line, a miniature airlift could do the job at very small cost.

This plan has merit in that, besides requiring a very modest outlay of money, it would involve only a handful of officers from the United States Army, principally specialists in transportation and supply.

For the time being, however, the State Department, waiting for the dust to settle in China and for British de facto recognition of the Chinese Communist regime, maintains a do-nothing attitude.

Fighting the Spenders

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Palladium-Item of Richmond, Ind., for May 13, 1949:

FIGHTING THE SPENDERS

Budget balancers in the Congress are fighting the spenders.

Backing up the demands of Senator BYRD, Democrat, Virginia, for cuts in Federal expenditures are Senator GEORGE, Democrat, Georgia, and Senator TAFT, Republican, Ohio.

Senator O'MAHONEY, Democrat, Wyoming, is opposed to big cuts in Federal expenditures. He is supporting President Truman's proposals for more and more spending.

The President originally estimated a deficit of $900,000,000. But economy-minded Members of the Congress say the prospective deficit is nearer $2,250,000,000.

In the face of this deficit, the President has outlined new spending proposals that will call for a tax increase of $4,000,000,000.

The New Deal spenders do not worry about deficits nor about tax increases. They still believe in the old Roosevelt theory that there is no limit to the amount of money the Government can spend.

They are not worrying about the plight of the people who have to raise the money. Neither are they worrying about the threat to the soundness of the Government's financial position.

Members of the Congress who insist on a balanced budget are serving their country well.

They are convinced that less spending is the proper way to balance the budget. They see no need to boost taxes when Federal expenditures can be cut without damaging essential services.

Concordia College Choir Will Give Concert in Washington, D. C.

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to call to the attention of my colleagues the forthcoming concert by the Concordia Choir from Concordia College, Moorhead, Minn., at Constitution Hall in Washington, Wednesday evening, May 25, 1949.

This choir is one of the outstanding a capella musical organizations in America. Its many appearances throughout the Midwest and West have evoked the acclaim of noted critics wherever the group has been heard. Its director, Mr. Paul J. Christiansen, is the head of the music department of Concordia College and is recognized for his fine work with young people. In his own right he is a contemporary composer of note. His scores are standard works for many choral groups.

Concordia College is one of the leading Lutheran institutions of higher learning in the United States. Its student body is composed of young people mostly of Norwegian descent from the States of Minnesota, North Dakota, South Dakota, and Montana.

The choir is en route to Norway for an 8-week concert tour and its Washington appearance will be one of the final concerts before the group embarks at New York on May 28 on the Norwegian-American liner *Stavangerfjord*. This tour is truly a good-will tour of international significance as these young people will sing 31 concerts in the native land of their forefathers, and will visit with many close relatives of their families. The inspiration for the trip is a true

spiritual and cultural bond between this segment of our Scandinavian population and their native land.

The Washington concert is being sponsored by the Greater Washington Area Alumni Association of Concordia College. Members of Congress of Scandinavian descent and the entire Minnesota congressional delegation have joined the alumni as cosponsors of this event.

May I urge all of my colleagues to encourage this group of fine young people by attending their concert at Constitution Hall the evening of May 25.

Saving the Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. CHARLES A. HALLECK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. HALLECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of May 17, 1949:

SAVING THE TAFT-HARTLEY ACT

Several visitors at the White House have come away with the impression that President Truman intends to fight to the last ditch for his labor bill—a bill that is already buried beneath the adverse votes of the House of Representatives. Their impression coincides with Mr. Truman's own recent comment to the effect that there will be plenty of time in his 4-year term in which to make good his pledge to labor. The impression grows that the President recognizes a vested political interest in the Taft-Hartley Act and would be loath to lose that seeming advantage by the enactment of a less controversial labor law.

The White House explains that the President's letter to his "old friend," A. F. Whitney, president of the Brotherhood of Railway Trainmen, was not a slap at Speaker RAYBURN and other administration leaders who are trying to produce a labor-management relations bill that will have some chance of being enacted. Typographical errors in the letter had made the President seem to strike out at the "compromisers," although he intended to strike only at their "compromises." That may in some measure soothe Mr. RAYBURN'S feelings, but the explanation leaves the President clinging as vigorously as ever to the carcass of a dead policy.

"I am in the same frame of mind you are," the President wrote to Mr. Whitney, "that it is much better to go down fighting for what is right than to compromise your principles." Those who remember the railroad strike of 1946 are doubtless a little puzzled by the spectacle of these two men standing shoulder to shoulder on a matter of great principle. For the sake of these bewildered citizens the President would do well to let the people know what principle he is talking about. We had supposed that the issue was simply one of getting on the statute books a law that would be fair alike to labor and management; that would promote good relations between them and aid them in the settlement of their disputes. To get such a law, it is now unmistakably clear that the administration's one-sided bill must be discarded and a fresh start made.

Even the AFL and CIO now agree that some compromise will have to be made. Congress simply will not revert to the old discredited idea that, while labor is protected against the abuses of management, management and the public must not be protected against the abuses of organized labor. The inevitable consequence of Presidential adherence to this shabby principle will be to keep the Taft-Hartley Act on the books. Is that really his purpose? Undoubtedly the Taft-Hartley Act did yeoman service for Mr. Truman in the last campaign. Is he now conserving it as the best possible issue to be trotted out in 1952 and possibly 1954? That would be a harsh conclusion. Yet Mr. Truman ought to see that it is a conclusion which will and must be drawn if he persists in a policy that will defeat any reasonable modification of the maligned labor law.

Monopoly Sidetracked

EXTENSION OF REMARKS
OF
HON. FRANK FELLOWS
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. FELLOWS. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following editorial from the Bangor (Maine) Daily News of May 9, 1949, entitled "Monopoly Sidetracked":

Congress has debated the question whether labor monopolies are to replace freedom and after a series of frantic jockeyings, has decided against it—temporarily, at least.

That, in substance, was the result of Wednesday's recommittal to committee by the House of Representatives of the Wood bill which would have replaced the Taft-Hartley Act.

It seems to make little difference what original bill is introduced to supersede this bug-a-boo to union racketeers, for amendments have been added to make it a reasonable facsimile, if not an identical twin to the act now on the books. That would lead to the natural conclusion that Congress sees nothing wrong with the act itself, but with the sponsorship. The Eighty-first Congress said in substance: "Give the purposes of the act Democratic sponsorship and we'll give it our blessing."

But, regardless of the outcome, the end of the controversy will be reached only in infinity.

This Congress, like every other Congress, faces constantly some political or industrial or labor or other group striving for monopoly power and advantage over the inarticulate unorganized mass known as the "peepul." They will not organize to defend their freedom, so it is being taken away from them.

For example, the Wagner Act granted unlimited power of monopoly to one group over the electorate. That was the first time in our history that a group was given power legally to organize a closed shop that determined who could work and when and at what price and the amount of tribute to be paid for the privilege.

No other group of citizens had a legal right to conspire in concert on an industry-wide basis to strike and commit violence to maintain and fix prices and destroy absolutely all competition. No group had ever before claimed legally the power to endanger and render helpless the whole public.

At common law such claims of power were held to be against the public interest and illegal. There was no such thing as the right to strike in such concert as to amount to a studied conspiracy against the public.

The right to quit work was obvious in a free society. But the right to strike in concert and use violence to stop all opposition or competition, so that the public had no choice but to submit to terms, was unthinkable in that it constituted an arbitrary, evil monopoly. It was a crime to strike against society.

Such madness and crime flourished for 13 years after the Wagner Act that the Taft-Hartley Act, or the new Labor-Management Act, became inevitable in 1947.

But the labor dictators want their monopoly power returned to them under the Wagner Act, which the Taft-Hartley Act took away. The fighters for freedom in Congress have objected. They point out that after 16 months of freedom and destruction of the evils of monopoly, production of food and shelter has risen and strife and crime in labor-management relations has been cut in half.

Freedom to work or not to work has been restored to the individual. He suffers from much less tyranny from gangster bosses. He votes in secret once more in the management of union affairs.

These rationalists in Congress contend that if labor monopoly is restored to industry, it will also immediately monopolize the political power. In fact, to grant such power as the restoration of the Wagner Act would give to labor dictators is to acknowledge in effect that they have already taken over political power.

It boils down to the question whether they are to rule manufacturing and transportation by the closed shop, strikes and violence, and to fix prices and wages by compulsion. If they have the power now to do that, the next step must follow in the nature of things. They will fix rents and exploit the little property owners.

They will build houses at taxpayers expense and rent to themselves at half price. They will compel the farmer to grow food at prices set by them. And the miners, doctors, lawyers, teachers and preachers, big- and small-business men as well, will render their services under the control and compulsions of the Government that will be run in the same way the monopoly power of labor runs its affairs.

It is not fantastic. It is certain as the labor socialist monopoly of political power, British variety. If the Labor Socialists now in Congress working for repeal (and there are well over a hundred of them) succeed, their number will increase.

But, for the moment at least, the House has shown itself of sterner stuff.

It's now the Senate's turn to show its mettle.

Why the Field Day?

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I place in the RECORD an extract from the weekly publication, the Machinist, wherein it is forcibly noted the attitude of the press in its treatment of the recommittal of the labor bill. The article follows:

WHY

The daily newspapers are having a field day reading meanings into labor's defeat in Congress last week.

Certainly, every workingman should know the answer to the $64 question: How come a majority in the new Congress which we elected last fall would vote for a bill written by the same union-hating crew that wrote Taft-Hartley?

It's a fair question. We think the answer ought to be given straight away without any quibbling. We lost that important vote on Taft-Hartley because labor doesn't have enough friends in this new Congress. A switch of eight votes would have changed the verdict. Two years ago, we had less than 100 friends in the House of Representatives. We couldn't even muster the one-third vote necessary to sustain President Truman's veto. Today we have 203 friends willing to stand up and be counted.

We can get those additional votes if we get to work now supporting our friends and lining up some strong candidates to replace our enemies in 1950 when every Congressman will be up for reelection.

FEPC Proposals

EXTENSION OF REMARKS
OF
HON. LAURIE C. BATTLE
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. BATTLE. Mr. Speaker, a few days ago I testified before the Labor and Education Subcommittee in opposition to FEPC legislation. The Birmingham News has written an excellent editorial on this important issue and I ask unanimous consent to include it in the RECORD so all Members of the House of Representatives may have the benefit of this enlightened analysis. I am most appreciative of the kind words relating to my testimony.

THE FEPC PROPOSALS AGAIN

The FEPC issue, unhappily, again has come to the front in Washington. A House labor committee has opened hearings on nine bills directed against discrimination in employment on account of race, religion or color.

There seems very little chance that any legislation of this kind will be passed at this session of Congress. Sentiment among the lawmakers apparently continues to be against setting up a fair employment practices commission with compulsory powers. It is plain—as polls and other indications have shown—that there is no strong demand among the people as a whole for the enactment of such legislation.

Compulsory powers for a Federal body to use in local situations certainly would lead to an intensification of the problem of discrimination.

State and local groups working on a voluntary, advisory basis conceivably might do considerable good in this complex field, although even such programs would have to be very carefully conceived and executed in order to avoid an intensification of minority tensions.

Representative BATTLE, testifying at the hearing, said that the delicate problem of race relations must be met by enlightened action from within—not by coercion from without. Legislation having to do with the problem, he maintained, should be local in origin and spirit, grounded in the good will of the people who are to carry it out. There is much of reality and force in that position.

How much can be done by legislation of any kind to overcome injustice against members of minority groups seeking economic opportunity and betterment is questionable. This paper does not believe that justice or freedom would be well served by an FEPC law which would have the effect of forcing employers to hire particular persons.

Hearings on legislative proposals are in the line of regular and proper procedure. This issue will now get a good verbal going-over, as it has in so many other discussions. But the Truman administration will be wise, in our opinion, to avoid in this instance again, centering too much of its attention on a very widely and strongly opposed proposal virtually certain to fail of passage.

General Pulaski Memorial Day

EXTENSION OF REMARKS
OF
HON. CHESTER C. GORSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. GORSKI of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

BOARD OF SUPERVISORS,
COUNTY OF ERIE,
Buffalo, N. Y., May 11, 1949.

The Honorable CHESTER GORSKI,
House of Representatives,
Washington, D. C.

MY DEAR MR. GORSKI: We are forwarding for your consideration a certified copy of a resolution passed by the Erie County Board of Supervisors at their meeting on April 12, 1949.

Very truly yours,
ALFORD J. FARLEY,
Deputy Clerk of the Board.

STATE OF NEW YORK,
BOARD OF SUPERVISORS OF ERIE COUNTY,
Buffalo, N. Y., May 10, 1949.

To Whom It May Concern:

I hereby certify that at a session of the Board of Supervisors of Erie County, held in the county hall, in the city of Buffalo, on the 12th day of April A. D. 1949, a resolution was adopted, of which the following is a true copy:

"Whereas a resolution providing for the President of the United States of America to proclaim October 11 of each year as General Pulaski's Memorial Day for the observance and commemoration of the death of Brig. Gen. Casimir Pulaski is now pending in the present session of the United States Congress; and

"Whereas the 11th day of October 1779 is the date in American history of the heroic death of Brig. Gen. Casimir Pulaski, who died from wounds received on October 9, 1779, at the Battle of Savannah, Ga.; and

"Whereas the State of New York and the greater portion of the remaining States of the Union through legislative enactment designated October 11 of each year as General Pulaski's Memorial Day; and

"Whereas it is fitting that the anniversary of this day be commemorated with suitable patriotic and public exercises in observing and honoring through commemoration of the heroic death of this great hero of the Revolutionary War; and

"Whereas the Congress of the United States of America has by legislative enactment designated October 11, 1949, to be General Pulaski's Memorial Day in the United States of America: Therefore be it

"Resolved, That the Board of Supervisors, County of Erie, State of New York, earnestly urges the Congress of the United States to pass and respectfully requests the President of the United States to approve the General Pulaski Memorial Day resolution now pending before the United States Congress; and be it further

"Resolved, That copies of these resolutions be transmitted forthwith by the chairman of the board of supervisors to the President of the United States, to the Presiding Officer of each branch of Congress, and to the Members thereof of this county."

Attest:

ALFORD J. FARLEY,
Deputy Clerk of the Board of Supervisors of Erie County.

American Freedom

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include the address I delivered last Sunday at Worcester, Mass., on the occasion of the city's first observance of I Am An American Day The ceremony was sponsored by the Worcester Veterans Council and took place on the city hall plaza.

The address follows:

It is a real honor and pleasure for me to return to my home city, from the Nation's Capital, and take part in this program today.

On May 3, 1940, by resolution of the Congress of the United States, and a proclamation by the President, the third Sunday in May, of each year, is set aside as I Am An American Day.

This Sunday, May 15, 1949, marks the time for us as Americans, whether native born or naturalized, to express particular appreciation of our country, even while we go about that most important task of improving it.

Just prior to World War II, when the rights of human beings almost the world over were being subjugated to the will of dictatorships, a few public-spirited American citizens fell upon the idea that there should be a day designated in this country when special attention should be directed to the rights and duties of our citizens.

It was thought appropriate that those who had earned the privilege of full suffrage, either by becoming of age or through naturalization during the preceding year, should be honored, and, at the same time, be made conscious of their national responsibilities.

So, this year the President has called upon the Governors of all States to proclaim, "I Am An American Day," because as he says, "The strength of our Nation lies in unity of all of our people of whatever race, creed, culture, or national origin—a unity that can be built only upon a full realization of the worth and meaning of American citizenship."

As you well know, there is an element in the world today that propagandizes us as a Nation of hypocrites who profess belief in human rights, while denying them in practice.

You and I know that this accusation is untrue, because we Americans not only believe in the principles underlying human rights, but we do indeed practice them in the highest measure of any place on this globe.

Although we enjoy the greatest freedom of any people, we must not become so accustomed, or so lethargic in that freedom, that we take it as a matter of course.

To really appreciate our freedom, we should pause on this day to consider how desperate we would be if that freedom were suddenly taken from us.

How would you feel if, without warning, your right to speak out was denied to you?

If your right to worship God was suppressed; if your right to assemble peacefully, as we are now, was interfered with by security police?

How would you take it if you were not permitted to supervise the education of your own children, or to change your job; to own property or a business, or, if in the event you were accused of a crime, to have a speedy and fair trial by jury? How would you regard the invasion of your home without a warrant or strict censorship of radio and press by the state; or the presence of dictators' spies in your office, your factory, your farm, your school, your church, and even your home.

Nothing like this is happening in the United States because American principles forbid it, and American practice is sufficiently in accord with our principles to make it impossible.

We have a great country and we should be grateful to God for it.

In the face of so much Communist propaganda designed to make us disparage all things American, we need on this day, the encouragement which arises from realizing how mightily America has fought for human freedom in the past, and how bravely and effectively America fights for freedom in this living present.

This is a time for rebirth of American patriotism; a time to protect our inalienable rights of life, liberty, and the pursuit of happiness against the designs of communism; the time to esteem the sacrifices and the triumphs of the patriots who have gone before us; to acclaim the good in America which lightens our day; a time to prepare the way for that greater America, which, by God's grace, shall be hereafter.

A relentless conflict of ideologies seeking to gain mastery over the minds of men rages in the arena of world thought and action today It has never been more true than now that eternal vigilance is the price of liberty.

The spirit and purpose of I Am An American Day should not be permitted to subside with the conclusion of a formal celebration. The force, power, efficacy, and virtue of a democracy, as a living and dynamic force at work, must be our answer to every atheistic philosophy which seeks to overthrow our system and supplant our way of life.

Americanism means many things, but it is most a link that ties together upward of 140,000,000 people. It is a way of life that can be found in no other place on this universe. It is something in which we as a people have believed devoutly ever since we were a Nation born of sacrifice for an ideal.

Men of all creeds and colors have died for it in costly conflicts, and now, lest it be cast aside for want of champions, unless it be adulterated by subversive infiltration, let there be on this day of observance of the priceless heritage of our citizenship a voluntary, spontaneous outpouring of loyalty by all of our people.

Everything that has made this country a haven for the downtrodden and all of the hope for a future of continued freedom in the world are symbolized in those glorious words—I am an American.

The Escape of Gerhart Eisler

EXTENSION OF REMARKS
OF
HON. MONROE M. REDDEN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. REDDEN. Mr. Speaker, yesterday on the floor of the House several Republican Members criticized the Attorney General because of the escape of Gerhart Eisler. I think this criticism is unjustified and that the motive is purely political.

These critics knew that the Attorney General insisted that Eisler be required to give bond in the sum of $100,000 instead of $23,500, as required by the court. They knew also that the Attorney General insisted that aliens of this character be not allowed bond at all, and that they should be required to remain in jail until disposition of the charges pending against them.

What more could an alert and competent Attorney General do? He certainly cannot be expected to place an FBI man on the trail of every person charged with a crime who is released on bail. The fact, however, that he did not do this moves some to criticize the Attorney General.

When a person is charged with a crime and gives bail for his appearance, the United States Supreme Court has held that the defendant is thereby released to the custody of his bondsman. He is not subject to arrest on the same charge again, or for the purpose of giving an additional bond unless orders to that effect are issued from the proper court.

The evidence in this case clearly shows that the Attorney General fully carried out his duties, and that his critics blame him for the escape of Eisler because the Attorney General happens to be a Democrat.

Curtis Calder

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Buffalo (N. Y.) Courier-Express of May 17, 1949:

DREW PEARSON'S WASHINGTON MERRY-GO-ROUND

WASHINGTON.—Today will be unfolded the inside story of why Curtis Calder, tall, handsome head of giant Electric Bond & Share, delayed 60 days in accepting President Truman's bid to be Secretary of the Army.

It will be unfolded before the Securities and Exchange Commission in what on the surface may appear to be humdrum hearings, but which beneath the surface, means mil-ns in dividends to stockholders.

Beneath the surface also lurks the most important economic question placed before either F. D. Roosevelt or H. S. Truman. In fact, it goes to certain root differences between Roosevelt and Truman.

In 1932 Roosevelt picked the big banks and utilities as his principal target of economic attack and, of them, Electric Bond & Share bore the brunt of battle. After election, F. D. R. made good on his campaign promises, and despite murderous pressure from big business lobbies, he got Congress to pass the Banking Act of 1933, the Securities and Exchange Act of 1934, the Holding Company Act of 1935, and the Investment Company Act of 1940.

Not only did F. D. R. put these laws on the statute books, but he appointed his ablest men to enforce them—Justice William O. Douglas, now of the United States Supreme Court; Justice Ferdinand Pecora, now of the New York Supreme Court; Leon Henderson, James M. Landis, and Justice Jerome Frank, of the United States Court of Appeals.

The company which fought hardest against these laws, especially the Holding Company Act, was Electric Bond & Share, which took to the Supreme Court almost every SEC move to protect small investors.

Then came the administration of Harry Truman, and F. D. R.'s crusading policy was changed almost overnight when Truman selected the head of the corporation which so bitterly fought Roosevelt, Curtis Calder, to be Secretary of the Army.

Actually Truman continues to be the great advocate of public power—at least on paper. But as in so many other cases, Truman's selection of personnel undercuts his policy. For, as Secretary of the Army, Calder would control the Army Engineers, who build the big dams, and who swing powerful influence against Government power projects.

Reasons for Truman's sudden reversal of Roosevelt policy by selecting Calder for this vital post probably were:

1. Calder is the intimate friend of the big investment banker, Floyd Odlum, largest contributor to the Truman campaign fund, and head of the world's largest investment trust—the Atlas Corp. Atlas has long dominated Electric Bond & Share, while Odlum served as its attorney and vice president. Odlum's motto is: "If you can't lick 'em, join 'em"; and he has maneuvered to put his men in various key spots.

2. Odlum's Consolidated Aircraft had paid a legal retainer to Louis Johnson and kept him as a director before Johnson became Secretary of Defense. Johnson is sometimes naive and superfaithful to his friends.

Whatever the reasons, all you have to do is read the records of the Federal Trade Commission to see how far Harry Truman strayed from the policies of the man who made him.

FTC records contain chapter and verse on Calder's activities. They tell how Calder, then head of Texas Power & Light, led the Power Trust propaganda drive in the Southwest. They tell how Calder was the first utility executive to advocate lining up school teachers to promote the utilities. (Later the Power Trust even subsidized professors and tried to eliminate textbooks which failed to laud the utilities.)

Calder delivered talk after talk before schools and civic groups in the Southwest, extolling the great blessings of utilities and the evils of municipal ownership. He did such a good job that he was promoted to be president of American & Foreign Power (1927–44), then went on to head up the parent company, Electric Bond & Share.

What Curtis Calder runs up against before the SEC today is a battery of irate stockholders who point out that American & Foreign Power has defaulted on both first and second preferred stock dividends. In addition, it hasn't paid dividends on common stock since 1930.

As a result of these defaults, a United States district court in Maine recently ordered the SEC to hold a hearing and listen to stockholders' complaints. At first the SEC had appeared loath to do this—possibly because Truman had listened to Boss Ed Flynn of the Bronx and appointed certain friendly Democrats to the SEC. But faced with a court order, the SEC is now very much on the spot.

If it takes favorable action for the stockholders, and against Calder and Odlum, then the SEC may incur the ire of a gentleman who doesn't relish opposition to his candidates for office. (Witness his stubborn defense of Mon Wallgren.)

What happened was that Electric Bond & Share proposed floating a $35,000,000 bond issue to reorganize American & Foreign Power.

The reorganization was opposed by some stockholders, some of whom claimed this was merely the old game of borrowing money to pay dividends.

At first, the courts sided with the company, and against the stockholders—until something unexpected happened. The big bank and insurance companies refused to buy the new bond issue. Also the once "sucker" public shied away from buying. Result: American & Foreign Power went into default on dividends on both first and second preferred stock, causing the United States district court in Maine to reverse itself and order the SEC to reconsider the entire case.

That is why a battery of lawyers for stockholders and utilities has descended on Washington, and why some of Truman's biggest campaign contributors will be in the spotlight during the hearings.

Infantile Paralysis

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Manila Bulletin of April 30, 1949:

INFANTILE PARALYSIS

A malady that strikes with a certain amount of fury, attacking children and adults alike, is destined to find itself somewhat checkmated in the Philippines. Importation of seven iron lungs, to be distributed to various hospitals in the archipelago, will lend a ray of hope to those whose loved ones are threatened with death from polio.

Infantile paralysis comes into a community without fanfare or advance heralding. It just appears, and before the community realizes its presence children, and frequently adults, are taken ill, some to be crippled for life, some to be claimed by death.

It is a mysterious malady, and has baffled science over these many years. There have been found ways and means of arresting the disease, and of protecting children from its extreme ravages. Its death toll in America is not as great as formerly. Much discussion has been passed around, from scientific centers to the common walks of life, as to causes, remedies, and all that, but medical science is still looking for the complete answers.

Polio in America makes its attack during the hot summer months. These are June, July and August. In 1948 the opening of schools was postponed many weeks beyond the regular opening dates, because of the persistent hanging-on of polio. When polio epidemics hit various States, or communities, the American Red Cross sends out the call for special nurses. Polio centers are set up, and the best in medical science and in nursing are brought forward to combat the malady.

Bringing the iron lungs or respirators to the Philippines is a step in the right direction in saving young lives, and the War Damage Commission may be thanked for recognizing this need and of taking steps to meet it. And it is natural that all health organizations and health authorities in the islands will be as appreciative as the boy or girl who may be fated to use one of the lungs.

Child Health Bill

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. BURNSIDE. Mr. Speaker, the school-health bill recently passed by the Senate would make a great contribution to the health of our Nation. Providing for examinations of school children between the ages of 5 and 17 will allow many diseases and physical handicaps to be discovered early, when it is easiest to cure them. But limiting the application of this bill to children attending school will eliminate some of the ones who need the service the most—children who are not attending school because of some illness or handicap. Examinations will often prove that some simple medical treatment will make it possible for these children to return to school and live normal, useful lives.

For this reason I have introduced a bill to apply the benefits of S. 1411 to all children between the ages of 5 and 17.

A similar plan was used by West Virginia when my secretary, Maj. Francis Turner, was director of the department of public welfare of that State. I include here a letter from Mr. Harry L. Flournoy, associate managing editor of the Charleston Gazette, Charleston, W. Va., and a copy of an article in the Literary Digest of January 18, 1936, which explain how the plan worked:

MAY 7, 1949.

Hon. M. G. BURNSIDE,
House of Representatives,
Office Building, Washington, D. C.

DEAR SIR: It comes to my attention that your right-hand man, Maj. Francis W. Turner, is interested in getting part of the $35,000,000 in Federal aid to States for examination of school children used in restoring the sight of blind children.

During 1938, when Major Turner was director of the West Virginia department of public welfare, he put through a project for blind destitute children of the State that was the most startlingly successful thing I have ever heard of. I have mailed him copies of two news stories of the time that cover the details. Please by all means read them carefully. Every word in them is authentic.

Major Turner gave sight to 802 out of some 900 children examined. The cost to the State was less than $10,000. The economic value of the sight of these children was over $27,000,000.

You could do no finer thing than back Major Turner in promoting through Congress and other agencies a similar project covering the whole United States. Of course it would require your organizing influence back of it.

Every success to both of you.

Very truly,

HARRY L. FLOURNOY,
Associate Managing Editor, the Gazette.

[From the Literary Digest of January 18, 1936]

GIFT OF VISION TO BLIND

The new year brought a larger measure of happiness for 802 destitute children of West Virginia than they had ever hoped to see. They are the fortunate ones to whom sight has been restored through the energy of the State department of public welfare, headed by Maj. Francis W. Turner, and the charity of doctors, optometrists, clubs, courts, and the junior league.

"The project," writes Harry L. Flournoy in the Charleston Gazette, "is packed with human interest—tears of joy, the reaction of the opening of sightless eyes upon a beautiful world, incidents that have their humorous side.

"The survey was made by county agents of the department, and all blind destitute children were listed. Clinics were established at convenient centers and the children were passed through them for examination by specialists who gave their time and talents gratis. A total of 948 passed through these clinics. Only 145 were found to be hopelessly incurable."

CLUBS COOPERATE

Helping were Kiwanis Clubs, women's and parent-teacher clubs; the Masonic Order, the Junior League and the county courts. Civic organizations cared for 300 cases, and the welfare department attended to 648. Here are two instances:

"A few months ago a little Negro girl was led along Charleston streets by her mother. She was not allowed to play alone in the yard because she hurt herself so much by walking or running into unseen objects. Yesterday a department agent called at the home. The little girl was sitting in the home reading the funny papers. She was one of the 802 successful cases.

"A specialist from Montgomery called at the department offices in the statehouse. When asked about a little boy in his home town he smiled broadly—and gulped down a lump in his throat. 'I just can't help choking up when I think of that grand little fellow,' he said. 'His unbounded joy at regaining his sight is pathetic.'"

What has been done in West Virginia, says Mr. Flournoy, can be done in every State in the Union and at a saving to the State. West Virginia saved $3,171,850 in educating the children whose sight has been restored.

A Friendly Analysis of the Columbia River Bills

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. HORAN. Mr. Speaker, since the writing and publication of my analysis of the employee provisions of the Truman administration's bill for a Columbia Valley Administration, the Assistant Secretary of the Interior, Mr. C. Girard Davidson, has called to public attention certain changes in that bill which were made between the time my colleagues, the Honorable HENRY M. JACKSON and the Honorable HUGH B. MITCHELL, introduced it in the House on April 14, and April 19, when Senator MAGNUSON and several other Senators introduced a companion bill in the Senate.

In the House bills, section 15 (a) contained the following two sentences which were removed in the Senate version:

Any employee of the administration may be removed in the discretion of the Board. No regular officer or employee of the administration shall receive a salary in excess of that received by the directors.

These two sentences have been part of every previous CVA bill introduced in Congress. There never has been any question in my mind that the former sentence would have destroyed any possible protection to the rights of employees stated in other provisions of the bill. I am glad the bill's sponsors have seen fit to eliminate it from the new proposal. However, I can see no good reason for not retaining the second sentence.

There are two other significant changes, which were not publicized. In subsection (b), dealing with tenure, the House bill said employees would have "rights with respect to security of tenure comparable to those provided by the civil-service laws." In the Senate version, there has been inserted an important word to make it read "rights reasonably comparable," in other words, giving the administration wider leeway in determining what those rights would be. There is no such double-talk in my Columbia Interstate Commission bill, which says employees shall have "rights with respect to security of tenure as provided by the civil-service laws."

The third change is in the provision for penalizing political discrimination of employees. In the House version, it was provided that any director who violated the provision should be "guilty of an offense against the United States and upon conviction thereof shall be fined not more than $5,000 or imprisoned not more than 1 year, or both." By the time the Senate version was introduced, someone must have decided this was too stern treatment for political skullduggery, because it was changed to read merely that any director who violated the rule "shall be removed from office by the President," with no criminal implications.

Finally, I should like to call attention of the Congress and the public to the fact that no valid reason still has been offered for excluding the CVA from civil-service supervision. On May 10 of this year, President Harry B. Mitchell of the Civil Service Commission wrote me that—

> The Civil Service Commission believes that only such appointments as are made by the President and confirmed by the Senate should be exempted from the requirements of the civil-service laws and Classification Act.

Apparently, the Civil Service Commission was not consulted when the administration CVA bill was drawn up because it completely excludes the CVA from civil service laws or supervision.

To conclude my remarks, Mr. Speaker, I would like to insert a letter I have written to Mr. E. M. Weston, president of the Washington State Federation of Labor, discussing these points in greater detail:

HOUSE OF REPRESENTATIVES,
Washington, D. C., May 16, 1949.

Mr. E. M. WESTON,
President, Washington State Federation of Labor, Seattle, Wash.

DEAR MR. WESTON: Following our meeting last week at Wenatchee, during which we discussed the labor provisions of the several bills before Congress relating to coordinated Columbia region development, I have seen a copy of the letter written to you by Assistant Secretary of the Interior Davidson on this subject. Since both Representative TOLLEFSON and I have made some strong criticisms of the employee provisions of the administration CVA bill, as it was first introduced, I do want to recognize the changes made in the Senate version which Mr. Davidson pointed out.

I am glad the sponsors of the CVA bill have removed the line which read: "Any employee of the administration may be removed in the discretion of the Board." This action certainly removes one of the prime objections we voiced to the bill.

This action high lights, however, the basic conflict of ideas regarding employees of any Columbia regional agency—that is, whether they are to be given the full protection of existing laws covering civil service and/or the employee relationships of private industry or whether they are to be left at the mercy of a board of directors which is told by law only to devise its own personnel policy.

If the employees of a CVA are to be given rights reasonably comparable to those guaranteed by Civil Service, then why not put them under Civil Service and avoid the unnecessary administrative machinery that goes with setting up a separate system? On May 10 of this year, President Harry B. Mitchell of the Civil Service Commission wrote to me in this same vein—and his argument carries a great deal of sense. The only possible reason is that the business activities of the CVA required an operation more similar to those followed by private utility industries. In that case, why not put the CVA under the same laws as govern those relationships in private business?

The answer lies in the fact—fully demonstrated by our experience with the Bonneville Power Administration—that a CVA would have, generally, two types of employees: the clerical and administrative types which could easily fit under full civil service and the construction and maintenance workers who are in the utility business. It was in recognition of this fact that the BPA caused to be enacted in 1945 a series of amendments to the Bonneville Act (Public Law 201, 79th Cong.) setting up an employee system which has been eminently successful and which satisfied organized labor, Civil Service, the needs of the Bonneville Administration, and the general public. Mr. Davidson, then general counsel for BPA, was the chief witness at the hearings favoring the present Bonneville labor regulations.

Actually, the Civil Service Commission on many occasions has insisted that it was perfectly capable of caring for the needs of any agency of the Federal Government under the civil-service laws. I think the experience of the BPA shows that Civil Service is satisfactory and desirable for clerical and administrative employees but that the laws of private business are better suitable for those employees doing work similar to that performed by private utilities.

In either case, there is absolutely no valid reason which has yet been put forth for not including employees of any regional agency under one system or the other or both. I think—and my mail recently shows that there are those who agree with me—that members and leaders of organized labor would be very foolish indeed not to insist upon a legal basis for their relationships with what potentially would be the largest employer in the Pacific Northwest, instead of taking their chances upon the continued indulgence of political administrators who, for the moment, happen to look kindly upon labor.

To make my position absolutely clear on "point 5" of the eight labor points made by Representative TOLLEFSON, all of the proposals before Congress, as well as present laws, agree that contractors operating under contracts with the agency would be subject to the Federal labor laws. The category of workers under discussion here includes those laborers, mechanics, and workers on maintenance crews, operating facilities of completed projects and force-account construction workers who would be direct employees of the CVA.

Under point 4 of the Tollefson memorandum, Mr. Davidson has correctly pointed out that the administration CVA bill "authorizes" the agency to bargain collectively with its own employees. That word may be sufficient. But I want to stress that my Columbia Interstate Commission bill not only "authorizes" but also "directs" the agency to bargain collectively—and then specifies the rules under which such bargaining is to take place. The administration bill leaves it entirely up to the agency to determine on what terms it will bargain, how employee representatives shall be recognized, and all of the other important factors in such bargaining.

In short, reviewing the eight points against both the CVA and CIC bills, the CVA bill gives nothing to labor in benefits that it does not already enjoy under the Bonneville Act. The CVA bill takes away specific Civil Service protection for administrative employees, comes only half-way on collective bargaining, and makes none of the guaranties to labor in its utility activities such as are taken for granted in private business. Each of these objections is fully met in my CIC bill.

On this basis, I think you will agree with me that some major amendments are in order before section 15 of the CVA bill should be accepted by organized labor. I will appreciate your comments on these provisions.

Sincerely,

WALT HORAN,
Member of Congress.

Why Trade-Unions?

EXTENSION OF REMARKS
OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1949

Mr. KELLEY. Mr. Speaker, under permission to extend my remarks, I wish to include an editorial entitled "Why Trade-Unions?" which appeared in the magazine America of May 14, 1949.

This article sets forth the basic reason and necessity for unionization and points up the utter helplessness of laborers who are denied the benefits of joint action. Too, it points out the defenselessness of such workers against inhuman employers. Perhaps those reading this editorial will be more inclined to see labor's viewpoint.

WHY TRADE-UNIONS?

"After the old trade guilds had been destroyed in the last century * * *," wrote Pope Leo XIII in 1891, "and when public institutions and legislation had cast off traditional religious teaching, it gradually came about that the present age handed over the workers, each alone and defenseless, to the inhumanity of employers and the unbridled greed of competitors." Therein, the Pope explained, lay the origins of modern industrial conflict.

Much better than the generation to which the encyclical Rerum Novarum was addressed, we understand that secularism is indeed a basic cause of social strife and class warfare. One may reasonably doubt, however, whether we see today the significance of the Papal reference to the medieval guilds any more clearly than did the highly individualistic men of the 1890's.

How many of us have a real appreciation of the nature of trade-unionism, which is the modern form of the old craftsmen guilds, or of its function in society? Is it not true that many industrialists still regard a trade-union—any kind of a trade-union—as a sort of necessary evil which they must live with only because the law coerces them to do so? Even people who sympathize with trade-unionism, despite the defects of trade unionists, sometimes do so for the wrong reason, or at least for one that is inadequate. They look upon unionism as a necessary defense against the unjust, antisocial employer. If employers were generally fair-minded and benevolent, these friends of the workingman would, apparently, see no need or justification for trade-unionism. They miss almost completely its wider social significance.

The immediate occasion of these remarks is an article, Social Function of Trade-Unionism, which appeared in June 1947 number of the Political Science Quarterly and is reprinted in part in the current issue of the Catholic Mind. Though the author, Prof. Frank Tannenbaum, of Columbia University, is not a Catholic he reveals that profound understanding of our social philosophy which one occasionally finds in scholars who sincerely seek the truth. His article is one of the best commentaries on Pope Leo's reference to the destruction of the guilds that we have ever seen.

Professor Tannenbaum finds that the great crime of the industrial revolution was to isolate the individual and leave him helpless and exposed in our machine society. He writes:

"What the industrial revolution did to the individual, and especially to the individual laborer, was to disrupt his society, tear him loose from a traditional family and communal mooring and throw him upon his own resources. The timeless custom of being a member of a community, of belonging to a landed estate, of carrying on one's work in a family, or a cottage industry, of being identified with a guild, of having a mystery, in short, of being interlaced within a society as a moral person and having a specific status, wore away more or less rapidly and in varying degrees. Man, for the first time in his history, was individualized to an extent he had never been previously."

Anyone with a knowledge of history, or of human nature, could have foretold the reaction of workers to this process of atomization. Grouped together physically in the industrial process, they discovered a moral dependence upon each other and a basis of common faith, interest, and objective. This they expressed through trade-unionism. Dr. Tannenbaum truly observes:

"The trade-union movement represents a return to an older and socially normal way of life on the part of the men, skilled and unskilled, who do the labor of the world. If the historical record has any meaning, then we must assume that a sense of identity among men engaged in a common craft, trade, industry, or occupation is an organic relationship to the function. Men functionally identified develop a sense of their part of the social universe which is peculiarly their own and which they, in fact, can share with no one else. How otherwise explain the fact that the guild for traders, craftsmen, and artisans is a seemingly universal phenomenon?"

Trade unionism came because it was in the nature of things, not because outside agitators stirred up otherwise contented workingmen. Man is a social and moral being. He is a member of a society, and society is, or ought to be, organic. He is not an isolated individual moved solely by thought of gain or loss. The concept of economic man is a myth, as Dr. Tannenbaum rightly says—and therein lies the real meaning of unionism:

"If there is any meaning that can be derived from the persistent grouping of men about their tools or within their industry, it is the very clear attempt to reassert human experience, namely, that work must fill a social, a moral, as well as an economic role."

That is what Leo XIII said a half century ago.

Amendment of Railway Labor Act To Cover Shipping to Territories and Possessions Asked by Hawaii as Protection Against Interruption in Steamship Service

---

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the text of a joint resolution adopted by the twenty-fifth biennial session of the Legislature of the Territory of Hawaii and approved by the Governor asking that the provisions of the Railway Labor Act be amended to cover shipping from the continent to the Territories and possessions, the text of the bill introduced by myself on May 16 to carry out this request, and the text of a statement issued to the press covering this action.

Joint resolution requesting the Congress of the United States of America to enact legislation in regard to the stoppage or curtailment of sea-borne commerce between ports of the continental United States and ports of the Territory of Hawaii due to labor disputes

Whereas the Territory of Hawaii, not being self-sufficient and being located over 2,000 miles from the continental United States, and deriving much of its food and other essential supplies therefrom, as well as shipping much of its products thereto, is largely dependent upon sea-borne commerce between ports of the continental United States and ports of the said Territory for such food and essential supplies, as well as for the transportation for such products; and

Whereas such commerce has been stopped or greatly curtailed from time to time, by reason of labor disputes between employers, on the one hand, and labor unions representing maritime workers or harbor workers, on the other hand, as a result of which labor disputes the economy of the said Territory has been injured, its productive effort has been damaged, and its people have suffered from protracted shortages of food and other essential supplies; and

Whereas the best interests of the said Territory and its people are served by the prompt and orderly settlement of the aforesaid labor disputes; and

Whereas the Congress of the United States of America enacted the Federal Railway Act (title 45, U. S. C., chap. 8) for the prompt and orderly settlement of labor disputes between railway employers and railway employees, but has enacted no similar legislation for the settlement of labor disputes between the aforesaid employers and the aforesaid maritime workers and harbor workers, although both classes of labor disputes equally affect the public interest and the health, welfare, and safety of the people: Now, therefore,

Be it enacted by the Legislature of the Territory of Hawaii:

SECTION 1. That the Congress of the United States of America be, and it is hereby, respectfully requested to enact legislation similar, in principle, to the said Federal Railway Labor Act for the prompt and orderly settlement of labor disputes between employers, on the one hand, and maritime employees on ships engaging in commerce between ports of the continental United States and ports of the Territory of Hawaii and harbor workers in said ports, on the other hand, to the end that such commerce will not be stopped or curtailed, and all such disputes will be settled as promptly and orderly as possible.

SEC. 2. That certified copies of this joint resolution shall be transmitted to the President of the United States, to the President of the Senate and to the Speaker of the House of Representatives of the Congress of the United States, to the Secretary of the Interior, to the Secretary of Labor, to the United States Maritime Commission and to the Delegate to Congress from Hawaii.

SEC. 3. This joint resolution shall take effect upon its approval.

Approved this 5th day of May A. D. 1949.

INGRAM M. STAINBACK,
Governor of the Territory of Hawaii.

A bill to amend the Railway Labor Act

Be it enacted, etc., That all the provisions of title I of the Railway Labor Act approved May 20, 1926, as amended (45 U. S. C., 1946 ed., sec. 151), except the provisions of section 3 thereof, are extended to and shall cover every common carrier by water engaged in commerce between the continental United States and the Territories and possessions, and to every person in the service of such a carrier who is subject to its continuing authority to supervise and direct the manner of rendition of his service, and to every person engaged in the loading or unloading of such carrier.

SEC. 2. The duties, requirements, penalties, benefits, and privileges prescribed and established by the provisions of title I of said act except section 3 thereof shall apply to such carriers by water and to such persons in the same manner and to the same extent as though such carriers and persons were specifically included within the definition of "carrier" and "employee," respectively, in section 1 of said act.

STATEMENT OF J. R. FARRINGTON, DELEGATE TO CONGRESS FROM HAWAII, MAY 16, 1949

I have introduced into the House today a bill which would extend the Railway Labor Act to cover surface transportation between the continental United States and the Territories and possessions.

The bill amends the Railway Labor Act "to cover every common carrier by water engaged in commerce between the continental United States and the territories and possessions, and to every person in the service of such a carrier who is subject to its continuing authority to supervise and direct the manner of rendition of his service, and to every person engaged in the loading or unloading of such carrier."

This legislation is requested in a joint resolution which was passed by the twenty-fifth biennial session of the Territorial Legislature and was approved a few days ago by Gov. Ingram M. Stainback. The resolution was delivered to me last Friday.

The Railway Labor Act was adopted originally in 1926. It was amended in 1936 to include air transportation.

Under the terms of this act, the services of a mediation board, consisting of three Federally appointed officials and their staffs, are made available when agreement on wages, working conditions, and rules cannot be

achieved by the normal process of collective bargaining.

The law provides that in the event mediation fails that arbitration be offered. This follows a well-established pattern for settling disputes. Under it, management chooses one representative, another is chosen by labor, and a third is chosen by them both. In the event they cannot agree on the third person, he is selected by the mediation board.

The parties to the dispute are not obligated to accept arbitration, but in the event they accept it, they are obligated to accept the results.

In the event arbitration is refused, provision is made for the selection by the President of the United States of an emergency board and a cooling-off period. This device is employed in extreme disputes where a stoppage of work is threatened.

Some of the principal features of the operation of this law are well described in the report of the National Mediation Board for fiscal 1948 as follows:

"For many years the act has been heralded as a model statute for preventing strikes. This view is based upon the effectiveness of the act in past years in facilitating peaceful settlements and the fact that the procedures as enacted were agreed upon by railroad management and unions representing railroad employees. In providing for settlement of disputes over changes in rates of pay, rules, and working conditions the act stresses the obligation on both parties to endeavor diligently to settle such matters across the conference table in direct negotiations. Failing to effect a settlement in this manner the law provides for mediation service at the request of either party to the dispute. Mediation serves to continue negotiations between the parties with the Government assisting toward amicable settlement of the dispute.

"If no settlement can be made in mediation section 7 of the act requires that the Board use its best efforts to induce the parties to submit their dispute to arbitration. Acceptance of arbitration is not compulsory under the law.

"However, when arbitration is agreed to by the parties, the award of the Arbitration Board is final and binding. When settlements cannot be effected through mediation, arbitration is often found to be a satisfactory method of disposition of a troublesome dispute. If all of these procedures have been exhausted and the dispute still persists, the law provides, in cases where in its judgment interruption to interstate commerce is substantially threatened, that this Board shall so report to the President, who may then, in his discretion, create an emergency board under section 10 of the act, to investigate the dispute and report its findings to the President. The time limitations for proceedings under section 10 have been described in the preceding section of this chapter.

"Review of these procedures shows that the so-called cooling-off principle is abundantly provided for in the law. The provisions for direct negotiations and mediation serve to extend the cooling-off period far beyond the 60 days provided by section 10. These procedures assume that if the facts of a dispute are thoroughly considered and made public, the pressure of public opinion will form in favor of a fair and square settlement of the dispute.

"Nowhere in these procedures is there any compulsion on either party to settle the dispute. On the contrary, the law is based upon the principle of free and untrammeled collective bargaining. There is nothing in the law which abridges the right of employees to strike. In exchange for preserving the right to strike, employees are subjected to delaying procedures during which the nature of the dispute can be fully explored in negotiations and publicly aired by emergency boards. These procedures take advantage of the fact that as long as negotiations continue between disputing parties there is chance of an agreement being reached. These procedures also recognize that the American people are fair and reasonable and that the working forces of our country should have a fair and square deal. There is nothing in the law which requires either employees or carriers to accept the conclusion of a Presidential emergency board. There is nothing binding in such conclusions except the force of public opinion. However, having had access to all the processes of collective bargaining, and then having had the dispute heard and considered by an impartial fact-finding board, the implications are strong that the recommendations of such a board should in good grace be accepted by both parties as a proper basis for settling the dispute.

"This lack of compulsion in the law is at one time its strength and its weakness. Its strength is measured by the effectiveness of the law in facilitating amicable settlements in thousands of disputes since its enactment in 1926. Its weakness is that too often in recent years emergency board recommendations have been circumvented in one way or another. Such action weakens the law and strikes at the very spirit which led to its enactment and effective application for so many years.

"The act is the product of more than 60 years' experience in the field of Federal legislation dealing with the settlement of railway labor disputes. As early as 1888 there was national concern over the danger to public health, safety, and welfare caused by tie-ups in railroad transportation. The product of this concern was the act of 1888. Continuously since that date there has been Federal law on the statute books for peaceful settlement of railway labor disputes in the interest of preventing interruptions to essential railroad transportation service. In its present form the essence of the law is to avoid interruption to the Nation's railroad transportation without resort to force. Our Nation could not afford such interruptions in 1888 and we can afford them even less in 1948."

Outlawing of Communist Party in the United States

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I desire to include therein a resolution adopted recently by the Russell E. Marshall Post, No. 68, American Legion, Corydon, Iowa, urging the adoption of legislation to outlaw the Communist Party in the United States.

Whereas, for God and country, we have again assembled to renew our pledge of allegiance to the principles upon which the American Legion was founded, to consolidate the victories already won, and to organize our resources for the battles still ahead; and

Whereas the events of the passing year have emphasized more than ever before those dangers to our liberty which spring to life during the slightest relaxation of that eternal and self-sacrificing vigilance which keeps men free; and

Whereas William Z. Foster, national committeeman, and Eugene Dennis, general secretary of the Communist Party in America, have stated, according to the public press, that in the event of war between the United States and Russia the Communist Party in this country would try to "defeat the predatory war aims of American imperialism" and that all Communists in the United States would "cooperate with all democratic forces to defeat the predatory war aims of American imperialism and bring such a war to a speedy conclusion on the basis of a democratic peace": Therefore be it

Resolved, by Russell E. Marshall Post, No. 68, Corydon, Iowa, in regular meeting assembled, That we urge Congress to enact enabling legislation toward outlawing the Communist Party in the United States of America, in order to stamp out this Kremlin-controlled menace; and be it further

Resolved, That a copy of this resolution be sent to our Congressman and to both our United States Senators.

E. D. LAMMERS,
Post Commander.

The Nazis Are Creeping Back

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. MULTER. Mr. Speaker, the following article entitled "The Nazis Are Creeping Back" appeared in the National Jewish Monthly for May 1949. It was written before the Western Powers decided to merge the American, British, and French zones of Germany into an almost autonomous republic.

Harry N. Sperber was chief German interpreter under Justice Jackson at the Nuremberg trials of Goering, Hess, Schacht, and company. Born and reared in Germany, he was awarded a doctorate in law at the University of Berlin, but came to the United States in 1925 and has been an American citizen since 1930. His parents fled Germany in 1933 and settled in Jerusalem, where Captain Sperber, too, lived in 1938. He served as a private in the Haganah at that time. After the outbreak of war he broadcast into Germany for the BBC, for which he was beaten up by bund members in New York. He entered the United States Army as a private, was commissioned after 7 months, and served 3½ years overseas with Military Intelligence. Now a newspaperman and radio commentator, he has lectured to nearly 200 B'nai B'rith lodges and many other groups. He speaks from time to time on the United States State Department Voice of America to Germany, and he directed the March of Time documentary film, Germany: Handle With Carp.

THE NAZIS ARE CREEPING BACK

(By Harry N. Sperber)

"We must build up a strong Germany. It will be a buffer state between us and the Russians in the next war."

How many times have you heard this argument during recent months? Every dilettante Acheson, cocktail in hand and just brimful of international wisdom—culled from Winchell, Pearson, Pegler, or Kaltenborn—is rarin' to lick the Russians pronto—provided the Germans will do the bleeding for him.

The hapless main loser in this diplomatic roulette game is, as usual, the Jew.

He—Hitler's first and most wretched victim—has been abandoned again, while those who created the Nazi monster are on their way to what they hope will be a greater, more glorious repeat performance.

It is perplexing to discover how many Jewish people dumbly echo the treacherous German buffer state speculation. None of them seem to realize that they are helping to crack the whip over the back of their fellow Jews, with every expression of this sentiment.

NAZI REFORM AN ILLUSION

War with Russia has become a fixed part of our daily conversation. Millions of Americans accept it as a coming certainty. The same millions, their memories as substantial as a sieve, are willing to climb onto the bandwagon of those German men who had poured the life blood into the veins of Hitler's monstrous movement. Many hard-bitten Yanks, their heads in a cloud, wallow in the serviceable day dream that the sadistic Nazi dictators of 1945 have suddenly turned into shining crusaders for democracy in 1949. Just because we'd like to have it that way.

This very convenient wishful thinking on the part of the masses has made life easy for those willful men who are in a position to shape America's foreign policy toward defeated Germany. After the hanging of the Goerings and Ribbentrops, the Streichers, and Seyss-Inquarts, after the execution of the SS men who ran the concentration camps, and some of the physicians who used prisoners as laboratory guinea pigs, a strange thing has happened. The roster of industrialists who populate the executive offices of the huge steel and coal empires in Germany again reads like a Who's Who in Nazidom. While America's eyes were kept glued to the Kremlin, the steel, coal, and dyestuff barons of the Ruhr slipped smoothly from the butter fingers of military government courts. With superior propagandistic skill these men then sold the western Allies the same shoddy line of goods which they had unloaded so successfully after the First World War: "We Germans are your last line of defense against the bloody danger from the East." Hitler ran this line into a vast fortune, before fate tripped him up.

STRASSER IS QUITE FRANK

Of course, as soon as the Germans take their tongues out of their cheeks, they sing a different tune. One of the most brutally frank tunesmiths of them all is Hitler's former pal, the notorious Otto Strasser, now a resident of Bridgetown, Nova Scotia. In a recent newsletter Strasser gave the world an X-ray insight into present Teutonic thinking. He wrote:

"The Marshall plan will be built on sand until Germany has become a full partner of the western powers.

"We will talk Russian to the east and English to the west, but at heart we will remain Germans.

"Any tactial measure to help Germany will be justified.

"America's and Russia's battle is not our concern, except insofar as it helps our comeback."

Thus speaks Strasser. He can afford it. He lives in Canada. He is far away from the censorships of occupied Germany, which seal the lips of many who think the same way, but are too cautious to say so.

In permitting Hitler's robber barons to return to power, no matter for what honest or pretended reason, both America and England have reopened the floodgates of vicious anti-Semitism. Feeling important again, the Nazi elements in Germany needed no other encouragement. Synagogues and Jewish cemeteries again ceased to be safe. Insults and attacks upon Jews on open streets lacked only the brown shirts and swastika armbands of 10 years ago. In the "Oliver Twist" incident, most citizens of liberal Berlin sided against the Jews. In Schwaebisch-Gmuend, a city in the United States zone, ex-Nazi Franz Konrad was elected mayor. His opponent, Franz Czisch, a Catholic by religion, but half-Jew by origin, found his home decorated with the star of David. His campaign posters were smeared with wildly anti-Semitic slogans. All this in the third year of American occupation and enlightenment.

Pogrom-like excesses of this sort would have been impossible during the months following VE-day. Then every German sought to obtain a letter from any Jew available, attesting to the fine character of said German. The defeated cringed before every American uniform.

In Nuremberg the writer was shown a long list of Hitlerites by a German man. Grimly he said: "We had picked a tree for each one of these criminals. If only you Americans had let us hang them." Germans then insisted that Hitler had been the greatest misfortune which had ever befallen their land. Living up to Winston Churchill's terse portraiture, "The Germans are either at your throat or at your feet." they licked GI boots until their tongues hung out.

OPPORTUNITY WAS MUFFED

There, then, was our golden opportunity to show the Germans what we meant by democracy. We had bought this opportunity so dearly with the lives and health of hundreds of thousands of our young men.

What did we do with it?

We threw it away.

In no time the Germans looked through the American soldier. They found that he neither knew nor cared why he really was in Germany. As long as the beer, the women, and the black market held out, he was happy. The question: "When will you Americans fight the Russians, so we can help you," made the rounds and hit the mark. It was a simple German trick, to win friends and influence people.

After the public horror, following the discovery of Auschwitz, Buchenwald, and Mauthausen, had died down, the Germans proceeded with the second switch. This time the target was the Jew. There were Jewish DP's, some unable to get a job, others not willing to become part of the German economy, who engaged in the black market. Quickly the cry rose: "The Jews run our black market." Actually their number was insignificant when compared with that of the Christian black marketers, some German, some American, including a heap of embarrassingly high-ranking brass.

By pounding hatred for both Russians and Jews into American minds the Germans nimbly hopped the psychological fence, which had separated winner and loser. The number of AMG personnel, both military and civilian, who suddenly discovered that we had the Germans all wrong, grew by leaps and bounds.

KNIFE CUTS BOTH WAYS

Of course, the Russians did their share in destroying their popularity among their American Allies. The friendship so fervently expressed when fighting GI's and Mujiks met in the heart of burning Germany, has rotted away. Ill will on both sides is rampant. How much the cynical needling by zealous Germans had helped in pushing America and the U. S. S. R. into opposite corners will never be known. It has had one rather ironic result. Some of the cooler heads in Germany have suddenly realized that their contribution toward the present powder-keg atmosphere may backfire. In another war Germany again will become the battlefield. The thought of what the new weapons will do to the remnants of their cities sends shivers down their backs.

The nasty resurgence of Jew-hatred among Germans is not surprising. Twenty years of Hitler propaganda are bound to leave their mark. The occupation byproduct of this resurgence is shameful. During recent months a considerable number of American civilian AMG employees were dismissed. The large majority among those who lost their jobs were Jews. This may be purely coincidental. But it does fit into the pattern of thinking which has been blooming during 40 months of occupation.

We are calculating on the German buffer state as a cushion between us and an attacking Russia. To create this state we have permitted the most treacherous Nazi elements among the Germans to move back into key positions. We believe they will be on our side. Or at least we claim to believe this. There is nothing to substantiate this belief. Walter Lippmann recently revealed that a number of leading western Germans had engaged in secret meetings with the Russians. Strasser tells us: "America's and Russia's battle is not our concern, except insofar as it helps us come back." With arrogant self-assurance he adds: "Any tactical measure (read 'swindle') to help Germany will be justified." Strasser is a good pupil of Dr. Wilhelm Frick, Hitler's Minister of the Interior. Whenever Goebbels or Himmler planned a new robbery or mass murder, Frick would invent and publish a brand new law authorizing the intended act. This self-made law made the crime "legal." In spite of all this obvious trickery we are naively gambling on the western buffer state in Germany, even if it means playing post office with our worst enemies of a few years ago. That the Jew gets hurt in this not very democratic process is just too bad.

TIP OFF THE GERMANS

Scrutinizing the evolution of this diplomatic maneuver, we find one fly in the soothing ointment. There is no responsible German on record as saying that Germany has been informed of the buffer role which has been assigned to her in the cocktail salons of New York and Washington. If Hans is to pull our chestnuts out of the Russian fire, it might be wise to tip him off.

As it stands, we are reminded of the story of little Jake, who was scared stiff of a huge barking dog. Said Abe: "Why be scared, Jake? Don't you know barking dogs don't bite?"

Said Jake: "I know! But does the dog know?"

We all know that the Germans are supposed to be the buffer state. Do the Germans know?

Rent Control

EXTENSION OF REMARKS

OF

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1949

Mr. BENNETT of Florida. Mr. Speaker, under leave to extend my remarks, I wish to include the following article written by Cecil Wright Pemberton in an analysis of his observations on rent control. The article is included at the request of the Florida Tax Information

Association; and its inclusion here indicates neither approval nor disapproval by myself:

In this discussion we ought to be, and must be, guided by a frame of reference. Real estate covers a very considerable field as a broad term and is entirely too broad to be used. For practical purposes, the field must be limited to an area which we can all recognize together and at the same time. This can be done by recognizing that the subject of real estate covers three main divisions: (1) Property which is downtown and business, as well as rural, which is not under Federal control; (2) a second class, which is new housing, also exempt from Federal control, for the time being at least.

In the third and last class, we find our subject residential rental controlled property. It may also be designated investment rental-controlled property. This property is a prisoner of war in 1949, although the fighting war has been over almost 4 years. The control feature is technical and is accomplished in its legal sense by a simple omission. The President of the United States has not yet declared the war ended officially.

Decontrol has been engineered in every phase of our economy, meaning that the rights of property and to property have been restored to their owners, save one—investment rental-controlled realty. This device has been fostered and promoted in ways and means which have been accompanied by waves of improper propaganda, half truths, dangerous distortions, and barefaced misrepresentations.

It is unfortunate indeed there has been so much heat, so very little light. Because of injuries already inflicted, a state of frustration and near desperation in many quarters has invited extreme measures on both sides of the question, which of course has done violence to the real facts of the situation. The case has been accompanied here and there by an earnest effort to get the record straight, and in this effort the Florida Tax Information Association has done, or attempted to do, its level best.

As we face the parity system to keep the farmers happy, labor-management deals to advance labor position, and we see the industrialists of this great Nation being subsidized in effect by Marshall plans and other grandiose schemes, let it be said that residential rental property under control does not view this with desire or envy. It wants no part of it, even if it could get it. Indeed, if any paternalistic governmental scheme of creating what the experts call flexible inner cushions—if any such scheme could be applied at this late date it could not now undo the damage already done, nor lessen the losses which are gone, and which have been sustained by patriotic, hard working, and frugal Americans who have suffered the misfortune to invest their money in such properties in the hope it would serve others and also serve them under the good old American system of doing things.

This association is already of record in November 1947 with a comprehensive statement of this situation, and a complete coverage of the monstrosity in Jacksonville and Duval County, Fla. Nothing said then is to be unsaid now. None of the hardships, misfortunes, or nightmares then endured are any less at this time. They are more—much more—14 months later.

If the inflation has subsided, it will be happy news for investment rental controlled property but in the real order of things it will be impossible for them to appreciate in any predictable future time. The cost sheet has been up—up—up. And then up some more; and there it is going to stay. This is asserted in the face of soft price spots here and there in some lines. Property managers, who attempt to struggle with cost sheets and try to keep their despairing clients at the same time, know what I mean.

THE TAX PICTURE OF ALL REAL PROPERTY, DUVAL COUNTY AND JACKSONVILLE, WITH EMPHASIS ON RENTAL-CONTROLLED PROPERTY

A prior observation before this Board on a former occasion is important again: Real-estate taxes are hardly ever clear to the layman. The layman may be a renter, who lives in a controlled property, and is thus indifferent; it may be the owner, who is vitally concerned, but who is confronted with a tax bill and is uncertain how it is put together. Even property managers with long experience and seeming intimate contact with such problems are hazy about it, and must content themselves with a declaration to their clients—"It's simply awful."

It was further observed 14 months ago that a straight look at the tax picture is neither welcome nor pleasant, a tax picture that is obviously more burdensome now. As the full story is unrolled in all its horror, these facts do no discredit to either city or county budget-making authorities, who have accomplished, in our view, the most economic and best budgets in the circumstances. We have indicated in other places, and always publicly, that the budgets themselves have gone the full distance in serving both taxpayer and public interest alike.

It is the sources from which city and county budget revenues must be drawn, mainly the real-property tax base, which is the point of this analysis and how its burden is brought directly down upon residential rental-control property.

Anybody with any property of any kind who foots a tax bill knows only too well that taxes are not the whole load but it is a prevailing one. In business, which is competitive, the break-even point is widely published. In property matters, taxes are a fixed item with all implications added. This added implication is that taxes are a fixed expense but always variable, moving into higher and higher levels year after year. This is occasioned by the larger and larger drafts made against property by local taxing authorities.

With respect to controlled-rental property, returns have been arbitrarily fixed. Taxes, together with all other costs, have risen without halt. This rise has wiped out the margins between income and outgo, diluting the original investment, spreading distress with increasing cruelty in the ranks of such investments.

Taxes, the city of Jacksonville

In the period between 1941 and 1949, city of Jacksonville taxes have advanced 87 percent—in dollars from $1,326,000 to $2,475,000. For every dollar paid when rent control began, $1.87 in 1949.

Taxes, Duval County, Fla.

In the period between 1941 and 1949, Duval County taxes have advanced 119 percent. In dollars from $3,077,000 to $6,752,000, an increase of $3,675,000. For every dollar of property taxes paid in 1941–42 through the tax collector's window $2.19 in 1948–49 tax period. And this assumes the assessment was the same in both periods, which it often is not. As a matter of fact, all too many instances are found where the tax bill is 150 percent to 200 percent increased, or more, because of assessment changes.

Combined city-county property taxes

In this same period of review for city and county independently, the combined dollars increased from $4,403,000 to $9,227,000, a dollar increase of $4,824,000 or more than all the taxes paid 7 years before by 110 percent. Since both city and county taxes must be paid this last analysis is vitally important. The load becomes $2.10 in 1949 against $1 7 years before.

The tax base from which taxes are drawn

A property owner feels his own property situation acutely, for he must dig the money to pay the taxes assessed against him. This reality loses its identity when swallowed up in the total, meaning the total of all property, both real and personal, which makes up the total tax base. It is in the tax base itself we find reflections of the injustice, the cruelty and economic nonsense of placing a rigid ceiling in one single department of the tax base. For practical purposes, the fixed propaganda, the dire distortions and misrepresentations with respect to this matter ought to be ignored, and only the reality recognized.

This stark reality becomes more evident in the tax base, its casualties and the wreckage its represents.

The tax base means what and who pays the taxes, that is property taxes. It is an inventory of both real and personal property brought together in one heap. After the tax bill has been decided, then assessments are made against it, but not all of it. The system is rigid and inflexible, and the exemptions—those who do not pay—are becoming greater with each succeeding year while the property left to carry it is practically at a standstill. Nobody can debate this, for the tax base which pays the bill has advanced only 9 percent while the taxes against it have gone up 119 percent (Duval County). The record speaks on this more as an epitaph than as eloquence.

More specifically, the tax base on which taxes were laid in 1942 was $206,000,000, in 1949 $225,000,000, up 9 percent.

A lot of people pay personal property tax bills, both small and large. Many of the smaller personal-property-tax payers in lower brackets carry a comfortable feeling with them that they are a taxpayer. Such indeed is not the case, for when all the personal property taxes are in—both big and small together—they make up only 24 percent of the total that must be raised to carry the cost of city and county government.

This means that somewhere the money must be raised, so it makes real property the beast of burden in the proportion of 76 percent. To be precise, these properties were the following in dollars in 1949: $155,200,000 of nonexempt realty, $54,300,000 of personal property, and $15,500,000 rail and telegraph.

The changed complexions of these figures must of necessity be studied on the schedules themselves. This documented material accompanies this presentation.

The $155,200,000 of nonexempt property contains within it your rental-controlled properties. Note this:

We have said the over-all tax base has advanced only 9 percent. In the same period the nonexempt real estate, which is $155,200,000 in 1949 was $159,400,000 in 1941–42 period, a loss—note this—of 3 percent. This means liquidation and a squeeze which can be recognized by anybody. There have been new stores, renovations and other improvements adding greatly to the roll, but with it all, the loss is still 3 percent. This trend is significant and convincing to even the most partisan.

THE HOMESTEAD EXEMPTION SITUATION IN FLORIDA WIPES OUT TAX BASE

It is the law of the State of Florida that the first $5,000 of assessed value of every Florida homestead is to be declared exempt. A total tax roll in another State without this exemption when compared with a Florida tax roll, city, county, or the State-wide roll as a whole, can lead to dangerous conclusions. Our total roll is something different in Florida from the nonexempt tax roll. Our total roll, with the homestead exemptions included, totals $325,000,000, but with the homestead exemptions removed—which it has to be for tax purposes—is shrunken to $225,000,000. This means that $100,000,000 worth of homestead valuation in Duval County stands outside the tax base—which is 31 percent of the potential—and pays not 1 cent for operating cost of either city or county government.

Expressed another way, Duval County had $58,000,000 of exempt homes in 1941–42, $100,000,000 7 years later.

Where does the tax burden rest? With nonexempt property—what there is left of it to pay the rising tax load put on it.

Documents in chart and graph form are all included with this presentation.

THE RENT CONTROL INDEX

It has already been said that every form of property ownership has been returned to its rightful owners except residential rental control properties. On January 3, 1949, the report by the Council of Presidential Advisers was made public, specifically directed to the Congress of the United States, the Eighty-first. This is a most voluminous and technical report. Its study is impossible to more than a fractional number of our citizens for reasons of technical phases and time required in such a study. In this report are numerous charts and graphs which are understandable for the most part by even the layman.

Chart No. 4 of this report, headed "Consumer's Prices" is important to this discussion. Four subjects are given graph treatment—food, apparel, all items of the combined index, and rents. 1935–39 average equals 100 and is base point. The chart begins January 1946, ends December 1948, showing monthly changes.

The rent index or line is practically flat on the chart. Other items move upward and almost off the page. In fact the food index in August 1948 was 216.6. The rent contrast is revealing, 117.7.

To be even more precise I have prepared this same chart since 1939, which is the way it ought to be done. Price indexes during the war were under OPA and therefore not fully accurate. But prior to the war they were not, nor since. Although controls were abandoned except for rental control property, the White House appealed for over-all controls without success. It appears now the appeal has been watered down and will settle for standby control in the implication the inflation is tapering off. Having said this, there is certainly no implication in this implication that controls should be put on our economy because residential property is federally controlled. Quite the contrary.

The right to reasonable profit has always been a part of the American system heretofore. It ought to be sustained and enforced. Why the present disparity and denial? Can it be shown that residential controlled property earns 6 percent over-all?

SUMMATION

In January 1948, 10 percent over-all increase was authorized for this area by Federal Expediter Tighe E. Woods. This was in response to request for 25 percent by rental advisory board. In considering the decision, the Federal Expediter stated frankly that tax factors were the basis for it, and the study and presentation by this association, documented then as it is now, were the exclusive guide.

The 10-percent over-all increase was granted in this area under a method which the Federal Expediter has not revealed. It was our conviction that 25 percent was a reasonable minimum, which was denied by 15 percent. During the past year, the situation, taxwise and otherwise, has materially worsened. If the 25 percent was a reasonable area for consideration then, it is even more so now. It is respectfully suggested to this board as No. 1 channel. The urgency of the request is directed again to the Expediter and his associate advisers. The submission herewith is fully documented. On the basis of prior accuracy by this association, with which the Expediter is entirely familiar and has so expressed himself, we offer this latest submission in a full spirit of cooperation and clarity to the end that economic principles may not be entirely ignored but upheld and justice be done in the right place.

Respectfully submitted.

FLORIDA TAX INFORMATION ASSOCIATION, INC.

World Government Now, a Delusion

EXTENSION OF REMARKS
OF

HON. LEONARD W. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1949

Mr. LEONARD W. HALL. Mr. Speaker, I submit for inclusion in the RECORD, under the leave granted me, an address by Hon. Hamilton Fish, our former colleague from New York, on the occasion of a debate on the question, "Should the United States now assume leadership in establishing an effective world government?"

It was my opportunity and privilege to serve as moderator in this debate, held at Great Neck, N. Y., on March 8, 1949.

The address by former Representative Fish follows:

WORLD GOVERNMENT NOW A DELUSION

I do not question the sincerity, the idealism, or the desire for enduring peace that motivates the One Worlders and World Government Now groups in America. I do not subscribe to the unfair criticism of World Federalists and Union Now organizations that they are largely made up of ardent internationalists and pink intellectuals. It does not make any difference who the 40,000 members are, where they come from, or what their politics or international views may be.

The real issue is: "Can world government be achieved now or in the near future?" The answer is an emphatic "No" and I propose to present sound and undeniable reasons why it is impossible of attainment, subject always to a third world war in which we may emerge victorious over Soviet Russia.

In case of our being defeated, God forbid, as we are the most powerful bulwark left against Red fascism, a world communism state would be inevitable. I take an emphatic and unequivocal stand that, without another war, the formation of a world government now is a snare and a delusion. I even go further and submit that, unwittingly, the World Government adherents are indulging in sophistry, false reasoning, and misrepresentation by leading the peace-loving American people into believing that world government is feasible and possible now. Unfortunately, it is not, not even a limited world government for purposes of military defense against aggression.

It is no more possible nov than growing oranges in the Arctic Circle.

The World Federalists, blinded by their understandable passion for peace, refuse to see the pitfalls and insurmountable obstacles. They glibly talk of world government now and ignore the fact there is an irrepressible, an irreconcilable contest being waged by totalitarian Soviet Russia and its Communist satellites against the United States and all free nations.

Soviet Russia, aspiring to create a world Communist government, would naturally refuse to join a world government dominated by free nations whose main object would be to stop Communist aggression. By the same token, we could not join a world government dominated by the Communists, as it would mean sacrificing human freedom without a contest.

We are further from world government today than at any time since the Hague Conference in 1907, when the fundamental principles of international law were accepted by most nations. Unfortunately, many of those accepted principles, particularly relating to prisoners of war and neutrality, were scrapped or ignored during the last two World Wars.

The only way we could entice Soviet Russia and its Communist bloc into a world government would be to establish representation on the basis of population. It appears most likely that the Communists will take over all of China within the next 6 months. This would place the control of 480,000,000 Chinese under the hammer and sickle. The next step will be for the Communists to infiltrate and overthrow the French Government of Indochina, sovietize Malaya, Burma, Siam, Indonesia, and parts of India, and thereby place 200,000,000 more Asiatics under the Red yoke.

Soviet Russia is on the march toward setting up a world Communist government of 1,000,000,000 people within the next few years unless stopped by another world war. The free nations will probably not muster one-third of the Communist-dominated population by 1951. Communists everywhere, under the direction of the politbureau at Moscow, have been planning and plotting for a world government of their own for 30 years, and do not propose to scrap their main objective just as they believe they are about to achieve it to placate One Worlders or World Federalists in America.

I am not arguing against the theory of a limited world government, restricted to military purposes to prevent aggression and promote world peace. That is a noble ideal that should have the support of all who cherish peace and abhor war. No sacrifice is too great to obtain world peace, except the betrayal of individual liberty and human freedom.

I am vehemently opposed to the establishment of any kind of world government except one specifically restricted to stop aggression and provide world-wide peace and security. I cannot conceive of anything more disastrous to the economic welfare and happiness of the American people than to delegate our constitutional powers to a world government over trade, immigration, and control of our money.

Lenin once said, "Give me the power to spend the currency into destruction and I will determine what sort of a social and economic system will be established." The United World Federalists of America are divided into right and left wings groups. The left wing is not satisfied with merely providing a world government with a sufficient armed police to enforce peace, but wants control over such domestic issues as trade, immigration, and money.

In any world government the United States would be in a minority. If we should transfer our control over exports and imports, immigration, and money to a world government, a combination of Nations, jealous of our wealth, resources, and prosperity, could ruin us economically in a short time and we could not even defend ourselves against such wanton and ruthless acts.

A world government, empowered with control over immigration, might transplant 50,000,000 Chinese and 50,000,000 East Indians to the United States despite any protests from our Government or people. I doubt if a single Member of Congress would vote even to submit a constitutional amendment for ratification by the States or people providing for the transfer of such domestic powers to a world government. The proposition is utterly fantastic. However, the fanatical proponents of world government advocate just that.

An actually realistic world government could not exist without such powers. I

question even the minimum proposals of the United World Federalists who insist on direct taxing power for maintenance of a world government and police force, and the right to set up courts composed of foreigners in every nation to try and punish alleged violations or crimes against world peace.

Can any sane man envisage a court composed of British and American judges functioning in Soviet Russia by her consent to try members of the Politburo for aggression and offenses against world peace?

No. Not even the minimum requirements, which is the cloak under which the left-wing "do-gooders" cover up their aspirations to remake the world by leveling America down, and Asia and Africa up, is attainable in our day and generation without a Third World War. The fanatical left-wing visionaries want to wipe out all national sovereignty throughout the world.

If nations might, in this atomic age, be willing to surrender their war powers to a world government to enforce peace by use of a powerful police force, the left-wing One-Worlders claim it would be merely the first step, to a dream world or utopia, supported by a universal UNRRA where the lion lays down with the lamb, and where unselfishness and good will will reign supreme forevermore. God help the United States if we have to finance any such economic delusion. We will be bankrupt before the blueprints have been completed.

The Soviet Union continues to insist on the right of veto over inspection and control of the atomic bomb. It would be the height of folly and criminal stupidity to surrender the atomic-bomb secrets on any lesser guaranties than provided in the Baruch plan. Whenever Soviet Russia turns from aggression and world revolution to the paths of peace and sincere international cooperation, then and then only, should we agree to outlaw the A-bomb. In the meanwhile we should retain the atomic secrets for our own defense and for the preservation of world peace and freedom.

World peace is not only desirable, but it is a must that should head the list of all human efforts. Another World War would cause chaos and unprecedented destruction of life and property, and might well end our civilization, and depopulate large parts of our planet. The destructive capacity of modern warfare, with guided missiles, huge rocket airships loaded with tons of bombs, and the possibility of wiping out half the civilian population by more powerful atomic weapons compels thinking people to concentrate their main efforts on achieving world peace.

Peace should be uppermost in the minds of every statesman. It should be encouraged by the press, the Congress, and the executive department of our Government.

World peace should be proclaimed a holy mission from every pulpit of every church in America. For 24 years in Congress I participated in every legitimate peace move made by the Congress. I fought for such legislation as outlawing war, known as the Kellogg Pact, the abolition of the use of poisonous gas, the World Court, the limitation of armaments, a referendum on war, the neutrality bill, and against every attempt to involve us in war except for defensive purposes. The old contest between noninterventionists and interventionists was largely obscured by the fatal blunder we made in using the atomic bomb which left the United States (hitherto invincible against all attacks) naked and defenseless.

The lingering differences between the 1939-41 interventionists and internationalists have been finally swallowed up by the openly proclaimed objectives of the Red plotters at Moscow to set up a world Communist Government by revolution or by armed force. There is no such thing as appeasing, bribing, or compromising with the Communist plan for world revolution and world domination. That is part and parcel of their fundamental ideology to achieve subjugation of all noncommunistic nations.

I quote the following from the Communist Manifesto by Karl Marx and Friedrich Engels which is the bible of all Communists.

"In short, the Communists everywhere support every revolutionary movement against the existing social and political order of things. In all these movements they bring to the front as the leading question in each case the property question, no matter what its degree of development at the time. The Communists disdain to conceal their views and aims. They openly declare that their ends can be attained only by forcible overthrow of all existing social conditions. Let the ruling classes tremble at a Communist revolution. The proletarians have nothing to lose but their chains. They have a world to gain."

As a former noninterventionist leader in Congress, and proud of it, as every statement I made has been vindicated many times over by time and events, I find myself now compelled, because of the rotten mess we made in Europe to urge our joining the North Atlantic Pact in defense of the remaining free nations of Europe against Soviet aggression. Having helped to wreck and ruin half of Europe we have certain moral obligations toward the nations of western Europe not to let them be swallowed up one by one by the Red octopus. In addition, our own national security is involved with half the world already Communist. The place to stop the Red armies is at the Elbe and the time is now.

Judging the future by the past, Communists everywhere taking their orders from Moscow, show no signs of changing their ideology or abating their relentless attacks on all existing non-Communist political and social orders. I repeatedly warned, back in 1940-41, that if we entered the war the Soviet vulture would swoop down in the last analysis and pick up the bloody remains of most of Europe.

Let us be realistic and understand once and for all that the Russian Communists have a definite plan of world revolution and armed conquest. The Marshall plan is merely a relief and rehabilitation measure providing food and equipment for Europe. It does not protect or defend the free nations of Europe from Soviet armed aggression. It does not achieve security for ourselves or any other nation. Without a western European defensive union our foreign policy is useless and bankrupt. The Marshall plan is nothing more than a paper blockade, and as ineffectual. It opposes a paper curtain to the "iron curtain." It neither frightens, checks or stops the Communist plans for revolution and conquest. It assumes that the nations receiving our gifts automatically increase production and acquire moral force and physical power to withstand the Communist colossus.

No nation has ever restored its stability and strength by depending on hand-outs. That can only be done by their own efforts and hard labor, but even then a defensive military alliance is necessary without further delay. The Communist aggressors fear and respect only military might. We should immediately reinforce the Marshall plan by staff agreements with Britain, France, Italy, Spain, Belgium, Holland, Switzerland and the Scandinavian countries, and probably with Canada, South Africa, Australia and New Zealand. It should be done openly and at once so that there will be no doubt of a united military front of all western democratic nations to oppose and crush any attempt by the Red army to violate the peace of the world by overt acts of aggression in western Europe. It is their only chance to survive as free nations. Let them pool their armed forces under a single general staff. Once the Communist armies over-run Europe it will be the end of Great Britain, and we will be confronted with an aggressive and militant Communist Europe, followed quickly by a Communist Asia and North Africa.

Although world communism is on the march in Europe and Asia it is not inevitable here. It must be stopped; it can be stopped. The words of Patrick Henry apply today more than ever before:

"Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery?"

That is the paramount issue in the world today—freedom and democracy or slavery and totalitarianism.

A New Maginot Line?

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. LATHAM. Mr. Speaker, under permission granted to extend my remarks in the Appendix of the RECORD, I wish to include a very pertinent article by James J. Haggerty, Jr., which appeared in American Aviation magazine in the issue of May 1, 1949.

The article is as follows:

A NEW MAGINOT LINE?

(By James J. Haggerty, Jr.)

We are building a new Maginot line.

It's not a steel and concrete fortress such as the one the French took such pride in before Hitler showed them how foolish it was to place such confidence in it. Ours is a mental Maginot, a supreme confidence in the ability of a new weapon to win a war single-handedly. The new weapon is the long-range bomber—the Convair B-36.

We discovered that this new Maginot Line was under construction when we paid a visit to the House of Representatives last week and listened to debate on defense appropriations—debate which brought about a whopping six-billion-plus appropriation for the Air Force, but which reduced naval aviation to a token force.

Foreman of the new Maginot construction is Representative CLARENCE CANNON, a Missouri Democrat who happens to be chairman of the House Appropriations Committee. CANNON came out point-blank and said there was no need for a strong naval air force. CANNON said that the next war could be determined decisively in 3 weeks by atomic warfare—and he added that the only way to end this war in 3 weeks is by B-36 warfare.

"Why should we waste vast sums of money on naval planes tied down to a radius of 500 or 700 miles?" asked the distinguished gentleman from Missouri, where they used to have to be shown, but are now apparently gullible in the extreme and highly susceptible to Air Force propaganda. (Navy planes have radii up to 2,000-plus miles.) "A smaller amount of money can supply land-based planes about the effectiveness of which there can be no question," he continues. (He should check his price lists again.)

DANGEROUS BELIEF

If some other armchair general had uttered these sentiments, we would have dismissed them with a gentle curl of the lip. But CANNON's position makes them extremely dangerous remarks, for he is the chief of the group which decides how much

money will be spent on defense and how it will be spent. And this business of concentrating our entire defense on one weapon, to the detriment of all others, can be serious.

In his speech on the House floor, CANNON also said that the Navy cannot reach Moscow with an atomic bomb. He stated further that the launching of atomic bombs is not a Navy function. With that we are in full accord, as we have stated before. We don't think the Navy has any business in long-range atomic bombing and we think it made a serious error in tactics when it tried to muscle into that territory, for such tactics cost the Navy a lot of friends.

But CANNON seems to have missed the basic point—that the Navy's aviation is not intended, as it is constituted today, to deliver atom bombs to Moscow. It is intended to protect the surface fleet from air or sea attack, so that the fleet can perform its assigned function of mastery of the seas. And, therefore, the question of whether Navy planes can reach Moscow is totally irrelevant.

CANNON'S whole argument hinges on the ability of the B–36 to deliver atom bombs from bases in North America. He concedes that Russia would occupy the entire European continent within 90 days after opening of hostilities. Therefore, the B–36 would be our only offensive weapon, since no other land-based planes have sufficient range to operate from North American bases.

NOT ENOUGH

Now we believe, as Mr. CANNON apparently does, that the B–36 is capable of these ranges. We also believe it will have a measure of success comparable to that of World War II heavy bombers. But is this enough to win a war? Should we concentrate all of our defense appropriations on the belief that we can sit back securely at home and dispatch B–36's from home bases which will end the war in 3 weeks?

Paradoxically, CANNON himself doesn't think so. We quote the gentleman from Missouri: "Of course, a war could not be won by air power alone."

Such being the case, Mr. CANNON will have to admit that we will reqiure some sort of service from the Navy. He says that its function is the maintenance of lines of communication and transportation. We think it would be something more than that. In any event we do need a Navy—we're agreed on that. Ergo, we'll need aviation support if that Navy is to function effectively.

"We have the greatest Navy in the world," said Mr. CANNON, "And we will keep it the greatest Navy in the world."

KNIFING THE NAVY

Well, speaking air-wise, here's how CANNON'S committee intends to maintain the greatest Navy in the world. The money appropriated for naval aviation for the coming year will require:

(a) cancellation of every airframe and engine research and development project scheduled for the coming year;

(b) construction of only 843 planes (380 less than this year);

(c) operation of 2,930 planes less than the minimum required;

(d) deactivation of three attack carriers, nine naval air stations, and four antisubmarine patrol squadrons;

(e) a 16-percent reduction in aircraft overhauls; and

(f) discontinuance of Naval Reserve air groups on fleet carriers.

In addition, it lowers the naval aircraft manufacturers' ability to produce, since few companies build planes for both Air Force and Navy. The procurement cutback will reduce naval-plane manufacturers to a far lower level of preparedness for emergency production than the current level. Further, it means a gradual decline in total air strength, for if you buy only 843 planes yearly, and each has a life of 6 years, then in 6 years you have only 5,058 planes, instead of the 7,783 authorized for the coming year.

Does that sound like maintaining the world's greatest Navy?

REALLOCATION NEEDED

We think the House has made a serious error in thus crippling naval air power. We hope the Senate will do something to rectify it. It wouldn't require any increase in the already staggering (sixteen billion) defense budget—just a more careful scrutiny of the proposed expenditures and a little reallocation. But more than that, we hope that this Maginot line type of thinking doesn't spread, for if it does we may be in trouble someday.

Strangest part of Mr. Cannon's remarks is the following:

"How can we forget the fatal decision of the French Chamber of Deputies on precisely the same question which is facing us here today? They were urged to build airplanes. But they declined on the ground that the airplane was useful only for reconnaissance, and their matchless army, protected by the impregnable Maginot line, was invincible. * * * Let us not make the same mistake."

W. Stuart Symington, Secretary of the Air Force, got caught with his hand in the jam pot. Representative ALBERT J. ENGEL, Republican, Michigan, ranking Republican on the military subcommittee of CANNON'S House Appropriation Committee, is the guy who caught him.

It seems as how Mr. S. had tried to pad the budget a few odd billions. Lt. Gen. Edward Rawlings, the Air Comptroller, had totted up the money the Air Force thought it would need to struggle through the coming year and it came to eight billion-odd. But Mr. S. said uh-uh, he wanted 11 billions.

"In fact," he said, quite candidly, "Gen. Rawlings and I had a little argument."

Symington admitted his guilt in testimony before the Appropriations subcommittee on the Air Force's 1950 budget.

"I would like to absolve the Air Force and take full responsibility for that myself," he said. (The printed hearings do not report whether he blushed.) The reason for his padding act, the Secretary explained, is that he had heard that the Army and Navy were going to ask for a big bundle, so he thought he would go along too, with a sublime disregard for military requirements and the poor benighted taxpayer. Of course, he shrugged, he knew it would never go through. "It was my thought that the higher the figure the more ridiculous it looked; and therefore it would force the services to buy and operate instead on the basis of an integrated plan."

ENGEL took a dim view of the padding attempt. He said he "cannot appreciate a policy of the armed services which will inflate the budget hoping to get something."

Dedication Address of Leonard A. Scheele, Surgeon General, Public Health Service, Federal Security Agency

EXTENSION OF REMARKS

OF

HON. RALPH E. CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1949

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following dedication address by Leonard A. Scheele, M. D., Surgeon General, Public Health Service, Federal Security Agency, delivered at the dedication luncheon of the laying of cornerstone of Goldblatt Memorial Hospital, Chicago, Ill., May 12, 1949:

The opening of this magnificent clinical center is the climax of several years of work, which the United States Public Health Service has watched with the keenest interest, and in which we are proud to have had a part. The Goldblatt clinical center is the fruit of combined effort. It is made possible by the generosity of a distinguished citizen of Chicago. It will carry forward the cancer research of a great, privately endowed university, aided by the voluntary gifts of many citizens—individually, through the Chicago Cancer Research Foundation, and through the American Cancer Society. This research has also been assisted by tax-funds extended through Federal grants-in-aid. This clinical center therefore belongs to the whole country, as well as to the people of this city and the University of Chicago.

It will offer new hope to sufferers everywhere, not only because of the additional beds which it makes available but especially because of its fine research facilities. The laboratories occupy five whole floors of the building. And because the clinical and research activities support each other, every square foot of this building is truly dedicated to the search for more knowledge about the cause and cure of cancer. It does not even provide space as most hospitals do for dining rooms and living quarters. It is all cancer research, conducted by a staff which gives full time to this purpose.

That, to me, is the great significance of this occasion. This clinical center comes as the gift of the right man, at the right time, and in the right place to be of maximum effectiveness in our Nation-wide battle against cancer.

Maurice Goldblatt, the Chicagoan who has provided the larger part of the funds for this great building, came to this country as an immigrant boy with his three brothers. He has had a successful career in business. This is a familiar and well-loved American story. It is part of the meaning of America. But Mr. Goldblatt has carried the story through to a higher level. He has come to see beyond the frontiers of material success into the limitless territory of human sufferings and human needs.

This clinical center, a memorial to one of his brothers who died of cancer, is only one of his interests. He is a member of the boards of the American Cancer Society and American Heart Association and he has played a prominent role in the cancer and heart fund raising campaigns in Chicago during the last several years. He is well known and well loved in the Public Health Service. He is a member of our National Advisory Heart Council, which assists and guides the Service's effort against heart disease, parallel to the campaign against cancer. Mr. Goldblatt has given generously not only of his money, but of his time and strength. His foresight has made possible advances in clinical medicine on many fronts. It is noteworthy to find a man who, besides working himself in the front line of money-raising activities, takes an enlightened interest in the long-range objectives of scientific research.

For a number of reasons, the opening of this clinical center is especially timely. Cancer research has now reached the point where it functions best in close cooperation with the basic sciences, on the one hand, and on the other with clinical medicine. This hospital with its university affiliations promises that integration. It was not always thus. In the past, outstanding contributions have been made by those working in such isolated fields as pathology, radiology and surgery. The pathologists, for example,

have given us microscopic examination of tissue, by far the most widely used test for cancer at the present time. Surgery gave us radical excision of tumors. Biophysics gave us radiation. Surgery and radiation are the basic treatments for cancer.

Specialization was—and still is—essential. But now, as science grows, we are witnessing a new development—a unified approach to the complex problem of cancer. This approach draws upon almost every branch of science.

Our present crossing of departmental barriers marks an important advance in our search. It also means that the time is ripe for just such an institution as the Goldblatt clinical research center. For even while this building has been under construction, developments in chemotherapy, in radiology, in other fields have moved forward almost as in a mystical harmony. Here they can all be used to their fullest advantage.

I understand that this building will have a section devoted to the evaluation and development of diagnostic tests. This is especially timely, for the number of possible tests for cancer which require evaluation and development at the practical service level is increasing. Tests which are successful here will be released for general use throughout the country.

From the particular viewpoint of the Public Health Service, the opening of this center is helpful, because of our own future plans. The Congress has authorized construction of a clinical center near Washington, D. C., where research into the cause and cure of various diseases, including cancer, will go forward in laboratory and the clinic under the same roof. The experience gained here in Chicago will be helpful to us in our center, and to research workers and physicians everywhere.

Mr. Goldblatt's gift is a demonstration of the continuing vitality of the American voluntary system. I believe deeply in our voluntary system. The Government cannot possibly do the whole job, in cancer research or in other fields of human welfare. The success which crowns the efforts of Government scientists and public-health workers is directly related to the voluntary interest and the progress in the institutions outside of Government.

There are many examples at this university of cooperation and accomplishment. Dr. C. B. Huggins, who is present today, has a long history of accomplishment in this university and he has worked closely with the Public Health Service. For the past 3 years he has been a useful member of the National Advisory Cancer Council, which has helped to direct the work of the National Cancer Institute. His scientific acumen enables him to see the usefulness of other people's work and the significance of very small advances, and carry them further. To the far-flung, scattered work of laboratories across the whole country, he brings the gift of a constructive imagination.

In addition to Dr. Huggins' research on the anomalous behavior of blood proteins in cancer and other degenerative diseases, which has recently attracted Nation-wide attention as a possible lead to a diagnostic test, he has given his name to other accomplishments. I should like to mention his work in prostatic cancer. After preliminary studies on animals Dr. Huggins was able to show that prostatic cancer, one of the most baffling forms of the disease, could be controlled at least to some extent by the administration of female hormones or by surgery. The Huggins treatment often resulted in marked and prolonged remissions to the disease. Moreover, he found the progress of the disease to be measurable by determination of the level of an enzyme, acid phosphatase, in the blood.

Another University of Chicago scientist, Dr. G. Gomori, has developed highly sensitive tests which detect processes of the enzymes within the cells and tissues. Chemical reactions that take place within the body are influenced by a large variety of enzymes, agents which are indispensable to growth and to life. The development of modern medicine in histo-chemistry and cyto-chemistry owes much to Dr. Gomori. Enzymes as a fundamental base in the study of all malignant diseases have been investigated here by Dr. E. S. Gusman Barron.

Dr. Leon O. Jacobson, whose work in malignant blood diseases is well known, has helped to develop methods for the administration of nitrogen mustards. Those now have a place in the treatment of Hodgkins' disease, leukemia, and other difficult diseases. Dr. Jacobson has also been active in the medical aspects of radiation. Dr. Paul Steiner, of the department of pathology, has done excellent work in the study of cancer, both experimental and epidemiological.

I should like to mention many other names if time permitted. These men and their many colleagues will continue and extend their work with the increased facilities now being made available.

We remember hearing it said frequently during the early years of the last war, while the country was still in the process of rearming for defense, that 14 men would be needed behind the lines to support every man at the front. In the same way, the treatment of cancer patients is supported by the research work in the laboratories. It is indispensable to their welfare, just as clinical work is indispensable to research. To have them united in this clinical center will be highly useful to the whole United States.

No better situation could have been chosen. The city of Chicago is on its way to becoming one of the world's greatest medical centers, with many research institutions, medical schools and hospitals. And here on the campus of the University of Chicago, the Goldblatt clinical center is close to those other laboratories from which so many great discoveries in basic science have come. The most famous of these was the first development of nuclear reaction.

Now the Argonne Laboratory of the Atomic Energy Commission is building a research center adjoining this one we dedicate today, especially for research with radioactive materials and multimillion volt radiation equipment. Of necessity, the Atomic Energy Commission building, constructed especially for safe work with very high-energy radiations, must be a separate institution but it will be connected physically and intellectually with the Goldblatt clinical center. From their close future cooperation we may anticipate great things to come.

Nuclear energy, with all that it has meant and will mean in the future to clinical medicine and research, is only one of the fruits of basic research applicable to cancer. From the departments of chemistry and biology, from the facilities of the medical school, it may safely be predicted there will come in the future a flow of increasingly integrated research discoveries. These will be applicable here, at the bedside of patients in this center, to the relief of present suffering and the prevention of future disease. This building is a symbol of the coordinated approach the American people have determined to make in the fight against cancer.

To the medical staff, the research people, the nurses, and all who will take part in this work at the Goldblatt clinical center, I offer congratulations and best wishes for success in the long battle which lies ahead. The people of Chicago are to be congratulated today for the gift which the far-sighted generosity of one of their citizens has made possible. To those of us outside Chicago, the continuing growth of integrated research activities in cancer, here at the heart of our country, is inspiring to behold. It is inspiring and it is meaningful. For the whole United States is enlisted in this fight against cancer, and some day we are going to win it.

A Tribute to Mrs. Zula Loggins, of West Columbia, Tex., Who for Many Years Worked Tirelessly and Effectively in the Movement To Establish a National Father's Day

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. THOMPSON. Mr. Speaker, I have before me two newspaper articles briefly describing the splendid and successful effort made by Mrs. Loggins to recognize the fathers of our country. Mrs. Loggins, whose family has long been prominent in Brazoria County, Tex., is beloved by many people residing in all parts of the United States for her unselfish devotion to mankind, and I feel it will be a most fitting and appropriate tribute to place the two articles in the CONGRESSIONAL RECORD, which appear below:

FOUNDER OF FATHER'S DAY STILL A "PIN-UP" GIRL

When our dads throughout the Nation are given homage Sunday, Father's Day, great tribute should be paid to Mrs. Zula Loggins here in West Columbia. For it is she who originated the idea more than 30 years ago.

In 1945, Zula Loggins was voted the "pin-up" girl of the steamship *W. B. Rogers* while the ship was on duty in the waters off Tunis, North Africa. The shipmates, in writing Miss Zula, as she is affectionately called by her friends, had this to say:

"For the beauty of the thought and heart that you, Zula Loggins, gave our Nation's fathers, sons, and daughters, in creating a day of acknowledgement and gratitude to our American dads, we wish to announce that you have been unanimously voted the pin-up girl of the *W. B. Rogers*."

Today, Zula Loggins is still straight as an arrow, and walks with the graceful posture of a young girl. Her hair, though no longer brown, has turned a silver-blond, and tiny lines have formed around the twinkling blue eyes. But her lilting laugh stills rings with the zest of a life that has been fully and well lived.

Miss Zula's family tree was rooted in the earth at Valley Forge. Her maternal grandfather was General Washington's flag bearer.

In 1891 Miss Zula came to this Brazos River country to make her home. She has been honored by governors and kings. Kipling once wrote: "If you can walk with kings and not lose the common touch," and Zula Loggins is that kind of person.

As we celebrate Father's Day this year, and through all the years, let's never forget to pay tribute to this great lady who founded it.

MRS. ZULA LOGGINS, FOUNDER OF FATHER'S DAY MOVEMENT, GETS GOVERNOR'S RECOGNITION THROUGH STORY APPEARING IN ANGLETON TIMES

When fathers throughout America and in the far-flung battle areas as well are paid homage Sunday, Father's Day, credit for the thoughtful remembrances and tribute must

go to Mrs. Zula Loggins of West Columbia, who 30 years ago conceived and originated the idea.

Reading the story of Mrs. Loggins' continuous efforts and persistence in fostering this day for father and of her ultimate success published in the Angleton Times, Gov. Coke Stevenson wrote the author of the observance the following letter:

EXECUTIVE DEPARTMENT,
Austin, Tex., May 10, 1945.

Mrs. ZULA W. LOGGINS,
West Columbia, Tex.

DEAR MRS. LOGGINS: Judge Williams came by the office yesterday and presented me with a framed copy of the article taken from the Angleton Times with reference to the splendid work done by you toward the proper recognition of an annual Father's Day. I read this article with a great deal of interest and appreciate Judge William's interest.

I think this article is a very fine tribute to you and to the fathers in recognition of them on their special day.

With kindest regards and best wishes, I remain,

Sincerely yours,
COKE STEVENSON,
Governor.

"I Am An American Day," Sunday, May 15, 1949

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the radio address I delivered over Station WLAW, Lawrence, Mass., in observance of "I Am An American Day":

Fellow citizens, I am speaking to you on time contributed by the management of WLAW as a public service to observe "I Am An American Day." President Truman has called upon all of us to stop and think of the blessings we enjoy as members of the American family. In his words we should do so, "because the strength of our Nation lies in the unity of all of our people, of whatever race, creed, culture, or national origin—a unity that can be built only upon a full realization of the worth and meaning of American citizenship."

We are the freest, happiest, and most prosperous people on earth. We do not say this boastfully; far from it. There is much work to be done to make it better. Some nations point to the wealth of our natural resources—the timberlands, the great rivers, the fruitful earth, the coal and petroleum and ores beneath it—as if this were the only factor in our progress as a people. But Russia, and China, and other countries also possess these resources. The material difference is measured by the fact that some quality in our way of life has inspired men to make the best use of these resources for the good of all. No magic wand transformed them into the comforts and conveniences of life which we enjoy. Only freedom, freedom of opportunity which stirs a man with hope and encourages all the energies of his body, his mind, and his spirit, is responsible for our development.

One hundred and seventy-five years ago, our pioneer forefathers made a new beginning in a new world. Their first step was to throw off the shackles of king and class and creed. All men were to be considered equal—free to choose any job or profession which they were willing to work for; free to express their honest opinions; free to select those who would represent them in government; free to worship God according to their conscience.

This is America, rich not only in the wondrous buildings and machines which have been fashioned from the raw products of the earth itself, but wealthier by far in the diversity of talent and personality and character and skill evoked by respect for self, working side by side with respect for others.

In the plain and simple virtues of neighborliness we find the essence of Americanism.

For the basic law of our land, we have no constitution imposed from above by the self-appointed few. Our Constitution was built to last, from the ground up, and was the work of the people. In it are defined those inalienable rights which 140,000,000 cannot take away from any one American. In addition to these, are other laws to meet the changing needs of our Nation but laws made by your chosen representatives. And these cannot contravene the basic rights which are guaranteed to you.

The organization of our Government flowed from this primary sense of neighborliness.

It is found in our schools, our churches, and in every activity of our national life.

It is the consideration of my right and your right, freely aired so that all sides of every question shall be heard, matched by our duty to fairly resolve differences in the name of harmony.

And by this example we show our children the great and effective truths of neighborliness, which is but another word for mutual respect and mutual understanding.

I have seen men and women of middle age who could speak but little English, as they became naturalized citizens of this Nation. They were leaving behind them the second-class citizenship or less of the lands from which they emigrated to this country. They were graduating to full dignity as human beings. And as I observed their expressions of pride and joy, I knew that they would be fine citizens because they had earned the right as everything worth while in this life must be earned.

It was then that this thought came to me. Are many of us who were born to citizenship really earning it?

This is the question for each one of us to answer as we take searching inventory of ourselves.

That we have enjoyed many opportunities is above contradiction. We know not from the history of the far-away past but from the sacrifices of friends and neighbors in our own time what some have given to preserve our liberties.

But what have we contributed to American citizenship?

In the quiet confessional of the heart it is for us to make an honest reckoning and resolve from this day forth to live up to the full meaning of I am an American.

It is the pledge in all our endeavors to be good neighbors.

Marines March Again

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. THOMPSON. Mr. Speaker, under leave granted to me, I take great pleasure in placing in the RECORD an article concerning the forthcoming parade of the justly famous Fourth Marine Division. On Saturday morning, June 11, every normal human being along the route of the parade will be thrilled as they watch this organization and escorting units of the Regular Marine Corps.

Old soldiers will forgive me if I mention with particular pride that the parade will be led by my old comrade and one-time commanding officer, Maj. Gen. Franklin A. Hart, with whom I, myself, have marched in numerous parades.

MARINES MARCH AGAIN

The first all-Marine parade in 25 years will march down Constitution Avenue Saturday morning, June 11, as the Fourth Marine Division holds its annual reunion here.

President Truman and ranking national dignitaries have been invited to review the veterans of the Fighting Fourth which saw four major actions in a period of 1 year during the last war.

Maj. Gen. Franklin A. Hart, USMC, commanding general of the Second Marine Division at Camp Lejeune and president of the Fourth Marine Division Association, will lead the troops which will include marching units from Quantico and the Washington Barracks. Bands from Lejeune, Quantico, and the Washington Drum and Bugle Corps will furnish music along with the President's own Marine Band. Washington's Fifth Marine Reserve Battalion, commanded by Lt. Col. John E. Fondahl, a Fifth Division veteran, also will march.

The parade will be the high light of the 2-day affair, June 10–11, and will conclude with an address in the Sylvan Theater. Unit dinners, a fashion show for the wives at Statler Hotel headquarters, and a moonlight ride down the Potomac also are planned.

Col. E. A. Pollock, USMC, convention chairman, expects this year's attendance to top the Kansas City reunion, the division's first.

The Fourth Division was led by Gen. Clifton B. Cates, Commandant of the Marine Corps, in its last two Pacific campaigns, Tinian and Iwo Jima.

THE FOURTH MARINE DIVISION

The history of the Fourth Marine Division is recorded in the annals of the Nation's central Pacific offensive against the Japanese in World War II which saw the division committed 4 times in only 13 months, each time against bitter enemy opposition.

During 21 months in the Pacific, the Fourth engaged the Japanese first at Roi-Namur, Kwajalein Atoll, Marshall Islands, next at Saipan and at Tinian, Marianas Islands, and finally at Iwo Jima.

Early elements of the Fourth were formed in 1942 and the East Coast Echelon had received considerable training at Camp Lejeune, N. C., before it was merged with trained units on the west coast and the Division finally activated at Camp Joseph H. Pendleton, Oceanside, Calif., August 16, 1943.

In January 1944 the Division sailed from San Diego, Calif., for Kwajalein Atoll and on the first day of the following month, its assault units received their baptism of fire, wresting Roi-Namur Islands from fanatical defenders in 72 hours of fighting. Artillery units emplaced on adjacent islands in the Atoll, provided D-day operational support.

The Fourth Division set three new records at Roi-Namur. It was the first division to go directly into combat from the United States; it captured the first Japanese mandated territory in World War II; and captured its objective in less time than that of any other important operation since the war's start.

From Kwajalein, the division went to the island of Maui in the Territory of Hawaii,

which became the Fourth's rest camp and staging area between Pacific campaigns.

The initial stay at Maui was short-lived. On June 15, 1944, just 4 months after Kwajalein, the Fourth and Second Marine Divisions struck at Saipan, capital and stronghold of the Japanese in the Marianas Islands.

The marines of the Second and Fourth and soldiers of the Twenty-Seventh Army Division which joined in the fighting, overcame stubborn enemy resistance on Saipan only after 25 gruelling days which began with the beach landings.

Maj. Gen. Harry Schmidt, who had commanded the division since August 1943, was succeeded by Gen. C. B. Gates, now the nineteenth Commandant of the Marine Corps, then also a major general, on July 12, 1944. General Cates led the Fourth at Tinian and continued as division commander until the division was disbanded late in 1945.

On July 24 the Fourth landed in assault on Tinian, an island adjacent to Saipan, over the narrowest beaches ever used for amphibious combat operations. They were joined by the Second Division on the following day. Together, the marines secured Tinian in 9 days.

The Presidential Unit Citation was awarded the Fourth Marine Division for action at Saipan and Tinian. After the Mariannas operations the division returned once again to Maui to rest and reorganize for future action. Iwo Jima was next on the Fourth's timetable.

The historic seizure of that island fortress began February 19, 1945. The Fifth Amphibious Corps, including the Third, Fourth, and Fifth Marine Divisions, required 26 days of fighting for victory at Iwo Jima.

Most of the Fourth's members added a star to their Presidential Unit Citation ribbon when it was announced later that the coveted citation had been awarded to all assault units of the Fifth Corps for action at Iwo Jima.

The Fourth was the first marine division selected to return to the United States after peace was declared. The division was deactivated at Camp Pendleton November 28, 1945, 2 years, 3 months, and 13 days from the date it became a division.

In 63 days of actual combat the famed Fourth beat the enemy where he was strongest, contributing greatly to victory in the Pacific. Ten members from its ranks received the Medal of Honor, the highest military honor this Nation can bestow. This, perhaps, is a partial indication of the caliber of officers and men who made the Fourth's victories possible.

Proceedings on the Occasion of Dedication of Plaque to John Tyler at Richmond, Va.

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 18 (legislative day of Monday, April 11), 1949

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD the proceedings of a service held in Richmond, Va., on April 12, by the Woodmen of the World in dedicating a plaque on the capitol grounds of Virginia to John Tyler, the tenth President of the United States.

There being no objection, the proceedings were ordered to be printed in the RECORD, as follows:

DEDICATION OF PLAQUE TO JOHN TYLER, TENTH PRESIDENT OF THE UNITED STATES, CAPITOL GROUNDS, RICHMOND, VA., APRIL 12, 1949, PLACED BY HEAD CAMP, JURISDICTION OF VIRGINIA, WOODMEN OF THE WORLD

The following program was presented with E. L. Smither, Jr., head consul, jurisdiction of Virginia, Woodmen of the World, presiding:

Singing of America, accompanied by the Thomas Jefferson High School Band.

The meeting was then opened by an invocation prayer by Dr. T. Rupert Coleman, pastor, Ginter Park Baptist Church.

Dr. COLEMAN. Let us pray together.

Our Father, we acclaim Thee as the eternal and omnipotent of all creation and life, and we lift our prayers unto Thee who art the God of our fathers. We thank Thee for America, our country of freedom and our land of liberty. We thank Thee, today, for our divinely endowed heritage secured and left to us by our fathers who loved justice and brotherhood more than their own life. Grant us this day, heart so humble and committed to Thee, that we may worthily honor Thee in this very unique privilege of dedicating this plaque to the memory and life of one of our Nation's leaders. Grant to us, we beseech Thee, oh God, eyes that may see, ears that may hear, and hearts that are sensitive to those virtues and qualities which have made men sterling and powerful in leading our Nation.

We praise Thee, our God, for John Tyler, his life, his service, his leadership, his love for and promotion of peace and brotherhood among all mankind; grant to us, our God, the ability to keep alive in our hearts those virtues that make for selfless service for the sake of others and for the glory of God. We lift our hearts to Thee now in behalf of these men.

We are gathered in our city, representing the Woodmen of the World, whose ideals are those of brotherhood among men, love for the needy, and service to those who are sick and less fortunate. Bless the officers and leaders of this camp, that the coming year will bring to reality those accomplishments that will praise Thee; grant to every member the ability to lose self for the sake of others, that none may every speak so wickedly as did that first brother of the human family when he asked, "Am I my brother's keeper?" Instead, however, may every Woodman faithfully emulate that one who said, "Whosoever doeth the will of my Father in heaven is my brother, my sister, my mother." Make us daring, that we may speak and act when cowards are silent, and help us to exemplify those qualities of life which make for peace and good will among all men; empower these who speak and we who hear with the ability to hear the voice of the eternal, and willingness to obey that voice, in beholding Him who died for the sins of all mankind.

We humble ourselves before Thee, our Father, and ask that Thou wilt forgive us for every known and secret sin; revitalize our fellowship with Him whom death could not hold, so that we may be faithful to the end of our earthly journey, and then share with Him, who arose from the dead, that life that shall endless be. To these ends, our Father, we make our prayer, through worship, in the name of and for the glory of our Lord Jesus Christ. Amen.

Mr. SMITHER. We of the head camp, jurisdiction of Virginia, of the Woodmen of the World, are gathered here today on these historic and hallowed grounds for the purpose of dedicating and presenting a plaque honoring the memory of one of our native sons, John Tyler, who in the yesteryear made such a noble contribution to the life and welfare of our beloved Commonwealth and our great Nation. It is with a great deal of pride and pleasure that I present to you at this time the national president of the Woodmen of the World of Omaha, Nebr., the Honorable Farrar Newberry, who will make the presentation of the John Tyler plaque on behalf of our society. Mr. Newberry.

Mr. NEWBERRY. Head consul Smither, your Excellency Governor Tuck, your Honor Mayor King, one of the greatest of Americans, Senator BYRD, my friends of the head camp, ladies and gentlemen; the fraternity in action program of the Woodmen of the World, of which this exercise illustrates a part, began really in the local lodges, 9,000 of them, of our society some 5 or 6 years ago. It featured the honoring of veteran members. It recognized the efficiency of officers in ritualism. It had for its object the development of the uniform rank, which is the degree team branch of our society. It paid special tribute to veteran members of 25 and 50 years' standing in the society. It organized public programs to honor the veterans of our society who were in World War II, and presented 30,000 certificates to those boys. It organized programs for family night and nights for church relationship. Then the program branched to service of the community in which the camp is located, for indeed a Woodmen lodge, like any other fraternal organization, is or should be a good citizen in the community in which it is situated. And so our camps began the organization of such projects as furnishing of rooms in the local hospitals, the giving of such equipment as blood banks, plasma banks, iron lungs and wheel chairs, to hospitals. Then it began the organized program of calling attention to the children of America of the things for which the flag and Nation were begun a long time ago; and so more than 5,000 new United States flags were presented to public and parochial schools throughout this Nation by our local camps. And this year in all of the States except 2 or 3 our head camps—the State organizations—are presenting flags and beautiful flagpoles to the city, or library association, or to some worthy organization. For instance, on yesterday we presented the flag and staff to the Boys Club at Macon, Ga.

We organized a program honoring the scoutmasters of Boy Scout troops and cub packs with public programs honoring these young men and the girls who give their time to the Girl Scout movement, with the presentation of such awards as compasses. The awarding of medals to boys and girls in elementary and high schools, who are most proficient in American history, has been one of the important projects of the fraternity in action program.

Then we come to the contributions made by the national service fund of the society, through its local camps, to the cancer, arthritis, and infantile paralysis funds, and such great organizations as the American Red Cross; the establishment and maintenance of parks and playgrounds, the election of drinking fountains, the giving of school auditorium seats, kitchen equipment for community houses, books for the school library, basketball and other athletic equipment, athletic trophies, and chairs for American Legion halls. These are some of the miscellaneous items of the great program.

We come for a moment now to do a thing which illustrates another project of fraternity in action; to keep alive the memory of America's great men. Our largest camp, at Omaha, Nebr., recently put a bronze plaque to mark the site of the first house or residence ever built in the home city of our society. Gov. Harris Flanagan, of the State of Arkansas, was similarly honored. We went out and placed a memorial to mark the home of the great commoner, William Jennings Bryan, who gave his property to a church,

and on it today stands one of the great hospitals of America. We similarly honored August H. Garland, Attorney General in the Cabinet of Grover Cleveland; Mark W. Izard, the second Territorial Governor of Nebraska; Nathaniel Massey, the founder of Chillicothe, Ohio; Andrew Johnson, the seventeenth President of the United States; Richard Pearis, first white settler of Greenville County, S. C.; Uncle Joe Cannon, for many years Speaker of the House of Representatives, born in North Carolina near the city of Greensboro; Pvt. John Allen, the noted Congressman, of Tupelo, Miss.; the great evangelist, Sam Jones; and our own immortal Morris Sheppard, dean of the Congress when he passed away, and for 43 years the national treasurer of this society.

Two others in preparation at the present time are to commemorate the author of Suwannee River, Stephen Foster, at Live Oak, Fla., and the great family of the Bankheads in the State of Alabama.

These are symbols of the great program of fraternity in action of the Woodmen of the World.

Today, my friends, we present a plaque and dedicate it to the tenth President of the United States. Speakers are here to tell us about that great man. It is my pleasure, on behalf of the head camp of the jurisdiction of Virginia, to present for them to you people of the Commonwealth of Virginia this memorial to the great American, John Tyler, and ask that his great grandchildren, Anne S. and George K. Tyler, now unveil the plaque. Thank you.

Mr. SMITHER. The grandchildren of John Tyler are kneeling behind the plaque, and they have pulled the white curtains from the plaque sitting planted here on the ground. [The assembly applauds.]

I have the honor to present His Excellency, William M. Tuck, Governor of Virginia, who will accept this plaque on behalf of the Commonwealth. Governor Tuck.

Governor TUCK. Fellow sovereigns of the Society of the Woodmen of the World, ladies and gentlemen, the place of our tenth President in history has been neglected and even at times misrepresented. Certainly his stature as a man and a public servant of the very highest principles deserves to be recognized and glorified.

President John Tyler revered those fundamental principles upon which the Nation was founded and which guided it through the difficult years of its formative history. His character embodied the strongest qualities of courage and determination. He was never one to compromise with principle. Many episodes in his career demonstrated a strict adherence to principle and an unwavering loyalty and devotion to duty which have been unsurpassed by any American of his or any other generation; his actions were without regard to what effect they may have had on his personal and political fortunes.

John Tyler did not hesitate to voluntarily relinquish the high office of United States Senator when a resolutions of instructions from the General Assembly of Virginia as to his vote ran contrary to his convictions and his sense of public duty. In recording his decision, he wrote these memorable lines: "I shall carry with me into retirement the principles which I brought with me into public life, and by the surrender of the high station to which I was called by the voice of the people of Virginia, I shall set an example to my children which shall teach them to regard as nothing place and office, when either is to be attained or held at the sacrifice of honor."

No man ever stated the case for principle and public duty in a more forthright manner.

President Tyler served in the Congress, in the office of Governor of the Commonwealth, and in the Senate of the United States. In these and every other position of trust he labored faithfully and steadfastly for the common weal and in accordance with his conscientious convictions.

No matter how capable and desirous an individual may be to serve faithfully and well in public position, if he is to succeed, it is indispensable that he have the courage and the fortitude to make and execute his decisions with a firm hand and a resolute will.

Too many of our public men of the present generation are more concerned with their tenure of office than the type of service they render. They possess none of the qualities of statesmanship characteristic of our early Americans. In comparison with them, if this trend continues unabated, our leadership soon may be reduced to mere manikins, shaped from the wasted fiber of our Nation's progenitors. While such men may be colorful and gaudy in their new freshness, their qualities may be likened to some of our modern clothes which cannot stand the wear and tear and strain of continuous use and soon become faded and threadbare. America is in desperate need of being shielded and delivered from such men.

Our national welfare demands towering leaders who will stand firm as the rugged oak. John Tyler was such a man in an age noted for the strength of character of its leaders. He is entitled to and no doubt is accorded in the heart of every patriotic Virginian a place high in that galaxy of American statesmen contributed by the proud Commonwealth of Virginia, the mother of States and of statesmen.

In behalf of the Commonwealth of Virginia, I accept this monument, a manifestation of the patriotism of the officers and members of the donor, the head camp jurisdiction of Virginia, of the Society of the Woodmen of the World.

Mr. SMITHER. Thank you, Governor Tuck. I am now privileged to present the Honorable W. Sterling King, mayor of Richmond, who will accept this plaque on behalf of the city of Richmond. Mr. King.

Mr. KING. Thank you, Mr. Chairman, your Excellency Governor Tuck, Senator BYRD, distinguished guests, ladies, and gentlemen, I had the pleasure of addressing this group of men this morning on the opening of their meeting, and I took occasion to say to them something that I want the residents and citizens of Virginia to hear. In Richmond we are prvileged to have many guests and visitors because we have hallowed and historic grounds in this city. The fact that we are standing in the shadow of the capitol of Virginia at this time perhaps brings many, many guests and visitors to this city. I think they all enjoy it thoroughly, but there are far too few occasions when these people will leave something to contribute to the city to be remembered after they leave. This ground on which we are standing today does not belong to the city of Richmond, and I might even say it hardly even belongs to the State of Virginia. It belongs to America, because no ground as hallowed as this could belong really to any group of citizens, and I hope that the occasion this afternoon may be emulated by others.

To me it seems to be the very genius of citizenship when people will give something to the community in which they live rather than to continually be striving to take something away. And to you Woodmen of the World, I want to say that you have presented a most gratifying occasion to me as mayor of the city of Richmond to accept this plaque on behalf of the city and to express my gratitude for the citizens of this city for enriching our traditions and our history by giving this permanent evidence to a great man who contributed to his country far beyond the call of duty. I thank you gentlemen for making this occasion possible, and I promise you that this marker will be cherished by our citizens and pointed out with pride to the many visitors that we have in this historic city. I thank you gentlemen for coming here and for this act of courtesy, and express my gratitude for our citizens. I thank you.

Mr. SMITHER. Thank you, Mayor King. I have the pleasure to present the Honorable D. Gardner Tyler, grandson of former President Tyler, who will accept this plaque on behalf of the Tyler family. Mr. Tyler.

Mr. TYLER. It is quite appropriate for us to pause here today to do homage to John Tyler, who was at one time Virginia legislator, Member of Congress, United States Senator, member of the congress of the Confederate States, Governor of Virginia, Vice President, and President of the United States. His long and distinguished public career manifested that he need abandoned principle for political expediency. At this time in Virginia we are indeed fortunate to have the beloved and distinguished HARRY F. BYRD as our senior Senator, and the courageous, able, and resourceful William Munford Tuck as our Governor, both of whom (like John Tyler) have always fought for the best interests of the people of Virginia, regardless of popular notions to the contrary.

The Society of the Woodmen of the World has graciously seen fit to honor our great ancestor by erecting this plaque in historic Capitol Square, Richmond, Va. It is a privilege for me to express our appreciation, and it is with distinct pleasure that I accept the plaque on behalf of the descendants of John Tyler, Tenth President of the United States.

Address by Hon. Harry Flood Byrd, of Virginia, on Occasion of Dedication of Plaque to John Tyler at Richmond, Va.

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 18 (legislative day of Monday, April 11), 1949

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a speech made by me, at the invitation of the Woodmen of the World on the occasion of the dedication of a plaque on the capitol grounds of Virginia to John Tyler, the tenth President of the United States.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. SMITHER. Thank you, Mr. Tyler. I am gratified indeed that I am privileged to present the Honorable HARRY F. BYRD, our senior United States Senator, who while in the midst of pressing business in our Nation's Capital, graviously consented to address us on this occasion. Senator BYRD.

ADDRESS BY HON. HARRY F. BYRD, UNITED STATES SENATOR FROM VIRGINIA

Few men in American political history have been more maligned than John Tyler. Yet, in 1949—against the background of provocative situations of the present and recent past—to review his life and works, and the times in which he lived, is to be more than ever impressed with the greatness of the man who came out of nearby Charles City County, through State and National legislation and the governorship of Virginia, to become the tenth President of the United States.

It is a wonderful thing which is being done here today by the head camp convention of the Woodmen of the World. For it is only natural that these ceremonies unveiling a plaque to a man who died before this great fraternity was founded will cause many to search out for themselves the reasons for this tribute. And, under the stimulation of this occasion, the search of those interested surely will lead them straight to the kernel of the reasons where they will find Tyler's granite-like principles and his impregnable faith in Jeffersonian fundamentals.

To President Farrar Newberry, head consul E. L. Smither, Jr., and Chairman T. G. Smoak, we are deeply indebted for this opportunity, here at the capitol of Virginia, to rededicate ourselves, in these turbulent times, to those principles and fundamentals which John Tyler learned at the knee of his father who was an intimate friend of Thomas Jefferson and a man of strong convictions.

As a suggestion to those who would take the time to do justice to John Tyler by studying his record and the circumstances under which it was made, it may be said that no biography in American politics is more interesting or more revealing of an indelible era in our national history. He was a steadfast leader in unstable times who has withstood unkind—and sometimes grossly unfair—treatment by many of his contemporaries, some historians, and some biographers. His story will be even more interesting to those who think they detect some similarities in the times—then and now.

They will find that Tyler lived and worked in a period when our Nation was in the throes of profound change—even as it is today. And they will find marked evidence of the friction generated by the clashes of his principles and fundamentals with the impatience and intolerance which invariably characterize the more publicized incidents in an era of change.

They will find an historical example of a State and National figure—a man born to honorable behavior, high principles, and deep fundamentals—who was caught in the tensions of a cold war—even as we are involved in one now. But the impact upon the fine qualities of Tyler was probably more resounding than it would be upon one of comparable character in our time, because the cold strife then was being waged within the confines of our own land. Proximity made tempers short. The attending controversies invaded families and rifts severed strong bonds of close friendship and fraternity.

Aside from such similarities between the 1840's and the 1940's as may exist, those who would do justice to Tyler will recognize that political parties in his time were almost as changeable as the times themselves. They will be aware that party tenets were not founded in traditions arising from tried and proved policies.

And they will recognize also that the Nation itself, even if it were not so terribly torn by its own sectional strife, had not attained the stability of maturity.

This is by no means an adequate description of either the Tyler characteristics or the circumstances under which he labored, but perhaps it may dispel some of the misrepresentation concerning him and clear away some of the confusion of his complex times.

It is our hope that these ceremonies—in a measure—will promote better understanding and more tolerance of conscientious adherence to principles and fundamentals in periods of emotional demands. Perhaps it will help demonstrate the wisdom of tediously testing the vehicles of transition with the requirements of tradition. If we can do that, then, in our time, John Tyler will have made another contribution to the lasting good of his country.

While the minds of some of our people may be prejudiced by the vitriolic writing of his day, it must be said in fairness that not all the historians and biographers have been critical. Several recent works on his life are to the contrary. The eminent Claude G. Bowers is author of the statement that "Tyler loved Virginia, but no man loved the Union more truly."

How accurate this statement is may be seen from a quick résumé of Tyler's life and public service. It included service at three different times in the Virginia Legislature, speakership of the house of delegates, membership on the powerful council of State, governorship of Virginia, membership in the United States House of Representatives and the United States Senate, membership in a State constitutional convention, election as Vice President of the United States, service as President of the United States, membership in the convention of border States, membership in the Provisional Confederate Congress, and election to the Confederate House of Delegates.

He was born the son of John Tyler, Sr., who, himself, was Governor of Virginia, a judge of State and Federal courts, a member and speaker of the house of delegates and, as previously mentioned, an intimate friend of Thomas Jefferson.

Born to such parentage, Tyler was steeped in American statecraft. Public service came naturally to him. And, it is no wonder that in the 72 years of his life John Tyler made a public record seldom equaled in the history of this Nation. He was graduated from his beloved college of William and Mary at the age of 17, and before reaching his majority he engaged in an exceptionally profitable practice of law here in Richmond.

When we fill in this sketch of Tyler's life we get a vivid picture of one of the most complex political periods in our history. The country was expanding across the continent. The slavery issue was rising to war proportions. Political giants like Clay and Calhoun in Congress were virtually at each other's throat over the tariff and other issues. The Nation's fiscal system was forced to the forefront of politics by President Andrew Jackson in the so-called bank issue, and Jackson, himself, was no balm on the times. International affairs—some of them dating back to the Republic's infancy—had been allowed to drag out to a danger point.

These were some of the elements of national politics which filled the career and influenced the actions of John Tyler who was born a Jeffersonian Democrat—or a Republican as they were known then. In him was bred the principle of States' rights. In his environment strict construction of the Constitution was fundamental. A stern father taught him to guard his principles and the Nation's fundamentals with his honor.

Most of the criticism heaped upon him was drawn by the conflict of these characteristics of the man with the issues of his times. But history fails Tyler, as it fails many others, by its lack of emphasis upon his many constructive contributions which precipitated no political storms.

If there are those today who doubt that progress is consistent with Jeffersonian Democracy, let them look to the State and national record of Tyler and give it a twentieth century application.

Both in the State legislature and as Governor, his record was progressive indeed—while adhering to States' rights and strict construction. He was one of the earlier—and effective—advocates of stripping away the sectionalism which impeded the progress of Virginia. He implemented this advocacy with a State-wide program of public improvements, and he worked prodigiously for a full and free system of public schools. Actually, he was impelled even more in these programs by his unqualified belief in States' rights and the State responsibilities which went with them.

In Congress, Tyler's rigid conformance to fundamentals and to his principles drew him into numerous difficult situations, but in the Senate he revealed a new attribute—and ability to conciliate. He was credited with bringing about the tariff compromise of 1833 which broke the long deadlock between Clay and Calhoun and fixed the Nation's tariff policy for many years.

The distance of his perception is evident from his attitude in the Missouri Compromise debates. Future implications were his principal concern. He foresaw the War Between the States, and anticipated the Dred Scott decision by 37 years. Some believe the slavery question could have been settled without war, if the South had embraced his early congressional position.

It is interesting—if not vital to the story—to note that he opposed a congressional pay raise despite the personal sacrifice required of him while in public office. And perhaps it should be noted also that he voted consistently against increasing Federal taxes.

In summary of his record in Congress—he was a moderate on the tariff issue, favoring tariff for revenue, but not for protection and, as such, he probably rendered his most valuable legislative service. He was a consistent opponent of slave trade and wished for its end through action by the States and, as chairman of the District of Columbia Committee, he implemented this principle, by writing abolition of slave trade and sale into the law for the Nation's Capital. He opposed the United States bank on constitutional grounds and to the extent of his convictions he supported Jackson on this question.

In 1840 the Whigs nominated William Henry Harrison of Ohio for President and John Tyler of Virginia as Vice President, and both were natives of Charles City County, Va. Harrison had become a general, and his popularity was due to some extent to his military successes. Tyler was chosen in favor of the southern supporters of the party.

Harrison died a month after his inauguration, and Tyler became the first Vice President to succeed to the office of President through vacancy. He set the precedent for Vice Presidents assuming the Presidency in their own right, rather than merely presiding as an acting President. And, despite almost insurmountable political handicaps, his critics to the contrary, he made a brilliant record as a Chief Executive for his one-term administration.

He met domestic issues with exceptional ability. Some of his more constructive achievements in this field included reorganization of the Navy with development of the National Observatory, and testing Federal use of the magnetic telegraph with a variety of possibilities such as the development of the Weather Bureau. His vetoes destroyed the United States Bank monopoly for all time, but a highly partisan Congress denied him the substitute he proposed. The result left him with only makeshift fiscal machinery, but he operated the Government without loss or fraud, curtailed the debt, and reduced Federal spending by 25 percent.

There had been 7 years of fighting in the Seminole war. With his tact and dispatch, Tyler finished it in a few months. He dissipated the so-called Dorr Rebellion by smiting it with a firm attitude.

The high mark of his administration probably was in foreign affairs, for it was under Tyler's guidance that the Washington Treaty of 1842 was negotiated. With this he settled numerous potentially dangerous controversies between this country and Great Britain. Some of them had been subjects of dispute for years. Among other agreements

reached under the treaty were those concerning the northeastern boundary which had come down unsolved through six administrations. Others included the right of search claimed by the British under the pretext of suppressing slave trade, and the sanctity of territory and protection of the flag involved in the cases of the *Caroline* and *Creole*. Many believe that, without this treaty, another war with England would have been a certainty. Its successful negotiation, on the other hand, probably sealed the bond between the two English-speaking nations which was to make them victorious allies in two great world wars against the freedoms of democracy.

Tyler's invocation of the Monroe Doctrine when the British seized the Hawaiian Islands in 1842 extended American influence into the Pacific, and beyond these islands he opened the doors of China to the United States by the treaty of 1844.

He fought tenaciously for the annexation of Texas, and, despite British, French, and Mexican intrigues, and considerable political opposition in the United States, he virtually brought this great State into the Union before the expiration of his administration.

These were the remarkable achievements of a President who was said to be without a party. They were wrought while his image was being burned in effigy, while he was being scorned by those who once claimed his friendship, while he was absorbing the most carping criticism ever piled upon a Chief Magistrate of this Nation.

The hotbloods of two political parties called him traitor. The partisan press lashed him unmercifully. A whole Cabinet—save one—walked out on him while he was President. He was threatened with impeachment. Even people in his own county turned upon him.

Patriotic citizens of our time have a right to ask why such malediction was heaped upon a man of admitted personal charm, obvious intellect, and documented achievement. By the same token, justice to a President of the United States requires us to make our own estimate of his greatness, based upon an unbiased study of his life, his acts, and his times.

Briefly, the excitement of sparks flying from the brakes of strong will, high principles, and deeply rooted fundamentals applied to the impulsiveness, impatience, and political ambition in an era of profound changes magnified the controversies and hid the achievements. The moral is that we should recognize similar situations when we see them again.

Actually, Tyler—although agreeing with Jackson on many issues—did break with the head of his party in the more extreme nationalistic aspects of the General's administration, such as his force act crackdown on South Carolina which violated Tyler's States' rights principles. And, although agreeing with Jackson on the unconstitutionality of the United States bank, he also opposed the sudden withdrawal of Federal funds as a detriment to business. And, indeed, he opposed some of Jackson's appointments. The result was that he found himself outside the Jackson party.

The Whigs were such a conglomerate group they couldn't even adopt a platform. They nominated Tyler, who at the time was unaffiliated, for his States' rights background. They knew what he stood for, because there is no reason to underrate the Virginian's political prominence. And, as President, it was inevitable that his convictions, principles, and his adherence to fundamentals should clash with the multi-hued political complexion of the tariff men and antitariff men, the States' rights men and nationalist men, the bank men and the antibank men, etc., of whom the Whig Party consisted. And it should be noted that not all of these men were without high political ambition; that many of them were noted for their cunning; some were among the political towers of their time. Perhaps the press has never been more biased in political harangue. Tempers were short. Issues were at white heat. Tongues were sharp. Under such conditions justice to a man of unbending principles and fundamentals could not be expected.

But, at the end of his administration, on a pledge from his old associates in the Democratic Party to bring Texas safely into the Union, Tyler renounced his own nomination for reelection in favor of James K. Polk and led a great many of his followers back to their original political affiliation.

It is to his final glory that ex-President Tyler exerted himself in his declining years to the preservation of the Union which he loved, but when the break came he followed his lifelong principle that he owed allegiance to the Union because he owed allegiance to his State which by its own choice had become a part of the Union.

He lived to see much of the malice toward him mellow, and his old friends were friendly again. What we have to erase today is the injustice which was written about him to prejudice posterity.

For those who respect their fellowmen for their will to have principles—and to cherish and defend them—no greater tribute can be paid to John Tyler than to quote from his own letter of resignation from the United States Senate, which was forced upon him by his adversaries. In that letter he said: "I shall carry with me into retirement the principles which I brought with me into public office, and by the surrender of the high station to which I was called by the voice of the people of Virginia, I shall set an example to my children which shall teach them to regard as nothing, place and office when either is to be attained or held at the sacrifice of honor."

Descendants of John Tyler are in this audience today, and I salute them. We in Virginia know that they are carrying forward the Tyler tradition of good citizenship and fine public service. In many instances the deeds of the present Tyler generation are to be found recorded in high places throughout the State. And they will be grateful for the service in justice which is being done this day for their illustrious ancestor.

Mr. SMITHER. Thank you, Senator BYRD. Let me, on behalf of Virginia Woodmen, express our grateful appreciation to those who appeared on this program; our speakers; the Thomas Jefferson High School band, directed by Mr. Frank G. Wendt; the John Marshall High School band, directed by Mr. W. Donald Berky; and to Mr. T. G. Smoak, chairman of arrangements; and his committee; and to the radio stations WRNL, WLEE, WRVA, and WMBG; and to C. G. Lamb, our parade major; and to all others who have contributed so unselfishly of their time and talents for this occasion.

Ladies and gentlemen, our national anthem, played by the John Marshall High School band.

National anthem.

Address by Hon. Hubert H. Humphrey, of Minnesota, Before National Conference on Citizenship

---

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 18 (legislative day of Monday, April 11), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by me before the National Conference on Citizenship, at New York City on May 16, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Lycurgus once said that "Citizens are the best walls of a free city." It is strange how true the words of this great Spartan lawmaker of the ninth century B. C. are today. Today we live in a world which has no physical barriers. It is a world which can be traversed in a matter of hours. National boundaries are no longer safe. National interest is no longer secure. In a world such as this, where physical weapons no longer have any meaning, the only dynamic yet constant force upon which a nation can rely is its citizenship.

Yet this thing which we call citizenship is capable of many qualities. Citizenship can be a prison, or it can be a portal. It can enslave man in his loyalty to a totalitarian state, or it can free man through a realization that government and loyalty to a democratic ideal can provide for him the opportunity for individual growth and the expression of individual personality.

The state is an invention of man. It has neither intellect nor conscience nor morals. Yet our world is characterized in the minds of many by a conflict of states one with another. Why this conflict? It is sensible that man should allow his own invention, the state, to destroy him and his possessions in conflict? Is it sensible that many should allow a doctrine of citizenship to lead him and his civilization down the road to chaos and to the destruction of that civilization?

It must be, then, that the conflict the world faces is not a conflict between states. It must be then that this conflict has another interpretation. The interpretation I suggest is that the conflict is not one between states, but rather is one between ideals and ideologists. The state, as an invention of man with no intellect, conscience, or morals, is an inanimate machine. As such, therefore, it relies upon fuel provided for it by the loyalties of citizenship to give it strength, purpose, and direction.

With this perspective, we can better understand the differences between the ideology of democracy and the ideology of totalitarianism. The democratic state is one which is mastered by man; a totalitarian state is one which is master of man. The struggle our world faces is a struggle between both ideologies.

The forces of totalitarianism which we face are not quiet. The very nature of their principles calls for agitation, activity, and fanatic dedication. Their philosophy is not an attractive one. Man does not willingly submit himself to mastery by a machine of his own creation. Yet the bitter lesson we have learned is that those of us who believe in democracy cannot remain passive in the confidence that totalitarianism has no future because man desires freedom. Man desires freedom, but man also desires security. Self-government is not a luxury on which men may grow fat and indulgent. Rather it is an instrument by which men can, if they have the wisdom, safeguard their individual freedom and employ that freedom in the pursuit of happiness. It is true that democracy cannot be defeated in the theoretical struggle of ideologies, but democracy can be defeated by default. Democracy can lose if those of us who believe in it remain indifferent and neglect our personal responsibility for its security and growth. The strength of totalitarianism lies in the indifference of its people. Democratic self-government tries its people with a stronger challenge than any other system in the world. Scorning the brutal coercion of totalitarian states, it asks justice and brotherhood of its people; it asks that they cooperate well and voluntarily

for their common welfare in order that each may benefit equitably according to his merits.

Democracy is an easy ideology to take for granted. We seldom consider its basic principles in a critical light, in order to formulate our reasons for upholding it. It is a tragic fact that American youth which went abroad in the war to save democracy was totally unprepared to spread its message of democracy. General Bradley, in a recent article, said that throughout Europe, wherever our armies were stationed, the people of Europe were bewildered by our American soldiers who appeared indifferent to the political and philosophical origins and nature of our democracy. Unhappily, when driven into a corner intellectually, our soldiers were forced to fall back on American wage scales, automobiles, our refrigerators, and eventually and triumphantly on the American bathroom for their defense. Here then is the danger signal. Here then is an indictment of the indifference which has led our Nation to permit this vacuum to remain.

Our democracy is much like a tall stand of timber. We cannot cut from it more than we plant in it without imperiling its survival, and forests like gardens cannot be bought. They must be cultivated by toil and nourished by the sweat of those who would keep them. We quickly forget that if freedom is to flourish, our society must reexamine its principles of education and rededicate itself to the conviction that education is that strength for freedom of democracy. It must take strength from the understanding that an educated people is easy to govern, difficult to lead, impossible to enslave. Only the educated man is a freeman.

In 1945 your distinguished organization, the National Educational Association, issued a statement which said:

"Citizenship implies the effective use at every level from childhood through adulthood of the rights and responsibilities of democracy. It is based upon clear understanding and purposeful skilled action in attaining democratic goals. It is based on faith in the power of people to work together toward the solution of common problems. Democracy seeks to provide increasingly equal opportunity for all, regardless of race, creed, national origin, or social and economic status."

Education as a major social institution is the medium through which citizenship can be translated into loyalty to democratic ideals. Education for democratic citizenship means the practice of democracy. Education for democratic citizenship in the school means democratic practices in the school. Education for democratic citizenship in the community means democratic practices in the community, in the homes, churches, businesses, industries, labor organizations, community agencies, patriotic and service groups. It means direct participation in social and civic affairs. It means the training of young citizens with service responsibility in running for office, voting, jury duty, and the study of our institutions. Education for democratic citizenship means the development of knowledge and the understanding for increased participation in local, State, national, and world affairs. If America and democracy are to come of age, it means that we must expand our concept of the school to include not merely the formal periods of classroom instruction but also the training of the whole man, the whole individual. It means that our schools must be directly tuned to the need for vocational guidance and aptitude. It means that our schools must relate themselves to the need for psychiatric assistance even on the school level. It means that our schools must indeed be laboratories for democracy.

A generation ago Americans had a philosophy of personal and public life which said, "Take care of number one." This idea was very simple. If everyone devoted himself to his own success, if everyone took care of number one, then obviously the sum total of the success of all numbers would be prosperity and happiness for all people. This would bring an end to poverty not only in the United States but everywhere else in the world.

How wrong we were. We were wrong and that philosophy was doomed to failure because it ran counter to moral law in its glorification of selfishness; its failure was foretold by the teachings of the Bible. That philosophy is wrong because it ran counter to the democratic principles of human brotherhood, to the declaration that all men are created equal. It was wrong because it ran counter to the true nature of Americanism and American democracy. It was our country which was the first to present to the modern world a coherent political faith based upon the dignity of the individual, the equality and fraternity of mankind. We were the first to pattern a structure of government and to form a society which denied selfishness as a pattern for behaviour, and which emphasized democracy and human solidarity. This ideology was more powerful than the arms of conquest. This ideology upset thrones in Europe and convulsed a continent. It is now convulsing another. This ideology put into the hearts and breasts of Colonial people, the underprivileged, and the subjected, a consuming desire for liberty, a desire which today is emphasized by such rebellions as those in Indo-China and Indonesia, and in the fact of India's freedom. We never moved a battalion or a regiment, in the eighteenth or nineteenth century, yet the idea of the Declaration of Independence produced the doctrine of the rights of man, the equality of man, and broke the back of oppression and the power of kings.

For a period we in the United States have forgotten the basic roots from which this democratic idea has come. We forgot that to take care of "No. 1" is a principle which runs counter to the principle of human brotherhood and of mutual obligation one to another, which is the basis of democracy.

We forgot and thus we failed. Proof of that failure was the frustrating depression followed by a terrible war.

Part of our neglect was translated into an indifference to political life. Why bother with veterans' hospitals, or Government research laboratories, or public administration, or public works, or Government-paid education?

Yet when depression and war came, the whole science of self-government, the whole process of government which had seemed so irrelevant and so inconsequential to us who thought we had found the golden way, became suddenly the center of our greatest concern. Many of our leading citizens who had never before given a thought to Government except as a minor irritant, volunteered or were forced to give up their business to devote themselves entirely to government in order to pull us out of economic havoc and later in order to win a war.

Let us not repeat the errors of our generation. Instead of "take care of No. 1," I propose this phrase: "Take care of all." Take care of human brotherhood; take care of democracy; take care of self-government.

By that I suggest that our young men and young women be trained to qualify to spend a part of their lives in some form of public service. I suggest that the youth of our Nation be educated so that they can be qualified to set aside a number of years voluntarily for service in legislative or executive branches in our local or National Government, for service in our engineering, medical, administrative, social, educational or foreign services of our Government. I am proposing that out of the best and most productive years of each man's life he carves a segment in which he puts his private career aside to serve a community and his country and thereby his fellow men and the cause of democracy and freedom. I am proposing that throughout his life each citizen dedicate himself to active political participation. Aristotle once said that the truest definition of a complete citizen that can be given is probably this: that he shares in the judicial and executive part of the Government.

We face a crisis. This crisis is not one which military forces alone can conquer, that military forces alone can protect us from. Nor is our crisis of brief duration. Our crisis calls not only for steadfastness and faith but for great skill in self-government. We must summon all of our talents for citizenship, for self-government, for public service.

I am not urging that everyone pursue public service in some form as a life career. Not at all. What I do urge is citizen participation in politics. Only this way can democratic institutions continue to prosper and flourish.

I have stated above that citizenship can be a prison or a portal. Citizenship can confine a man within the narrow limits of the customs and traditions of his own community, or it can make him an active, productive, and responsible part of a political entity much larger than the community with which he has physical contact.

In the Middle Ages, the obligations of citizenship controlled a man's relationship to the city in which he lived. By collaborating with a man from a neighboring city he could be in violation of his citizenship obligations and thus be guilty of treason.

As modern society grew more complex, and as means of communication and transportation cut distances and eliminated frontiers, the concept of citizenship and responsibilities of citizenship has grown and developed. When the American Colonies federated themselves and formed a United States, citizens of several States expanded their loyalties to include the new federation. A Virginian was no less a Virginian when he became an American.

Today our concept of citizenship is further expanded. It is further expanded because of our realization that democratic citizenship is a loyalty to an ideal and not just to a State. Democratic citizenship is a dedication to the democratic ideal, to the ideal of human rights, civil rights, freedom from insecurity for all people.

Out of every bitter experience of history, out of every tragedy, man learns in his sorrow. Out of the sacrifice of two world wars we again come back to the immortal idea of the oneness of man, of his essential unity. It was out of this conviction and out of the recognition of this eternal truth that man, with all of his limitations, his prejudices and his inabilities, created the United Nations. The United States of America is dedicated to the United Nations. The world is moving closer to one, becoming a true United Nations. It seems likely that within the next few weeks the Senate will give force to the Atlantic Treaty which by implication throws our lot in with the fortunes of the nations of Europe. And while discussion of the Atlantic Treaty is dominating our press and air waves there is even now a most serious and specific discussion of European federation—of the political and economic federation of Western Europe.

Overshadowing and running through the discussions of Europe federation, alliances and plans for internationalism, there is a rapidly increasing volume of discussion about something called world citizenship and world government. The idea of world citizenship is beginning to take form in the minds of men everywhere. The people of the world are coming to realize that they are one, that their interests are one, that our law must be one. The people of the world are coming to realize and must come to realize that if we

want a society free of the agonies of war and preparation for war, free of devastation and the fear of tomorrow, then they must accept the principle that every American, every Russian, every Indonesian, every South African, is in a real though limited sense a citizen of the world, and hence should be subject to a world law.

Democratic citizenship means a realization that democracy is not a fixed, a static, and an unchanging stereotype, but that it is a vital, dynamic, and constantly growing force. Democratic citizenship must mean concern with the community and as our community has grown to encompass the world, so must the concept of democratic citizenship grow to encompass the world.

The idea of a world order and the United Nations is now new. It has its own immortality. Mankind from the very beginning has sought a society in which he can live in peace and security. The United Nations is a summarized expression of the desire of mankind to live in a world of law and order. American participation in the United Nations is proof of the fact that America is ready to accept its world obligations and that American citizens are ready to accept their new responsibilities as world citizens, because world law is the only ultimate hope for the survival of our ideal, and because Americans understand that democracy is an objective as a world of free and equal men who will, in their freedom, create and secure a just and enduring society.

The Basing-Point System and Blackjack Methods of Competition in Steel—Giants of Steel Industry Earnings Unmasked—Basing-Point System Retarded Regional Development—Small Business Cannot Grow and Prosper Under Basing-Point System—Moratorium on Antitrust Laws Would Be a Major Disaster to Our Economy

---

EXTENSION OF REMARKS
OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1949

Mr. PATMAN. Mr. Speaker, different opponents of the basing-point pricing system have different reasons for opposing the system. Our eminent legal advisors oppose the basing-point system on the very sound ground that the system is monopolistic in nature. In fact, through its use monopolies have been created in the cement, steel, and other industries. Government officials, Federal, State, municipal, and others oppose the basing-point system for the reason that it destroys competition as between supplies of basic commodities. Wholesale and retail dealers oppose the basing-point system for the reason that they are subjected to rigorous price control, and little or no profit on basic construction items, which they must necessarily carry in stock as a convenience for their customers if for no other reason. General contractors; heavy, highway and building, oppose the basing-point system because the prices are often rigged for big jobs and they too, like dealers and Government officials, are unable to obtain competitive prices on cement, steel, pipe of all kinds, and many other construction materials, which in the past have been sold under the basing-point system. The taxpayer opposes the basing-point system because many of his tax dollars are paid to monopolies for products used in public improvements, bought at a much higher price than such products could have been bought had the basing-point system not been in operation. Practical and experienced economists oppose the basing-point system because it violates all the rules of the free enterprise system and is a burden on the economy of our country. Small business opposes the basing-point system because the small businessman is aware of the prohibitive effects upon his right to buy and sell in open markets and to realize upon his initiative and ability in the field of trade and commerce. The courts had decreed that the basing-point system does all of these things and more, and that the system as it was applied in the cement industry was a collusive practice in which the defendants "cooperated in carrying out the objectives of the basing-point delivered price system." The Supreme Court further said in the Cement case:

> We sustain the Commission's holding that concerted maintenance of the basing-point delivered-price system is an unfair method of competition prohibited by the Federal Trade Commission Act. In so doing we give great weight to the Commission's conclusion, as this Court has done in other cases.

The passage of any legislation, which even remotely would place the approval of Congress on unfair trade practices and subvert our antitrust laws, places a club in the hands of monopoly that will long be used to beat down small-business enterprise. Congress has long taken the position that combinations in the restraint of trade are dangerous to the well-being of small-business enterprise. The passage of any moratorium bill I sincerely believe will encourage the disregard and subversive attitude now held by great corporations toward our antitrust and fair-trade-practice laws. We cannot honestly speak of free enterprise, free markets, and free trade in one breath and in another speak of a moratorium upon our antitrust laws. We must necessarily take a firm position on one side or the other. Either we intend to strengthen and support our antitrust laws or we do not. It is as simple as that. We cannot in good faith ourselves strike down that which we have built up in good faith for the protection of our economy. There is no doubt that passage of moratorium legislation will strike a blow at our antitrust and fair-trade-practice laws which will require years of fighting to recover the lost ground if we ever recover it.

BASING-POINT SYSTEM CONTROLLED MANY COMMODITIES

Of course, cement is only one of the many commodities which has been sold under the basing-point system of pricing. Steel and steel products were in fact the first of our basic commodities sold under this system. Among the many steel products was rigid steel conduit, used as a safety device for enclosing conductors of electricity in our buildings and homes. The rigid steel conduit industry used the basing-point system to perfection even to the extent of controlling the wholesale outlets for its product, and so on through to the retail electric goods store and the electric contractor. The Supreme Court recently affirmed the decision of the Seventh Circuit Court of Appeals in the Rigid Steel Conduit case, which was handed down by the court of appeals on May 12, 1948, and a petition for a rehearing denied on June 19, 1948. The court said in part:

> The record clearly establishes the fact that conduit manufacturers controlling 93 percent of the industry use a system under which they quote only delivered prices, which are determined in accordance with a formula consisting of a base price at Pittsburgh or Chicago plus rail freight, depending upon which basing-point price controls at any particular destination or in any particular section of the United States; that as a result of using that formula the conduit producers were enabled to match their delivered-price quotations, and purchasers everywhere were unable to find price advantages anywhere.

Please note the words of the court that "purchasers everywhere were unable to find price advantages anywhere." In other words, by the use of the basing-point pricing system a monopoly was created which effectively and drastically eliminated all competition from the industry. The court further said:

> That purchasers at or near a place of production could not buy more cheaply than from producers located at great distances, and producers located at great distances from any given purchaser quoted as low a delivered price as that quoted by the nearest producer.

BASING-POINT BIDS TO PANAMA CANAL CONFIRM SOUNDNESS OF FEDERAL TRADE COMMISSION'S POSITION

It is well at times to reiterate for the purpose of emphasis. The whole story of the rigid steel conduit industry, its unfair trade practices, its monopolistic control over vital construction material nor its unwarranted and high-handed methods of operation can all be told in one paragraph or one article. But, it was all told by the Federal Trade Commission to the Seventh Circuit Court of Appeals and on the basis of the whole story the system was overthrown by the Court of Appeals and its decision was affirmed by the Supreme Court.

Several years ago bids on rigid steel conduit in relatively small quantitites were received by officials of the Panama Canal. One of the bidders, the Laclede Tube Co., filed a low bid which was thrown out as not being strictly in accordance to specifications. This bid, as set forth on the table which will follow under project I, resulted in the award of this project by lot.

On the second project, listed on the table as project II, there were 29 bidders with three deviating from absolute identity. One of these, Steel Tubes, Inc., was $160 higher; one bidder, Louis Electric Co., was $800 higher; and the third among the deviators was S. Weinstein Supply Co., which was $379.05 less than the basing-point system price offered by the 26 other bidders.

On project III listed on the table there were 16 bidders, of which eight bid identical prices of $687 for the lot. The other eight bids were lower than this amount. Of these low bidders the differences in prices range from 20 cents to $49 under the eight identical bids of $687. The 20-cent under bid was by General Electric Supply Corp., a subsidiary of the General Electric Co. The Panama Canal table follows:

Table of identical bids to the Panama Canal, 1935–38

Bidders	Project I bids (111,000 feet, June 7, 1935)	Project II bids (100,000 feet, Jan. 6, 1938)	Project III bids (2,000 feet, Dec. 21, 1938)
1. American Electric Supply Co.	$8,188.90	$6,200.00	$687.00
2. Associated Hardware & Supplies Corp.			[1] 656.00
3. Austin Co. (M. B.)	8,188.90	6,200.00	
4. Baitinger Electrical Co., Inc.	8,188.90	6,200.00	
5. Baltimore Electric Supply Co.	8,188.90

35. Steelduct Co.	8,188.90	6,200.00	
36. Triangle Conduit & Cable Co., Inc.	8,188.90		
37. United States Electrical Export Corp.	8,188.90	6,200.00	
38. Walker Bros.	8,188.90	6,200.00	687.00
39. Weinstein Supply Co.	8,188.90	[1] 5,823.95	
40. West Philadelphia Electrical Supply Co.	8,188.90	6,200.00	
41. Westinghouse Electrical Supply Co.	8,188.90	6,200.00	
42. Williamsburg Electrical Supply Co.			[1] 666.40
43. Youngstown Sheet & Tube Co.	8,188.90	6,200.00	687.00

[1] Bid deviating from the system price.

BASING-POINT SYSTEM MANUFACTURERS PUT PRESSURE ON THE WHOLESALERS USING BLACKJACK METHODS

History records that lack of strict observance of the basing-point system such as is indicated by the diversity of bids in this list of abstracts led to pressure from manufacturers on their wholesalers who did not maintain system prices in the bidding. The Rigid Steel Conduit Association advised its members that they should insist upon wholesalers maintaining the manufacturers' "published position." Some manufacturers wrote to their wholesalers regarding the matter. For example, Garland Manufacturing Co. stated in a letter to an agent under date of June 8, 1938:

We do not wish to threaten, but we definitely are going to cancel some of our distributor agency contracts if they do not carry out our instructions, and if they are known as price cutters, it is going to be very hard for them to sign up new agreements with ourselves or others.

Some distributor contracts were cancelled for nonobservance of basing-point prices. To keep the system's vicious price controls effective it became necessary thus to coerce independent merchant distributors. Only by such methods can the system be made to work where distribution of products is carried on through independent wholesaling channels.

This blackjack method of selling merchandise illustrates perfectly the evils inherent in the basing-point pricing system. Not only is it a monopolistic system but one fraught with danger to decent law abiding merchants and manufacturers. No industry that would subscribe to such business methods is entitled to move in business circles where fair dealing, honor and honesty are key words. Rather the perpetrators of such unethical and perverted price and sale controls should be stricken from the lists of those who look upon trade and commerce as an obligation to serve with honor and integrity.

BASING-POINT SYSTEM RETURN GOAL OF STEEL INDUSTRY

Recently the Wall Street Journal and other newspapers have told of the expectancy with which the steel industry awaited the green light to return to the basing-point system. The cement decision outlawing the basing-point system has now been effective more than a year. Yet, the giants of our industrial fabric have made greater profits than ever before in the history of industry.

The stupendous earnings during the first quarter of 1949 of that colossus of the steel industry, United States Steel Corp., the initial account of which I have already placed in the CONGRESSIONAL RECORD, May 6, actually contain a hidden joker. This joker is in the form of an unspecified amount of accelerated depreciation deducted arbitrarily by the company, and not recognized under the tax laws of the United States nor allowed by the Bureau of Internal Revenue. Moreover, even when openly presented, this type of convenient though dubious bookkeeping has been much criticized and frowned upon by the Institute of Accountants. Indeed, but for this extra deduction, inserted without mention by this father and perfecter of the basing point, its earnings for the first quarter of 1949 would stand at an all-time high.

Indicative of how large these extra and unrecognized deductions bulk are the figures for the year 1948, which showed that of $145,986,681 in charges for depreciation and depletion, over $55,335,000 or 37.9 percent of the total represented accelerated depreciation. Therefore, net income after taxes for the full year 1948 amounted not to the $129,627,845 reported—$12 per share—but 42.7 percent more, or $184,962,289—$18.35 per share—under the law of the land. If we unmask these fictitious extra charges in the first quarter 1949, we would find reported earnings of $49,928,670 were understated by over $13,500,000 and actually reached the staggering total of $63,555,000, or in excess of $254,000,000 at an annual rate—$26.30 per share. Thus, without benefit of the basing-point system, the United States Steel Corp. earnings per share as properly computed under the law—without accelerated depreciation—would show earnings per share in the first quarter, 1949, of $6.58 instead of the $5.01 reported by the company. In the light of these stupendous earnings and the latest increase in dividends, it is not surprising to find that the corporation at its recent annual meeting decided to split its stock three for one, one major effect of which will be to conceal the high level of earnings per share.

BASING-POINT STEEL AND MONOPOLY BOYS RETAIN EARNINGS IN EXCESSIVE AMOUNTS

The Wall Street Journal report on United States Steel's first quarter earnings shows that the $52,000,000 of additions to and replacement of facilities for this period fell $14,500,000 short of the total of undistributed profits and the funds set aside as a charge for depreciation and depletion. This is what breeds recessions; excessively high prices and the retention of large profits in excess of dividend payments and expenditures for plant and equipment, piling up idle surpluses and draining away purchasing power from all income groups. In light of these facts, statements on prices by Mr. Olds, major domo of United States Steel, and Mr. Grace, of Bethlehem Steel, second largest in the industry, reflect the cynical attitude of these leading exponents of the art of merger, integration, price control, and monopoly. Despite the highest rate of return on its capitalization in history, over 12½ percent, Mr. Olds stated, according to the Journal of Commerce of April 27, that United States Steel was not contemplating any reduction in steel prices or in output in the near future, and warned that any substantial rise in costs would have to be reflected in still higher prices. At the same time he sought to minimize, almost to extinction, the importance of sharp declines in scrap and fuel material costs.

Mr. Grace, according to the Wall Street Journal of April 29, 1949, saw no prospects of any immediate reduction in steel prices, asserting that "lower prices can't come until costs are lower." He offered no explanation as to how Bethlehem's earnings in the first quarter of 1949 could skyrocket 114 percent over those of the corresponding 1948 quarter, unless prices had been increased excessively compared to costs. According to a compilation appearing in the Wall Street Journal of May 10, 1949, earnings of 27 leading steel producers during the first quarter of 1949

increased 66 percent over the already fabulous profits enjoyed in the comparable quarter of 1948.

BASING-POINT ORIGINATORS LONG FOR RETURN OF GREATER PROFITS BY WAY OF PHANTOM FREIGHT

The same giants of industry which, in cement, steel, and other commodities, have made the greatest profits in history, desire the return of the basing-point pricing system to perpetuate their control over industry and the prices which you and I must pay for the necessities of life, health, convenience, and comfort. For more than a year since the cement decision the basing-point and monopoly boys have been sounding the battle cry of "moratorium." They do not want a moratorium to tell them what is legal in carrying on their business, they want a moratorium to hide behind and set up outlawed systems of pricings. The cry "confusion" has been heard. They long for clarity. A moratorium on our antitrust laws can only be for the purpose of furnishing corporation lawyers further legal grounds for argument. Arguments which would be strung out in the courts for years and years while monopoly and unfair pricing methods and trade practices would reign supreme. The real moratorium they desire is a moratorium against those who would protect and foster open competitive markets for small business as against industry concentration, integration, and control. The only confusion they operate under now is how best to stifle competition and regional development.

WITHOUT BENEFIT OF BASING-POINT SYSTEMS NEW PLANTS ARE SPRINGING UP

Already in the short period of a year word is coming in that new plants to produce cement, steel, and many other commodities are being built at locations beneficial to our regional development. Basic commodities should be available at points throughout the country which will enable purchasers to buy with the lowest possible freight charges. It is a ridiculous premise that our basic industries should be concentrated in any particular area and in order to have complete distribution to set up arbitrary pricing systems such as is the basing-point system.

Seriously, this situation has retarded development in many sections of our country and should not be tolerated by the several States. Without artificial pricing systems which set up price discrimination against whole regions and control all prices our industry would develop normally where it should be developed. Small business is vitally interested in regional development. Small business is vitally concerned with its sources of supply of raw materials and its finished products and should not be made to pay freight half way across the continent in order to have these supplies available. Small business should not be at the mercy of a few large manufacturers of products necessary to small business survival; manufacturers who can, by withholding raw materials, absolutely wreck any small business institution. Small manufacturers of fine tools and other products in New England are as much affected as are small manufacturers of agricultural machinery in the Middle West or small manufacturers in the South, trying to establish trade by using raw products available in that section. Small business in the whole Rocky Mountain and Pacific coast area is in the same position of having giant corporations control both sources of materials and the prices of these materials.

If normal commerce is carried on in our country without benefit of basing-point systems and other pernicious and artificial pricing systems, authorized or not authorized by law, free enterprise and small business will survive. Otherwise I am fearful of the consequences. I repeat that a moratorium on any phase of our antitrust laws will be a major disaster to our economy and it is my earnest hope that the Congress will not be the author of any such legislation.

Military Brass Provides Liberally for Self in Kilday Bill

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1949

Mr. BURDICK. Mr. Speaker, it seems we are going top-heavy in everything we do, and quite forget that the thousands and thousands at the bottom of of the retirement pay groups of retired veterans are quite forgotten. To advise the public how this plan works, I desire to submit herewith the following statement by Hon. J. H. Hoeppel:

MILITARY BRASS PROVIDES LIBERALLY FOR SELF IN KILDAY BILL—THOUSANDS OF AGED AND DISABLED RETIRED ENLISTED MEN RECEIVE NO INCREASE WHATSOEVER

(By J. H. Hoeppel)

In order that the American public may know how "unselfishly" our military brass operates against the welfare of the taxpayers, we submit herewith a summary showing the monthly retired pay received by officers who retired after 30 years' service or who were retired for disability after a few days or perhaps a few months of service only.

Comparatively, we also give the retired pay, present and proposed, as well as the increases which are proposed in H. R. 4591 for both officers and enlisted men who served 30 years to retirement. The pay of officers of similar grade and rank in the entire service, including their cash allowances for subsistence and quarters is approximately 40 to 60 percent more grade-for-grade than the pay which is proposed for retired officers in column 2.

For instance, the compensation of a major general in active service with 30 years' service is $1,200 per month, of which amount $195 allowances for quarters and subsistence is income-tax exempt.

The present pay received, the proposed pay, and the increase under the proposed pay are shown in columns 1, 2, and 3, respectively:

Monthly pay of retired officers

	Present pay	Proposed pay	Increase
Major general and higher	$350.00	$724.25	$204.25
Brigadier general	412.50	652.50	240.00
Colonel	412.50	551.25	138.75
Lieutenant colonel	360.93	461.25	100.32
Major	309.38	405.00	105.62
Captain	258.75	348.75	90.00
First lieutenant	225.00	275.62	50.62
Second lieutenant	202.50	247.50	45.00
Warrant officer	202.50	230.62	28.12

Monthly pay of retired enlisted men

	Present pay	Proposed pay	Increase
Enlisted men:			
First grade	$185.63	$225.00	$39.37
Second grade	151.88	191.25	39.37
Third grade	129.38	174.00	54.62
Fourth grade	112.50	146.25	33.75
Fifth grade	101.25	112.50	11.25
Sixth grade	90.00	90.00	None

The increases here shown are not actually take-home increases as 20 percent of the increases are substracted as withholding (income tax). As there are approximately 40,000 retired enlisted men who did not serve 30 years to retirement, all these in this category receive varying retired pay predicated upon length of service, disability, and so forth.

For instance, 7,000 aged and disabled retired enlisted men of the Navy and Marine Corps, who, because of disability were unable to serve in World War II, will receive a monthly increase of only $5.75 per month.

Ten to fifteen thousand (30-year) retired enlisted men of the Navy and Marine Corps, who were too disabled to serve in World War II, under the proposed bill will receive absolutely no increase in retirement pay.

Approximately 20,000 retired enlisted men of the Navy and Marine Corps with 20 years' service, who served in both World War I and World War II will receive only a small increase based on their increased longevity. Outside of increased longevity they receive no increase under the proposed bill.

Enlisted men retired from the Army for disability after 20 years' service will continue to receive the same pay they now receive. No change in present pay.

Enlisted men retired from the Navy after 20 years' service (not disabled) under the Fleet Reserve Act of 1938 will receive an increase in pay from $82.50 to $135.50 per month.

From the foregoing it will be seen that enlisted men who served 30 years to retirement will receive a minimum increase of $11.25 per month to a maximum of $54.32 per month

Officers who served 30 years, or who were retired after short service for disability, will receive a minimum increase of $45 per month to a maximum increase of $240 per month

From the foregoing, it will be readily seen that the officers are munificently provided for with the minimum increase any of them receive being $45 per month.

The Hook bill, as originally introduced, was fair and square to the taxpayers from the standpoint of the disabled officers. The provision in the original Hook bill, making the retired pay of officers retired for disability subject to income tax, was not included in H. R. 4591. It is our contention—and was once the view of Members of Congress—that officers retired for disability who have lucrative employment should be forced to pay income tax on the disability retired pay which they receive.

We contend further that it is unfair to give an officer of short service 75 percent of the pay of his rank and then permit him to enter

civil employment to earn a large salary and, at the same time, to absolve him from paying tax on his easily obtained high retired pay.

The Hook bill also contained an outstanding provision to provide that the easily promoted officers of World War II, who were given an advance in rank with their terminal leave, should not receive retired pay predicated on such advanced rank but that their retired pay should be based on a rank which they held for at least 6 months. This provision to safeguard the taxpayers was also stricken and is not contained in H. R. 4591.

It is unfair to the taxpayers, we repeat, to force them to pay from 40 to 50 years unusually high retired pay to officers who were given such undeserved increased rank on their terminal leave so that many of them could strut the streets of our cities as colonels, etc.

This adds an undue burden on the taxpayers, who are forced to pay retired pay predicated upon rank which was never exercised in command of men but which was only held while the officer was on terminal leave. We contend that the requirement of forcing an officer to have served 6 months in grade before he can receive retired pay on such grade should be reincorporated in H. R. 4591 in respect to all those who served in World War II. As promotions were difficult and few and far between and none given on discharge (World War I officers received no terminal leave), therefore, the 6 months' prohibition should not apply against those who served in a higher rank in World War I.

In our opinion, it savors somewhat of the form of a racket to grant such abnormal increases in pay to lieutenant colonels, colonels, and brigadier generals. These ranks were easily attained during World War II and as a consequence, thousands of young disabled officers have been, and will be, retired at these high ranks, which means that for years and years the taxpayers will be called upon to pay undue retired pay to these men, many with only World War II active service.

In addition, let us not forget that under title III, Public 810, Eightieth Congress, thousands of lieutenant colonels, colonels, and brigadier generals from the National Guard and Reserve Corps, after only a few years of active service (the balance of their service was as civilians) are also to receive such high increases in retired pay as we show herein.

BENEFITS TAKEN FROM ENLISTED MEN SO THAT OFFICERS MAY GRAB MORE

When H. R. 4591 was before the committee, we sought to have it amended to restore to retired enlisted men allowances which were taken from them arbitrarily on War Department recommendation in the Pay Act of June 16, 1942.

Under the original act for enlisted men, they were promised by the Government that if they would serve 30 years to retirement they would be granted allowances for the balance of their lives. This solemn unilateral contract of the Government with the aged and disabled enlisted men was repudiated so that officers could grab more for themselves (as they did) in the Pay Act referred to.

Inasmuch as thousands of retired enlisted men are to receive no increase under the Hook bill (H. R. 4591), we, therefore, appeal to the Congress to restore allowances of $30 per month to all enlisted men who retired with 30 years of service so that the Government may again live up to its promise in the original Retirement Act to pay allowances to all such retired enlisted men for the balance of their lives. In order that this may be effected, we propose an amendment to H. R. 4591 to provide:

"That enlisted men of the Army, Navy, Marine Corps, and Coast Guard heretofore or hereafter retired from active service with credit for 30 years' service shall, in addition to retired pay, be entitled to allowances of $30 per month in lieu of allowances in kind heretofore authorized under provisions of the act of 1885 establishing military retirement."

If this amendment is adopted, then all retired enlisted men will be assured of an increase in retired pay of $30 per month, which is not an exorbitant request considering the high cost of living and the fact that most of these men have received but very little increase in retired pay since 1922. To increase the monthly income of such retired enlisted men $30 per month would not be disproportionate—or would it be—compared with the maximum increase of $240 per month which is provided in the Hook bill for retired brigadier generals.

The undersigned submits the foregoing for the consideration of the Congress and the American public so that they may see for themselves how generously the officers of the armed services are to be provided for while, at the same time, such niggardly consideration is being extended to the most of the retired enlisted men and especially to those who were so aged and disabled that they were unable to serve in World War II.

Believing as we do that the Members of Congress are interested in fair play when true facts are presented to them, we shall endeavor to have this information incorporated in the CONGRESSIONAL RECORD. To our subscribers who read this true statement of fact in our publication, we request that they mail this article to one of the Senators from their State calling his attention to the discrepancy between the increase provided for officers and enlisted men on the retired list of the armed services under the provisions of H. R. 4591.

Gerhart Eisler

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. BROOKS. Mr. Speaker, I do not agree with the criticism uttered on the floor of this House yesterday regarding the handling of the Gerhart Eisler case. Gerhart Eisler, leader of the Communist movement in the United States, was arrested and, under the Constitution and laws of our land, was entitled to make bond at the discretion of the court. The Attorney General insisted on a bond not less than $100,000; but the court chose to set the bond at $25,000 and thus made it possible for Gerhart Eisler to furnish suitable sureties for his release on bond. Had Eisler been in trouble in Russia, no such fair treatment would have been extended by the Kremlin.

Gerhart Eisler is out of this country now, and sometimes I am prone to believe the best course would be to let him go and prevent him and any of his ilk from ever coming back to this country. Since the Attorney General has asked to bring him back, I join with his office in rejoicing that we will be able to prosecute this man to the full extent of the law. He sought to undermine our Government and he should expect nothing but grim justice, and no leniency, from the Government which he sought to destroy. I believe the bail which Gerhart Eisler made was handled by the Kremlin. I think he would have made $100,000 bond as quickly as $25,000 and in cases like this, regardless of the amount of bail, the defendant is apt to jump bond.

The duties of the FBI are to track down criminals and to make available for use proper witnesses at the trial. These duties cease after an arrest has been made and bond furnished by the defendant. The FBI is under no obligation to follow an accused who has made bond as set by the court, and in accordance with its terms, as long as the bond remains unforfeited. The criticism against the Attorney General and the FBI therefore is certainly unfair. On the contrary, our prompt action in obtaining help from the British Government in arresting this man, and the effort to bring him back to the United States at an early date, would indicate a definite intent on the part of the Justice Department to insist on summary justice at an early date.

Maurice H. Thatcher

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1949

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks, I wish to include the following speech I delivered at a dinner of the Panama Canal Society of Washington on May 14, 1949, at the Broadmoor, honoring Maurice H. Thatcher, former Member of the House:

Mr. President, our honored guest, ladies and gentlemen, Maurice H. Thatcher grew up in Butler County, Ky., where he was elected clerk of the circuit court upon attainment of his majority. He studied law in Frankfort where he held official posts during the Bradley administration, and was licensed to practice under examination by the court of appeals at Frankfort. He located in 1900 in Louisville and entered on the general practice of his profession. He served as assistant United States attorney for the western district of Kentucky from 1901 to 1906 after which he again engaged in the general practice in Louisville. He was State inspector and examiner for the State of Kentucky for 2 years.

Maurice Thatcher was appointed on March 26, 1910, by President Taft, as a member of the Isthmian Canal Commission made up of seven members and having in charge the construction of the Panama Canal. He was confirmed by the Senate on April 7, 1910, thus filling the vacancy caused by the resignation of former Senator Jo S. C. Blackburn, of Kentucky.

He was married to Miss Anne Bell Chinn, daughter of Attorney Frank Chinn, a Confederate veteran of Frankfort, Ky., and granddaughter of Mrs. Prudence Blackburn Hunt, a cousin of Senator Blackburn, on May 4, 1910, and they sailed from New York for the Isthmus on May 6, 1910, arriving there on May 13, making their first home in Acon, Canal Zone, adjoining Panama City. On arrival Commissioner Thatcher became civil Governor of the Canal Zone. Under his immediate supervision were grouped all the civil activities of the Canal Zone.

In addition, Governor Thatcher was the official representative of the Isthmian Canal Commission in all its dealing with the Government of the Republic of Panama and the foreign diplomats accredited to Panama, and never did he fail to receive the fullest aid and cooperation concerning any request made in behalf of the Canal work or interests. In addition to his other duties, Governor Thatcher, in association with the other members of the Isthmian Canal Commission, performed certain legislative work in the enactment of laws or ordinances dealing with local matters—major legislation being enacted by the Congress.

Governor Thatcher served as a member of the Isthmian Canal Commission and Governor of the Canal Zone until near the completion of the building of the Canal, or until August 8, 1913. The Commission was abolished as of March 31, 1914, under congressional act providing for the government and operation of the Canal. The Commission was made up of seven members. The other six with whom Governor Thatcher served have all died—Colonel Gaillard, Generals Gdethals, Gorgas, Sibert, and Hodges, and Admiral Rosseau.

Governor and Mrs. Thatcher returned to Kentucky and made their home in Louisville, where he again entered upon the practice of his profession and so continued until his election to Congress in November 1922. He was elected altogether to serve five terms in Congress, from March 4, 1923, to March 4, 1933. Since his retirement from Congress, he has practiced law in Washington, but Louisville and Kentucky remain his permanent home.

In 1928 he received what is believed to have been the greatest majority any candidate for a major office in Louisville and Jefferson County has ever received, something over 33,000. In his last race for Congress he had no opposition from either party.

It may be fairly said that in all his public career, Governor and Congressman Thatcher sought to serve his constituents and his country without regard to partisan consideration. During his Isthmian incumbency, running about 3½ years, Governor Thatcher conducted the civil affairs of the Canal Zone with efficiency and economy.

During the fateful years of Canal construction, all roads led to Panama. People from all over the world flocked there, and the Thatchers did much to contribute to the enjoyment and pleasure of these visitants, and to the promotion of international good will. Mrs. Thatcher mastered the Spanish tongue, and this, together with her fine qualities as a hostess and neighbor, greatly endeared her to the Panamanian people, while Governor Thatcher, by his unfailing habits of sympathetic consideration and fair dealing, won and has ever held the high regard of Panamanians. It is but just to say that Mrs. Thatcher greatly contributed to the success her husband achieved in his Isthmian role.

In 1930, Governor Thatcher, then dean of the Kentucky House delegation in Congress, was appointed by President Hoover as a member of a commission of three to voyage to Caracas—accompanied by Mrs. Thatcher—and there present to the United States of Venezuela the statue of Henry Clay, the great protagonist of Latin-American independence and the friend of Bolivar, the George Washington of South America.

When Governor Thatcher came to Congress, his Isthmian experiences were of value to him, the Panama Canal, and the Republic of Panama. He was always ready to respond to any appeal or request for aid in these directions. Thus he assisted in bringing about the enactment of the permanent Civil Service Retirement Act for Canal Zone employees, and was the author of the legislation establishing a permanent ferry across the Panama Canal at its Pacific entrance. This ferry and the highway from the west terminus of the ferry to the zone line were named in his honor, and each now bears his name.

The Thatcher Ferry and the Thatcher Highway, it may be noted, constitute links in the great inter-American highway system, stretching from Alaska to the city of Panama, which, within a reasonable time, will be fully completed.

While he was in Congress, Governor Thatcher was author of the legislation establishing the Gorgas Memorial Laboratory at Panama City, an outstanding institution devoted to research touching the cause and prevention of tropical disease, both human and veterinary. Congress now annually appropriates $100,000 to maintain and operate this institution. Governor Thatcher, since his retirement from Congress, has served the Gorgas Memorial Institute of Tropical and Preventive Medicine—the parent organization in charge of the laboratory—as general counsel and member of the executive committee and board of directors, and, in addition, is now serving the institute as its vice president. He is rendering important services in these connections, altogether without compensation.

For his Isthmian services, and for his long-continued efforts in behalf of pan-Americanism, Governor Thatcher has been the recipient of the highest civic honors from three Latin-American countries: The Order of Vasco Nunez de Balboa, from Panama; the Order of Al Merito, from Ecuador; and the Order of del Libertador, from Venezuela.

During his congressional service, Governor Thatcher made an unusual record of achievement in obtaining the enactment of important public measures dealing with highways and bridges, books and schools for the blind of America, and for conservation. He was author of the legislation creating the Mammoth Cave National Park, in Kentucky; the Zachary Taylor National Cemetery, also in Kentucky; a new and much needed $3,000,000 Federal building in Louisville; a new United States marine hospital for Louisville; and a million and a half dollar veterans' hospital for the Kentucky region. He was also the author of the measure under which the new $5,000,000 bridge across the Ohio River at Louisville was built, and largely through his efforts the structure was officially named as the George Rogers Clark Memorial Bridge in honor of the immortal conqueror of the Northwest Territory in the War of the American Revolution. He procured the naming of the U. S. S. battle cruiser *Louisville* for his home city, and made the dedicatory address at her launching and christening at the Bremerton Navy Yard on Puget Sound in 1930, Mrs. Thatcher acting as hostess for the occasion. He was also author of the legislation providing for the improvement and perpetual maintenance of the Lincoln birthplace farm in Kentucky. These and various other efforts of his, put forth while he was a Member of Congress, were highly praiseworthy and stand as monuments to his outstanding ability.

At the outset of his congressional service, Governor Thatcher was placed on the all-important and powerful House Committee on Appropriations, serving thereon for the full 10 years of his tenure, and there rendered fine and constructive service in behalf of the taxpayers of the Nation.

I know that during his congressional career, and ever since, he has been active in his efforts to serve the Panama Canal, the Republic of Panama, the interests of those who built the great waterway, and those who have operated it; and that through the years he has sought to promote cordial relations among the countries of the Western Hemisphere. He has always been a most earnest advocate of pan-Americanism.

In addition, ladies and gentlemen, Mr. Thatcher, during his entire career, has interested himself in every worthy activity coming to his attention. He has given of his time freely and has, by his unselfish efforts, contributed much to the comfort and happiness of many of those among whom he has lived. We find him and his charming wife in splendid health, and I know I speak the sentiments of everyone present when I say we wish for them both many more years of health, and the happiness that comes only from living from day to day under the precept of the Golden Rule, which has characterized their entire lives.

Power of the Press

EXTENSION OF REMARKS

OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, May 18 (legislative day of Monday, April 11), 1949

Mrs. SMITH of Maine. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address which I delivered at the annual dinner of the American Newspaper Publishers Association in New York City on Thursday, April 28, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Part of my training for membership in the United States Senate was in the newspaper business. For a few years I was the circulation manager of a small weekly Maine newspaper. In that position I learned what circulation meant to the advertiser and what the advertiser meant to the publisher. About the nearest that I ever got to being a publisher was as assistant to the publisher of that weekly.

All through my service in Congress I have kept my hand in the newspaper game, even if in a limited and removed manner. While in the House of Representatives, I wrote a regular column for all of the weeklies in my Second Congressional District. That column was of tremendous value to me, because through it I interpreted and reported my work and actions in Congress to the people. By it they learned to know me better and what made me tick the way I did. They might not like the way I voted on some issues—but they found out at the time of the voting, instead of waiting until campaign time, why I voted as I did.

I still write a column for the Maine weeklies, but now it is a monthly column, and goes to all Maine weeklies instead of just those of the second district. But I have taken on another writing chore. I have joined the ranks of "five-day-a-week" columnists. I am scribbling my daily thoughts for some twenty-five newspapers throughout the country.

So I can still claim some kinship to the newspaper fraternity. With the self-acquired delusion that printer's ink flows through my veins, I read with a great deal of admiration the official, public admissions of the American newspaper editors at their meeting in Washington last week. In self-appraisal they found themselves guilty of "Ivory Tower" thinking and reporting, and of completely missing the boat on the national election.

I got a greater thrill out of reading this than I did of Dr. George Gallup's recent letter to me asking me how I arrived at my September 1948 election prediction that the Republicans would get only 45.6 percent of the presidential vote and saying, "This is by far the most accurate forecast that has come to my attention to date, and I wish to extend to you my heartiest congratulations."

There are no truer attributes of greatness than admission of mistakes and self-appraisal. By these standards, American newspaper editors showed their greatness with their public frankness in Washington last week.

Freedom of the press is one of the cornerstones of our American democracy. As long as those who write the news, interpret the news, edit the news, and publish the news do not abuse the freedom of the press, they will constitute one of our greatest bulwarks against communism or any other "ism" that seeks to destroy our way of life. But they must continue to write, interpret, edit, and publish in the fearless and objective manner they have followed in the past. This means maintaining a delicate balance between caution and courage. I think the American press has done this admirably. I have complete confidence that the American press will do it in the future.

The only fear I have about the American press is that it may be becoming too sophisticated. Perhaps the fault is with me. Perhaps I am lagging behind, in my naïveté. This may stem from a feeling that the American people are becoming more sophisticated, that they like their news with a sophisticated slant. And it may be true that as America grows older as a Nation, so its people increasingly acquire sophistication.

At the last Lincoln Day dinner in Washington, on the same program with Governor Dewey, I said that we must recognize that the American electorate has matured, that it has developed an intelligence and an ability to discriminate in the selection of its representatives on the basis of their records rather than their promises.

The American press has contributed greatly to the development of political maturity on the part of the American people. It has done so by printing the records of our political leaders, by reporting and interpreting major issues to the public, and by exposing otherwise subtle political alliances, coalitions, and maneuvers.

That is good. But I am afraid that this searchlight-of-the-press technique has inadvertently bred cynicism and hard-set impressions. For example, once the press places the label of conservative or liberal on a public figure, it is difficult for that public figure to shed that label in the eyes of the public. He is faced with "You can't fool us; we're wise to you" attitude.

Because one Member of Congress has his name on a particular piece of legislation or law that has been branded as reactionary or conservative by the liberals, his record of sponsoring so-called liberal legislation on housing, health, and education is either ignored or discounted. He is accused of changing his spots for fear he will not be reelected—even though he may have sponsored the liberal measures before his conservative measure was passed.

In the free democracy that America is, there is no more powerful force than public opinion. And no element controls public opinion more than does the press. Such power carries with it a grave responsibility. To some extent, it can be said that the United States Government is only what the press makes it—for it is only what the people make it—and the actions of our people are greatly guided by what they read in the papers.

Outside of our home town, the rest of the world to us is what the press makes it—what the press tells us the world is. Outside of our next door neighbors and the people we see, hear and touch, other people are what the press makes them to be—what the press tells us they are.

Walter Lippmann has stated this thesis much more profoundly than I ever could. He calls it "pseudo environment," and his most impressive example is our conception of war in a foreign country. To those of us who did not experience combat, war was only what the newspapers told us it was.

It has been said that "things are what they seem, not what they are." We do not all see things the same way. For example, it is rare that two people relate an event, such as an automobile accident, in the same detail. Often we see only that which we want to see. That is a normal, human frailty.

The point I am trying to make is that since the world and people and events and conditions are largely what the newspapers report to us—and since we do not all see things the same way—the American press has an almost superhuman responsibility in conveying the truth to the public. The only way it can do this, as I see it, is by giving the public as many views or conceptions as is practicable within the space of a paper so that the reader may judge for himself.
